Introduction

General information
The Infotainment system provides you with state-of-the-art in-car infotainment.

Using radio tuner functions, you may register up to 35 stations on seven favourites pages.

For the different wavebands the radio is equipped with fifteen automatically assignable channel presets.
Furthermore, 35 channels can be allocated manually (waveband-independent).

You can connect external data storage devices, e.g. iPod, USB devices, or other auxiliary devices to the Infotainment system as further audio sources; either via cable or via Bluetooth.

Using the controls and menus of the Infotainment system, you can operate approved smartphone applications, e.g. a navigation app.

In addition, the Infotainment system is equipped with a Phone portal that allows for comfortable and safe use of your mobile phone in the vehicle.

Optionally, the Infotainment system can be operated using the controls on the steering wheel, or via the speech recognition application 'Siri Eyes Free'.

The well-thought-out design of the control elements, the touch screen and the clear displays enable you to control the system easily and intuitively.

Note
This manual describes all options and features available for the various Infotainment systems. Certain descriptions, including those for display and menu functions, may not apply to your vehicle due to model variant, country specifications, special equipment or accessories.
Important information on operation and traffic safety

⚠️ Warning

The Infotainment system must be used so that the vehicle can be driven safely at all times. If in doubt, stop the vehicle and operate the Infotainment system while the vehicle is stationary.

Radio reception

Radio reception may be disrupted by static, noise, distortion or loss of reception due to:

- changes in distance from the transmitter,
- multipath reception due to reflection,
- shadowing.

Theft-deterrent feature

The Infotainment system therefore functions only in your vehicle and is worthless to a thief.

Usage

Control elements
The Infotainment system is operated via function buttons, a touch screen and menus that are shown on the display.

Inputs are made optionally via:
- the central control unit in the instrument panel ☘ 8,
- audio controls on the steering wheel ☘ 8,
- the speech recognition system ☘ 42.

Switching the Infotainment system on or off
Press ☥. After switching on, the last selected Infotainment source becomes active.

Automatic switch-off
If the Infotainment system has been switched on pressing ☥ while the ignition is switched off, it will switch off again automatically 10 minutes after the last user input.
Setting the volume
Press ∨ or ∧. The current setting is shown on the display.
Optionally, using the touch screen: move the volume slider with your finger to the left or right.
When the Infotainment system is switched on, the last selected volume is set, provided that it is lower than the maximum start-up volume. For a detailed description 17.

Speed compensated volume
When the speed compensated volume is activated 17, the volume is adapted automatically to make up for the road and wind noise as you drive.

Volume of traffic announcements (TA)
The volume of traffic announcements can be set separately 17.

Mute
Press ∨ or ∧ and then tap on the ś screen button in the volume menu displayed.

To cancel the mute function: press ∨ or ∧. The last selected volume is set again.

Volume limitation at high temperatures
At very high temperatures inside the vehicle, the Infotainment system limits the maximum adjustable volume. If necessary, the volume is decreased automatically.

Modes of operation
Press the button to display the Home menu.

Note
For a detailed description of menu operation via touch screen 13.

Audio
Select the Audio screen button to open the main menu of the last selected audio mode.
Select Source in the top line of the menu to open a drop down list.

To change to another audio mode: tap on one of the list items.
Introduction

For a detailed description of:
- Radio tuner functions 20
- External devices (USB, AUX, Bluetooth) 33.

Gallery
Select the Gallery screen button to open the main menu of the last selected picture or movie mode. Tap on Source in the top line of the menu to open a drop down list.

To change to another picture or movie mode: tap on one of the list items.

For a detailed description of:
- Picture functions 36
- Movie functions 37.

Phone
Select the Phone screen button to establish a Bluetooth connection between the Infotainment system and a mobile phone.
If a connection can be established, the main menu of the phone mode is displayed.

If no connection can be established, a corresponding message is displayed. For a detailed description of preparing and establishing a Bluetooth connection between the Infotainment system and a mobile phone 44.

Apps
Select the Apps screen button to open a menu for selection and start of approved smartphone applications supported by the Infotainment system.

For a detailed description of mobile phone operation via the Infotainment system 48.

For a detailed description 30 and 40.
Settings
Select the Settings screen button to open a menu for various system related settings.

Time & date settings and Vehicle settings are described in the Owner's Manual.

All other settings are described by theme in the respective chapters of this manual.

Basic operation

Controls for menu operation

Touch screen
The display of the Infotainment system has a touch-sensitive surface that allows direct interaction with the displayed menu controls.

For example, you can activate an on-screen button by tapping on it with your finger or you can change the position of an on-screen slider element by moving it with your finger.

Caution
Do not use pointed or hard items like ballpoint pens, pencils or similar for touch screen operation.

button
Press the button to access the Home menu.

Using the touch screen, you may then access further menus and functions.

(screen button)
Introduction

When operating the menus, press the screen button in the respective submenu to return to the next higher menu level.

Menu operation (examples)

Selecting and activating a screen button or menu item

Tap on a screen button or menu item. The corresponding system function is activated, a message is displayed, or a submenu with further options opens up.

Messages

Before a system function is executed, you are sometimes prompted with a message. If requested, confirm the message or select one of the options.

The selection and activation of a screen button in a message function are the same as described for screen buttons in a menu.

Scrolling through a long list of menu items

If there are more menu items available than presentable on the screen, a scroll bar is displayed. To scroll through the list of menu items:

- Tap on ▲ or ▼ above or below the scroll bar
- move the slider of the scroll bar with your finger up or down.
Adjusting a setting
The different setting types available in the various settings menus are shown and described below.

Example: Display settings

Tap on - or + or move the slider next to a setting to adjust this setting. Confirm your choice by selecting OK.

Note
In subsequent chapters the operating steps for adjusting a setting via the touch screen will be described as "...adjust the...setting...".

Example: Radio settings

Tap on < or > next to a setting to choose one of the available options or to set a specific value.

Note
In subsequent chapters the operating steps for switching to another option via the touch screen will be described as "...set...to...'option name'/value'...".

Example: RDS option

Tap on On or Off next to a setting to activate or deactivate this option.

Note
In subsequent chapters the operating steps for switching a setting On or Off via the touch screen will be described as "...set...to...On..." or "...set...to...Off...".
Example: DAB category list

Tap on a list item to select or deselect the option. If a list item is selected, a checkmark appears within the box next to the item.

Note
In subsequent chapters the operating steps for choosing an option via the touch screen will be described as "...choose...'option name'...".

Tone settings
In the tone settings menu, the tone characteristics can be set differently for each radio waveband and each external audio source. The menu may be accessed from each individual audio main menu.

To open the tone settings menu, select MENU in the bottom line of the respective main menu. If necessary, scroll through the list of menu items and select Tone settings. The respective menu is displayed.

EQ mode
(EQ: Equaliser)

Use this setting to optimise the tone for the style of music, e.g. Rock or Classical.
Select the desired sound style. If you choose Manual, you can manually adjust the following settings.

Bass
Use this setting to enhance or attenuate the deep frequencies of the audio sources.
Set Bass to a value between -12 and 12.

Mid
Use this setting to enhance or attenuate the midrange frequencies of the audio source.
Set Mid to a value between -12 and 12.

Treble
Use this setting to enhance or attenuate the high frequencies of the audio sources.
Set Treble to a value between -12 and 12.
Setting balance and fader
Use the illustration at the right side of the menu to adjust balance and fader. To define the point in the passenger compartment where the sound is at its highest level, tap on the corresponding point in the illustration. Alternatively, you can move the red marker with your finger to the desired point.

Note
The balance and fader settings are valid for all audio sources. They cannot be adjusted individually for each audio source.

Resetting to factory defaults
Select Reset.

Saving current settings
Select OK.

Volume settings

Adjusting the maximum startup volume
Press the \textit{[\hspace{1em}]} button and then select the \textit{Settings} screen button.

Scroll through the list to \textit{Max startup volume}.

Set \textit{Max startup volume} to a value between 13 and 37.

Adjusting the speed compensated volume
Press the \textit{[\hspace{1em}]} button and then select the \textit{Settings} screen button. Select \textit{Radio settings} to display the respective menu.

To adjust the degree of volume adaptation, set \textit{Auto volume} to \textit{Off}, \textit{Low}, \textit{Medium} or \textit{High}.

\textit{Off}: no enhancement of volume with increasing vehicle speed.

\textit{High}: maximum enhancement of volume with increasing vehicle speed.

Adjusting the volume of traffic announcements
The volume of traffic announcements can be preset separately to a level independent of the "normal" volume level.
Introduction

Press the button and then select the **Settings** screen button.
Select **Radio settings** and then **RDS option** to display the respective menu.

Set **TP volume** to a value between 0 and 63.

**Adjusting the ring tone volume**
Press the button and then select the **Settings** screen button.
Select **Connection settings** to display the respective menu.

Set **Ringtone volume** to a value between 0 and 63.

**Activating or deactivating the touch beep volume function**
If the touch beep volume function is activated, each tap on a screen button or menu item is indicated by a beeping sound.
Press the button and then select the **Settings** screen button.
Scroll through the list to **Touch beep volume**.

Set the function to **On** or **Off**.

**System settings**

**Adjusting the language**
Press the button and then select the **Settings** screen button.
Select **Language (language)** to display the respective menu.
To adjust the language for the menu texts: tap on the desired language.

**Activating or deactivating the text scroll function**
If long text is displayed on the screen, the text may either be scrolled continually or it may be scrolled once and displayed in truncated form.

Press the button and then select the **Settings** screen button.
Scroll through the list to **Text scroll**.

If you wish the text to be scrolled continually, set the function to **On**.
If you wish the text to be scrolled in blocks, set it to **Off**.

**Resetting to factory defaults**
All settings, e.g. the volume and tone settings, the favourite lists, or the Bluetooth device list can be reset to the factory defaults.

Press the button and then select the **Settings** screen button.
Select **Radio settings** to display the respective menu.

To reset all settings: tap on **Radio factory settings** and confirm the messages appearing afterwards.

**Displaying the system version**
Press the button and then select **Settings**.
Scroll through the list and select **System version**.
Radio

Usage .......................................... 20
Station search .............................. 20
Autostore lists .............................. 21
Favourite lists .............................. 22
Waveband menus .......................... 22
Radio data system (RDS) ............... 24
Digital audio broadcasting ............ 26

Usage

Activating the radio
Press the button and then select the Audio screen button. The audio main menu last selected is displayed. Select Source to open a drop down list.

Select a radio waveband, e.g. AM or FM.
The station last played in the selected waveband will be received.

Note
To display information on the currently active radio station: tap on the display.

Station search

Automatic station search

Briefly tap on or to play the previous or next station in the station memory.

Manual station search
Tap on or and hold. Release when the required frequency has almost been reached.
A search is made for the next station that can be received and it is played automatically.

**Note**
Manual station search: If the radio does not find a station, it switches automatically to a more sensitive search level. If it still does not find a station, the frequency that was last active is set again.

**Note**
FM waveband: when the RDS function is activated, only RDS stations 24 are searched for, and when the radio traffic service (TP) is activated, only traffic service stations 24 are searched for.

**Station tuning**
Tap on and hold or repeatedly tap on ◀ or ▶ to adjust the frequency of the desired radio station.

If **Radio tune bar** in the **Radio settings** menu (see note below) is set to **On**, a tune bar is displayed when tapping on ◀ or ▶.

You may now manually tune or seek for radio stations.

**Note**
To open the **Radio settings** menu: press the button, select the **Settings** screen button and then select the **Radio settings** menu item.

**Autostore lists**
The stations received best in a waveband can be searched for and stored automatically via the autostore function.

Each waveband has 3 autostore lists (AS 1/3, AS 2/3 and AS 3/3), in each of which 5 stations may be stored.

**Note**
If the **FAV** tab is currently shown in the foreground: tap on the **AS** tab to display the autostore lists.

**Note**
The currently received station is highlighted.

**Storing stations**
If required, tap on the **AS** tab to display the autostore lists.
Radio

Tap on and hold the AS tab for a few seconds. A message is displayed and the stations received best in the active waveband are stored in the autostore lists.

Note
If there are no stations stored in the AS stations lists, the lists will be updated automatically when you first select the AS tab.

Retrieving stations
If required, tap on the AS tab to display the autostore lists.
If required, tap on < or > to select another autostore list.
Select the preset screen button on which the desired radio station is stored.

Favourite lists
Stations of all wavebands can be stored manually in the favourite lists.

Storing a station
If required, tap on the FAV tab to display the favourite lists.
If required, tap on < or > to select another favourite list.

To store the currently active radio station to a preset screen button: tap on and hold the desired screen button for a few seconds. The corresponding frequency or station name is displayed on the screen button.

Retrieving stations
If required, tap on the FAV tab to display the favourite lists.
If required, tap on < or > to select another favourite list.
Select the preset screen button on which the desired radio station is stored.

Waveband menus
Alternative facilities for station selection are available via waveband specific menus.
Tap on MENU in the bottom line of the active radio main menu to open the corresponding waveband specific submenu.

Note
The following FM specific displays are shown as examples.
Radio

Select the desired station.

**Note**
The currently received radio station is indicated by the ➤ symbol next to the station name.

**Station lists**
Within a waveband menu, select a stationlist, e.g. **FM station list**. All receivable stations of the relevant waveband and in the current reception area are displayed.

**Note**
The currently received radio station is indicated by the ➤ symbol next to the station name.

**Category lists**
Numerous radio stations broadcast a PTY code, which specifies the type of programme transmitted (e.g. news). Some stations also change the PTY code depending on the content which is currently transmitted.

The Infotainment system stores these stations, sorted by programme type in the corresponding category list.

**Note**
The category list submenu item is not available for the AM waveband.

To search for a programme type determined by the stations, select the waveband specific category list option.

**Favorite list**
Select **Favorite list** to display all stations currently stored in the favourites lists.
A list of programme types currently available is displayed.

**Note**
For the DAB waveband, only the selected categories are displayed in the category list.

Select the desired programme type. A list of stations is displayed transmitting a programme of the selected type.

Select the desired station.

**Note**
The currently received radio station is indicated by the symbol next to the station name.

---

**Update station lists**
If the stations stored in a waveband specific station list can no longer be received, select the respective menu item to update the station list in the waveband menu, e.g. **Update FM station list**.

**Note**
If a waveband-specific station list is updated, the corresponding category list is also updated.

A station search is started and a corresponding message is displayed. Once the search is finished, the respective station list is displayed.

**Note**
The currently received radio station is indicated by the symbol next to the station name.

**Tone settings**
For a detailed description of the **Tone settings** menu.

---

**Radio data system (RDS)**
RDS is a service of FM stations that considerably facilitates the finding of the desired station and its fault-free reception.

**Advantages of RDS**
- On the display, the programme name of the station appears instead of its frequency.
- During a station search, the Infotainment system tunes in to RDS stations only.
- The Infotainment system always tunes into the best receivable broadcasting frequency of the set station by means of AF (alternative frequency).
- Depending on the station that is received, the Infotainment system displays radio text that can contain e.g. information about the current programme.

**RDS option menu**
To open the menu for the RDS configuration:
Press the \( \triangleright \) button and then select the **Settings** screen button. Select **Radio settings** and then **RDS option** to display the respective menu.

**Note**
If **RDS** is set to **Off**, not all menu items shown above are displayed.

**Traffic announcements (TA)**
Radio traffic service stations are RDS stations that broadcast traffic news. If the traffic service is switched on, the currently active function is interrupted for the duration of the traffic announcement.

**Switching the traffic announcements on and off**
Set **TA** to **On** or **Off**.
If the radio traffic service is activated, [TP] is shown in the top line of all main menus. If the current station is not a radio traffic service station, TP is greyed-out and a search is started automatically for the next radio traffic service station. As soon as a radio traffic service station is found, TP is highlighted. If no radio traffic service station is found, TP remains greyed-out.

If a traffic announcement is broadcasted on the respective station, a message is displayed. To interrupt the announcement and return to the function previously activated: select **Cancel** in the message.

**TP volume**
The volume of traffic announcements can be preset to a value between 0 and 63.

**RDS configuration**
Set **RDS** to **On** or **Off**.

**Radio text**
If the RDS function is activated and a RDS station is currently received, information about the current programme and the music track currently playing are displayed below the programme name. To show or hide the information, set **Radio text** to **On** or **Off**.

**Regionalisation**
Sometimes RDS stations broadcast regionally different programmes on different frequencies. Set **Regional** to **On** or **Off**.

If regionalisation is switched on, alternative frequencies with the same regional programmes are selected where necessary. If regionalisation is switched off, alternative frequencies of the stations are selected without regard to regional programmes.
PSN scroll freeze
Some RDS stations do not only indicate the programme service name (PSN) on the display, but also show additional information about the current programme. If additional information is displayed, the programme name is hidden.
To prevent additional information from being displayed, set PSN scroll freeze to On.

Digital audio broadcasting
Digital audio broadcasting (DAB) is an innovative and universal broadcasting system.
DAB stations are indicated by the programme name instead of the broadcasting frequency.

General information
- With DAB, several radio programmes (services) can be broadcasted on a single frequency (ensemble).
- Besides high-quality digital audio services, DAB is also able to transmit programme-associated data and a multitude of other data services including travel and traffic information.
- As long as a given DAB receiver can pick up the signal sent out by a broadcasting station (even if the signal is very weak), sound reproduction is ensured.
- There is no fading (weakening of the sound that is typical of AM or FM reception). The DAB signal is reproduced at a constant volume.
- If the DAB signal is too weak to be picked up by the receiver, reception is interrupted completely. This incident can be avoided by activating Service linking DAB and/or Service linking FM in the DAB option menu (see below).
- Interference caused by stations that are on nearby frequencies (a phenomenon that is typical of AM and FM reception) does not occur with DAB.
- If the DAB signal is reflected by natural obstacles or buildings, the reception quality of DAB is improved, whereas AM or FM reception is considerably impaired in such cases.
- When DAB reception is enabled, the FM tuner of the Infotainment system remains active in the background and continually searches for the best receivable FM stations. If TP 24 is activated, traffic announcements of the FM station which is currently best receivable are issued. Deactivate TP, if DAB reception should not be interrupted by FM traffic announcements.

DAB option menu
To open the menu for the DAB configuration:
Press the button and then select the Settings screen button.
Select Radio settings and then DAB option to display the respective menu.
DAB category settings
To choose which categories are displayed in the DAB category list in the DAB menu 22, select DAB category settings. The respective menu is displayed.

Select All or select and deselect only some categories from the available options.
Select OK to confirm your choice.

DAB configuration
In the DAB option menu you can setup features concerning the DAB radio reception.

Service linking DAB
If this function is activated, the device switches over to the same service (programme) on another DAB ensemble (frequency, if available) when the DAB signal is too weak to be picked up by the receiver.
Set Service linking DAB to On or Off.

Service linking FM
If this function is activated, the device switches over to a corresponding FM station of the active DAB service (if available) when the DAB signal is too weak to be picked up by the receiver.
Set Service linking FM to On or Off.

Dynamic range compression
If this function is activated, the dynamic range of the DAB signal is reduced. That means that the level of loud sounds is reduced and the level of quiet sounds is increased. Therefore the volume of the Infotainment system can be raised to a point where the quiet sounds are audible, without the loud sounds being too loud.
Set Dynamic range ctrl to On or Off.
Selecting a frequency band
With this function, you may define which DAB wavebands are to be received by the Infotainment system.
Choose **L-Band only** (1452 - 1492 MHz, earth and satellite radio) **Band III only** (174 - 240 MHz, earth radio) or **Both**.

Radio text
If this function is activated, additional information about the programme currently received or the music track currently playing such as title, artist, music type, news or traffic updates are displayed. To show or hide the information, set **Radio text** to **On** or **Off**.

Slide Show
If this function is activated, additional information about the programme currently received or the music track currently playing are displayed in the form of pictures, graphics or short video sequences.

To show or hide these pictures, graphics or videos sequences, set **Slide Show** to **On** or **Off**.

Waveband menu
Tap on the **MENU** screen button in the bottom line of the DAB main menu to open the waveband submenu.

DAB announcements
Besides their music programmes, a lot of DAB stations also broadcast announcements of various categories. If you activate some or all categories, the currently received DAB service is interrupted when an announcement of these categories is made. Select **DAB announcements** in the DAB waveband menu. A list of categories is displayed.

Activate all or just the desired announcement categories. Different announcement categories can be selected at the same time.

EPG current program
A lot of DAB stations also offer an electronic program guide. An electronic program guide (EPG) provides you with continuously updated information about current and upcoming programmes. To display information on the currently active programme, select **EPG current program**.
EPG station list
The **EPG station list** contains the stations providing an electronic program guide.

To display current and upcoming programmes of the respective station, select **Info** next to the station name.

**Intellitext**
The **Intellitext** function allows the reception of additional information such as announcements, financial information, sports, news etc.

Select one of the categories and choose a specific item to display detailed information.

*Info*
To display detailed information on the currently active DAB station, select the **Info** menu item.
External devices

General information
In the centre console below the climate controls, there is an AUX socket and a USB socket for the connection of external audio data sources.

Note
The sockets must always be kept clean and dry.

AUX input
It is possible to connect e.g. an iPod or another auxiliary device to the AUX input.

When connected to the AUX input, the audio signal of the auxiliary device is transmitted via the speakers of the Infotainment system.

The volume and the tone settings can be adjusted via the Infotainment system. All other control functions must be operated via the auxiliary device.

Connecting a device
To connect the auxiliary device to the AUX input socket of the Infotainment system, use one of the following cables:
3-pole for audio source, 4-pole for movie source.

1 = Left audio signal
2 = Right audio signal
3 = Ground
4 = Video signal
AUX audio function
The Infotainment system can play music files contained in auxiliary devices e.g. smartphones or iPod/iPhone products.

AUX movie function
The Infotainment system can play movies contained in auxiliary devices e.g. smartphones or iPod/iPhone products.

Note
To use the movie function with your iPod/iPhone, connect your device to the AUX port only. A constant connection cannot be established via the USB port.

USB port
An MP3 player, USB drive, SD card (via USB connector/adapter), iPod or Smartphone can be connected to the USB port.

When connected to the USB port, various functions of the devices mentioned above can be operated via the controls and menus of the Infotainment system.

Note
Not all MP3 player, USB drive, SD card, iPod models or Smartphones are supported by the Infotainment system.

Connecting/disconnecting a device
Connect the USB device or iPod to the USB port. For the iPod, use the appropriate connection cable. The music function starts automatically.

To disconnect the USB device or iPod, select another function and then remove the USB storage device.

Caution
Avoid disconnecting the device during playback. This may damage the device or the Infotainment system.

USB audio function
The Infotainment system can play music files contained in USB storage devices or iPod/iPhone products.

USB picture function
The Infotainment system can display pictures contained in USB storage devices.

USB movie function
The Infotainment system can play movies contained in USB storage devices.

Note
To use the movie function with your iPod/iPhone, connect your device to the AUX port only. A constant connection cannot be established via the USB port.

Bluetooth
Bluetooth enabled audio sources (e.g. music mobile phones, MP3 players featuring Bluetooth, etc.), which support the Bluetooth music profiles A2DP and AVRCP can be connected wirelessly to the Infotainment system.
Connecting a device
For a detailed description on the Bluetooth connection ◇ 45.

Bluetooth audio function
The Infotainment system can play music files contained in Bluetooth devices e.g. smartphones or iPod/iPhone products.

Support of smartphone applications
The Apps function of the Infotainment system allows access to approved smartphone applications. The Infotainment system authorises application updates as they become available.

Before an approved application can be operated using the controls and menus of the Infotainment system, the respective application must be installed on the smartphone.

Follow the instructions on the smartphone when installing an approved smartphone application.

File formats and folders
The maximum capacity of a device supported by the Infotainment system amounts to 2500 music files, 2500 picture files, 250 movie files, 2500 folders and 10 stages of folder structure. Only devices formatted in the FAT16/FAT32 file system are supported.

Note
Some files may not be played properly. This might be due to a different recording format or the condition of the file.

Files from online shops to which digital rights management has been applied cannot be played.

The Infotainment system can play the following audio, picture and movie files stored on external devices.

Audio files
The playable audio file formats are .mp3, .wma, .ogg and .wav.

When playing a file with ID3 tag information, the Infotainment system can display information, e.g. on the track title and artist.

Picture files
The displayable picture file formats are .jpg, .bmp, .png and .gif.

.jpg files must have a size of 64 to 5000 pixels in width and 64 to 5000 pixels in height.

.bmp, .png and .gif files must have a size of 64 to 1024 pixels in width and 64 to 1024 pixels in height.

Movie files
The playable movie file formats are .avi, .mpg, .mp4, .divx, .xvid and .wmv.

The resolution of the files must be within a range of 720 pixels in width and 576 pixels in height. The frame rate must be less than 30 fps.

Usable codecs are divx, xvid, mpeg-1, mpeg-4 (mpg4, mp42, mp43) and wmv9 (wmv3).

The playable audio formats are .mp3, .ac3, .aac and .wma.

The displayable subtitle format is .smi.

Auxiliary device

Activating the AUX function
If the auxiliary device is not yet connected to the Infotainment system, connect the device 30. The AUX audio menu is displayed and playback of the audio tracks starts automatically.

In case the auxiliary device is already connected:
If required, press the button and then select the Audio screen button to open the audio main menu last selected.
If required, select Source to open a drop down list and then select AUX to open the respective audio main menu.
Playback of the audio tracks starts automatically.

Changing the tone settings
Select Tone settings to open the respective menu. For a detailed description 16.

Note
The volume and the tone settings can be adjusted via the Infotainment system. All other functions must be performed via the auxiliary device.

USB device and iPod

Activating the USB device or iPod function
If the USB device or iPod is not yet connected to the Infotainment system, connect the device 30. The respective audio main menu is displayed and playback of the audio tracks starts automatically.

In case the USB device or iPod is already connected:
If required, press the button and then select the Audio screen button to open the audio main menu last selected.
If required, select Source to open a drop down list and then select USB to open the respective audio main menu.
Playback of the audio tracks starts automatically.
Internal devices

Note
Album covers are displayed if they are included in the audio file, e.g. MP3 file.

Interrupting and resuming playback
Tap on \( \rightarrow \) to interrupt playback. The screen button changes to \( \leftarrow \).
Tap on \( \rightarrow \) to resume playback.

Playing the next or previous track
Tap on \( \rightarrow \) to play the next track.
Tap on \( \leftarrow \) within the first 2 seconds of the track playing to return to the previous track.

Returning to the beginning of the current track
Tap on \( \leftarrow \) after 2 seconds of the track playing.

Fast forwarding and rewinding
Tap on \( \rightarrow \) or \( \leftarrow \) and hold. Release to return to the normal playback mode.
Alternatively, you can move the slider showing the current track position with your finger to the left or right.

Playing tracks repeatedly
Repeatedly tap on \( \ast \) to choose one of the following options.
\( 1 \) = The current track is played repeatedly.
\( \text{ALL} \) = All tracks on the device are played repeatedly.
\( \text{OFF} \) = Normal playback mode.

Playing tracks randomly
Repeatedly tap on \( \ast \) to activate or deactivate the function.
\( \text{ON} \) = All tracks on the device are played in random order.
\( \text{OFF} \) = Normal playback mode.

Viewing information
To display information on the track currently playing, tap on the screen. A message is displayed showing information, e.g. on the title, artist, or album, saved with the track.

Using the music menu
Tap on \( \text{MENU} \) to open the respective music menu.
Different categories, in which the tracks are sorted, are displayed, e.g. Folders, Artists, or Albums.

Select the desired category, subcategory (if available) and then choose a track.
Changing the tone settings
Select Tone settings to open the respective menu. For a detailed description ▶ 16.

Bluetooth music

Activating the Bluetooth music function
If the Bluetooth device is not yet connected to the Infotainment system, establish a Bluetooth connection ▶ 45 and then continue as described below.

In case the Bluetooth device is already connected:
If required, press the button and then select the Audio screen button to open the audio main menu last selected.
If required, select Source to open a drop down list and then select Bluetooth to open the respective audio main menu.
Playback of the audio tracks starts automatically.

Interrupting and resuming playback
Tap on II to interrupt playback. The screen button changes to ►. Tap on ► to resume playback.

Playing the next or previous track
Tap on ►► to play the next track. Tap on ◄◄ within the first 2 seconds of the track playing to return to the previous track.

Returning to the beginning of the current track
Tap on ◄◄ after 2 seconds of the track playing.

Fast forwarding and rewinding
Tap on ◄◄ or ►► and hold. Release to return to the normal playback mode.

Playing a track or file repeatedly
Repeatedly tap on ◄ to choose one of the following options.
1 = The current track is played repeatedly.
ALL = All tracks on the device are played repeatedly.
OFF = Normal playback mode.

Playing a file randomly
Repeatedly tap on ◄ to activate or deactivate the function.
ON = All tracks on the device are played in random order.
OFF = Normal playback mode.

Note
Depending on the mobile phone some of these functions may not be available.
Changing the tone settings
Select \( \hat{d} \) to open the Tone settings menu. For a detailed description \( \hat{1} \) 16.

Displaying pictures
You can view pictures from a USB device.

Note
For your safety, some features are disabled while your vehicle is in motion.

Viewing pictures
If the USB device is not yet connected to the Infotainment system, connect the device \( \hat{3} \) 30 and then continue as described below.

In case the USB device is already connected:
If required, press the \( \hat{6} \) button and then select the Gallery screen button to open the picture or movie main menu last selected.

If required, select Source to open a drop down list and then select USB (Picture) to open the respective main menu.

A picture is automatically displayed.

Tap on the screen to view the picture in full screen. Tap on the screen again to leave the full screen mode.

Viewing the next or previous picture
Tap on \( \hat{4} \) to view the next picture.
Tap on \( \hat{5} \) to view the previous picture.

Rotating a picture
Tap on \( \hat{6} \) or \( \hat{7} \) to rotate the picture clockwise or counterclockwise.

Viewing a slide show
Tap on \( \hat{8} \) to view the pictures stored on the USB device in a slide show.
Tap on the screen to finish the slide show.

Zoom in on a picture
Tap on \( \hat{9} \) once or several times to zoom in on a picture or to return to its original size.

Using the picture menu
Tap on MENU to open the USB Picture menu.
Picture file list
All lists with picture files are displayed. Search for the picture you want to display and select it.

If you tap on the picture file name once, a small preview picture is displayed next to the file list. If you tap on it a second time or if you select \( \Rightarrow \) under the preview picture, the picture is displayed in the main menu.

**Sort by title**
A list with all picture files alphabetically ordered is displayed.

**Sort by date**
A list with all picture files sorted by date and starting with the latest date is displayed.

**Slide show time**
Adjust the time sequence in which one picture is shown in a slide show.

**Clock/temp. display**
If you want the time and temperature to be displayed in full screen mode, set **Clock/temp. display** to **On**.

**Display settings**
Adjust the brightness and contrast of the picture display.

Set **Brightness** to a value between -9 and 9.
Set **Contrast** to a value between -15 and 15.

**Playing movies**
You can view movies from an auxiliary device connected to the AUX input or from a USB device connected to the USB port.
**External devices**

**Note**
To use the movie function with your iPod/iPhone, connect your device to the AUX port only. A constant connection cannot be established via the USB port.

**Note**
For your safety, the movie function is not available while driving.

**Auxiliary device**

**Activating the AUX function**
If the auxiliary device is not yet connected to the Infotainment system, connect the device 30. The AUX movie menu is displayed and playback of the movie files starts automatically.

**In case the auxiliary device is already connected:**
If required, press the button and then select the Gallery screen button to open the picture or movie main menu last selected.

If required, select **Source** to open a drop down list and then select **AUX (Movie)** to open the respective main menu.

Playback of the movie files starts automatically.

**Note**
Apart from settings such as volume, tone and display, all functions need to be operated via the auxiliary device.

**Using the AUX movie menu**
Tap on **MENU** to open the **AUX Movie** menu.

For detailed information on the available settings, see the corresponding descriptions for USB devices below.

**USB device**

**Activating the USB device function**
If the USB device is not yet connected to the Infotainment system, connect the device 30 and then continue as described below.

**In case the USB device is already connected:**
If required, press the button and then select the **Gallery** screen button to open the picture or movie main menu last selected.

If required, select **Source** to open a drop down list and then select **USB (Movie)** to open the respective main menu.

Playback of movie files starts automatically.
Interrupting and resuming playback
Tap on \( \boldsymbol{\text{II}} \) to interrupt playback. The screen button changes to \( \boldsymbol{\text{▶}} \).
Tap on \( \boldsymbol{\text{▶}} \) to resume playback.

Playing the next or previous track
Tap on \( \boldsymbol{\text{▶}} \) to play the next movie file.
Tap on \( \boldsymbol{\text{◀}} \) within the first 5 seconds of the movie playing to return to the previous movie file.

Returning to the beginning of the current movie
Tap on \( \boldsymbol{\text{◀}} \) after 5 seconds of the movie playing.

Fast forwarding and rewinding
Tap on \( \boldsymbol{\text{◄}} \) or \( \boldsymbol{\text{▶}} \) and hold. Release to return to the normal playback mode.

Full screen
Tap on \( \boldsymbol{\text{✿}} \) to switch to full screen mode. Tap on the screen again to leave the full screen mode.

Using the USB movie menu
Tap on MENU to open the USB movie menu.

Movie file list
All lists with movie files are displayed. Search for the movie you want to display and select it. The respective movie starts playing.

Clock/temp. display
If you want the time and temperature to be displayed in full screen mode, set Clock/temp. display to On.

Display settings
Adjust the brightness and contrast of the movie display.

Set Brightness to a value between -9 and 9.
Set **Contrast** to a value between -15 and 15.

**Tone settings**
For a detailed description ➥ 16.

**Activating or deactivating subtitle and audio language**
If the movie has a subtitle and audio language, you can activate or deactivate these options.
Select ➧ on the right side of the screen.
To activate or deactivate the subtitle language, set the FA function to On or Off.
To activate or deactivate the audio language, set the ☮ function to On or Off.

**Using smartphone applications**
Before an approved application can be operated using the controls and menus of the Infotainment system, the respective application must be installed on the smartphone.

**Supported applications**
Press the Apps button and then select the Apps screen button to open the respective menu.
The menu shows which Smartphone applications are currently supported by the Infotainment system, see "Displaying or hiding application icons" below.

Find a detailed description of the respective application on the website of the corresponding software producer.

**Starting an application**
If not yet connected to the Infotainment system, connect the smartphone:
- **iPod/iPhone**: connect the device to the USB port ➥ 30
- **Android phone**: establish a Bluetooth connection ➥ 45.

If not installed, download the respective application to your Smartphone.
Press the Apps button and then select the Apps screen button to open the respective menu.
Tap on the screen button of the desired application. A connection to the respective application installed on the connected Smartphone is established.
The main menu of the application is shown on the display of the Infotainment system.

**Note**
Ensure good GPS reception of the Smartphone when using a navigation application.
Displaying or hiding application icons
You can define which of the approved applications supported by the Infotainment system are visible and selectable in the Apps menu.
Select Settings in the bottom line of the Apps main menu to open the App settings menu.

Select or deselect the desired applications and then select the OK screen button.
Speech recognition

General information
The Siri Eyes Free feature of the Infotainment system allows access to Siri, the speech interpretation and recognition interface on your iPhone or iPod. See the user guide of your iPhone or iPod to find out whether it supports Siri. Siri Eyes Free works with most of the built-in apps on your iPhone or iPod. You can ask Siri, e.g. to call people, play music, hear and compose text messages, dictate emails, hear new notifications, get directions, or add reminders. For detailed information, see the user guide of your iPhone or iPod.

Important notes
- In order to use Siri Eyes Free, your iPhone or iPod must be connected to the Infotainment system via USB cable 30 or via Bluetooth 45.

Usage

Activating speech recognition
Press \( \swarrow \) on the right side of the steering wheel to start a speech recognition session. A voice command message is displayed on the screen.

As soon as a beep is heard, you can say a command. For information on the commands supported, see the operating instructions for your iPhone or iPod.

- Siri Eyes Free requires 3G or wifi internet access on your iPhone or iPod.
- Siri Eyes Free is not compatible with the approved smartphone apps 40 supported by the Infotainment system. That means you cannot control these apps via Siri Eyes Free.
Adjusting the volume of voice prompts
Press +/- on the right side of the steering wheel to increase or decrease the volume of voice prompts.

Interrupting a voice prompt
As an experienced user, you can interrupt a voice prompt by selecting the cancel screen button in the voice command message.

A beep is heard immediately. You may now directly state a command without having to wait.

Deactivating speech recognition
Press \%/\ on the right side of the steering wheel. The voice command message disappears, the speech recognition session is ended.
Phone

General information
The Phone portal provides you with the possibility of having mobile phone conversations via a vehicle microphone and the vehicle loudspeakers as well as operating the most important mobile phone functions via the Infotainment system in the vehicle. To be able to use the Phone portal, the mobile phone must be connected to the Infotainment system via Bluetooth.

Not all Phone functions are supported by every mobile phone. The usable phone functions depend on the relevant mobile phone and network provider. You can find further information on this in the operating instructions for your mobile phone, or you can enquire about them with your network provider.

Important information for operation and traffic safety

⚠️ Warning
Mobile phones have effects on your environment. For this reason safety regulations and directions have been prepared. You should be familiar with the related directions before you use the telephone function.

⚠️ Warning
Use of the hands-free facility while driving can be dangerous because your concentration is reduced when telephoning. Park your vehicle before you use the hands-free facility. Follow the stipulations of the country in which you find yourself at present.

Do not forget to follow the special regulations that apply in specific areas and always switch off the mobile phone if the use of mobile
phones is prohibited, if interference is caused by the mobile phone or if dangerous situations can occur.

Bluetooth
The Phone portal is certified by the Bluetooth Special Interest Group (SIG).
You can find further information about the specification on the Internet at http://www.bluetooth.com

Bluetooth connection
Bluetooth is a radio standard for the wireless connection of e.g. mobile phones, iPod/iPhone models, or other devices.
To be able to set up a Bluetooth connection to the Infotainment system, the Bluetooth function of the Bluetooth device has to be activated. For further information, please consult the user guide of the Bluetooth device.

Via the Bluetooth settings menu, pairing (PIN code exchange between Bluetooth device and Infotainment system) and connecting of the Bluetooth devices to the Infotainment system are carried out.

Bluetooth settings menu
Press the button and then select the Settings screen button.
Select Connection settings and then Bluetooth settings to display the respective menu.

Pairing a device

Important information
■ Up to five devices can be paired to the system.
■ Only one paired device can be connected to the Infotainment system at a time.
■ Pairing normally only needs to be carried out once, unless the device is deleted from the list of paired devices. If the device has been connected previously, the Infotainment system establishes the connection automatically.
■ Bluetooth operation considerably drains the device's battery. Therefore, connect the device to the power outlet for charging.

Pairing a new device via the Bluetooth settings menu
1. Press the button and then select the Settings screen button.
   Select Connection settings and then Bluetooth settings to display the respective menu.
2. On the Infotainment system: set the Discoverable function to On to make the Infotainment system visible to the Bluetooth device.
   On the Bluetooth device: activate the Bluetooth function and the discoverability mode.
3. On the Infotainment system: select Bluetooth device list to display the respective submenu.
4. On the Infotainment system: tap on the Search Bluetooth Device screen button. All discoverable Bluetooth devices in the environment are displayed in a list.
5. Tap on the Bluetooth device you wish to pair.
6. If SSP (secure simple pairing) is supported:
   Confirm the messages on the Infotainment system and the Bluetooth device.
   If SSP (secure simple pairing) is not supported:
   On the Infotainment system: an Info message is displayed asking you to enter a PIN code on your Bluetooth device.
   On the Bluetooth device: enter the PIN code and confirm your input.
7. The Infotainment system and the device are paired.

**Note**
If the Bluetooth device is successfully paired, the 📞 symbol next to the Bluetooth device indicates that the phone function is enabled and the 🎵 symbol next to the Bluetooth device indicates that the Bluetooth music function is enabled.

**Note**
The connected device and the available options are highlighted.
**Phone**

**Note**
If the Bluetooth connection fails, a failure message is displayed on the screen of the Infotainment system.

8. The phone book is downloaded automatically to the Infotainment system. If this function is not supported by the Bluetooth device, a corresponding message is displayed.

**Pairing a new device via the Phone menu**
Press the 📞 button and then select the Phone screen button.
Confirm the Info message asking whether you wish to pair a Bluetooth device. The Bluetooth device list menu is displayed.
Proceed from step 4 as described above.
If the device has been successfully paired, the Phone main menu is displayed.

**Changing the Bluetooth PIN code**
Press the ✉️ button and then select the Settings screen button.
Select Connection settings, Bluetooth settings and then Change PIN code to display the respective menu.
Enter the desired four-digit PIN code.
To delete an entered number, select ⇐.
Confirm your input by selecting OK.

**Connecting a paired device**
Press the 📞 button and then select the Settings screen button.
Select Connection settings, Bluetooth settings and then Bluetooth device list to display the respective menu.
Select the Bluetooth device you wish to connect. The device is connected.

**Disconnecting a device**
Press the 📞 button and then select the Settings screen button.
Select Connection settings, Bluetooth settings and then Bluetooth device list to display the respective menu.
Select the Bluetooth device currently connected. You are prompted with a question.
Select Yes to disconnect the device.

**Deleting a device**
Press the 📞 button and then select the Settings screen button.
Select Connection settings, Bluetooth settings and then Bluetooth device list to display the respective menu.
Select Del next to the Bluetooth device. You are prompted with a question.
Select Yes to delete the device.
Device info
Press the Power button and then select the Settings screen button. Select Connection settings, Bluetooth settings and then Bluetooth device list to display the respective menu. The information displayed includes Device name, Address, and PIN code.

Emergency call

⚠️ Warning
Connection setup cannot be guaranteed in all situations. For this reason you should not rely exclusively on a mobile phone when a vitally important communication (e.g. a medical emergency) is concerned. In some networks it may be necessary for a valid SIM card to be properly inserted in the mobile phone.

⚠️ Warning
Bear in mind that you can make and receive calls with the mobile phone, if it is in a service area with a sufficiently strong signal. Under certain circumstances emergency calls cannot be made on all mobile phone networks; it is possible that they cannot be made when certain network services and/or telephone functions are active. You can enquire about this with the local network operators.

The emergency call number can differ depending on the region and country. Please enquire beforehand about the correct emergency call number for the relevant region.

Making an emergency call
Dial the emergency call number (e.g. 112).
The telephone connection to the emergency call centre is set up.

Answer when the service personnel questions you about the emergency.

⚠️ Warning
Do not end the call until you are requested to do so by the emergency call centre.

Operation
As soon as a connection via Bluetooth has been set up between your mobile phone and the Infotainment system, you can operate many functions of your mobile phone via the Infotainment system.

Note
In the handsfree mode mobile phone operation continues to be possible, e.g. taking a call or adjusting the volume.

After the setup of a connection between the mobile phone and the Infotainment system, mobile phone data is transmitted to the Infotainment system. This can take some time depending on the mobile phone and the amount of data to be transferred.
During this period, operation of the mobile phone via the Infotainment system is possible only to a limited extent.

**Note**

Not every mobile phone supports all functions of the Phone portal. Therefore deviations from the range of functions described with these specific mobile phones are possible.

**Phone main menu**

Press the button and then select the Phone screen button to display the respective menu.

![Phone Menu](image)

**Note**

The Phone main menu is only available, if a mobile phone is connected to the Infotainment system via Bluetooth. For a detailed description ⬇️ 45.

Many functions of the mobile phone can now be controlled via the Phone main menu (and associated submenus), and via the phonespecific controls on the steering wheel.

**Initiating a phone call**

**Entering a phone number**

Press the button and then select the Phone screen button to display the respective menu.

Enter a telephone number using the keypad in the Phone main menu.

To delete one or more entered characters, tap or long tap on ❌.

Tap on the screen button or press the button on the steering wheel to start dialling.

**Using the phone book**

**Note**

When pairing a mobile phone with the Infotainment system via Bluetooth, the phone book of the mobile phone is downloaded automatically.

If the phone book is not downloaded, consult the operating instructions for your mobile phone.

Press the button and then select the Phone screen button to display the respective menu.

Select **Phone Book**.

![Phone Book](image)
Quick search
1. Scroll through the list of phone book entries.
2. Tap on the contact you wish to call. A menu with all phone numbers stored for the selected contact is displayed.
3. Select the desired phone number to initiate the call.

Search menu
If the phone book contains a great number of entries, you can conveniently search for the desired contact via the search menu.

Select 📞 in the Phone book menu to display the search tab.

As on a telephone or mobile phone, the letters are organised in alphabetical groups on the screen buttons: abc, def, ghi, jkl, mno, pqrs, tuv, and wxyz.

Use ← to delete an entered group of letters.

1. Select the button containing the first letter of the contact you wish to search for.

For example: If the contact you wish to search for starts with 'g' select the ghi screen button.
Using the call history
All incoming, outgoing, or missed calls are registered.
Press the button and then select the Phone screen button to display the respective menu.
Select Call History to display the respective menu.

Select for outgoing calls, \( \text{\textdagger} \) for missed calls and \( \text{\textdaggerdbl} \) for incoming calls. The respective call list is displayed.

Select the desired entry to initiate a call.

Redialling a number
The last dialled phone number can be redialled.
Press the button and then select the Phone screen button to display the respective menu.
Tap on \( \text{\textdaggerdbl} \) for a few seconds. The number last dialled is redialled.

Using speed dial numbers
Speed dial numbers that are stored on the mobile phone can also be dialled using the keypad of the Phone main menu.
Press the button and then select the Phone screen button to display the respective menu.
Enter the desired speed dial number:
If the speed dial number consists of one digit, a long tap on the respective digit initiates the call.
If the speed dial number consists of two digits, tap on the first digit and then long tap on the second digit to initiate the call.
Incoming phone call

Taking a call
If an audio mode, e.g. the radio or USB mode, is active at the moment a call comes in, the audio source is muted and stays muted until the call ends.
A message with the caller’s phone number or name (if available) is displayed.

To answer the call, select the Accept screen button in the message or press the button on the steering wheel.

Rejecting a call
To reject the call, select Reject in the message or press the button on the steering wheel.

Changing the ring tone
Press the button and then select the Settings screen button.
Select Connection settings and then Change ringtone to display the respective menu. A list of ring tones is displayed.

Select one of the ring tones.
For a detailed description on the Ringtone volume 17.

Functions during a call
During an ongoing phone call the Phone main menu is displayed.

Deactivating the handsfree mode temporarily
To continue the conversation via the mobile phone, select the handsfree button.
To return to the handsfree mode, select the handsfree button again.

Note
If activated, the corresponding symbol is highlighted.
Deactivating the microphone temporarily
To mute the microphone, select 🎤.
To reactivate the microphone, select 🎤 again.

Note
If activated, the corresponding symbol is highlighted.

Ending a phone call
Select 📷 to end the call.

Mobile phones and CB radio equipment

Installation instructions and operating guidelines
The vehicle specific installation instructions and the operating guidelines of the mobile phone and handsfree manufacturer must be observed when installing and operating a mobile telephone. Failure to do so could invalidate the vehicle type approval (EU directive 95/54/EC).

Recommendations for fault-free operation:
- Professionally installed exterior antenna to obtain the maximum range possible,
- Maximum transmission power 10 watts,
- Installation of the phone in a suitable spot, consider relevant Note in the Owner’s Manual, section Airbag system.

Seek advice on predetermined installation points for the external antenna or equipment holder and ways of using devices with a transmission power exceeding 10 watts.

Use of a handsfree attachment without external antenna with mobile telephone standards GSM 900/1800/1900 and UMTS is only permitted if the maximum transmission power of the mobile telephone is 2 watts for GSM 900 or 1 watt for the other types.

For reasons of safety, do not use the phone while driving. Even use of a handsfree set can be a distraction while driving.

⚠️ Warning
Operation of radio equipment and mobile telephones which fail to meet above mentioned mobile telephone standards is only permitted using an antenna located outside of the vehicle.

⚠️ Caution
Mobile telephones and radio equipment may lead to malfunctions in the vehicle electronics when operated inside the vehicle with no exterior antenna, unless the above mentioned regulations are observed.

Introduction

General information

The Infotainment system provides you with state-of-the-art in-car infotainment.

Using the radio tuner functions, you may register up to 36 stations on six favourites pages.

The integrated audio player will entertain you with audio CDs and MP3/WMA CDs.

You can connect external data storage devices, e.g. iPod, MP3 player, USB stick, or a portable CD player to the Infotainment system as further audio sources; either via cable or via Bluetooth.

In addition, the Infotainment system is equipped with a Phone portal that allows for comfortable and safe use of your mobile phone in the vehicle.

Optionally, the Infotainment system can be operated using controls on the steering wheel.

The well-thought-out design of the control elements and the clear displays enable you to control the system easily and intuitively.

Note

This manual describes all options and features available for the various Infotainment systems. Certain descriptions, including those for display and menu functions, may not apply to your vehicle due to model variant, country specifications, special equipment or accessories.

Important information on operation and traffic safety

⚠️ Warning

The Infotainment system must be used so that the vehicle can be driven safely at all times. If in doubt, stop the vehicle and operate the Infotainment system while the vehicle is stationary.
Radio reception
Radio reception may be disrupted by static, noise, distortion or loss of reception due to:
- changes in distance from the transmitter,
- multipath reception due to reflection,
- shadowing.

Theft-deterrent feature
The Infotainment system is equipped with an electronic security system for the purpose of theft deterrence. The Infotainment system therefore functions only in your vehicle and is worthless to a thief.

Introduction

Usage

Control elements
The Infotainment system is operated via function buttons, a MENU-TUNE knob and menus that are shown on the display.

Inputs are made via the control panel on the Infotainment system 62
Optionally they are made via the audio controls on the steering wheel 62.

Switching the Infotainment system on or off
Press ∇ VOL briefly. After switching on, the last selected Infotainment source becomes active.
Press ∇ VOL again to turn the system off.

Automatic switch-off
If the Infotainment system is switched on pressing ∇ VOL while the ignition is turned off, it will switch off again automatically 10 minutes after the last user input.
Setting the volume
Turn \(\odot\) VOL. The current setting is shown on the display.
When the Infotainment system is switched on, the last selected volume is set, provided this setting is lower than the maximum startup volume (see below).
The following inputs can be made separately:
- the maximum startup volume \(\odot\) 71
- the volume of traffic announcements \(\odot\) 71.

Speed compensated volume
When speed compensated volume is activated \(\odot\) 71, the volume is adapted automatically to make up for the road and wind noises as you drive.

Mute function
Press \(\downarrow\) / \(\uparrow\) or \(\otimes\) (if Phone portal available: press for a few seconds) to mute the audio sources.

To cancel the mute function: turn \(\odot\) VOL or press \(\downarrow\)/\(\uparrow\) or \(\otimes\) again (if Phone portal available: press for a few seconds).

Volume limitation at high temperatures
At very high temperatures inside the vehicle the Infotainment system limits the maximum adjustable volume. If necessary, the volume is decreased automatically.

Modes of operation
Radio
Press RADIO to open the radio main menu or to change between the different wavebands.
Press MENU-TUNE to open the waveband menus with options for the station selection.
For a detailed description of the radio functions see \(\odot\) 73.

Audio players
R 3.0
Press AUX to activate the AUX mode.

CD 3.0 BT
Press MEDIA once or several times to open the CD, USB, iPod or AUX main menu or to switch between these menus.
Press MENU-TUNE to open the relevant menus with options for the track selection.
For a detailed description of CD player functions \(\odot\) 81, AUX functions \(\odot\) 84, USB port functions \(\odot\) 85 and Bluetooth music functions \(\odot\) 88.

Phone
Press \(\downarrow\) / \(\uparrow\) briefly to open the telephone menu.
Press MENU-TUNE to open the phone menu with options for the input and selection of numbers.
For a detailed description of the Phone portal \(\odot\) 90.
System settings

Adjusting the language
The menu texts on the Infotainment system's display can be displayed in various languages.
Press CONFIG to open the Settings menu.
Select Languages in the Settings menu to display the respective menu.

Choose the desired language for the menu texts.

Note
For a detailed description of menu operation 68.

Time and date settings
Find a detailed description in your Owner's Manual.

Vehicle settings
Find a detailed description in your Owner's Manual.

Other settings
Find a detailed description for all other settings in the relevant chapters.

Restore factory settings
All settings, e.g. the volume and tone settings, the favourite lists, or the Bluetooth device list, can be reset to the factory defaults.
Press CONFIG to open the Settings menu. Select Vehicle settings and then Restore factory settings.
The submenu prompts you with a question. To reset all values to the factory defaults, select Yes.

Basic operation

MENU-TUNE knob
The MENU-TUNE knob is the central control element for the menus.

Turn MENU-TUNE:
- to mark a menu option,
- to set a numeric value.
Press MENU-TUNE:
- to select or activate the marked option,
- to confirm a set value,
- to switch a system function on/off.

BACK button
Press BACK briefly:
- to exit a menu,
- to return from a submenu to the next higher menu level,
- to delete the last character in a character sequence.
Press and hold BACK for a few seconds to delete the entire entry.
Examples of menu operation

Selecting an option

Turn **MENU-TUNE** to move the cursor (= coloured background) to the desired option.
Press **MENU-TUNE** to select the marked option.

Submenus
An arrow on the right-hand edge of the menu indicates that after selection of the option a submenu with further options will be opened.

Activating a setting

Turn **MENU-TUNE** to mark the desired setting.
Press **MENU-TUNE** to activate the setting.

Setting a value

Turn **MENU-TUNE** to change the current value of the setting.
Press **MENU-TUNE** to confirm the set value.

The cursor then switches to the next value. If all values are set, you are automatically returned to the next higher menu level.

Adjusting a setting

Turn **MENU-TUNE** to adjust the setting.
Press **MENU-TUNE** to confirm the setting.

Switching a function on or off

Turn **MENU-TUNE** to mark the function to be switched on or off.
Press MENU-TUNE to switch between the settings On and Off.

**Entering a character sequence**

To enter character sequences, e.g. PIN codes or telephone numbers:

- Turn MENU-TUNE to mark the desired character.
- Press MENU-TUNE to confirm the marked character.
- The last character in the character sequence can be deleted by selecting ◀ or ▶ on the display or pressing ◀ BACK. Pressing and holding ◀ BACK deletes the entire entry.
- To change the position of the cursor in the character sequence already entered, select ◀ or ▶ on the display.

**Tone settings**

In the tone settings menu the tone characteristics can be set differently for each radio waveband and each audio player source.

- Press TONE to open the tone settings menu.

**Setting bass, midrange, and treble**

Scroll through the list and select Bass, Midrange or Treble.

- Set the desired value for the selected option.

**Setting the volume distribution between front and rear**

Scroll through the list and select Fader.

- Set the desired value.

**Setting the volume distribution between right and left**

Scroll through the list and select Balance.

- Set the desired value.
Selecting a tone style
Scroll through the list and select EQ (Equaliser). The EQ presets menu is displayed.

The displayed options offer optimised bass, middle, and treble presettings for the relevant style of music.
Select the desired option.

Setting an individual setting to "0"
Select the desired option and press MENU-TUNE for a few seconds.
The value is reset to "0".

Setting all settings to "0" or "OFF"
Press TONE for a few seconds.
All values are reset to "0", the EQ preset is set to "OFF".

Volume settings

Adjusting the speed compensated volume
Press CONFIG to open the Settings menu.
Select Radio settings and then Auto volume control.

The Auto volume control function can be deactivated or the degree of the volume adaptation can be selected in the menu displayed.
Select the desired option.

Adjusting the maximum startup volume
Press CONFIG to open the Settings menu.
Select Radio settings and then Maximum startup volume.

Set the desired value.

Adjusting the volume of traffic announcements
The volume of traffic announcements can be preset to increase or decrease in proportion to the normal audio volume.
Press CONFIG to open the Settings menu.
Select Radio settings, RDS options and then TA volume.

Set the desired value.
Adjusting the volume of the ring tone
Press CONFIG to open the Settings menu.
Select Phone settings, Sound & Signals and then Ring Volume.
Set the desired value.
Radio

Usage .......................................... 73
Station search .............................. 73
Autostore lists .............................. 74
Favourite lists ............................... 75
Waveband menus ........................ 75
Radio data system (RDS) ............ 77
Digital audio broadcasting ............ 79

Usage

Activating the radio
Press RADIO to open the radio main menu.

The station last played will be received.

Selecting the waveband
Press RADIO once or several times to select the desired waveband.
The station last played in that waveband will be received.

Station search

Automatic station search
Briefly press ← or → to play the next station in the station memory.

Manually station search
Press and hold ← or →. Release when the required frequency has almost been reached on the frequency display.

A search is made for the next station that can be received and it is played automatically.

Note
Manual station search: If the radio does not find a station, it switches automatically to a more sensitive search level. If it still does not find a station, the frequency that was last active is set again.

Note
FM waveband: when the RDS function is activated, only RDS stations are searched for, and when the radio traffic service (TP) is activated, only traffic service stations are searched for.

Manual station tuning
In the radio main menu, press MENU-TUNE to open the respective waveband menu and select manual tuning.
Radio

On the pop-up frequency display, turn **MENU-TUNE** and set the optimal reception frequency.

**Autostore lists**

The stations received best in a waveband can be searched for and stored automatically via the autostore function.

Each waveband has 2 autostore lists (**AS-Stations 1**, **AS-Stations 2**), in each of which 6 stations can be stored.

![AS-Stations 2](image)

**Note**
The currently received station is marked by ♤.

**Automatic station storing**
Press and hold FAV 1-2-3 until an autostore message is displayed. The 12 strongest stations in the current waveband will be stored in the 2 autostore lists.

To cancel the autostore procedure, press **MENU-TUNE**.

**Storing stations manually**
Stations can also be stored manually in the autostore lists.

Set the station to be stored.
Briefly press FAV 1-2-3 once or several times to switch to the desired list.

To store the station in a list position: press the corresponding station button 1...6 until a confirmation message is displayed.

**Note**
Manually stored stations are overwritten in an automatic station storing process.

**Retrieving a station**
Briefly press FAV 1-2-3 once or several times to switch to the desired list.

Briefly press one of the station buttons 1...6 to open the station at the corresponding list position.

**Note**
To operate this function, the **AS-Stations** function must be activated (see below).

**Activating the autostore stations function**
Press **CONFIG** to open the **Settings** menu.

Select **Radio settings** and then **AS-Stations** to open the respective menu.

Set the autostore stations for the respective waveband to **On**.
Favourite lists
Stations of all wavebands can be stored manually in the favourite lists.

6 stations can be stored in each favourite list. The number of available favourite lists can be set (see below).

Note
The currently received station is marked by 📻.

Storing a station
Set the station to be stored.
Briefly press FAV 1-2-3 once or several times to switch to the desired list.

To store the station in a list position: press the corresponding station button 1...6 until a confirmation message is displayed.

Retrieving a station
Briefly press FAV 1-2-3 once or several times to switch to the desired list.
Briefly press one of the station buttons 1...6 to open the station at the corresponding list position.

Defining the number of available favourite lists
Press CONFIG to open the Settings menu.
Select Radio settings and then Radio favourites to open the menu Max. number of favourites pages.

Select the desired number of available favourite lists.

Waveband menus
Alternative facilities for station selection are available via waveband specific menus.

Note
The following displays are shown as examples.

Stations lists
When in a radio main menu, turn MENU-TUNE to open the stations list of the respective waveband.
The receivable radio stations in the current reception area are displayed.

Note
If no station list has been created beforehand, the Infotainment system performs an automatic station search.
Select the desired station.
Note
The currently received station is marked by 🅱.

Updating the stations lists
When in a radio main menu, press MENU-TUNE to open the relevant waveband menu.
If the stations stored in the waveband-specific station list can no longer be received:
Select the respective menu item to update the station list in the respective waveband menu, e.g. Update FM station list.
A station search is started. Once the search is completed, the station last received will be played.
To cancel the station search: press MENU-TUNE.

Note
If the Infotainment system features a dual tuner, the stations lists are continuously updated in the background. No manual update is required.

Note
If a waveband-specific station list is updated, the corresponding category list is also updated.

Favourites list
While in a radio main menu, press MENU-TUNE to open the relevant waveband menu.
Select Favourites list. All stations saved in the favourite lists are displayed.

Select the desired station.

Note
The currently received station is marked by 🅱.

Category lists
Numerous radio stations broadcast a PTY code, which specifies the type of programme transmitted (e.g. news).

Some stations also change the PTY code depending on the content currently being transmitted.
The Infotainment system stores these stations, sorted by programme type, in the corresponding category list.
To search for a programme type determined by station: select the waveband specific category list option.
A list of programme types currently available is displayed.

Select the desired programme type.
A list of stations is displayed that transmit a programme of the selected type.
Select the desired station.
The category list is updated, too, when the corresponding waveband-specific station list is updated.

**Note**
The currently received station is marked by ⚫.

### DAB announcements
Besides their music programmes, numerous DAB stations broadcast various announcement categories.

The currently received DAB service (programme) is interrupted when any announcement of previously activated categories is pending.

**Activating announcement categories**
When in the DAB menu, select DAB announcements to display the respective menu.

Activate the desired announcement categories.
Several announcement categories can be selected at the same time.

**Note**
DAB announcements can only be received if the DAB waveband is activated.

### Radio data system (RDS)
RDS is a service of FM stations that considerably facilitates the finding of the desired station and its fault-free reception.

**Advantages of RDS**
- On the display, the programme name of the set station appears instead of its frequency.
- During a station search, the Infotainment system tunes in to RDS stations only.
- The Infotainment system always tunes into the best receivable broadcasting frequency of the set station by means of AF (Alternative Frequency).
- Depending on the station that is received, the Infotainment system displays radio text that can contain e.g. information about the current programme.

### Configuring RDS
Press CONFIG to open the Settings menu.
Select Radio settings and then RDS options.
Set the option **RDS** to **On** or **Off**.

**Note**
If RDS is switched off, it will be automatically switched on again when a radio station is changed (by search function or preset button).

**Note**
The following options are only available, if **RDS** is set to **On**.

### RDS options

#### Switching regionalisation on and off
At certain times some RDS stations broadcast regionally different programmes on different frequencies.

Set the option **Regional** to **On** or **Off**.

If regionalisation is switched on, only alternative frequencies (AF) with the same regional programmes are selected.

If regionalisation is switched off, alternative frequencies of the stations are selected without regard to regional programmes.

#### RDS scrolling text
Some RDS stations hide the programme name in the display line in order to display additional information.

To prevent additional information being displayed:
- Set **Text scroll freeze** to **On**.

#### TA volume
The volume of traffic announcements (TA) can be preset. For a detailed description \( \Rightarrow 71 \).

#### Radio traffic service
(\( \text{TP} = \text{Traffic Programme} \))

Radio traffic service stations are RDS stations that broadcast traffic news.

**Switching the radio traffic service on and off**

To switch the traffic announcement standby facility of the Infotainment system on and off:

Press the **TP** button.
- If the radio traffic service is switched on, [ ] is displayed in the radio main menu.
- Only radio traffic service stations are received.
- If the current station is not a radio traffic service station, a search is started automatically for the next radio traffic service station.
- If a radio traffic service station has been found, [TP] is displayed in the radio main menu.
- Traffic announcements are played at the preset TA volume \( \Rightarrow 71 \).
- If the radio traffic service is switched on, CD/MP3 replay is interrupted for the duration of the traffic announcement.

**Listening to traffic announcements only**
Switch on the radio traffic service and completely turn down the volume of the Infotainment system.
Blocking out traffic announcements
To block out a traffic announcement, e.g. during CD/MP3 replay:
Press TP or MENU-TUNE to confirm the cancelling message on the display.
The traffic announcement is cancelled, but the radio traffic service remains switched on.

Digital audio broadcasting
Digital audio broadcasting (DAB) is an innovative and universal broadcast system.
DAB stations are indicated by the programme name instead of the broadcasting frequency.

General information
- With DAB, several radio programmes (services) can be broadcasted on a single frequency (ensemble).
- Besides high-quality digital audio services, DAB is also able to transmit programme-associated data and a multitude of other data services including travel and traffic information.
- As long as a given DAB receiver can pick up the signal sent out by a broadcasting station (even if the signal is very weak), sound reproduction is ensured.
- There is no fading (weakening of the sound that is typical of AM or FM reception). The DAB signal is reproduced at a constant volume.
- If the DAB signal is too weak to be picked up by the receiver, reception is interrupted completely. This incident can be avoided by activating Auto ensemble linking and/or Auto linking DAB-FM in the DAB settings menu.
- Interference caused by stations that are on nearby frequencies (a phenomenon that is typical of AM and FM reception) does not occur with DAB.
- If the DAB signal is reflected by natural obstacles or buildings, the reception quality of DAB is improved, whereas AM or FM reception is considerably impaired in such cases.
- When DAB reception is enabled, the FM tuner of the Infotainment system remains active in the background and continually searches for the best receivable FM stations. If TP 77 is activated, traffic announcements of the FM station with the strongest signal are issued. Deactivate TP, if DAB reception should not be interrupted by FM traffic announcements.

Configuring DAB
Press CONFIG.
Select Radio settings and then DAB settings.
The following options are available in the configuration menu:

**Auto ensemble linking**
With this function activated, the device switches over to the same service (programme) on another DAB ensemble (frequency) when the DAB signal is too weak to be picked up by the receiver.

Set the function to On or Off.

**Auto linking DAB-FM**
With this function activated, the device switches over to a corresponding FM station of the active DAB service when the DAB signal is too weak to be picked up by the receiver.

Set the function to On or Off.

**Dynamic audio adaption**
With this function activated, the dynamic range of the DAB signal is reduced. That means the level of the loud sounds is reduced and the level of the quiet sounds is increased. Therefore, the volume of the Infotainment system can be raised to a point where the quiet sounds are audible, without the loud sounds being too loud.

Set the function to On or Off.

**Band selection**
Select the menu item Band selection to display the respective menu.

To define which DAB wavebands are to be received by the Infotainment system, activate one of the options:

- **L-Band**: 1452 - 1492 MHz, earth and satellite radio
- **Band III**: 174 - 240 MHz, earth radio
- **Both**
General information
The Infotainment system's CD player can play audio CDs and MP3/WMA CDs.

Important information

Caution
Under no circumstances place single-CDs with a diameter of 8 cm or shaped CDs in the audio player.
You must not put any stickers on CDs. These discs can get jammed in the CD drive and ruin the player. Replacement of the device will then be necessary.

- The following CD formats can be used:
  CD-ROM Mode 1 and Mode 2.
  CD-ROM XA Mode 2, Form 1 and Form 2.
- The following file formats can be used:
  ISO 9660 Level 1, Level 2 (Romeo, Joliet).
  MP3 and WMA files written in any format other than listed above may not play correctly and their file names and folder names may not be displayed correctly.
- Audio CDs with copy protection, which are not in compliance with the audio CD standard, may not play correctly or not at all.
- Self-recorded CD-Rs and CD-RWs are more vulnerable to mishandling than prerecorded CDs. Correct handling, especially in the case of self-recorded CD-Rs and CD-RWs, must be ensured (see below).
- Self-recorded CD-Rs and CD-RWs may not play correctly or not at all. In such cases it is not the equipment that is at fault.
- On mixed mode CDs (audio tracks and compressed files, e.g. MP3), the audio tracks part and the compressed files part can be played separately.
Avoid leaving fingerprints when you change CDs.

- Put CDs back in their sleeves immediately after removing them from the CD player in order to protect them from damage and dirt.
- Dirt and liquids on CDs can smear the lens of the CD player inside the device and cause faults.
- Protect CDs from heat and direct sunlight.

- The following restrictions apply to MP3/WMA CDs:
  - Bit rate: 8 kbit/s - 320 kbit/s.
  - Sampling frequency: 48 kHz, 44.1 kHz, 32 kHz (for MPEG-1) and 24 kHz, 22.05 kHz, 16 kHz (for MPEG-2).
- The following restrictions apply to the data stored on an MP3/WMA CD:
  - Number of tracks: max. 999.
  - Number of tracks per folder level: max. 512.
  - Folder structure depth: max. 10 levels.

**Note**
This chapter deals only with playing MP3 files since the operation for MP3 and WMA files is identical. When a CD with WMA files is loaded, MP3 related menus are displayed.

**Usage**

**Starting CD replay**
Press MEDIA once or several times to open the CD or MP3 main menu.

- If there is a CD in the CD player, CD playback is started.
- Depending on the data stored on the audio CD or MP3 CD, differing information about the CD and the current music track will be shown on the display.

**Inserting a CD**
Insert a CD with the printed side facing up into the CD slot until it is drawn in.

**Note**
If a CD is inserted, the CD symbol is shown on the display.

**Skipping to the next or previous track**
Briefly press the \( \downarrow \) or \( \uparrow \) buttons.

**Fast forward or rewind**
Press and hold the \( \downarrow \) or \( \uparrow \) buttons to fast forward or rewind the current track.

**Selecting tracks using the audio CD menu**
Press MENU-TUNE to open the CD menu.
Shuffle songs
To play all tracks in a random order: set this function to On.

**Note**
If this function is activated, ≈ is shown in the respective main menu.

Repeat
To repeatedly listen to a track: set this function to On.

**Note**
If this function is activated, is shown in the respective main menu.

Track list
To select a track on the CD: select Track list and then select the desired track.

Folders
To select a track from a folder: select Folders. A list of the folders stored on the CD is displayed.

Select one of the folders and then select the desired track.

**Note**
This menu item is only available, if an MP3 CD is inserted.

Search...
To open a menu for track search and selection: select Search....

Select one of the categories and then select the desired track.

**Note**
This menu item is only available, if an MP3 CD is inserted.

Removing a CD
Press △.

The CD is pushed out of the CD slot.
If the CD is not removed after ejection, it will be drawn back in again automatically after a few seconds.
AUX input

General information
On the control panel of the Infotainment system 62, there is an AUX input for the connection of external audio sources.
It is possible, for example, to connect a portable CD player with a 3.5 mm jack plug to the AUX input.

Note
The socket must always be kept clean and dry.

Usage
CD 3.0 BT
Press MEDIA once or several times to activate the AUX mode.

R 3.0
Press AUX to activate the AUX mode.

All other functions can be operated only via the control elements of the audio source.

Turn VOL of the Infotainment system to adjust the volume.
General information

In the centre console below the climate controls there is a USB socket for the connection of external audio data sources.

**Note**

The socket must always be kept clean and dry.

An MP3 player, USB drive, SD card (via USB connector/adapter), or iPod can be connected to the USB port.

When connected to the USB port, various functions of the above devices can be operated via the controls and menus of the Infotainment system.

**Note**

Not all MP3 player, USB drive, SD card or iPod models are supported by the Infotainment system.

**Important information**

- The external devices connected to the USB port must comply with the USB Mass Storage Class specification (USB MSC).

- Devices connected via USB are supported according to USB Specification V 2.0. Maximum supported speed: 12 Mbit/s.

- Only devices with a FAT16/FAT32 file system are supported.

- Hard disk drives (HDD) are not supported.

- USB hubs are not supported.

- The following file formats can be used:
  - ISO9660 Level 1, Level 2 (Romeo, Joliet).
  - MP3 and WMA files written in another format than listed above may not play correctly, and their file names and folder names may not be displayed correctly.

- The following restrictions apply to the files stored on the external device:
  - Bit rate: 8 kbit/s - 320 kbit/s.
  - Sampling frequency: 48 kHz, 44.1 kHz, 32 kHz (for MPEG-1) and
24 kHz, 22.05 kHz, 16kHz (for MPEG-2).

- The following restrictions apply to the data stored on external devices connected to the USB port:
  - Number of tracks: max. 999.
  - Number of tracks per folder level: max. 512.
  - Folder structure depth: max. 10 levels.
  - WMA files with Digital Rights Management (DRM) from online music shops cannot be played.
  - WMA files can only be played safely, if they were created with Windows Media Player version 9 or later.
  - Applicable playlist extensions: .m3u, .pls, .wpl.
  - Playlist entries must be in the form of relative paths.
  - The system attribute for folders/files that contain audio data must not be set.

### Playing saved audio files

Press MEDIA once or several times to activate the MP3 or iPod mode.

Replay of the audio data stored on the device is started automatically.

**MP3:**

**iPod:**

### Using the device-specific menu

Press MENU-TUNE to open the menu of the device currently connected.

### Shuffle songs

To play all tracks in a random order: set this function to On.

**Note**

If this function is activated, ≥ is shown in the respective main menu.

### Repeat

To repeatedly listen to a track: set this function to On.

**Note**

If this function is activated, ← is shown in the respective main menu.

### Folders

To select a track from a folder: select Folders. A list of the folders stored on the device is displayed.

Select one of the folders and then select the desired track.
Note
This menu item is not available, if an iPod is connected.

Search...
To open a menu for track search and selection: select Search....
Select one of the categories and then select the desired track.

Removing the device
To safely remove the device, select Remove USB or Eject iPod and then disconnect the device.
Bluetooth music

General information
Bluetooth enabled audio sources (e.g. music mobile phones, MP3 players featuring Bluetooth, etc.) which support the Bluetooth music protocol A2DP can be connected wirelessly to the Infotainment system.

Important information
- The Infotainment system only connects to Bluetooth devices that support A2DP (Advanced Audio Distribution Profile) version 1.2 or higher.
- The Bluetooth device must support AVRCP (Audio Video Remote Control Profile) version 1.0 or higher. If the device does not support AVRCP, only the volume can be controlled via the Infotainment system.
- Before connecting the Bluetooth device to the Infotainment system, become acquainted with the device’s operating instructions for Bluetooth functions.

Operation
Prerequisites
The following prerequisites must be met in order to use the Bluetooth music mode of the Infotainment system:
- The Bluetooth function of the Infotainment system must be activated 91.
- The Bluetooth function of the external Bluetooth audio source must be activated (see operating instructions for the device).
- Depending on the external Bluetooth audio source, it may be required to set the device to "visible" (see operating instructions for the device).
- The external Bluetooth audio source must be paired and connected to the Infotainment system 91.

Activating the Bluetooth music mode
Press MEDIA once or several times to activate the Bluetooth music mode.
Bluetooth music playback has to be started and paused/stopped via the Bluetooth device.

**Operation via Infotainment system**

**Adjusting the volume**
The volume can be adjusted via the Infotainment system  66.

**Skipping to next or previous track**
Briefly press  or  on the control panel of the Infotainment system.
General information

The Phone portal provides you with the possibility of having mobile phone conversations via a vehicle microphone and the vehicle loudspeakers as well as operating the most important mobile phone functions via the Infotainment system in the vehicle. To be able to use the Phone portal, the mobile phone must be connected to the Infotainment system via Bluetooth.

Not all Phone portal functions are supported by every mobile phone. The possible phone functions depend on the relevant mobile phone and network provider. You will find further information on this in the operating instructions for your mobile phone or you can enquire about them with your network provider.

Important information for operation and traffic safety

⚠️ Warning

Mobile phones have effects on your environment. For this reason safety regulations and directions have been prepared. You should be familiar with the related directions before you use the telephone function.

⚠️ Warning

Use of the hands-free facility while driving can be dangerous because your concentration is reduced when telephoning. Park your vehicle before you use the hands-free facility. Follow the stipulations of the country in which you find yourself at present.

Do not forget to follow the special regulations that apply in specific areas and always switch off the mobile phone if the use of mobile
phones is prohibited, if interference is caused by the mobile phone or if dangerous situations can occur.

Bluetooth
The Phone portal is certified by the Bluetooth Special Interest Group (SIG).
You will find further information about the specification on the Internet at http://www.bluetooth.com

Bluetooth connection
Bluetooth is a radio standard for the wireless connection of e.g. a telephone with other devices. Data such as a telephone book, call lists, the network operator's name, and field strength can be transferred. The functionality can be restricted depending on the telephone type.
To be able to set up a Bluetooth connection with the Phone portal, the Bluetooth function of the mobile phone must be activated and the mobile phone must be set to "visible".

Find a detailed description in the operating instructions for the mobile phone.

Activating Bluetooth
Press CONFIG to open the Settings menu.
Select Phone settings and then Bluetooth. The submenu prompts you with a question.

Set Bluetooth to On by answering the question with Yes or No, as required.

Pairing a Bluetooth device
Press CONFIG to open the Settings menu. Select Phone settings and then Pair device.
You may optionally press ✈️ / ✖️ twice.
The following display is shown:

As soon as the Phone portal of the Infotainment system is detected, it appears in the device list of your Bluetooth device. Select the Phone portal.
Upon request, enter the PIN code on your Bluetooth device. The devices are paired and connected.

Note
Your mobile phone book will be downloaded automatically. The presentation and order of the telephone book entries may be different on the Infotainment system's display and the mobile phone's display.

If the Bluetooth connection has been successfully performed: in case another Bluetooth device had been
connected to the Infotainment system, this device is now disconnected from the system.
If the Bluetooth connection failed: start the procedure described above again or consult the operating instructions for the Bluetooth device.

**Note**
A maximum of 5 devices can be paired with the Infotainment system.

**Changing the Bluetooth code**
Press CONFIG to open the Settings menu.
Select Phone settings and then Change Bluetooth code. The following display is shown:

![Change Bluetooth code](image)

Enter the desired four-digit PIN code and confirm your input with OK.

**Connecting another paired device**
Press CONFIG to open the Settings menu.
Select Phone settings and then Device list. A list of all Bluetooth devices currently paired to the Infotainment system is displayed.

**Note**
The Bluetooth device currently connected to the Infotainment system is indicated by 🔄.

Select the desired device. A submenu is displayed.
Select the submenu item Select to establish the connection.

**Disconnecting a device**
Press CONFIG to open the Settings menu.
Select Phone settings and then Device list. A list of all Bluetooth devices currently paired to the Infotainment system is displayed.

**Note**
The Bluetooth device currently connected to the Infotainment system is indicated by 🔄.

Select the paired device. A submenu is displayed.
Select the submenu item Disconnect to disconnect the device.

**Removing a paired device**
Press CONFIG to open the Settings menu.
Select Phone settings and then Device list. A list of all Bluetooth devices currently paired to the Infotainment system is displayed.

**Note**
The Bluetooth device currently connected to the Infotainment system is indicated by 🔄.

Select the desired device. A submenu is displayed.
If the device is connected, it must be disconnected first (see above). Select the submenu item Delete to remove the device.

Restoring the factory defaults
The phone settings, e.g. the device list, the Bluetooth code, and the ring tone, can be reset to the factory defaults. Press CONFIG to open the Settings menu. Select Phone settings and then Restore factory settings. The submenu prompts you with a question. To reset all values to the factory defaults, select Yes.

Emergency call

Warning
Connection setup cannot be guaranteed in all situations. For this reason, do not rely exclusively on a mobile phone when a vitally important communication (e.g. a medical emergency) is concerned.

Warning
Bear in mind that you can make and receive calls with the mobile phone, if it is in a service area with a sufficiently strong signal. Under certain circumstances emergency calls cannot be made on all mobile phone networks; it is possible that they cannot be made when certain network services and/or telephone functions are active. You can enquire about this with the local network operators. The emergency call number can differ depending on the region and country. Please enquire beforehand about the correct emergency call number for the relevant region.

Warning
Do not end the call until you are requested to do so by the emergency call centre.

Operation
As soon as a Bluetooth connection has been set up between your mobile phone and the Infotainment system, you can also operate many functions of your mobile phone via the Infotainment system. Via the Infotainment system, you can, e.g. set up a connection to the telephone numbers stored in your mobile phone or change the telephone numbers.

Making an emergency call
Dial the emergency call number (e.g. 112). The telephone connection to the emergency call centre is set up. Answer when the service personnel questions you about the emergency.

On some networks, it may be necessary for a valid SIM card to be properly inserted in the mobile phone.
In the handsfree mode, mobile phone operation is still possible, e.g. taking a call or adjusting the volume.

After the setup of a connection between the mobile phone and the Infotainment system, mobile phone data is transmitted to the Infotainment system. This can take several minutes depending on the phone model. During this period, operation of the mobile phone is possible via the Infotainment system only to a limited extent.

Not every mobile phone supports all functions of the Phone portal. Therefore deviations from the range of functions described with these specific mobile phones are possible.

The following prerequisites must be met in order to use the handsfree mode of the Infotainment system:

- The Bluetooth function of the Infotainment system must be activated.
- The Bluetooth function of the mobile phone must be activated (see user guide of the device).
- The mobile phone must be set to "visible" (see user guide of the device).
- The mobile phone must be paired to the Infotainment system.

Press \# on the control panel of the Infotainment system. The phone main menu is displayed.

If there is no mobile phone connected to the Infotainment system, No phone available is displayed. For a detailed description of how to establish a Bluetooth connection, see page 91.

Many functions of the mobile phone can now be controlled via the phone main menu (and associated submenus) and via the phone-specific controls on the steering wheel.

Initiating a phone call

Entering a number manually

While in the phone main menu, press MENU-TUNE to open the Phone Menu.

Select the submenu item Enter number. The following screen is displayed.
Enter the desired number and select ✆ on the display to start dialling.

**Note**
To open the Search screen of the phone book, select ☐.

**Using the phone book**
The phone book contains contact names and numbers.

Being in the phone main menu, press MENU-TUNE to open the Phone Menu.
Select the submenu item Phone book. The following screen is displayed.

As on a telephone or mobile phone, the letters are organised in alphabetical groups on the display: abc, def, ghi, jkl, mno, pQRS, tuv, and wxyz.

Select the desired group of letters. The phone book is displayed showing the entries starting with one of the letters in the letter group.
Scroll through the list and select the desired entry name.
Scroll through the list of phone numbers and select the desired number. The corresponding phone number is dialled.

**Adjusting the sorting order of the phone book**
After pairing and connecting a mobile phone to the Infotainment system, your mobile phone book with phone numbers and names will be automatically downloaded to the Infotainment system.
The phone book on the Infotainment system may be sorted by First Name or Last Name.
Press CONFIG to open the Settings menu.
Select Phone settings and then Phone book sorting.
Select the desired option.

**Using the call lists**
All incoming, outgoing, or missed calls are registered in corresponding call lists.

Being in the phone main menu, press MENU-TUNE to open the Phone Menu. Select the submenu item Call lists.
You may optionally press the ✆ / ✆ button.
The following screen is displayed.

Select the desired call list, e.g. Missed calls. A menu with the corresponding call list is displayed.
To initiate a phone call: select the desired list entry. The corresponding phone number is dialled.

**Redialling a phone number**
The last dialled phone number can be redialled.
Press 🔄 on the steering wheel to open the Redial menu.
Press 🔄 again to start dialling.
Press 🔄 to exit the Redial menu.
You may optionally use the MENU-TUNE knob to select No on the display.

**Incoming phone call**
If an audio mode, e.g. the radio or CD mode, is active at the time of an incoming call, the relating audio source will be muted and stay muted until the call ends.
To answer the call: select Answer on the display.
To reject the call: select Decline on the display.

**Second incoming phone call**
If a second phone call comes in during an ongoing call, a message is displayed.
To answer the second call and end the ongoing call: select Answer on the display.
To reject the second call and continue the ongoing call: select Decline on the display.

**Changing the ring tone**
Press CONFIG to open the Settings menu.
Select Phone settings, Sound & Signals and then Ring tone. A list of all ring tones available is displayed.
Select the desired ring tone.
For a detailed description on the ring tone volume ➤ 71.

**Functions during a phone call**
During an ongoing phone call, the phone main menu will be displayed as follows.

Select Menu on the display to open the menu Connected.
Select Hang up on the display to end the call.

**Activating the private mode**
In the Connected menu, select the submenu item Private call to switch the call to the mobile phone. The following display is shown.

To switch the call back to the Infotainment system, select Menu on the display and then Transfer call.
Deactivating/activating the microphone
In the **Connected** menu, set the submenu item **Mute Mic** to **On**. The caller cannot hear you any more.
To reactivate the microphone: set the submenu item **Mute Mic** to **Off** again.

Mobile phones and CB radio equipment

Installation instructions and operating guidelines
The vehicle specific installation instructions and the operating guidelines of the mobile phone and handsfree manufacturer must be observed when installing and operating a mobile telephone. Failure to do so could invalidate the vehicle type approval (EU directive 95/54/EC).

Recommendations for fault-free operation:
- Professionally installed exterior antenna to obtain the maximum range possible,
- Maximum transmission power 10 watts,
- Installation of the phone in a suitable spot, consider relevant Note in the Owner's Manual, section **Airbag system**.
Seek advice on predetermined installation points for the external antenna or equipment holder and ways of using devices with a transmission power exceeding 10 watts.
Use of a handsfree attachment without external antenna with mobile telephone standards GSM 900/1800/1900 and UMTS is only permitted if the maximum transmission power of the mobile telephone is 2 watts for GSM 900 or 1 watt for the other types.

For reasons of safety, do not use the phone while driving. Even use of a handsfree set can be a distraction while driving.

⚠️ **Warning**
Operation of radio equipment and mobile telephones which fail to meet above mentioned mobile telephone standards is only permitted using an antenna located outside of the vehicle.

⚠️ **Caution**
Mobile telephones and radio equipment may lead to malfunctions in the vehicle electronics when operated inside the vehicle with no exterior antenna, unless the above mentioned regulations are observed.

FlexDock

General information
FlexDock consists of a built-in base plate and different types of cradles which can be attached to the base plate. By inserting an iPhone or a different smartphone to the cradle, the smartphone can be controlled via the Infotainment system, steering wheel control or touch screen. Detailed cradle usage information can be found in the cradle manual supplied with each cradle.

⚠️ Warning

Devices attached to the FlexDock must be used in a way that driver distraction is avoided and the vehicle can be driven safely at all times. You must always comply with the respective laws and regulations of the country where you are driving. These laws may differ from the information in this manual. If in doubt, stop your vehicle and operate devices while the vehicle is stationary.

Usage

Attaching the cradle to the base plate

Note

Do not operate a further audio source via the USB socket at the same time due to superimpositions of both audio sources.

Caution

To avoid theft, do not leave the mobile phone in the FlexDock when leaving the vehicle.
1. Remove the cover from the base plate.
2. Push the cradle in the base plate and fold down.

Connecting the smartphone to the Infotainment system

Universal smartphone
Connect the smartphone to the cradle by using the connecting cable.

iPhone
The iPhone is connected automatically when it is inserted into the cradle.
Depending on the status of the software and hardware equipment, the functionality of the iPhone can be restricted.

Operating the smartphone
When the smartphone is connected via FlexDock, it has the same functionality as if it is connected via the USB socket. See the corresponding instructions in this manual for detailed information.

To use the phone function or the Bluetooth Music function, a Bluetooth connection must be established. See the corresponding instructions in this manual and the operating instructions for the smartphone for detailed information.

Removing the cradle from the base plate
1. Push the release button and remove the cradle.
2. Attach the cover to the base plate.
