Vehicle specific data
Please enter your vehicle's data on the previous page to keep it easily accessible. This information is available in the sections "Service and maintenance" and "Technical data" as well as on the identification plate.

Introduction
Your vehicle is a designed combination of advanced technology, safety, environmental friendliness and economy.

This Owner's Manual provides you with all the necessary information to enable you to drive your vehicle safely and efficiently.

Make sure your passengers are aware of the possible risk of accident and injury which may result from improper use of the vehicle.

You must always comply with the specific laws and regulations of the country that you are in. These laws may differ from the information in this Owner's Manual.

When this Owner's Manual refers to a workshop visit, we recommend your Opel Service Partner.

For gas vehicles we recommend an Opel Repairer authorised for servicing gas vehicles.

All Opel Service Partners provide first-class service at reasonable prices. Experienced mechanics trained by Opel work according to specific Opel instructions.

The customer literature pack should always be kept ready to hand in the vehicle.

Using this manual
- This manual describes all options and features available for this model. Certain descriptions, including those for display and menu functions, may not apply to your vehicle due to model variant, country specifications, special equipment or accessories.
- The "In brief" section will give you an initial overview.

The table of contents at the beginning of this manual and within each section shows where the information is located.

The index will enable you to search for specific information.

This Owner's Manual depicts left-hand drive vehicles. Operation is similar for right-hand drive vehicles.

The Owner's Manual uses the factory engine designations. The corresponding sales designations can be found in the section "Technical data".

Directional data, e.g. left or right, or front or back, always relate to the direction of travel.

The vehicle display screens may not support your specific language.

Display messages and interior labelling are written in bold letters.
Danger, Warnings and Cautions

⚠️ Danger

Text marked ⚠️ Danger provides information on risk of fatal injury. Disregarding this information may endanger life.

⚠️ Warning

Text marked ⚠️ Warning provides information on risk of accident or injury. Disregarding this information may lead to injury.

Caution

Text marked Caution provides information on possible damage to the vehicle. Disregarding this information may lead to vehicle damage.

Symbols

Page references are indicated with ✤. ✤ means "see page".

We wish you many hours of pleasurable driving.

Adam Opel AG
Initial drive information

Vehicle unlocking

Press 🔼 to unlock the doors and load compartment. Open the doors by pulling the handles.

To open the tailgate, push the touchpad switch below the brand emblem.
Radio remote control ➔ 23, Central locking system ➔ 24, Load compartment ➔ 27.
Seat adjustment

Seat positioning

Pull handle, slide seat, release handle. Try to move the seat back and forth to ensure that the seat is locked in place.

Seat position 37, Seat adjustment 38.

⚠️ Danger

Do not sit nearer than 25 cm from the steering wheel, to permit safe airbag deployment.

Seat backrests

Turn handwheel to adjust inclination. Do not lean on backrest while adjusting.

Seat position 37, Seat adjustment 38, Seat folding 39, Sport seat 39.

Seat height

Lever pumping motion
up = seat higher
down = seat lower

Seat position 37, Seat adjustment 38.
Head restraint adjustment

Press release button, adjust height, engage.
Head restraints ▶ 36.

Seat belt

Pull out the seat belt and engage in belt buckle. The seat belt must not be twisted and must fit close against the body. The backrest must not be tilted back too far (maximum approx. 25°).
To release belt, press red button on belt buckle.
Seat position ▶ 37, Seat belts ▶ 41, Airbag system ▶ 44.

Mirror adjustment

Interior mirror

Manual anti-dazzle

To reduce dazzle, adjust the lever on the underside of the mirror housing.
Interior mirror ▶ 31.

Automatic anti-dazzle
Depending on the version, there is an automatic anti-dazzle interior mirror.
Dazzle from following vehicles at night is automatically reduced. Automatic anti-dazzle interior mirror 31.

Select the relevant exterior mirror with the rocker switch and adjust the mirror with the control ⦿. Convex exterior mirrors 30, Electric adjustment 30, Folding exterior mirrors 30. Heated exterior mirrors 30.

Unlock the lever, adjust the steering wheel, then engage the lever and ensure it is fully locked. Do not adjust the steering wheel unless the vehicle is stationary and the steering wheel lock has been released. Airbag system 44, Ignition positions 133.

Exterior lighting

Light switch

Turn light switch:
0 = lights off
شعاعات ضوء = معتمدة
D = headlights

Fog lights
Press buttons in light switch
ўD = front fog lights
ў = rear fog light

Light switch with automatic light control

AUTO = automatic light control:
exterior lighting is switched on and off automatically

= activation or deactivation of the automatic light control
شعاعات ضوء = معتمدة
D = headlights

Automatic light control 113.
**In brief**

**Headlight flash, high beam and low beam**

- Headlight flash = pull lever
- High beam = push lever
- Low beam = push or pull lever

High beam ➤ 113, Headlight flash ➤ 113, High beam assist ➤ 115.

**Turn and lane-change signals**

- Lever up = right turn signal
- Lever down = left turn signal

Turn and lane-change signals ➤ 116, Parking lights ➤ 117.

**Hazard warning flashers**

Operated by pressing △.

Hazard warning flashers ➤ 116.
In brief

Horn

Press \( \text{horn} \).

Washer and wiper systems

Windscreen wiper

- **HI** = fast
- **LO** = slow
- **INT** = interval wiping
  - or
  - automatic wiping with rain sensor
- **OFF** = off

For single wipe when the wiper is off, press lever down to position 1x.

Windscreen wiper \( \Rightarrow 79 \).

Windscreen washer

Pull lever.

Windscreen washer system \( \Rightarrow 79 \),
Washer fluid \( \Rightarrow 190 \), Wiper blade replacement \( \Rightarrow 192 \).
Rear window wiper

Press the rocker switch to activate the rear window wiper:
- upper switch = continuous operation
- lower switch = intermittent operation
- middle position = off

Rear window washer

Push lever.
Washer fluid is sprayed on the rear window and the wiper wipes a few times.
Rear window wiper/washer \(\triangleright 80\).

Climate control

Heated rear window

The heating is operated by pressing \(\mathbb{H}\).
Heated rear window \(\triangleright 33\), heated windscreen \(\triangleright 33\).

Heated exterior mirrors

Pressing \(\mathbb{H}\) also activates the heated exterior mirrors.
Heated exterior mirror \(\triangleright 30\).
Demisting and defrosting the windows

- Set air distribution control to 🍂.
- Press ⛄️.
- Set temperature control to warmest level.
- Set fan speed to highest level.
- Switch on heated rear window 🎈.
- Open side air vents as required and direct them towards the door windows.

Climate control system ◊ 122.

Transmission

Manual transmission

Reverse: with the vehicle stationary, depress clutch pedal and press the release button on the selector lever and engage the gear.

If the gear does not engage, set the lever to neutral, release the clutch pedal and depress again; then repeat gear selection.

Manual transmission ◊ 143.

Automatic transmission

P = park
R = reverse
N = neutral
D = drive
M = manual mode
+ = press to upshift in manual mode
− = press to downshift in manual mode

The selector lever can only be moved out of P when the ignition is on and the brake pedal is applied. To engage P or R, press the release button.

Automatic transmission ◊ 140.
Manual transmission automated

R = reverse. Engage only when vehicle is stationary
N = neutral
D = automatic mode
M = manual mode
+ = upshift in manual mode
− = downshift in manual mode

Manual transmission automated 144.

Starting off

Check before starting off
- Tyre pressure and condition 208, 250.
- Engine oil level and fluid levels 187.
- All windows, mirrors, exterior lighting and number plates are free from dirt, snow and ice and are operational.
- Proper position of mirrors, seats, and seat belts 30, 37, 42.
- Brake function at low speed, particularly if the brakes are wet.

Starting the engine

- Turn key to position 1.
- Move the steering wheel slightly to release the steering wheel lock.
  Manual transmission automated: operate brake pedal.
  Automatic transmission: operate brake pedal and move selector lever to P or N.
- Do not operate accelerator pedal.
■ Diesel engines: turn the key to position 2 for preheating and wait until control indicator ! extinguishes.
■ Turn the key to position 2 for preheating and wait until control indicator ! extinguishes.
■ Turn key to position 3 and release.

Starting the engine ◇ 134.

**Stop-start system**

If the vehicle is at a low speed or at a standstill and certain conditions are fulfilled, activate an Autostop as follows:

**Vehicles with manual transmission:**

■ Depress the clutch pedal.
■ Set the lever to neutral.
■ Release the clutch pedal.

An Autostop is indicated by the control indicator (A).

To restart the engine, depress the clutch pedal again. The control indicator (A) extinguishes.

**Vehicles with manual transmission automated:**

If the vehicle is at a standstill with the brake pedal depressed, Autostop is activated automatically, indicated by control indicator (A).

Release the brake pedal or move selector lever out of D to restart the engine. Control indicator (A) extinguishes.

Stop-start system ◇ 135.
### Parking

**⚠️ Warning**

- Do not park the vehicle on an easily ignitable surface. The high temperature of the exhaust system could ignite the surface.
- Always apply the parking brake. Activate the manual parking brake without pressing the release button. Apply as firmly as possible on a downhill slope or uphill slope. Depress foot brake at the same time to reduce operating force.
- Switch off the engine.
- If the vehicle is on a level surface or uphill slope, engage first gear or set the selector lever to position P before removing the ignition key. On an uphill slope, turn the front wheels away from the kerb.
  
  If the vehicle is on a downhill slope, engage reverse gear or set the selector lever to position P before removing the ignition key. Turn the front wheels towards the kerb.
- Close the windows and the sunroof.
- Remove the ignition key. Turn the steering wheel until the steering wheel lock is felt to engage.
  
  For vehicles with automatic transmission, the key can only be removed when the selector lever is in position P.
  
  For vehicles with manual transmission automated, the key can only be removed from the ignition switch when the parking brake is applied.

- Lock the vehicle with the radio remote control.
  
  Activate the anti-theft alarm system 28.
- The engine cooling fans may run after the engine has been switched off 186.

### Caution

After running at high engine speeds or with high engine loads, operate the engine briefly at a low load or run in neutral for approx. 30 seconds before switching off, in order to protect the turbocharger.

Keys, locks 22, Laying-up the vehicle for a long period of time 185.
Keys, doors and windows

Keys, locks

Keys

Replacement keys
The key number is specified in the Car Pass or on a detachable tag.

The key number must be quoted when ordering replacement keys, as it is a component of the immobiliser system.

Locks

The code number of the adapter for the locking wheel bolts is specified on a card. It must be quoted when ordering a replacement adapter.

Wheel changing

Car Pass
The Car Pass contains security-related vehicle data and should therefore be kept in a safe place.

When the vehicle is taken to a workshop, this vehicle data is needed in order to perform certain operations.
Radio remote control

Used to operate:
- central locking system
- anti-theft locking system
- anti-theft alarm system

The radio remote control has a range of approx. 20 metres. It can be restricted by external influences. The hazard warning flashers confirm operation.

Handle with care, protect from moisture and high temperatures and avoid unnecessary operation.

Fault
If the central locking system cannot be operated with the radio remote control, it may be due to the following:
- The range is exceeded.
- The battery voltage is too low.
- Frequent, repeated operation of the radio remote control while not in range, which will require re-synchronisation.
- Overload of the central locking system by operating at frequent intervals, the power supply is interrupted for a short time.
- Interference from higher-power radio waves from other sources.

Unlocking 24.

Basic settings
Some settings can be changed in the Info-Display.
Vehicle personalisation 108.

Radio remote control battery replacement
Replace the battery as soon as the range reduces.

Fault
If the central locking system cannot be operated with the radio remote control, it may be due to the following:
- The range is exceeded.
- The battery voltage is too low.
- Frequent, repeated operation of the radio remote control while not in range, which will require re-synchronisation.
- Overload of the central locking system by operating at frequent intervals, the power supply is interrupted for a short time.
- Interference from higher-power radio waves from other sources.

Unlocking 24.

Basic settings
Some settings can be changed in the Info-Display.
Vehicle personalisation 108.

Radio remote control battery replacement
Replace the battery as soon as the range reduces.

Fault
If the central locking system cannot be operated with the radio remote control, it may be due to the following:
- The range is exceeded.
- The battery voltage is too low.
- Frequent, repeated operation of the radio remote control while not in range, which will require re-synchronisation.
- Overload of the central locking system by operating at frequent intervals, the power supply is interrupted for a short time.
- Interference from higher-power radio waves from other sources.

Unlocking 24.

Basic settings
Some settings can be changed in the Info-Display.
Vehicle personalisation 108.

Radio remote control battery replacement
Replace the battery as soon as the range reduces.
Radio remote control synchronisation
After replacing the battery, unlock the door with the key in the driver's door lock. The radio remote control will be synchronised when the ignition is switched on.

Memorised settings
Whenever the key is removed from the ignition switch, the following settings are automatically memorised by the key:
- lighting
- electronic climate control
- presets for Infotainment system
- central locking system
- comfort settings
The saved settings are automatically used the next time the memorised key is inserted into the ignition switch and turned to position 1.

A precondition is that Personalization by driver is activated in the personal settings of the Info-Display. This must be set for each key used.

Vehicle personalisation 108.

Central locking system
Unlocks and locks doors, load compartment and fuel filler flap.
A pull on an interior door handle unlocks the respective door. Pulling the handle once more opens the door.

Note
In the event of an accident in which airbags or belt pretensioners are deployed, the vehicle is automatically unlocked.

Note
Three minutes after unlocking with the remote control, the doors are relocked automatically if no door has been opened.

Unlocking
Press .
Two settings are selectable in the Info-Display:
- To unlock only the driver's door, load compartment and fuel filler flap; press once. To unlock all doors; press twice.
- Press once to unlock doors, load compartment and fuel filler flap.
Vehicle personalisation 108.
The setting can be saved for the key being used.
Memorised settings 24.
Unlocking and opening the tailgate 27.

**Locking**
Close doors, load compartment and fuel filler flap.

Press [e].

If the driver’s door is not closed properly, the central locking system will not work.

**Central locking buttons**
Locks or unlocks doors, the load compartment and fuel filler flap from inside the passenger compartment.

Press [e] to lock.
Press [c] to unlock.

**Delayed door lock**
Switch off engine and remove key from the lock. Press [e] with at least one door opened and three chimes will sound. When the last door is closed, the vehicle will automatically lock all doors after five seconds and a feedback is given.

After 10 minutes, the vehicle will automatically lock all doors even if a door is still open. This function may be activated or deactivated in the Info-Display. Vehicle personalisation 108.

**Fault in radio remote control system**

**Unlocking**

Manually unlock the driver’s door by turning the key in the lock. Switch on the ignition and press the central locking button [c] to unlock the other doors, load compartment and fuel filler flap.

By switching on the ignition, the anti-theft locking system is deactivated.
Locking
Manually lock the driver's door by turning the key in the lock.

Fault in central locking system

Unlocking
Manually unlock the driver's door by turning the key in the lock. The other doors can be opened by pulling the interior handle twice. The load compartment and fuel filler flap cannot be opened.

To deactivate the anti-theft locking system, switch on the ignition.

Locking
Press inside locking knob of all doors except driver's door. Then close the driver's door and lock it from the outside with the key.

The fuel filler flap and tailgate cannot be locked.

Automatic locking
This security feature can be configured to automatically lock doors, load compartment and fuel filler flap as soon as a certain speed is exceeded.

Additionally, it is configurable to unlock the driver's door or all doors after the ignition is switched off and the ignition key is removed (manual transmission) or the selector lever is moved to position P (automatic transmission).

Settings can be changed in the Info-Display.

Vehicle personalisation
The settings can be saved for the key being used.

Child locks

⚠️ Warning

Use the child locks whenever children are occupying the rear seats.

Using a key or suitable screwdriver, turn switch on rear door lock to the horizontal position. The door cannot be opened from inside.
Doors
Load compartment
Tailgate
Opening
To open the tailgate, push the touchpad switch below the brand emblem.

Closing
Use interior handle.
Do not press the touchpad switch whilst closing as this will unlock the tailgate again.
Central locking system 24.

General hints for operating tailgate

**Danger**
Do not drive with the tailgate open or ajar, e.g. when transporting bulky objects, since toxic exhaust gases, which cannot be seen or smelled, could enter the vehicle. This can cause unconsciousness and even death.

**Caution**
Before opening the tailgate, check overhead obstructions, e.g. a garage door, to avoid damage to the tailgate. Always check the moving area above and behind the tailgate.

**Note**
The installation of certain heavy accessories onto the tailgate may affect its ability to remain open.
Vehicle security

Anti-theft locking system

⚠️ Warning

Do not use the system if there are people in the vehicle! The doors cannot be unlocked from the inside.

The system deadlocks all the doors. All doors must be closed otherwise the system cannot be activated.

If the ignition was on, the driver's door must be opened and closed once so that the vehicle can be secured.

Unlocking the vehicle disables the mechanical anti-theft locking system. This is not possible with the central locking button.

Activating

Press 🅱️ on the radio remote control twice within 5 seconds.

Anti-theft alarm system

The anti-theft alarm system is combined with the anti-theft locking system.

It monitors:
- doors, tailgate, bonnet
- ignition

Activation

- Self-activated 30 seconds after locking the vehicle by pressing 🅱️ once.
- Directly by pressing 🅱️ twice within five seconds.

Status LED

Status LED is integrated in the sensor on top of the instrument panel.
Status during the first 30 seconds of anti-theft alarm system activation:
LED illuminates = test, arming delay
LED flashes quickly = doors, tailgate or bonnet not completely closed, or system fault

Status after system is armed:
LED flashes slowly = system is armed

Seek the assistance of a workshop in the event of faults.

Deactivation
Unlocking the vehicle by pressing on the radio remote control or by switching on the ignition.

The system is not deactivated by unlocking the driver's door with the key or with the central locking button in the passenger compartment.

Alarm
When triggered, the alarm horn sounds and the hazard warning lights flash simultaneously. The number and duration of alarm signals are stipulated by legislation.

The alarm can be silenced by pressing any button on the radio remote control or by switching on the ignition.

The anti-theft alarm system can only be deactivated by pressing on the radio remote control or by switching on the ignition.

A triggered alarm, which has not been interrupted by the driver, will be indicated by the hazard warning lights. They will flash quickly three times when the vehicle is unlocked with the radio remote control.

Vehicle messages 105.

Immobiliser
The system is part of the ignition switch and checks whether the vehicle is allowed to be started with the key being used.

The immobiliser is activated automatically after the key has been removed from the ignition switch.

If the control indicator 🚭 flashes when the ignition is on, there is a fault in the system; the engine cannot be started. Switch off the ignition and repeat the start attempt.

If the control indicator continues flashing, attempt to start the engine using the spare key and seek the assistance of a workshop.

Note
The immobiliser does not lock the doors. You should always lock the vehicle after leaving it.

Switch on the anti-theft alarm system 24, 28.

Control indicator 🚭 96.
Exterior mirrors

Convex shape
The convex exterior mirror contains an aspherical area and reduces blind spots. The shape of the mirror makes objects appear smaller, which will affect the ability to estimate distances.

Electric adjustment

Rocker switch in center position: no mirror is selected to be adjusted.

Folding mirrors
For pedestrian safety, the exterior mirrors will swing out of their normal mounting position if they are struck with sufficient force. Reposition the mirror by applying slight pressure to the mirror housing.

Parking position
The exterior mirrors can be folded in by pressing gently on the outer edge of the housing, e.g. when in a confined parking situation.

Heated mirrors

Operated by pressing . Mirror heating works with the engine running.

It is switched off automatically after six minutes.

Pressing once more during the same ignition cycle allows the heating to operate for another three minutes.
Interior mirrors

Manual anti-dazzle

To reduce dazzle, adjust the lever on the underside of the mirror housing.

Automatic anti-dazzle

Dazzle from following vehicles at night is automatically reduced.

Windows

Windscreen

Windscreen stickers
Do not attach stickers, e.g. toll road stickers or similar, on the windscreen in the area of the interior mirror. Otherwise the detection zone of the sensor in the mirror housing could be restricted.

Manual windows
The rear door windows can be opened or closed manually with the window cranks.
Power windows

⚠️ Warning

Take care when operating the power windows. Risk of injury, particularly to children.

Be careful when closing the windows. Ensure that nothing becomes trapped in them as they move.

Operable with ignition on (position 2) 133.
Retained power off 133.

Operate the switch in the door trim for the respective window by pushing to open or pulling to close.

Open
Short push: window opens in stages. Long push: window opens automatically up to end position. To stop movement, operate switch once more.

Close
Short pull: window closes in stages. Longer pull: window closes automatically up to end position. To stop movement, operate switch once more.

Safety function
If the window glass encounters resistance above the middle of the window during automatic closing, it is immediately stopped and opened again.

Override safety function
In the event of closing difficulties due to frost or the like, switch on the ignition, then pull the switch several times to close the windows in stages.

Overload
If the windows are repeatedly operated at short intervals, the window operation is disabled for some time.

Fault
If the windows cannot be opened or closed automatically, activate the window electronics as follows:
1. Close the doors.
2. Switch on ignition.
3. Close the window completely and operate the button for an additional five seconds.
4. Open the window completely and operate the button for one second further.
5. Repeat this procedure for each window.
Heated rear window
Operated by pressing \[\text{\textcopyright}\].
Rear window heating works with the engine running.
It is switched off automatically after six minutes.
Pressing \[\text{\textcopyright}\] once more during the same ignition cycle allows the heating to operate for another three minutes.

Heated windscreen
Operated by pressing \[\text{\textcopyright}\].
Windscreen heating works together with heated rear window and engine running.
It is switched off automatically after six minutes.
Pressing \[\text{\textcopyright}\] once more during the same ignition cycle allows the heating to operate for another three minutes.

Sun visors
The sun visors can be folded down or swivelled to the side to prevent dazzling.
The integral mirrors should be closed when driving.
A ticket holder is located on the backside of the sun visor.
Roof

Sunroof

⚠️ Warning

Take care when operating the sunroof. Risk of injury, particularly to children.

Keep a close watch on the movable parts when operating them. Ensure that nothing becomes trapped in them as they move.

Operable via a rocker switch with ignition on (position 2) 133.

Retained power off 133.

Raise

Hold switch depressed until the sunroof is raised at the rear.

Open

From raised position press and release switch: the sunroof is opened automatically up to end position. To stop movement before endposition, operate switch once more.

Close

Hold switch depressed from any position until sunroof is closed completely. Releasing the switch stops movement in any position.

⚠️ Caution

When using a roof rack, check the free movement of the sunroof in order to avoid damage. It is only permitted to raise the sunroof.

⚠️ Note

If the top of the roof is wet, tilt sunroof, allow water to run off and then open sunroof.

Do not affix any stickers to sunroof.

Sunblind

The sunblind is manually operated.

Close or open the sunblind by sliding. Sunblind is usable in each sunroof position.
Overload
If the system is overloaded, the power supply is automatically cut-off for a short time. The system is protected by fuses in the fuse box 201.

Initialising the sun roof
If the sunroof cannot be operated, activate the electronics as follows: with ignition on close the sunroof and hold  depressed for at least 10 seconds.
Seek the assistance of a workshop to have the cause of the fault remedied.
Head restraints

Position

⚠️ Warning
Only drive with the head restraint set to the proper position.

The upper edge of the head restraint should be at upper head level. If this is not possible for extremely tall people, set to highest position, and set to lowest position for small people.

Adjustment

Front head restraints, height adjustment
Press release button, adjust height, engage.
Rear head restraints, height adjustment

Pull the head restraint upwards and let engage. To move downwards, press the catch to release and push the head restraint downwards.

Removal of rear head restraint
E.g. when using a child restraint system \( \Rightarrow \) 50.

Press both catches, pull the head restraint upwards and remove.
Place the head restraint in a net bag and secure the underside of the bag with Velcro fasteners to the load compartment floor. A suitable net bag is available from your workshop.

Front seats

Seat position

\[ \text{\textbf{Warning}} \]

Only drive with the seat correctly adjusted.

- Sit with buttocks as far back against the backrest as possible. Adjust the distance between the seat and the pedals so that legs are slightly angled when pressing the pedals. Slide the front passenger seat as far back as possible.
Sit with shoulders as far back against the backrest as possible. Set the backrest rake so that it is possible to easily reach the steering wheel with arms slightly bent. Maintain contact between shoulders and the backrest when turning the steering wheel. Do not angle the backrest too far back. We recommend a maximum rake of approx. 25°.

- Adjust the steering wheel □ 77.
- Set seat height high enough to have a clear field of vision on all sides and of all display instruments. There should be at least one hand of clearance between head and the roof frame. Your thighs should rest lightly on the seat without pressing into it.

- Adjust the head restraint □ 36.
- Adjust the height of the seat belt □ 42.

### Seat adjustment

<table>
<thead>
<tr>
<th>△ Danger</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not sit nearer than 25 cm from the steering wheel, to permit safe airbag deployment.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>△ Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Never adjust seats while driving as they could move uncontrollably.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>△ Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Never store any objects under the seats.</td>
</tr>
</tbody>
</table>

### Seat positioning

Pull handle, slide seat, release handle. Try to move the seat back and forth to ensure that the seat is locked in place.
Seat backrests

Turn handwheel to adjust inclination. Do not lean on backrest while adjusting.

Seat height

Lever pumping motion
up = seat higher
down = seat lower

Seat folding

Pull release lever towards the front and fold backrest forwards. Then slide seat forwards to the stop.
To restore, slide the seat backwards to the stop. Lift backrest to upright position without operating the release lever. Allow backrest to engage.
### Warning

When folding up, ensure that the seat is securely locked in position before driving. Failure to do so may result in personal injury in the event of heavy braking or collision.

The memory function allows the seat to engage in its original position after folding.

Do not operate handwheel for backrest inclination when backrest is folded forwards.

### Caution

When seat height is in the highest position, push head restraints down and fold up sun visors before folding backrest forwards.

### Sport seat folding

Remove seat belt from belt mount on the backrest.

Pull release lever located on the backrest, fold backrest forwards and release lever. Slide seat forwards to the stop.

To restore, slide the seat backwards to the stop. Lift backrest to upright position without operating the release lever. Allow backrest to engage.

### Warning

When folding up, ensure that the seat is securely locked in position before driving. Failure to do so may result in personal injury in the event of heavy braking or collision.

The memory function allows the seat to engage in its original position after folding.

Do not operate backrest adjuster handwheel when backrest is folded forwards.
Heating

Activate seat heating by pressing ☮ for the respective front seat.
Activation is indicated by the LED in the button.
Pressing ☮ once more deactivates seat heating.
Seat heating is operational when engine is running.
During an Autostop seat heating is also operational.
Stop-start system ♂ 135.

Seat belts

The seat belts are locked during heavy acceleration or deceleration of the vehicle holding the occupants in the sitting position. Therefore the risk of injury is considerably reduced.

⚠️ Warning
Fasten seat belt before each trip.
In the event of an accident, people not wearing seat belts endanger their fellow occupants and themselves.

Seat belts are designed to be used by only one person at a time. Child restraint system ♂ 50.
Periodically check all parts of the belt system for damage, pollution and proper functionality.
Have damaged components replaced. After an accident, have the belts and triggered belt pretensioners replaced by a workshop.

Note
Make sure that the belts are not damaged by shoes or sharp-edged objects or trapped. Prevent dirt from getting into the belt retractors.

Seat belt reminder
Each seat is equipped with a seat belt reminder, indicated for driver seat as control indicator ♂ in the tachometer ♂ 91, and for front passenger seat as control indicator ♂ in the centre console ♂ 89.
For rear seats, the seat belt reminder is indicated by symbols ♂ in the Driver Information Centre (DIC) ♂ 97.
Belt force limiters
On the front seats and the rear outboard seats, stress on the body is reduced by the gradual release of the belt during a collision.

Belt pretensioners
In the event of a head-on or rear-end collision of a certain severity, the front seat belts are tightened.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Incorrect handling (e.g. removal or fitting of belts) can trigger the belt pretensioners.</td>
</tr>
</tbody>
</table>

Deployment of the belt pretensioners is indicated by continuous illumination of control indicator \( \# \) 92.

Triggered belt pretensioners must be replaced by a workshop. Belt pretensioners can only be triggered once.

Note
Do not affix or install accessories or other objects that may interfere with the operation of the belt pretensioners. Do not make any modifications to belt pretensioner components as this will invalidate the vehicle type approval.

Three-point seat belt

Fastening

Withdraw the belt from the retractor, guide it untwisted across the body and insert the latch plate into the buckle. Tighten the lap belt regularly while driving by pulling the shoulder belt.

Sport seat: Feed seat belt through belt mount on backrest when fastening seat belt.

Loose or bulky clothing prevents the belt from fitting snugly. Do not place objects such as handbags or mobile phones between the belt and your body.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>The belt must not rest against hard or fragile objects in the pockets of your clothing.</td>
</tr>
</tbody>
</table>

Seat belt reminder \( \# \) 91.
Height adjustment

1. Pull belt out slightly.
2. Shift the height adjustment upwards or press button to disengage and push the height adjustment downwards.

Adjust the height so that the belt lies across the shoulder. It must not lie across the throat or upper arm. Do not adjust while driving.

Removing

To release belt, press red button on belt buckle.
Using the seat belt while pregnant

The lap belt must be positioned as low as possible across the pelvis to prevent pressure on the abdomen.

**Warning**

If handled improperly the airbag systems can be triggered in an explosive manner.

**Note**

The airbag systems and belt pretensioner control electronics are located in the centre console area. Do not put any magnetic objects in this area.

Do not affix any objects onto the airbag covers and do not cover them with other materials.

---

**Airbag system**

The airbag system consists of a number of individual systems depending on the scope of equipment.

When triggered, the airbags inflate within milliseconds. They also deflate so quickly that it is often unnoticeable during the collision.

When the airbags inflate escaping hot gases may cause burns.

**Warning**

Each airbag is triggered only once. Have deployed airbags replaced by a workshop. Furthermore, it may be necessary to have the steering wheel, the instrument panel, parts of the panelling, the door seals, handles and the seats replaced.

Do not make any modifications to the airbag system as this will invalidate the vehicle type approval.

**Fault**

If there is a fault in the airbag system, the control indicator \[\text{ illuminate}\] and a message or a warning code appears in the Driver Information Centre. The system is not operational.

Have the cause of the fault remedied by a workshop.

Control indicator for airbag systems \[\text{ illuminate}\] 92.
Seats, restraints

Child restraint systems on front passenger seat with airbag systems

EN: NEVER use a rearward-facing child restraint on a seat protected by an ACTIVE AIRBAG in front of it; DEATH or SERIOUS INJURY to the CHILD can occur.

DE: Nach hinten gerichtete Kindersitze NIEMALS auf einem Sitz verwenden, der durch einen davor befindlichen AKTIVEN AIRBAG geschützt ist, da dies den TOD oder SCHwere VERLETZUNGEN DES KINDES zur Folge haben kann.

FR: NE JAMAIS utiliser un siège d'enfant orienté vers l'arrière sur un siège protégé par un COUSSIN GONFLABLE ACTIF placé devant lui, sous peine d'inflicter des BLESSURES GRAVES, voire MORTELLES à l'ENFANT.

ES: NUNCA utilice un sistema de retención infantil orientado hacia atrás en un asiento protegido por un AIRBAG FRONTAL ACTIVO. Peligro de MUERTE o LESIONES GRAVES para el NIÑO.

RU: ЗАПРЕЩАЕТСЯ устанавливать детское удерживающее устройство лицом назад на сиденье автомобиля, оборудованном фронтальной подушкой безопасности, если ПОДУШКА НЕ ОТКЛЮЧЕНА! Это может привести к СМЕРТИ или СЕРьЕЗным ТРАВМам РЕБЕНКА.

NL: Gebruik NOOIT een achterwaarts gericht kinderzitje op een stoel met een ACTIEVE AIRBAG ervoor, om DODELIJK of ERNSTIG LETSEL van het KIND te voorkomen.

DA: Brug ALDRIG en bagudvendt barnesikringsutstyr på et sæde med AKTIV AIRBAG, BARNET kan komme i LIVSFARSE eller komme ALVORLIGT TIL SKADE.

SV: Använd ALDRIG en bakåtvänd barnstol på ett säte som skyddas med en framförvarande AKTIV AIRBAG. DÖDSFALL eller ALLVARLIGA SKADOR kan drabba BARNET.

FI: ÄLÄ KOSKAAN sijoita taaksepäin suunnattua lasten turvaistuinta istuimelle, jonka edessä on AKTIIVINEN TURVATYYNY, LAPSVOI KUOLLA tai VAMMAUTUA VAKAVasti.

NO: Bakovervendt barnesikringsutstyr må ALDRI brukes på et sete med AKTIV KOLLISJONSPUTE foran, da det kan føre til at BARNET utsettes for LIVSFARE og fare for ALVORLIGE SKADER.

PT: NUNCA use um sistema de retenção para crianças voltado para trás num banco protegido com um AIRBAG ACTIVO na frente do
Seats, restraints

mesmo, poderá ocorrer a PERDA DE VIDA ou FERIMENTOS GRAVES na CRIANÇA.

IT: Non usare mai un sistema di sicurezza per bambini rivolto all’indietro su un sedile protetto da AIRBAG ATTIVO di fronte ad esso: pericolo di MORTE o LESIONI GRAVI per la BAMBINA!

EL: ΝΟΤΕ μη χρησιμοποιείτε παιδικό κάθισμα ασφαλείας με φορά προς τα πίσω σε κάθισμα που προστατεύεται από μετωπικό ΕΝΕΡΓΟ ΑΕΡΟΣΑΚΟ, διότι το παιδί μπορεί να υποστεί ΘΑΝΑΣΙΜΟ ή ΣΟΒΑΡΟ ΤΡΑΥΜΑΤΙΣΜΟ.

PL: NIE WOLNO montować fotelika dziecięcego zwróconego tyłem do kierunku jazdy na fotelu, przed którym znajduje się WŁĄCZONA PODUSZKA POWIETRZNA. Niezastosowanie się do tego zalecenia może być przyczyną ŚMIERCI lub POWIETRZNYCH OBRAŻEN Dziecka.

TR: Arkaya bakan bir çocuk emniyet sistemini KESİNLİKLE önünde bir AKTİF HAVA YASTIŞI ile korunmakta olan bir koltukta kullanmayınız. ÇOCUK ÖLEBİLİR veya AĞIR ŞEKİLDE YARALANABİLİR.

UK: НИКОЛИ не використовуйте систему безпеки для дітей, що встановлюється обличчям назад, на сидінні з УВІМКНЄНОЮ ПОДУШКОЮ БЕЗПЕКИ, інакше це може призвести до СМЕРТІ чи СЕРІЙОЗНОГО ТРАВМУВАННЯ ДИТИНИ.

HU: SOHA ne használjon hátrafelé néző biztonsági gyerekülést előlről AKTÍV LÉGSZÁKKAL védett ülésen, mert a GYERMEK HALÁLAT vagy KOMOLY SÉRÜLÉSÉT okozhatja.

HR: NIKADA nemojte koristiti sustav zadržavanja za djecu okrenut prema natrag na sjedalu s AKTIVnim ZRAČnim JASTUKOM ispred njega, to bi moglo dovesti do SMRTi ili OZBILJNIH OZLJEDA za DIJETE.

SL: NIKOLI ne nameščajte otroškega varnostnega sedeža, obrnjene v nasprotni smeri vožnje, na sedež z AKTIVNO ČELNO ZRAČNO BLAZINO, saj pri tem obstaja nevarnost RESNIH ali SMRTNIH POŠKODB za OTROKA.

SR: NIKADA не користите детско седиште свртено наназад на седиште заштитено со АКТИВНО ВОЗДУШНО ПЕРНИЧЕ пред него, затоа што детето може ДА ЗАГИНЕ или да биде ТЕШКО ПОВРЕДЕНО.

BG: НИКОГА не използвайте детска седалка, гледаща назад, върху седалка, която е защитена чрез АКТИВНА ВЪЗДУШНА ВЪЗДУШНА ВЪЗДУШНА пред нея - може да се стигне до СМЪРТ или СЕРИОЗНО НАРАНЯВАНЕ на ДЕТЕТО.

RO: Nu utilizați NICIODATĂ un scaun pentru copil îndreptat spre partea din spate a mașinii pe un scaun protejat de un AIRBAG ACTIV în fața sa;
The front airbag system is triggered in the event of a front-end impact of a certain severity. The ignition must be switched on.

Front airbag system

The front airbag system consists of one airbag in the steering wheel and one in the instrument panel on the front passenger side. The location is identified by the word AIRBAG.
The inflated airbags cushion the impact, thereby reducing the risk of injury to the upper body and head of the front seat occupants considerably.

⚠️ Warning

Optimum protection is only provided when the seat is in the proper position.

Seat position 37.

Keep the area in which the airbag inflates clear of obstructions.

Fit the seat belt correctly and engage securely. Only then is the airbag able to protect.

Side airbag system

The side airbag system consists of an airbag in each front seat backrest. The location is identified by the word AIRBAG.

The side airbag system is triggered in the event of a side impact of a certain severity. The ignition must be switched on.

⚠️ Warning

Keep the area in which the airbag inflates clear of obstructions.

Note

Only use protective seat covers that have been approved for the vehicle. Be careful not to cover the airbags.
Curtain airbag system
The curtain airbag system consists of an airbag in the roof frame on each side. The location is identified by the word AIRBAG on the roof pillars. The curtain airbag system is triggered in the event of a side-on impact of a certain severity. The ignition must be switched on.

Warning
Keep the area in which the airbag inflates clear of obstructions. The hooks on the handles in the roof frame are only suitable for hanging up light articles of clothing, without coat hangers. Do not keep any items in these clothes.

Airbag deactivation
The front passenger airbag system must be deactivated for child restraint system on the passenger seat according to the instructions in the tables 52.

Use the ignition key to choose the switch position:

- OFF = front passenger airbag is deactivated and will not inflate in the event of a collision. Control indicator OFF illuminates continuously in the centre console
- ON = front passenger airbag is active

The inflated airbags cushion the impact, thereby reducing the risk of injury to the head in the event of a side-on impact considerably.
DANGER

Deactivate passenger airbag only in combination with the use of a child restraint system, subject to the instructions and restrictions in the tables 52. Otherwise, there is a risk of fatal injury for a person occupying a seat with a deactivated front passenger airbag.

If the control indicator illuminates for approx. 60 seconds after the ignition is switched on, the front passenger airbag system will inflate in the event of a collision.

If both control indicators are illuminated at the same time, there is a system failure. The status of the system is not discernible, therefore no person is allowed to occupy the front passenger seat. Contact a workshop immediately.

Change status only when the vehicle is stopped with the ignition off.

Status remains until the next change.

Control indicator for airbag deactivation 92.

CHILD RESTRAINTS

CHILD RESTRAINT SYSTEMS

We recommend Opel child restraint systems which are tailored specifically to the vehicle.

The following child restraints are recommended for the following weight classes:

- **Group 0, Group 0+**
  Maxi Cosi Cabriofix plus Easyfix, for children up to 13 kg

- **Group I**
  OPEL Duo, for children from 13 kg to 18 kg in this group

When a child restraint system is being used, pay attention to the following usage and installation instructions and also those supplied with the child restraint system.

Check local laws and regulations for mandatory use of child restraint systems. In some countries, the use of child restraint systems is forbidden on certain seats.
If using a rear-facing child restraint system on the front passenger seat, the airbag system for the front passenger seat must be deactivated. This also applies to certain forward-facing child restraint systems as indicated in the tables. If using a rear-facing child restraint system on the front passenger seat, the airbag system for the front passenger seat must be deactivated. This also applies to certain forward-facing child restraint systems as indicated in the tables.

**Danger**

Airbag deactivation 49.

Airbag label 44.

The rear seats are the most convenient location to fasten a child restraint system.

Children should travel facing rearwards in the vehicle as long as possible. This ensures that the child’s backbone, which is still very weak, is under less strain in the event of an accident.

**Selecting the right system**

Only use suitable restraint systems, e.g. those that comply with valid UN ECE regulations.

Ensure that the child restraint system to be installed is compatible with the vehicle type. Refer to the tables on the following pages, the instructions supplied with the child restraint system and the vehicle type list of non-universal child restraint systems.

Ensure that the mounting location of the child restraint system within the vehicle is correct, see following tables.

Allow children to enter and exit the vehicle only on the side facing away from the traffic.

When the child restraint system is not in use, secure the seat with a seat belt or remove it from the vehicle.

Child restraint systems could be fastened with ISOFIX mounting brackets, Top-tether if available, and/or a three-point seat belt. Refer to the following tables.

**Note**

Do not affix anything on the child restraint systems and do not cover them with any other materials.

A child restraint system which has been subjected to stress in an accident must be replaced.
## Child restraint installation locations

**Permissible options for fastening a child restraint system with a three-point seat belt**

IL = suitable for particular ISOFIX restraint systems of the "specific-vehicle", "restricted" or "semi-universal" categories. (ISOFIX/Top-tether fastening points optional for the front passenger seat but not available for sport seats). The ISOFIX restraint system must be approved for the specific vehicle type (refer to the vehicle type list of the child restraint system).

IUF = suitable for ISOFIX forward-facing child restraint systems of universal category approved for use in this weight class (ISOFIX/Top-tether fastening points optional for the front passenger seat but not available for sport seats).

X = no ISOFIX child restraint system approved in this weight class

¹ = move seat forwards as far as necessary and adjust seat backrest inclination as far as necessary to a vertical position to ensure that the belt runs forwards from the upper anchorage point

² = move seat height adjustment upwards as far as necessary and adjust seat backrest inclination as far as necessary to a vertical position to ensure that the belt is tight on the buckle side

³ = move the respective front seat ahead of the child restraint system forwards as far as necessary

⁴ = adjust the respective backrest to the rearmost position ☞ 69, adjust the respective headrest as necessary or remove if required ☞ 36

⁵ = ISOFIX/Top-tether fastening points optional for the front passenger seat (not available for sport seats)
ISOFIX size class and seat device

A – ISO/F3 = forward-facing child restraint system for children of maximum size in the weight class 9 to 18 kg
B – ISO/F2 = forward-facing child restraint system for smaller children in the weight class 9 to 18 kg
B1 – ISO/F2X = forward-facing child restraint system for smaller children in the weight class 9 to 18 kg
C – ISO/R3 = rear-facing child restraint system for children of maximum size in the weight class up to 18 kg
D – ISO/R2 = rear-facing child restraint system for smaller children in the weight class up to 18 kg
E – ISO/R1 = rear-facing child restraint system for young children in the weight class up to 13 kg
ISOFIX child restraint systems
Fasten vehicle-approved ISOFIX child restraint systems to the ISOFIX mounting brackets. Specific vehicle ISOFIX child restraint system positions are marked in the table by IL.

The vehicle is equipped with guides in the backrests to support the installation of the child restraint system.

ISOFIX child restraint systems on rear seats

ISOFIX mounting brackets on the rear seats are indicated by the ISOFIX logo on the backrest. Open the flaps of the guides before mounting a child restraint system. After removing the child restraint system, close the flaps.

ISOFIX child restraint systems on front passenger seat

Place the child restraint system in the centre of the seat and push backwards. Make sure that the child restraint system is engaged properly.

Top-tether fastening eyes
In addition to the ISOFIX mounting, fasten the Top-tether strap to the Top-tether fastening eyes. ISOFIX child restraint systems of universal category positions are marked in the table by IUF.

Top-tether fastening eye on rear seats
The vehicle has two fastening eyes on the backside of the rear seats. Top-tether fastening eyes are marked with the symbol for a child seat.
Top-tether fastening eye on front passenger seat
An additional fastening point is located on the passenger seat rail in the rear foot well.
Storage

Storage compartments

⚠️ Warning

Do not store heavy or sharp objects in the storage compartments. Otherwise, the storage compartment lid could open and vehicle occupants could be injured by objects being thrown around in the event of hard braking, a sudden change in direction or an accident.

Glovebox

Pull lever to open the glovebox cover. The glovebox features a coin holder and an adapter for the locking wheel bolts. The glovebox should be closed whilst driving.

Cupholders

Cupholders are located in the centre console.
The pockets in the doors are designed to carry bottles.

Additional bottleholders are located in the rear side panels.

Flexible cupholder strap

A movable rubber strap is located in the storage compartment in front of the gear selector lever. Pull out the strap to fix a cup or ashtray.

Front storage

Storage compartments are located below the light switch, in the centre console, in the door pockets and in the side panels near the rear seats.
**Underseat storage**

Lift at recessed edge and pull out. Maximum load: 1.5 kg. To close, push in and engage.

**Rear carrier system**

The rear carrier system (Flex-Fix system) allows bicycles to be attached to a pull-out carrier integrated into the vehicle floor. The transportation of other objects is not permitted.

The maximum load of the rear carrier system is 40 kg. The maximum load per bicycle is 20 kg.

The wheelbase of a bicycle must not exceed 1.2 metres. Otherwise the secure fastening of a bicycle is not possible.

If not in use, the carrier system can be slid back into the vehicle floor. There must not be any objects on the bicycles that could become loose during transportation.

<table>
<thead>
<tr>
<th><strong>Caution</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not attach bicycles with carbon pedal cranks to bicycle carriers. The bicycles may get damaged.</td>

<tbody>
<tr>
<td>Open the tailgate.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>⚠️ Warning</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>No persons may remain in the extension zone of the rear carrier system, risk of injury.</td>
</tr>
</tbody>
</table>
Pull release lever up. The system disengages and travels quickly out of the bumper.

Completely pull out the rear carrier system until you hear it engage. Ensure that it is not possible to push in the rear carrier system without pulling the release lever again.

**Warning**

It is only permissible to fit objects to the rear carrier system if the system has been correctly engaged. If the rear carrier system will not engage correctly, do not fit objects to the system and slide the system back. Seek the assistance of a workshop.

Install the tail lamps

First remove the rear (1), then the front (2) tail lamp from the recesses.
Open out the lamp support on the back of the tail lamp completely until it engages.

Push the clamping lever down and push the lamp support into the retainer until it engages. Perform this procedure for both tail lamps.

Check the cable and lamp position to make sure these are correctly installed and are securely located.

Lock the rear carrier system

Swivel the left clamping lever (1) first, followed by the right clamping lever (2) until they stop. Both clamping levers must point backwards, otherwise safe functionality is not guaranteed.

**Note**
Close the tailgate.
Unfold pedal crank recesses

Fold one or both pedal crank recesses upwards until the diagonal support engages.

Remove the pedal crank mounts from the pedal crank recesses.

Adapting the rear carrier system to a bicycle

Press the release lever and withdraw the wheel recesses.
Push the release lever on the strap retainer and remove the strap retainer.

Prepare the bicycle for attachment

Note
The maximum width for the pedal crank is 38.3 mm and the maximum depth is 14.4 mm.

Rotate the left pedal (without a chain cog) vertically downwards. The pedal on the left pedal crank must be horizontal.
The front bicycle must have its front wheel facing left.
The rear bicycle must have its front wheel facing right.

Attaching a bicycle to the rear carrier system

With the rotary lever on the pedal crank recess, roughly adapt the adjustable pedal crank unit to the protrusion of the pedal crank.
If the bicycle has straight pedal cranks, unscrew the pedal crank unit completely (position 5).
If the bicycle has curved pedal cranks, screw in the pedal crank unit all the way (position 1).

Put on the bicycle. The pedal crank here must be placed in the pedal crank recess opening as shown in the illustration.

**Caution**

Make sure that the pedal does not touch the surface of the rear end carrier. Otherwise the crankset might be damaged during the transport.

Attach the pedal crank by rotating the attachment screw on the pedal crank mount.

Insert pedal crank mount into outer rail of each pedal crank recess from above and slide downwards until at least underneath the notching.
Place the wheel recesses so that the bicycle is roughly horizontal. Here, the distance between the pedals and the tailgate should be at least 5 cm. Both bicycle tyres must be in the wheel recesses.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Make sure to pull out the wheel recesses as far as necessary to have both bicycle tyres placed in the recesses. Otherwise a horizontal mounting of the bicycle is not ensured. Disregard could lead to damage of the bicycle wheels caused by hot exhaust fumes.</td>
</tr>
</tbody>
</table>

Align the bicycle in the longitudinal direction of the vehicle: Slightly loosen the pedal mount.

Place the bicycle upright using the rotary lever on the pedal crank recess.

If the two bicycles obstruct one another, the relative positions of the bicycles can be adapted by adjusting the wheel recesses and the rotary lever on the pedal crank recess until the bicycles no longer touch one another. Make sure there is sufficient clearance from the vehicle.

Tighten the attachment screw for the pedal bearing mount to its maximum point by hand.

Secure both bicycle wheels to wheel recesses using strap retainers.

Check the bicycle to make sure it is secure.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ensure gap between bicycle and vehicle is at least 5 cm. If necessary, loosen handlebar and swivel sideways.</td>
</tr>
</tbody>
</table>
The settings for the wheel recesses and on the rotary lever on the pedal crank recess should be noted and saved for each bicycle. Correct presetting will facilitate refitting of the bicycle.

**Note**
It is recommended to attach a warning sign at the rearmost bicycle to increase visibility.

**Removing a bicycle from the rear carrier system**

Undo strap retainers on both bicycle tyres.

Hold on to the bicycle, loosen the attachment screw for the pedal bearing mount, then lift the pedal bearing mount to remove it.

**Retracting the rear carrier system**

Push the pedal crank mounts into the pedal crank recess as shown in the illustration.

Insert the strap retainer and pull tightly downwards as far as possible.
Press release lever and slide in wheel recesses all the way as far as they will go.

Disengage the locking lever on the diagonal support and fold both pedal crank recesses down.

⚠️ Warning
Risk of pinching.

Swivel first the right clamping lever (1) forwards, followed by the left clamping lever (2), until they can be engaged in their respective recesses.

Push the clamping lever down and pull both lamp supports out of the recesses.

Fold in the lamp supports on the backs of the tail lamps.
First place the front tail lamp (1), then the rear tail lamp (2) in the recesses and push down as far as possible. Push cables all the way into all guides in order to prevent damage.
Open the tailgate.
Push the release lever up and hold. Lift the system slightly and push it into the bumper until it engages. Release lever must return to original position.

\[\text{Warning}\]

If the system cannot be correctly engaged, please seek the assistance of a workshop.

**Load compartment**

**Load compartment extension**
The rear backrest can be locked in two positions. When transporting bulky items, lock in an upright position.

Pull the release handle on both sides, pull the backrest forwards to the vertical position and engage.

When unlocking, a red marking appears next to the release lever. The backrest is properly engaged when the red marks on both sides near the release lever are no longer visible.

**Folding down rear backrests**
Remove load compartment cover as necessary.
Push head restraints down by pressing the catch.

**Split backrest**
Pull the release handle on the relevant side, pull the backrest forwards to the vertical position and engage.

**Single-unit backrest**
Guide the seat belts through side supports to protect them against damage. When folding the backrest, pull the seat belts along with it.

**Split backrest**
Pull the release handle on the relevant side and fold it down onto the seat cushion.

**Single-unit backrest**
Pull the release handle on both sides and fold it down onto the seat cushion.

If the vehicle is to be loaded via a rear door, take the seat belt out of the seat backrest guide and insert the latch plate in the recess as shown in the illustration. To fold up, raise the backrest and guide it into an upright position until it engages audibly.

Ensure that the seat belts of the outboard seats are placed in the corresponding belt guides.

The backrest is properly engaged when the red marks on both sides near the release lever are no longer visible.

---

**⚠️ Warning**

Only drive the vehicle when the backrests are securely locked into position. Otherwise there is a risk of personal injury or damage to the load or vehicle in the event of hard braking or a collision.

The seat belt of the centre seat could be blocked when the backrest is folded up too quickly. To unlock the retractor, push in the seat belt or pull it out by approx. 20 mm and then let go.
Load compartment cover
Do not place any objects on the cover.

3-/5-door hatchback

Removing

Unhook retaining straps from tailgate.
Lift cover at the rear and push it upwards at the front.
Remove the cover.

Stowing
When the load compartment is fully loaded, stow the load compartment cover on the rear seats or remove from vehicle.

Fitting
Engage cover in side guides and fold downwards. Attach retaining straps to tailgate.

Delivery van
The load compartment cover consists of four segments which can be individually removed and inserted.

Removing

To remove rear cover, unhook retaining straps from tailgate.
Lift cover at the rear and push it upwards at the front. Remove the cover.

Fitting
Install the segments in the order 3 to 1. Engage segments in recesses at the side.
The segments overlap at the connecting points when they are closed.

To remove the three other segments (order 1 to 3) lift at the rear, disengage, twist and remove.
To install rear cover engage cover in side guides and fold downwards. Attach retaining straps to tailgate.

**Rear floor storage cover**

**Rear floor cover**

Lift up rear floor cover to gain access to emergency breakdown equipment.

Tools 207.

In models with a tyre repair kit on the right side in the load compartment, the spare wheel recess may be used as an additional stowage compartment. Tyre repair kit 215.

**Double load-bay floor**

The double load-bay floor can be inserted in the load compartment in two positions:

- directly above the cover for the spare wheel recess or the floor cover
- or in the upper openings in the load compartment

To remove, lift the load-bay floor using the recess and pull backwards.

To insert, push the load-bay floor forwards in the corresponding guide, then lower.

If mounted in the upper position, the space between the load-bay floor and the spare wheel well cover can be used as a stowage compartment.

In this position, if the rear seat backrests are folded forwards, an almost completely flat load bay is created.

The double load-bay floor is able to withstand a load of no more than 100 kg. In the lower position, the double load-bay floor is able to withstand the maximum permissible load.

**General hint**

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>For safety reasons, stow all parts in the load compartment in its position, always drive with a...</td>
</tr>
</tbody>
</table>
closed rear floor cover and, if possible, with folded up rear backrests.
Otherwise, vehicle occupants could be injured by objects being thrown around in the event of hard braking, a sudden change in direction or an accident.

Lashing eyes
3-/5-door hatchback

The lashing eyes are designed to secure items against slippage, e.g. using lashing straps or luggage net.

Delivery van

Loading can be secured by 4 lashing eyes in the load compartment

Warning triangle

The warning triangle is stowed in the load compartment below the tailgate.
First aid kit

Stow the first-aid kit in the compartment in the left wall of the load compartment.
To open the compartment, disengage cover and open it.

Roof rack system

Roof rack
For safety reasons and to avoid damage to the roof, the vehicle approved roof rack system is recommended. For further information contact your workshop.
Follow the installation instructions and remove the roof rack when not in use.

Fitting on model without sunroof

Push covers for concealing roof rack mounts down and push backwards with a valve cap key 207.

Fitting on model with sunroof

Disengage covers concealing roof rack mounts by pushing sliders in direction of arrow and remove upwards. To close roof rack mounts, first insert covers at front and engage sliders at rear.
Attach roof rack at appropriate points, see enclosed roof rack system instructions.
Loading information

- Heavy objects in the load compartment should be placed against the seat backrests. Ensure that the backrests are securely engaged. If objects can be stacked, heavier objects should be placed at the bottom.
- Secure objects with lashing straps attached to the lashing eyes 73.
- Use the hook at the right sidewall of the load compartment for hanging up carrier bags. Maximum load: 5 kg.
- Secure loose objects in the load compartment to prevent them from sliding.
- When transporting objects in the load compartment, the backrests of the rear seats must not be angled forward.
- Do not allow the load to protrude above the upper edge of the backrests.
- Do not place any objects on the load compartment cover or the instrument panel, and do not cover the sensor on top of the instrument panel.
- The load must not obstruct the operation of the pedals, parking brake and gear selector lever, or hinder the freedom of movement of the driver. Do not place any unsecured objects in the interior.
- Do not drive with an open load compartment.

⚠️ Warning

Always make sure that the load in the vehicle is securely stowed. Otherwise objects can be thrown around inside the vehicle and cause personal injury or damage to the load or car.

- The payload is the difference between the permitted gross vehicle weight (see identification plate 237) and the EC kerb weight.

To calculate the payload, enter the data for your vehicle in the Weights table at the front of this manual.

The EC kerb weight includes weights for the driver (68 kg), luggage (7 kg) and all fluids (tank 90 % full).

Optional equipment and accessories increase the kerb weight.

Driving with a roof load increases the sensitivity of the vehicle to cross-winds and has a detrimental effect on vehicle handling due to
the vehicle's higher centre of gravity. Distribute the load evenly and secure it properly with retaining straps. Adjust the tyre pressure and vehicle speed according to the load conditions. Check and retighten the straps frequently.
Do not drive faster than 120 km/h.
The permissible roof load is 75 kg. The roof load is the combined weight of the roof rack and the load.

Information displays ....................... 97
Vehicle messages ......................... 105
Vehicle personalisation ............... 108

Steering wheel adjustment

Unlock lever, adjust steering wheel, then engage lever and ensure it is fully locked.
Do not adjust steering wheel unless vehicle is stationary and steering wheel lock has been released.

Steering wheel controls

Cruise control, Speed limiter, Forward collision alert setting, Infotainment system and a connected mobile phone can be operated via the controls on the steering wheel.

Driver assistance systems 152.
Further information is available in the Infotainment system manual.
Heated steering wheel

Activate heating by pressing ⚡. Activation is indicated by the LED in the button.

The highlighted grip areas of the steering wheel are heated quicker and to a higher temperature than the other areas.

Heating is operational when the engine is running and during an Autostop.

Stop-start system ◯ 135.

Horn

Press ⬛.
Windscreen wiper/washer

Windscreen wiper

HI = fast
LO = slow
INT = interval wiping
OFF = off

For a single wipe when the windscreen wiper is off, press the lever down to position 1x.

Do not use if the windscreen is frozen.

Switch off in car washes.

Adjustable wiper interval

Wiper lever in position INT.

Turn the adjuster wheel to adjust the desired wipe interval:

short interval = turn adjuster wheel upwards
long interval = turn adjuster wheel downwards

Automatic wiping with rain sensor

INT = automatic wiping with rain sensor

The rain sensor detects the amount of water on the windscreen and automatically regulates the frequency of the windscreen wiper.

If the wiper frequency is above 20 seconds, the wiper arm moves slightly down to the park position.
Adjustable sensitivity of the rain sensor

Turn the adjuster wheel to adjust the sensitivity:
- Low sensitivity = turn adjuster wheel downwards
- High sensitivity = turn adjuster wheel upwards

Windscreen washer

Keep the sensor free from dust, dirt and ice.

Rear window wiper/washer

Pull lever. Washer fluid is sprayed onto the windscreen and the wiper wipes a few times.

Press the rocker switch to activate the rear window wiper:
- Upper position = continuous operation
- Lower position = intermittent operation
- Middle position = off
Push lever. Washer fluid is sprayed onto the rear window and the wiper wipes a few times.
Do not use if the rear window is frozen.
Switch off in car washes.
The rear window wiper comes on automatically when the windscreen wiper is switched on and reverse gear is engaged.
Activation or deactivation of this function can be changed in the menu Settings in the Info-Display.
Vehicle personalisation 108.

**Outside temperature**

A drop in temperature is indicated immediately and a rise in temperature after a time delay. Temperatures below 3 °C flash on the display.

Illustration shows Graphic-Info-Display.

Illustration shows Colour-Info-Display.

Uplevel-Display

Illustration shows Graphic-Info-Display.

Ice Possible.
Drive with Care
If outside temperature drops to 3 °C, a warning message is displayed in the Driver Information Centre.

**Warning**
The road surface may already be icy even though the display indicates a few degrees above 0 °C.

**Clock**

**Graphic-Info Display**
Press CONFIG to open the **Settings** menu.

Scroll through the list and select the menu item **Time Date** to display the respective submenu.

**Set time**
Press the **MENU-TUNE** knob to enter the **Set time** submenu.

Turn the **MENU-TUNE** knob to change the current value of the first setting.

Press the **MENU-TUNE** knob to confirm the set value.

The cursor then switches to the next value. If all values are set, you are automatically returned to the next higher menu level.

**Set date**
Press the **MENU-TUNE** knob to enter the **Set date** submenu.

Turn the **MENU-TUNE** knob to change the current value of the first setting.

Press the **MENU-TUNE** knob to confirm the set value.

The cursor then switches to the next value. If all values are set, you are automatically returned to the next higher menu level.

**Set time format**
To switch between the available options, repeatedly press the **MENU-TUNE** knob.

For a detailed description of menu operation, refer to the Infotainment system manual.
Set date format
To switch between the available options, repeatedly press the MENU-TUNE knob.

RDS clock synchronization
The RDS signal of most VHF transmitters automatically sets the time. RDS time synchronisation can take a few minutes. Some transmitters do not send a correct time signal. In such cases, it is recommended to switch off the automatic time synchronisation.

To switch between the options On and Off, repeatedly press the MENU-TUNE knob.

Colour-Info Display
Press 🌐 and then select the Settings screen button.
Select Time & date settings to display the respective submenu.

Note
For a detailed description of menu operation, refer to the Infotainment system manual.

Set time format
To select the desired time format, tap on the screen buttons 12 h or 24 h.

Set date format
To select the desired date format, tap on the < and > screen buttons and choose between the available options.

Set time and date
To adjust the time and date settings, tap on the ↑ and ↓ screen buttons.

RDS clock synchronization
The RDS signal of most VHF transmitters automatically sets the time. RDS time synchronisation can take a few minutes. Some transmitters do not send a correct time signal. In such cases, it is recommended to switch off the automatic time synchronisation.

To activate or deactivate RDS clock synchronisation, tap on the screen buttons On or Off.
Instruments and controls

Power outlets
A 12 Volt power outlet is located in the centre console.
Do not exceed the maximum power consumption of 120 watts.
With ignition off, the power outlet is deactivated. Additionally, the power outlet is deactivated in the event of low vehicle battery voltage.
Electrical accessories that are connected must comply with the electromagnetic compatibility requirements laid down in DIN VDE 40 839.

Do not connect any current-delivering accessories, e.g. electrical charging devices or batteries.
Do not damage the outlet by using unsuitable plugs.
Stop-start system ◇ 135.

Cigarette lighter
The cigarette lighter is located in the centre console.
Press in cigarette lighter. It switches off automatically once the element is glowing. Pull out lighter.

Ashtrays
Caution
To be used only for ash and not for combustible rubbish.
The portable ashtray can be placed in the cupholders.
Warning lights, gauges and indicators

Instrument cluster
The needles of the instruments briefly rotate to the end position when the ignition is switched on.

Speedometer
Indicates vehicle speed.

Odometer
The bottom line displays the recorded distance in km.

Trip odometer
The recorded distance is displayed since the last reset.
Trip odometer counts up to 9,999 km and then restarts at 0.

Baselevel and Midlevel display
To reset, press SET/CLR on the turn signal lever for a few seconds 97.
Instruments and controls

Uplevel display

Two trip odometer are selectable for different trips.
Select page Trip/Fuel Information Menu \( \text{Trip} / \text{Fuel Information Menu} \) by pressing Menu on the turn signal lever. Turn adjuster wheel on turn signal lever and select Trip 1 or Trip 2. Each trip odometer can be reset separately by pressing SET/CLR on the turn signal lever for a few seconds on the respective page.

Tachometer

Displays the engine speed.
Drive in a low engine speed range for each gear as much as possible.

Caution
If the needle is in the red warning zone, the maximum permitted engine speed is exceeded. Engine at risk.

Fuel gauge

Number of LEDs displays the fuel level in the tank.
8 LEDs = tank is full.

During liquid gas operation, the gas level in the tank is displayed.
Control indicator \( \text{illuminates if the level in the tank is low. Refuel immediately if it flashes.} \)
During liquid gas operation, the system automatically switches over to petrol operation when gas tanks are empty \( \text{87}. \)
Never run the tank dry.
Because of the fuel remaining in the tank, the top-up quantity may be less than the specified tank capacity.

**Fuel selector**

Press button LPG to switch between petrol and liquid gas operation. The LED in the button shows the current operating mode.

- **LED off** = petrol operation
- **LED illuminates** = liquid gas operation
- **LED flashes** = checking of conditions for fuel transition, or fuel transition is denied (message in the DIC appears)

As soon as the liquid gas tank is empty, petrol operation is automatically engaged until the ignition is switched off.

Fuel for liquid gas operation \(\Rightarrow\) 174.

**Engine coolant temperature gauge**

Number of LEDs displays the coolant temperature.

- **up to 3 LEDs** = engine operating temperature not yet reached
- **4 to 6 LEDs** = normal operating temperature
- **more than 6 LEDs** = temperature too high
Caution

If engine coolant temperature is too high, stop vehicle, switch off engine. Danger to engine. Check coolant level.

Service display

The engine oil life system lets you know when to change the engine oil and filter. Based on driving conditions, the interval at which an engine oil and filter change will be indicated can vary considerably.

To display the remaining engine oil life duration use turn signal lever buttons:

- Press MENU to select the Vehicle Information Menu.
- Turn the adjuster wheel to select Remaining Oil Life.

The remaining engine oil life duration is displayed in percent in the Driver Information Centre.

Reset

Press SET/CLR on turn signal lever for several seconds to reset. The remaining engine oil life duration page must be active. Switch on ignition, but engine off.

The system must be reset every time the engine oil is changed to ensure proper functionality. Seek the assistance of a workshop.

Next service

When the system has calculated that engine oil life has diminished, a warning message appears in the Driver Information Centre. Have engine oil and filter changed by a workshop within one week or 500 km (whichever occurs first).

Driver Information Centre 97.
Service information 233.
Control indicators

The control indicators described are not present in all vehicles. The description applies to all instrument versions. Depending on the equipment, the position of the control indicators may vary. When the ignition is switched on, most control indicators will illuminate briefly as a functionality test.

The control indicator colours mean:
red = danger, important reminder
yellow = warning, information, fault
green = confirmation of activation
blue = confirmation of activation
white = confirmation of activation
Control indicators in the instrument cluster
Control indicators in the centre console

Turn signal

illationates or flashes green.

Illuminates briefly
The parking lights are switched on.

Flashes
A turn signal or the hazard warning flashers are activated.
Rapid flashing: failure of a turn signal light or associated fuse.

Bulb replacement 193, Fuses 201.

Turn signals 116.

Seat belt reminder

Seat belt reminder on front seats

for driver's seat illuminates or flashes red in the tachometer.

for front passenger seat illuminates or flashes red in the centre console when the seat is occupied.

Illuminates
After the ignition has been switched on, until the seat belt has been fastened.

Flashes
After having started the engine for a maximum of 100 seconds, until the seat belt has been fastened.
Fastening the seat belt 42.

Seat belt status on rear seats

in the Driver Information Centre flashes or illuminates.
Illuminates
After having started the engine for a minimum of 35 seconds, until the seat belt has been fastened.
If an unfastened seat belt is fastened whilst driving.

Flashes
After starting-off, when the seat belt is unfastened.
Fastening the seat belt 42.

Airbag and belt tensioners
iscriminating red.
When the ignition is switched on, the control indicator illuminates for approx. four seconds. If it does not illuminate, does not go out after four seconds or illuminates whilst driving, there is a fault in the airbag system. Seek the assistance of a workshop. The airbags and belt pretensioners may fail to trigger in the event of an accident.
Deployment of the belt pretensioners or airbags is indicated by continuous illumination of .

Airbag deactivation
iscriminating yellow.
Illuminates for approx. 60 seconds after the ignition is switched on. The front passenger airbag is activated.
iscriminating yellow.
The front passenger airbag is deactivated 49.

Warning
Have the cause of the fault remedied immediately by a workshop.

Risk of fatal injury for a child using a child restraint system together with activated front passenger airbag.

Charging system
iscriminating red.
Illuminates when the ignition is switched on and extinguishes shortly after the engine starts.

Illuminates when the engine is running
Stop, switch off engine. Vehicle battery is not charging. Engine cooling may be interrupted. The brake servo unit may cease to be effective. Seek the assistance of a workshop.

Malfunction indicator light
iscriminating or flashes yellow.
Illuminates when the ignition is switched on and extinguishes shortly after the engine starts.
Illuminates when the engine is running
Fault in the emission control system. The permitted emission limits may be exceeded. Seek the assistance of a workshop immediately.

Flashes when the engine is running
Fault that could lead to catalytic converter damage. Ease up on the accelerator until the flashing stops. Seek the assistance of a workshop immediately.

Service vehicle soon
 illuminates yellow.
Additionally, a warning message is displayed in the Driver Information Centre.
The vehicle requires a service.
Seek the assistance of a workshop.
Vehicle messages ø 105.

Brake and clutch system
¢ illuminates red.
The brake and clutch fluid level is too low ø 190.

⚠ Warning
Stop. Do not continue your journey. Consult a workshop.

Illuminates after the ignition is switched on if the manual parking brake is applied ø 148.

Operate pedal
 inout illuminates or flashes yellow.

Illuminates
Clutch pedal needs to be depressed to start the engine in Autostop mode. Stop-start system ø 135.

Flashes
Clutch pedal needs to be depressed for a main start of the engine ø 19, ø 134.
On some versions, the operate pedal message is indicated in the Driver Information Display ø 105.

Antilock brake system (ABS)
 illuminates yellow.
Illuminates for a few seconds after the ignition is switched on. The system is ready for operation when the control indicator extinguishes.
If the control indicator does not go out after a few seconds, or if it illuminates while driving, there is a fault in the ABS. The brake system remains operational but without ABS regulation.
Antilock brake system ø 147.

Gear shifting
_approved with the number of the next higher gear is indicated, when upshifting is recommended for fuel saving reasons.

Power steering
¢! illuminates yellow.
Instruments and controls

Illuminates with power steering reduced
Power steering is reduced due to overheating of the system. Control indicator extinguishes when the system has cooled down.
Stop-start system 135.

Illuminates with power steering disabled
Failure in the power steering system. Consult a workshop.

Illumination of \( \bigcirc \! \) and \( \bigcirc \)
simultaneously
Power steering system must be calibrated, system calibration 151.

Lane departure warning
\( \bigcirc \! \) illuminates green or flashes yellow.

Illuminates green
System is switched on and ready to operate.

Flashes yellow
System recognises an unintended lane change.
Lane departure warning 172

Ultrasonic parking assist
\( \bigcirc \! \) illuminates yellow.
Fault in system or
Fault due to sensors that are dirty or covered by ice or snow or
Interference due to external sources of ultrasound. Once the source of interference is removed, the system will operate normally.
Have the cause of the fault in the system remedied by a workshop.
Ultrasonic parking assist 158.

Electronic Stability Control off
\( \bigcirc \! \) illuminates yellow.
The system is deactivated.

Electronic Stability Control and Traction Control system
\( \bigcirc \) flashes or illuminates yellow.

Flashes
The system is actively engaged. Engine output may be reduced and the vehicle may be braked automatically to a small degree.

Illuminates
A fault in the system is present. A warning message or warning code appears in the Driver Information Centre. Continued driving is possible. The system is not operational. Driving stability, however, may deteriorate depending on road surface conditions.
Have the cause of the fault remedied by a workshop.
Electronic Stability Control 150, Traction Control system 149.
Traction Control system off
illationates yellow.
The system is deactivated.

Preheating
illationates yellow.
Preheating is activated. Only activates when outside temperature is low.

Diesel particle filter
illationates or flashes yellow.
The diesel particle filter requires cleaning.
Continue driving until extinshes. If possible, do not allow engine speed to drop below 2000 rpm.

Flashes
The maximum filling level of the filter is reached. Start cleaning process immediately to avoid damage to the engine.
Diesel particle filter 138, Stop-start system 135.

Tyre pressure monitoring system
illationates or flashes yellow.

Illuminates
Tyre pressure loss. Stop immediately and check tyre pressure.

Flashes
Fault in system or tyre without pressure sensor mounted (e.g. spare wheel). After 60-90 seconds the control indicator illuminates continuously. Consult a workshop.
Tyre pressure monitoring system 209.

Engine oil pressure
illationates red.
Illuminates when the ignition is switched on and extinguishes shortly after the engine starts.

Illuminates when the engine is running

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Engine lubrication may be interrupted. This may result in damage to the engine and/or locking of the drive wheels.</td>
</tr>
</tbody>
</table>

1. Depress the clutch.
2. Set selector lever to neutral.
3. Move out of the flow of traffic as quickly as possible without impeding other vehicles.
4. Switch off the ignition.
When the engine is off, considerably more force is needed to brake and steer.
During an Autostop the brake servo unit will still be operational.
Do not remove key until vehicle is stationary, otherwise the steering wheel lock could engage unexpectedly.

Check oil level before seeking the assistance of a workshop 187.

**Low fuel**

- ☰ illuminates or flashes yellow.

**Illuminates**

Level in fuel tank is too low.

**Flashes**

Fuel used up. Refuel immediately.
Never run the tank dry.
Catalytic converter 139.
Bleeding the diesel fuel system 192.

**Warning**

**Immobiliser**

hở flashes yellow.
Fault in the immobiliser system. The engine cannot be started.

**Reduced engine power**

illuminates.
A door or the tailgate is open.

Information displays

Driver Information Centre
The Driver Information Centre (DIC) is located in the instrument cluster. Depending on the version and equipment, the Driver Information Centre (DIC) is available as Baselevel display, Midlevel display or Uplevel display.
Following pages are selectable in the DIC using the buttons on the turn signal lever:
- trip odometer 85
- vehicle information and settings, see below
- trip/fuel information, see below
- economic information, see below
- navigation information
Following indication appears if required:
- warning messages 105
- gear shift indication 93
- drive mode indication 140, 144
- tyre pressure warning 209
- seat belt reminder indication 91
- autostop indication 135
- service information 93

Baselevel-Display

Select subpages by turning the adjuster wheel on turn signal lever. Selectable subpages are:
- engine oil life indication
- tyre pressure indication
- tyre loading
- unit setting
Instruments and controls

- language setting, if no Infotainment system is available
- clock, if no Infotainment system is available
- outside temperature, if no Infotainment system is available

Some of the displayed functions differ when the vehicle is being driven or at a standstill.

**Midlevel display**

The menu pages of the Midlevel display are selected by pressing **MENU** on the turn signal lever.

Selectable menu pages of Midlevel display are:

- **Trip/Fuel Information Menu** menu, description see below
- **Vehicle Information Menu** menu, description see below

Some of the displayed functions differ when the vehicle is being driven or at a standstill. Some functions are only available when the vehicle is being driven.

**Uplevel-Display**

The menu pages of the Uplevel display are selected by pressing **MENU** on the turn signal lever. Main menu symbols are indicated in the top line of the display:

- **Trip/Fuel Information Menu**, displayed by 
  \[\text{i} \backslash\text{\ shortly}\], description see below
- **Vehicle Information Menu**, displayed by 
  \[\text{\i} \text{\ shortly}\], description see below
- **ECO Information Menu**, displayed by \[\text{\i} \text{\ shortly}\], description see below

Some of the displayed functions differ when the vehicle is being driven or at a standstill. Some functions are only available when the vehicle is being driven.

**Selecting menus and functions**

The menus and functions can be selected via the buttons on the turn signal lever.
Press **MENU** to switch between the main menus or to return from a submenu to the next higher menu level.

Turn the adjuster wheel to select a subpage of the main menu or to set a numeric value.

Press **SET/CLR** to select and confirm a function.

Vehicle and service messages are popped-up in the DIC if required. Confirm messages by pressing **SET/CLR**. Vehicle messages  105.

### Trip/Fuel Information Menu

Press **MENU** to select Trip/Fuel Information Menu information page .

Turn the adjuster wheel to select a subpage.

The following list contains all possible Trip/Fuel Information Menu pages. Some may not be available for your particular vehicle.

Follow the instructions given in the submenus.

- trip odometer 1
- trip odometer 2
- average fuel economy 1
- average fuel economy 2
- digital speed
- fuel range
- fuel range LPG version
- fuel level LPG version
- instantaneous fuel economy
- average vehicle speed
- clock

### temperature

### blank page

Selection and indication is different between Midlevel- and Uplevel-Display.

### Trip odometer 1 and 2

Trip odometer displays the current distance since a certain reset. Trip odometer counts up to a distance of 2,000 km then restarts at 0.

Turn the adjuster wheel to select between trip odometer 1 and 2.

To reset, press **SET/CLR** for a few seconds while viewing this page.

Simultaneously average fuel economy 1 and 2 is indicated together with trip odometer 1 and 2.

The information of trip page 1 and 2 can be reset separately while the respective display is active.

### Average fuel economy 1 and 2

Display of average consumption. The measurement can be reset at any time and starts with a default value.
Instruments and controls

To reset, press SET/CLR for a few seconds while viewing this page. Simultaneously trip odometer 1 and 2 is indicated together with average fuel economy 1 and 2.

The information of trip page 1 and 2 can be reset separately while the respective display is active.

On vehicles with LPG engines: Average consumption is indicated for the currently selected mode (LPG or petrol).

Digital speed
Digital display of the instantaneous speed.

Fuel range
Range is calculated from current fuel tank content and current consumption. The display shows average values.

After refuelling, the range is updated automatically after a brief delay.

When the fuel level in the tank is low, a message appears on the display and the control indicator in the fuel gauge illuminates.

Fuel range LPG version

When the tank must be refuelled immediately, a warning message appears and remains on the display. Additionally, the control indicator in the fuel gauge flashes 96.

Fuel level LPG version
Display of the fuel level in percent for the fuel type currently not being used, e.g. in petrol mode the fuel level for LPG is displayed.

Instantaneous fuel economy
Display of the instantaneous consumption.

On vehicles with LPG engines: Instantaneous consumption is indicated for the currently selected mode; LPG or petrol.

Average vehicle speed
Display of average speed. The measurement can be reset at any time.

To reset, press SET/CLR for a few seconds while viewing this page.

Clock
Display of actual time.

Only indicated if no Infotainment system is available.

Temperature
Display of actual outside temperature.
Only indicated if no Infotainment system is available.

Blank page
Shows a blank page without any information.

Vehicle Information Menu
Press MENU to select Vehicle Information Menu 📇.

Turn the adjuster wheel to select a subpage.

The following list contains all possible Vehicle Information Menu pages. Some may not be available for your particular vehicle.

Follow the instructions given in the submenus.
- unit
- speed warning
- remaining oil life
- tyre pressure
- tyre loading
- following distance
- traffic sign assistant
- language

Selection and indication is different between Midlevel- and Uplevel-Display.

Unit
Press SET/CLR while page is displayed. Select imperial (unit 1) or metric (unit 3) by turning the adjuster wheel. Press SET/CLR to set the unit.

Speed warning

To set the speed warning, press SET/CLR while the page is displayed. Turn the adjuster wheel to select the value. Press SET/CLR to set the speed.

If the selected speed limit is exceeded, a warning chime sounds. Once the speed is set, this feature can be turned off by pressing SET/CLR while viewing this page.

Remaining oil life
Indicates an estimate of the oil's useful life. The number in % means the current remaining oil life and indicates when to change the engine oil and filter 🔮 88.

Tyre pressure
Tyre pressure of all wheels is displayed on this page during driving 🔮 209.

Tyre load
The tyre loading display selects tyre pressure category **Light, Eco** or **Max** according to the actual inflated tyre
Instruments and controls

pressure. Select category by turning the adjuster wheel. Press SET/CLR to set the category 209.

Following distance
Displays the distance in seconds to a preceding moving vehicle 157.

Traffic sign assistant
Displays the detected traffic signs for the current route section 169.

Language
Select preferred country language as display language.
Only available if vehicle is not equipped with an Infotainment system.

ECO Information Menu
Press MENU to select ECO Information Menu .
Turn the adjuster wheel to select a submenu.
Follow the instructions given in the submenus.

- economy trend
- fuel Economy
- top consumers

Economy trend

This page displays a graph of the last 10 recorded average fuel economy values per 100 km.
Filled segments display the consumption in 5 km steps and shows the effect of topography or driving behaviour on fuel consumption.
Graph can be reset by pressing SET/CLR.

Fuel Economy
Indicates the average fuel consumption since the last driver reset compared to a best average fuel consumption value. To reset average fuel consumption, press and hold SET/CLR while viewing this page.
A short press on SET/CLR changes the distance over 10, 25 or 50 km.
Additionally the instantaneous consumption value is displayed.

Top consumers
List of top comfort consumers currently switched on is displayed in descending order. Fuel saving potential is indicated. A switched-off consumer disappears from the list and the consumption value will be updated.
During sporadic driving conditions, the engine will activate the heated rear window automatically to increase the engine load. In this event, the heated rear window is indicated as one of the top consumers, without activation by the driver.
Instruments and controls

Colour-Info-Display
Depending on the vehicle configuration, the vehicle has a Colour-Info-Display with touch screen functionality.

The Colour-Info-Display with touch screen functionality indicates in colour:
- time 82
- outside temperature 81
- date 82
- rear view camera indication 167
- parking assist and advanced parking assist instructions 158
- electronic climate control settings 125
- Infotainment system, see description in the Infotainment system manual
- system messages
- vehicle messages 105
- settings for vehicle personalisation 108

The type of information and how it is displayed depends on the settings made.

Selecting menus and settings
Menus and settings are selected via the touch screen display.

Press 3: Home page is displayed.
Tap display icon Settings: Menu page Settings is displayed. Select a setting by tapping.
Tap selection once more to confirm a setting or value.
Press display button 3 to exit a menu or setting without changing or delete the last character in a character sequence.
To exit the Settings menu, press display button 3 in steps or press 3 after confirming the changes.
Vehicle personalisation 108.
Instruments and controls

Memorised settings  24.

Graphic-Info-Display
Depending on the vehicle configuration, the vehicle has a Graphic-Info-Display.

The Graphic-Info-Display indicates:
- time  82
- outside temperature  81
- date  82
- electronic climate control settings  125

- Infotainment system, see description in the Infotainment system manual
- settings for vehicle personalisation  108

Selecting menus and settings
Menus and settings are accessed via the display.

Press CONFIG: Menu page Settings is displayed.
Turn knob MENU-TUNE to select a setting or value.
Press knob MENU-TUNE to confirm a setting or value.
Press BACK to exit a menu or setting without changing or delete the last character in a character sequence.
Press the button for a few seconds to delete the entire entry.

To exit the Settings menu, press BACK in steps or press CONFIG after confirming the changes.
Vehicle personalisation  108.
Memorised settings  24.
Vehicle messages

Messages are indicated mainly in the Driver Information Centre (DIC), in some cases together with a warning and signal buzzer.

Press SET/CLR, MENU or turn the adjuster wheel to confirm a message.

**Vehicle messages on Uplevel-Display**

The vehicle messages are displayed as text. Follow the instructions given in the messages.
The system displays messages regarding the following topics:
- service messages
- fluid levels
- anti-theft alarm system
- brakes
- ride control systems
- cruise control, speed limiter
- forward collision alert
- parking assist systems
- lighting, bulb replacement
- wiper/washer system
- doors, windows
- side blind spot alert
- traffic sign assistant
- lane departure warning
- radio remote control
- seat belts
- airbag systems
- engine and transmission
- tyre pressure
- diesel particle filter
- vehicle battery status

Vehicle messages on Colour-Info-Display
Some important messages appear additionally in the Colour-Info-Display. Some messages only pop-up for a few seconds.

Warning chimes
When starting the engine or whilst driving
Only one warning chime will sound at a time.

The warning chime regarding unfastened seat belts has priority over any other warning chime.
- If seat belt is not fastened.
- If a door or the tailgate is not fully closed when starting off.
- If a certain speed is exceeded with parking brake applied.
- If a programmed speed is exceeded.

- If a warning message appears in the Driver Information Centre (DIC) or Info-Display.
- If the parking assist detects an object.
- If unintended lane change occurs.
- If the reverse gear is engaged and the rear end carrier extended.
- If the diesel particle filter has reached the maximum filling level.

When the vehicle is parked and/or the driver's door is opened
- When the key is in the ignition switch.
- With exterior lights on.

During an Autostop
- If the driver's door is opened.

Battery voltage
Uplevel-Display
When the vehicle battery voltage is running low, a warning message will appear in the Driver Information Centre.
Base- and Midlevel-Display
When the vehicle battery voltage is running low, a warning code 174 will appear in the Driver Information Centre.

1. Switch off immediately electrical consumers which are not required for a safe ride, e.g. seat heating, heated rear and front window or other main consumers.

2. Charge the vehicle battery by driving continuously for a while or by using a charging device.

The warning message or warning code will disappear after the engine has been started twice consecutively without a voltage drop.

If the vehicle battery cannot be recharged, have the cause of the fault remedied by a workshop.

Vehicle personalisation
The vehicle's behaviour can be personalised by changing the settings in the Info-Display.

Some of the personal settings for different drivers can be memorised individually for each vehicle key. Memorised settings ➔ 24.

Depending on vehicle equipment and country-specific regulations, some of the functions described below might not be available.

Some functions are only displayed or active when the engine is running.

Personal settings
Graphic-Info-Display
Press CONFIG for the Settings menu.

Turn the MENU-TUNE control to move to the desired setup menu, and then press MENU-TUNE.

The following settings can be selected:

- Languages
- Time Date
- Radio settings
- Phone settings
- Vehicle settings
In the corresponding submenus, the following settings can be changed:

**Languages**
Selection of the desired language.

**Time Date**
See ‘Clock’ 82.

**Radio settings**
See Infotainment system manual for further information.

**Phone settings**
See Infotainment system manual for further information.

**Vehicle settings**

- **Climate and air quality**
  - **Auto fan speed:** Modifies the level of the cabin airflow of the climate control in Automatic mode.
  - **Air conditioning mode:** Controls the state of the cooling compressor when the vehicle is started. Last setting (recommended) or at vehicle start is either always ON or always OFF.

- **Comfort settings**
  - **Chime volume:** Changes the volume of warning chimes.
  - **Personalization by driver:** Activates or deactivates the personalisation function.

- **Rear auto wipe in reverse:**
  Activates or deactivates automatic switching on of the rear window wiper when reverse gear is engaged.

- **Park assist / Collision detection**
  - **Park assist:** Activates or deactivates the ultrasonic parking assist. Activation is selectable with or without attached trailer coupling.
  - **Side blind zone alert:** Changes the settings for the side blind spot alert system.

- **Exterior ambient lighting**
  - **Exterior lighting by unlocking:**
    Activates or deactivates the entry lighting.
  - **Duration upon exit of vehicle:**

- **Auto rear demist:** Activates automatically rear heated window.

- **Power door locks**
  - **Auto door lock:** Activates or deactivates the automatic door locking function after switching on ignition.
  - **Stop door lock if door open:** Activates or deactivates the door locking function while a door is open.
  - **Delayed door lock:** Activates or deactivates the delayed door locking function. This menu option is displayed with **Stop door lock if door open** deactivated. Central locking system 24.

- **Remote locking, unlocking, starting**
  - **Remote unlock feedback:**
    Activates or deactivates the hazard warning flasher feedback whilst unlocking.
  - **Passive door unlock:** Changes the configuration to unlock only the driver’s door or the whole vehicle whilst unlocking.
Auto relock doors: Activates or deactivates the automatic relock function after unlocking without opening the vehicle.

- **Restore factory settings:**
  Resets all settings to the default settings.

### Personal settings

**Colour-Info-Display**

When audio is switched on, press ± on the control panel.

Press **Settings**.

The following settings can be selected:

- **Time & date settings**
- **Radio settings**
- **Connection settings**
- **Vehicle settings**
- **Language**
- **Text scroll**
- **Touch beep volume**
- **Max startup volume**
- **System version**
- **DivX® VOD**

In the corresponding submenus the following settings can be changed:

- **Time & date settings**
  See 'Clock' ▶ 82.

### Radio settings

See Infotainment system manual for further information.

### Connection settings

See Infotainment system manual for further information.

### Vehicle settings

- **Climate & air quality**
  - **Auto fan speed**: Modifies the level of the cabin airflow of the climate control in automatic mode.
  - **Air conditioning mode**: Controls the state of the cooling compressor when the vehicle is started. Last setting (recommended) or at vehicle start is either always ON or always OFF.
  - **Auto rear defog**: Activates heated rear window automatically.

- **Comfort & convenience**
  - **Chime volume**: Changes the volume of warning chimes.
Personalization by driver: Activates or deactivates the personalisation function.

Auto wipe in reverse gear: Activates or deactivates automatic switching on of the rear window wiper when reverse gear is engaged.

- Collision / detection
  - Park assist: Activates or deactivates the ultrasonic parking assist. Activation is selectable with or without attached trailer coupling.
  - Side blind zone alert: Changes the settings for the side blind spot alert system.

- Lighting
  - Exit lighting: Activates or deactivates and changes the duration of exit lighting.
  - Vehicle locator lights: Activates or deactivates the welcome lighting.

- Power door locks
  - Auto door lock: Activates or deactivates the automatic door locking function after switching on ignition.
  - Unlocked door anti lock out: Activates or deactivates the door locking function while a door is open.
  - Delayed door lock: Activates or deactivates the delayed door locking function. This menu option is displayed with Unlocked door anti lock out deactivated. Central locking system 24.

- Lock, unlock settings
  - Remote unlock light feedback: Activates or deactivates the hazard warning flasher feedback whilst unlocking.
  - Remote door unlock: Changes the configuration to unlock only the driver’s door or the whole vehicle whilst unlocking.
  - Relock remotely unlocked doors: Activates or deactivates the automatic relock function after unlocking without opening the vehicle.

- Vehicle factory settings: Restores the setting values back to the factory default settings.

Language
Selection of the desired language.

Text scroll
See Infotainment system manual for further information.

Touch beep volume
See Infotainment system manual for further information.

Max startup volume
See Infotainment system manual for further information.

System version
See Infotainment system manual for further information.

DivX(R) VOD
See Infotainment system manual for further information.
Lighting

Exterior lighting .................................. 112
Interior lighting ................................. 118
Lighting features .............................. 120

Exterior lighting

Light switch

Turn light switch:
0 = lights off
봤 = sidelights
 mắt = headlights

Control indicator 臊 96.

Light switch with automatic light control

Turn light switch:
AUTO = automatic light control:
headlights are switched on and off automatically depending on external lighting conditions

= activation or deactivation of the automatic light control.
Switch turns back to AUTO
createdAt=96.

= sidelights
= headlights
The current status of the automatic light control is displayed in the Driver Information Centre (DIC).
When switching on the ignition, automatic light control is active.
When headlights are on, \( \text{\textbullet} \) illuminates. Control indicator \( \text{\textbullet} \) 96.

**Tail lights**
Tail lights are illuminated together with headlights and sidelights.

**Automatic light control**

- When the automatic light control function is switched on and the engine is running, the system switches between daytime running light and headlights automatically depending on the lighting conditions and information given by the rain sensor system.
- Daytime running light \( \text{\textbullet} \) 114.

**Automatic headlight activation**
During poor lighting conditions the headlights are switched on.
Furthermore the headlights are switched on if the windscreen wipers have been activated for several wipes.

**Tunnel detection**
When a tunnel is entered, the headlights are switched on immediately.

**High beam**

- To switch from low to high beam, push lever.
- To switch to low beam, push lever again or pull.
- High beam assist \( \text{\textbullet} \) 115.

**Headlight flash**
To activate the headlight flash, pull lever.
Headlight range adjustment

Manual headlight range adjustment

To adapt headlight range to the vehicle load to prevent dazzling: turn thumb wheel to required position.

0 = front seats occupied
1 = all seats occupied
2 = all seats occupied and load compartment laden
3 = driver’s seat occupied and load compartment laden

Headlights when driving abroad

The asymmetrical headlight beam extends visibility at the edge of the road at the passenger side. However, when driving in countries where traffic drives on the opposite side of the road, adjust the headlights to prevent dazzling of oncoming traffic.

There are two adjuster elements on each headlight housing.

Turn both adjuster elements on each headlight housing 1/2 turn with a size six hexagon key anticlockwise to set to right hand traffic mode. Therefore insert the key in the guidance as shown in the illustration. Alternatively, a Phillips head screwdriver size three can be used for setting.

To reset to left hand traffic mode, turn adjuster elements 1/2 turn clockwise.

Daytime running lights

Daytime running light increases visibility of the vehicle during daylight. They are switched on automatically when ignition is on.

Versions with automatic light control

The system switches between daytime running light and headlights automatically, depending on the lighting conditions and information given by the rain sensor system. Automatic light control 113.
Xenon lighting system
Xenon lighting system includes
- xenon headlights for low and high beam
- high beam assist
- corner lighting
- reversing function

Xenon headlights
Xenon headlights for low and high beam ensure better visibility under all conditions.
Operation is the same as for halogen headlights.
Light switch 112, high beam 113, headlight flash 113, headlight range adjustment 114, headlights when driving abroad 114.
Automatic light control 113.

High beam assist
This feature allows high beam xenon lights to function as the main driving light at night and when vehicle is faster than 40 km/h.

It switches automatically to low beam when:
- The camera in the windscreen detects the lights of oncoming or preceding vehicles.
- The vehicle is slower than 20 km/h.
- It is foggy or snowy.
- Driving in urban areas.
If there are no restrictions detected, the system switches back to high beam.

Activation

Deactivation
Push indicator lever once. It is also deactivated when front fog lights are switched on.
If a headlight flash is activated when the high beam is on, the high beam assist will be deactivated.
If a headlight flash is activated when the high beam is off, the high beam assist will remain activated.
The latest setting of the high beam assist will remain after the ignition is switched on again.
Corner lighting

On tight bends or when turning off, depending on the steering angle or the indicator light signal, an additional left or right reflector is switched on which illuminates the road in the direction of travel. It is activated up to a speed of 40 km/h.

Reversing function
If the low beam is on and reverse gear is engaged, both corner lights are switched on. They remain illuminated for 20 seconds after disengaging reverse gear.

Hazard warning flashers

Operated by pressing  
In the event of an accident with airbag deployment the hazard warning flashers are activated automatically.

Turn and lane-change signals

lever up = right turn signal
lever down = left turn signal

If the lever is moved past the resistance point, the turn signal is switched on constantly. When the steering wheel moves back, the turn signal is automatically deactivated.

For three flashes, e.g. when changing lanes, press the lever until resistance is felt and then release.
With a trailer connected, turn signal flashes six times when pressing the lever until resistance is felt and then releasing.
Move the lever to the resistance point and hold for longer indication.
Switch the turn signal off manually by moving the lever to its original position.

Front fog lights

Operated by pressing $\mathcal{O}$.  
Light switch in position AUTO: switching on rear fog light will switch on headlights automatically.

Rear fog lights

Operated by pressing $\mathcal{O}$.  
Light switch in position AUTO: switching on rear fog light will switch on headlights automatically.

Parking lights

When the vehicle is parked, the parking lights on one side can be activated:
1. Switch off the ignition.
2. Move the turn signal lever all the way up (right parking lights) or down (left parking lights).
Confirmed by a signal and the corresponding turn signal control indicator.
Reversing lights
The reversing light comes on when the ignition is on and reverse gear is selected.

Misted light covers
The inside of the light housing may mist up briefly in poor, wet and cold weather conditions, in heavy rain or after washing. The mist disappears quickly by itself; to help switch on the headlights.

Interior lighting
Instrument panel illumination control

Brightness of the following lights can be adjusted when the exterior lights are on:
- instrument panel illumination
- dome light
- ambient light
- Info-Display
- illuminated switches and operation elements

Turn thumb wheel ⚫ and hold until the desired brightness is obtained. On vehicles with automatic light control, the brightness can only be adjusted when the exterior lights are on and the light sensor detects night conditions.

Interior lights
Front courtesy light
Operate rocker switch:

- Centre position = automatic switching on when opening a door.
- 🛻 Turns off after a delay
- Press I = permanently on
- Press 0 = permanently off

**Front courtesy light with reading lights**

When opening a door, the courtesy light automatically switches on and then off after a delay.

Pressing 🛻 switches courtesy light on or off manually.

Switching on ignition will turn off courtesy light. When exterior lighting has been on previously, courtesy light will turn on when ignition is switched off.

**Note**

In the event of an accident with airbag deployment, the courtesy lights are turned on automatically.

**Rear courtesy lights**

Left and right lamps are separately switchable.

Operate rocker switches:

- Centre position = automatic switching on when opening a door.
- 🛻 Turns off after a delay
- Press I = permanently on
- Press 0 = permanently off

**Dome light**

Spotlight incorporated in the inside mirror housing comes on when headlights are switched on.

Dome light illuminates gear shifting console indirectly.

**Ambient light**

The ambient light consists of indirect red lights in the doors, in the instrument panel below the heating and ventilation unit and in the passenger foot well. It can be dimmed with the thumb wheel 🔄 together with the instrument panel illumination 🔄 118.

Ambient light comes on automatically when switching off ignition and extinguishes after opening a door.
Lighting features

Entry lighting

Welcome lighting
The following lights are switched on for a short time by unlocking the vehicle with the radio remote control:
- headlights
- tail lights
- number plate lights
- instrument panel light
- interior lights

Some functions are only operable when it is dark outside to facilitate locating the vehicle.

The lighting switches off immediately when the ignition key is turned to position 1

Activation or deactivation of this function can be changed in the Info-Display.

Vehicle personalisation
The settings can be saved for the key being used.

Exit lighting
The following lights switch on if the key is removed from the ignition switch:
- interior lights
- instrument panel light (only when it is dark)

They will switch off automatically after a delay and will be activated again if the driver's door is opened.

Path lighting
Headlights, tail lights and number plate lights illuminate the surrounding area for an adjustable time after leaving the vehicle.

Reading lights

Operated by pressing for the left and right side.
Activating

1. Switch off the ignition.
2. Remove the ignition key.
3. Open driver's door.
4. Pull the turn signal lever.
5. Close the driver's door.

If the driver's door is not closed the lights switch off after two minutes. Exit lighting is switched off immediately if the turn signal lever is pulled while the driver's door is open.

Activation, deactivation and duration of this function can be changed in the Info-Display. Vehicle personalisation 108.

The settings can be saved for the key being used 24.

Battery discharge protection

Vehicle battery state of charge function

The function guarantees longest vehicle battery life via a generator with controllable power output and optimised power distribution.

To prevent discharge of the vehicle battery when driving, the following systems are reduced automatically in two stages and finally switched off:

- auxiliary heater
- heated rear window
- heated windscreen
- heated mirrors
- heated seats
- fan

In the second stage, a message which confirms the activation of the vehicle battery discharge protection will be displayed in the Driver Information Centre (DIC).

Switching off electric lights

To prevent discharge of the vehicle battery when the ignition is switched off, some interior lights are switched off automatically after some time.
Climate control

Climate control systems ............. 122
Air vents .................................. 130
Maintenance .............................. 131

Climate control systems

Heating and ventilation system

Controls for:
- temperature
- fan speed
- air distribution

Heated rear window ▶ 33.
Heated windscreen ◇ 33.
Heated seats ◇ 41.
◇ 41.
Heated steering wheel ◇ 78.

Temperature
red = warm
blue = cold

Heating will not be fully effective until the engine has reached normal operating temperature.

Fan speed
Adjust the air flow by switching the fan to the desired speed.

Air distribution
◇ = to head area
◇ = to head area and foot well
◇ = to foot well
◇ = to windscreen, front door windows and foot well
◇ = to windscreen and front door windows

Intermediate settings are possible.
Demisting and defrosting the windows

- Set temperature control to warmest level.
- Set fan speed to highest speed.
- Set air distribution control to 🛡️.
- Switch on heated rear window 🌧.
- Open side air vents as required and direct them towards door windows.
- For simultaneous warming of the foot well, set air distribution control to 🛡️.

Air conditioning system

Controls for:
- temperature
- fan speed
- air distribution
- 🌡️ = cooling
- 🛡️ = air recirculation
- 🌧️ = heated rear window 🌧️

Heated windscreen 🌧️.
Heated seats 🛡️ 41.
Heated steering wheel 🛡️ 78.

Temperature
red = warm
blue = cold

Heating will not be fully effective until the engine has reached normal operating temperature.

Fan speed
Adjust the air flow by switching the fan to the desired speed.

Air distribution
- 🛡️ = to head area
- 🛡️ = to head area and foot well
- 🌧️ = to foot well
- 🌧️ = to windscreen, front door windows and foot well
- 🌧️ = to windscreen and front door windows (air conditioning is activated in the background to help preventing windows from fogging)

Intermediate settings are possible.
Climate control

Cooling

Press ☀ to switch on cooling. Activation is indicated by illumination of the LED in the button. Cooling is only functional when the engine is running and climate control fan is switched on.

Press ☀ again to switch off cooling.

The air conditioning system cools and dehumidifies (dries) as soon as the outside temperature is slightly above the freezing point. Therefore condensation may form and drip from under the vehicle.

If no cooling or drying is required, switch off the cooling system for fuel saving reasons.

Activated cooling may inhibit Autostops.

Stop-start system ☀ 135.

Air recirculation system ☝

Press ☝ to activate air recirculation mode. Activation is indicated by illumination of the LED in the button.

Press ☝ again to deactivate air recirculation mode.

⚠️ Warning

The exchange of fresh air is reduced in air recirculation mode. In operation without cooling the air humidity increases, so the windows may mist up from inside. The quality of the passenger compartment air deteriorates, which may cause the vehicle occupants to feel drowsy.

In warm and very humid ambient air conditions, the windscreen may mist up from outside, when cold air is directed towards it. If windscreen mists up from outside, activate windscreen wiper and deactivate ☝.

Maximum cooling

Briefly open the windows so that hot air can disperse quickly.
■ Switch on cooling ☀.
■ Air recirculation system ⬛ on.
■ Set temperature control to coldest level.
■ Set fan speed to highest level.
■ Set air distribution control to ⬜.
■ Open all vents.

Demisting and defrosting the windows 🔍

■ Set temperature control to warmest level.
■ Set fan speed to highest level.
■ Set air distribution control to ⬜.
■ Switch on heated rear window ⬯.
■ Open side air vents as required and direct them towards the door windows.

Note
If air distribution mode ⬜ is selected while engine is running, an Autostop will be inhibited until another air distribution is selected.

If air distribution mode ⬜ is selected while the engine is in an Autostop, the engine will restart automatically.

Stop-start system ☢ 135.

Electronic climate control system
Controls for:
■ fan speed
■ temperature
■ air distribution
🌞 = cooling
AUTO = automatic mode
🚗 = manual air recirculation
hiba = demisting and defrosting
🌡️ = heated rear window

Heated windscreen
Heated seats
Heated steering wheel

In Automatic mode, temperature, fan speed and air distribution are regulated automatically.

Climate control settings are shown on the Info-Display. Setting modifications are briefly popped-up, superimposed over the currently displayed menu.

The electronic climate control system is only fully operational when the engine is running.

Basic setting for maximum comfort:
■ Press AUTO, the air distribution and fan speed are regulated automatically. Activation is indicated by illumination of the LED in the button.
■ Open all air vents to allow optimised air distribution in Automatic mode.
■ Press 🌡️ to switch on optimal cooling and demisting. Activation is indicated by illumination of the LED in the button.

■ Set the preselected temperature using the centre rotary knob. Recommended temperature is 22 °C.

Temperature preselection
Set temperature by turning the centre rotary knob to the desired value. It is indicated in the display of the switch. For reasons of comfort, change temperature only in small increments.

If the minimum temperature Lo is set, the climate control system runs at maximum cooling, if cooling 🌡️ is switched on.

If the maximum temperature Hi is set, the climate control system runs at maximum heating.

Note
If 🌡️ is switched on, reducing the set cabin temperature can cause the engine to restart from an Autostop or inhibit an Autostop.

Demisting and defrosting the windows 🌧️

Press 🌧️. Activation is indicated by illumination of the LED in the button.

Temperature and air distribution are set automatically and the fan runs at high speed.

Switch on heated rear window 🃏.

To return to previous mode: press 🌧️, to return to Automatic mode: press AUTO.

Setting of automatic rear window heating can be changed in the Info-Display. Vehicle personalisation 🔄 108.

Note
If 🌧️ is pressed while the engine is running, an Autostop will be inhibited until 🌧️ is pressed again.

If ⬇️ is pressed with the fan switched on and the engine running, an Autostop will be inhibited until ⬇️ is pressed again or until the fan is switched off.
If ✪ is pressed while the engine is in an Autostop, the engine will restart automatically.

If ✫ is pressed with the fan switched on while the engine is in an Autostop, the engine will restart automatically.

Stop-start system  ◦ 135.

Manual settings
Climate control system settings can be changed by activating the buttons and rotary knobs as follows. Changing a setting will deactivate the Automatic mode.

Fan speed ✰

Turn left rotary knob to decrease or increase fan speed. The fan speed is indicated in the Info-Display.

Turning knob to ◇: fan and cooling are switched off.

To return to Automatic mode: Press AUTO.

Air distribution

Turn right rotary knob for desired adjustment. Setting is indicated in the Info-Display.

蜎 = to foot well
蜎 = to windscreen, front door windows and foot well
蜎 = to windscreen and front door windows (air conditioning is activated in the background to help preventing windows from fogging)
蜎 = to head area via adjustable air vents
蜎 = to head area and foot well
Return to Automatic air distribution: press AUTO.

Cooling

Press to switch on cooling. Activation is indicated by illumination of the LED in the button. Cooling is only functional when the engine is running and climate control fan is switched on.

Press again to switch off cooling.

The air conditioning system cools and dehumidifies (dries) as soon as the outside temperature is slightly above the freezing point. Therefore condensation may form and drip from under the vehicle.

If no cooling or drying is required, switch off the cooling system for fuel saving reasons.

When the cooling system is switched off, no engine restart will be requested by the climate control system during an Autostop. Exception: defrost system is activated and outside temperature above 0°C requests a restart.

The status of cooling operation is indicated in the Info-Display. Activation or deactivation of cooling operation after engine start can be changed in the Info-Display. Vehicle personalisation 108.

Air recirculation mode

Press to activate air recirculation mode. Activation is indicated by illumination of the LED in the button.

Press again to deactivate air recirculation mode.

Warning

The exchange of fresh air is reduced in air recirculation mode. In operation without cooling the air humidity increases, so the windows may mist up from inside. The quality of the passenger
compartment air deteriorates, which may cause the vehicle occupants to feel drowsy.

In warm and very humid ambient air conditions, the windscreen may mist up from outside, when cold air is directed towards it. If windscreen mists up from outside, activate windscreen wiper and deactivate ⏼.

**Basic settings**
Some settings can be changed in the Info-Display. Vehicle personalisation ◆ 108.

---

**Air vents**

**Adjustable air vents**
At least one air vent must be open while the cooling is on.

Adjust the air amount at the vent outlet by turning the adjuster wheel. The vent is closed when the adjuster wheel is turned close to the left or right.

Direct the flow of air by tilting and swivelling the slats.

**Warning**
Do not attach any objects to the slats of the air vents. Risk of damage and injury in case of an accident.

**Fixed air vents**
Additional air vents are located beneath the windscreen and door windows and in the foot wells.
Maintenance

Air intake

The air intake in front of the windscreen in the engine compartment must be kept clear to allow air intake. Remove any leaves, dirt or snow.

Pollen filter

The pollen filter cleans dust, soot, pollen and spores from the air entering the vehicle through the air intake.

Air conditioning regular operation

In order to ensure continuously efficient performance, cooling must be operated for a few minutes once a month, irrespective of the weather and time of year. Operation with cooling is not possible when the outside temperature is too low.

Service

For optimal cooling performance, it is recommended to annually check the climate control system, starting three years after initial vehicle registration, including:

- functionality and pressure test
- heating functionality
- leakage check
- check of drive belts
- cleaning of condenser and evaporator drainage
- performance check
Driving and operating

Driving hints ........................................... 132

Ride control systems .............................. 149
Driver assistance systems ..................... 152
Fuel ................................................ 173
Trailer hitch ....................................... 179

Driving hints

Control of the vehicle

Never coast with engine not running
Many systems will not function in this situation (e.g. brake servo unit, power steering). Driving in this manner is a danger to yourself and others.

All systems function during an Autostop.

Stop-start system 135.

Idle boost
If charging of the vehicle battery is required due to battery condition, the power output of the generator must be increased. This will be achieved by an idle boost which may be audible.

A message appears in the Driver Information Centre.

Pedals
To ensure the pedal travel is uninhibited, there must be no mats in the area of the pedals.

Driving downhill
Engage a gear when driving downhill to ensure that sufficient brake pressure is available.
Starting and operating

New vehicle running-in
Do not brake unnecessarily hard for the first few journeys.
During the first drive, smoke may occur because of wax and oil evaporating off the exhaust system. Park the vehicle in the open for a while after the first drive and avoid inhaling the fumes.
During the running-in period, fuel and engine oil consumption may be higher.
Additionally, the cleaning process of the diesel particle filter may take place more often.
Diesel particle filter 138.
Autostop may be inhibited to allow for charging of the vehicle battery.

Ignition switch positions
Turn key:

0 = ignition off: Some functions remain active until key is removed or driver's door is opened, provided the ignition was on previously
1 = accessory power mode: Steering wheel lock released, some electrical functions are operable, ignition is off
2 = ignition on power mode: Ignition is on, diesel engine is preheating. Control indicators illuminate and most electrical functions are operable
3 = engine start: Release key after starting procedure begins

Steering wheel lock
Remove key from ignition switch and turn steering wheel until it engages.

Retained power off
The following electronic systems are operable until the driver's door is opened or at the latest for 10 minutes after the ignition is switched off:
- power windows
- power outlets
- power sunroof
Power to the Infotainment system will continue to operate for 30 minutes or until the key is removed from the ignition switch, regardless of whether any door is opened.
Starting the engine

Turn key to position 1 to release the steering wheel lock.
Manual transmission: operate clutch and brake pedal.
Manual transmission automated: operate brake pedal.
Automatic transmission: operate brake pedal and move selector lever to P or N.
Do not operate the accelerator pedal.
Diesel engine: turn the key to position 2 for preheating until control indicator \(\checkmark\) extinguishes.

Turn key briefly to position 3 and release: an automatic procedure operates the starter after a brief delay, until the engine is running. See 'Automatic Starter Control'.

Before restarting or to switch off the engine, turn the key back to position 0.

During an Autostop, the engine can be started by depressing the clutch pedal.

**Starting the vehicle at low temperatures**
The start of the engine without additional heaters is possible down to -25 °C for diesel engines and -30 °C for petrol engines.

**Diesel engines**
The start of the engine without additional heaters is possible down to -25 °C.

**Petrol engines**
The start of the engine without additional heaters is possible down to -30 °C.

Required is an engine oil with the correct viscosity, the correct fuel, performed services and a sufficiently charged vehicle battery.

With temperatures below -30 °C, the automatic transmission requires a warming phase of approx. 5 minutes. The selector lever must be in position P.

**Automatic starter control**
This function controls the engine starting procedure. The driver does not need to hold the key in position 3. Once applied, the system will go on starting automatically until the engine is running. Because of the checking procedure, the engine starts running after a short delay.

Possible reasons for a non-starting engine:
- clutch pedal not operated (manual transmission)
- brake pedal not operated or selector lever not in P or N (automatic transmission)
- timeout occurred
Turbo engine warm-up
Upon start-up, engine available torque may be limited for a short time, especially when the engine temperature is cold. The limitation is to allow the lubrication system to fully protect the engine.

Overrun cut-off
The fuel supply is automatically cut-off during overrun, i.e. when the vehicle is driven with a gear engaged but accelerator is released.

Stop-start system
The stop-start system helps to save fuel and to reduce the exhaust emissions. When conditions allow, it switches off the engine as soon as the vehicle is at a low speed or at a standstill, e.g. at a traffic light or in a traffic jam.

On vehicles with manual transmission, the engine is started automatically as soon as the clutch is depressed.

On vehicles with manual transmission automated, the engine is started automatically as soon as the brake pedal is released.

A vehicle battery sensor ensures that an Autostop is only performed if the vehicle battery is sufficiently charged for a restart.

Activation
The stop-start system is available as soon as the engine is started, the vehicle starts-off and the conditions as stated below in this section are fulfilled.

Deactivation

Deactivate the stop-start system manually by pressing *eco*. The deactivation is indicated when the LED in the button extinguishes.

Autostop
Vehicles with manual transmission
If the vehicle is at a low speed or at a standstill, activate an Autostop as follows:

- Depress the clutch pedal.
- Set the lever in neutral.
- Release the clutch pedal.

The engine will be switched off while the ignition stays on.

Vehicles with manual transmission automated
If the vehicle is at a standstill with the brake pedal depressed, Autostop is activated automatically.

The engine will be switched off while the ignition stays on.

The stop-start system will be disabled on inclines of 15 % or more.
Indication

An Autostop is indicated by control indicator (A).

During an Autostop, the heating and brake performance will be maintained.

Conditions for an Autostop
The stop-start system checks if each of the following conditions is fulfilled:

- The stop-start system is not manually deactivated.
- The bonnet is fully closed.
- The driver's door is closed or the driver's seat belt is fastened.
- The vehicle battery is sufficiently charged and in good condition.
- The engine is warmed-up.
- The engine coolant temperature is not too high.
- The engine exhaust temperature is not too high, e.g. after driving with high engine load.
- The ambient temperature is above -5 °C.
- The climate control system allows an Autostop.
- The brake vacuum is sufficient.
- The self-cleaning function of the diesel particle filter is not active.
- The vehicle was driven at least at walking speed since the last Autostop.

Otherwise an Autostop will be inhibited.

Certain settings of the climate control system may inhibit an Autostop. See 'Climate control' chapter for further information 125.

Immediately after motorway driving an Autostop may be inhibited.

New vehicle running-in 133.

Vehicle battery discharge protection
To ensure reliable engine restarts, several vehicle battery discharge protection features are implemented as part of the stop-start system.

Power saving measures
During an Autostop, several electrical features, e.g. the rear window heating, are disabled or switched into a power saving mode. The fan speed of the climate control system is reduced to save power.

Restart of the engine by the driver
Vehicles with manual transmission
Depress the clutch pedal to restart the engine.

When the engine is restarted, control indicator (A) in the Driver Information Centre (DIC) extinguishes.

If the selector lever is shifted out of neutral before depressing the clutch pedal first, control indicator (B) illuminates or is shown as a symbol in the DIC.

Control indicator (B) 93.
Driving and operating

Vehicles with manual transmission automated
Release the brake pedal or move selector lever out of D to restart the engine.
When the engine is restarted, control indicator D in the DIC extinguishes.

Restart of the engine by the stop-start system
The selector lever must be in neutral to enable an automatic restart.
If one of the following conditions occurs during an Autostop, the engine will be restarted automatically by the stop-start system:
- The stop-start system is manually deactivated.
- The bonnet is opened.
- The driver's seat belt is unfastened and the driver's door is opened.
- The engine temperature is too low.
- The charging level of the vehicle battery is below a defined level.
- The brake vacuum is not sufficient.
- The vehicle is driven at least at walking speed.
- The climate control system requests an engine start.
- The air conditioning is manually switched on.

If the bonnet is not fully closed, a warning message is displayed in the Driver Information Centre.
If an electrical accessory, e.g. a portable CD player, is connected to the power outlet, a brief power drop during restart might be noticeable.

Parking

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not park the vehicle on an easily ignitable surface. The high temperature of the exhaust system could ignite the surface.</td>
</tr>
<tr>
<td>Always apply the parking brake. Activate the manual parking brake without pressing the release button. Apply as firmly as possible on a downhill slope or uphill slope. Depress foot brake at the same time to reduce operating force.</td>
</tr>
<tr>
<td>Switch off the engine.</td>
</tr>
<tr>
<td>If the vehicle is on a level surface or uphill slope, engage first gear or set the selector lever to position P before removing the ignition key. On an uphill slope, turn the front wheels away from the kerb.</td>
</tr>
<tr>
<td>If the vehicle is on a downhill slope, engage reverse gear or set the selector lever to position P before removing the ignition key. Turn the front wheels towards the kerb.</td>
</tr>
<tr>
<td>Close the windows and the sunroof.</td>
</tr>
<tr>
<td>Remove the ignition key. Turn the steering wheel until the steering wheel lock is felt to engage.</td>
</tr>
</tbody>
</table>

For vehicles with automatic transmission, the key can only
be removed when the selector lever is in position P.
For vehicles with manual transmission automated, the key can only be removed from the ignition switch when the parking brake is applied.

- Lock the vehicle.
- Activate the anti-theft alarm system.
- The engine cooling fans may run after the engine has been switched off ▶ 186.

**Caution**

After running at high engine speeds or with high engine loads, operate the engine briefly at a low load or run in neutral for approx. 30 seconds before switching off, in order to protect the turbocharger.

**Note**

In the event of an accident with airbag deployment, the engine is switched off automatically if the vehicle comes to a standstill within a certain time.

**Engine exhaust**

**Danger**

Engine exhaust gases contain poisonous carbon monoxide, which is colourless and odourless and could be fatal if inhaled.

If exhaust gases enter the interior of the vehicle, open the windows. Have the cause of the fault rectified by a workshop.

Avoid driving with an open load compartment, otherwise exhaust gases could enter the vehicle.

**Diesel particle filter**

The diesel particle filter system filters harmful soot particles out of the exhaust gases. The system includes a self-cleaning function that runs automatically during driving without any notification. The filter is cleaned by periodically burning off the soot particles at high temperature. This process takes place automatically under set driving conditions and may
Driving and operating

Driving and operating
take up to 25 minutes. Typically it
needs between seven and
12 minutes. Autostop is not available
and fuel consumption may be higher
during this period. The emission of
smells and smoke during this process
is normal.

Under certain driving conditions, e.g.
short distances, the system cannot
self clean itself automatically.

If cleaning of the filter is required and
if previous driving conditions did not
enable automatic cleaning, it will be
indicated by control indicator  
Simultaneously a warning message
or warning code appears in the Driver
Information Centre.

  illuminates when diesel particle
filter is full. Start cleaning process as
soon as possible.

  flashes when diesel particle filter
has reached the maximum filling
level. Start cleaning process
immediately to avoid damage to the
engine.

Cleaning process

To activate cleaning process,
continue driving, keep engine speed
above 2000 revolutions per minute.
Shift down if necessary. Diesel
particle filter cleaning is then started.
If  illuminates additionally,
cleaning is not possible, seek the
assistance of a workshop.

Caution

If the cleaning process is
interrupted, there is a risk of
provoking severe engine damage.

Cleaning takes place quickest at high
engine speeds and loads.
The control indicator  extinguishes
as soon as the self-cleaning
operation is complete.

Caustic converter

The catalytic converter reduces the
amount of harmful substances in the
exhaust gases.

Caution

Fuel grades other than those listed
on pages 173, 241 could
damage the catalytic converter or
electronic components.
Unburnt petrol will overheat and
damage the catalytic converter.
Therefore avoid excessive use of
the starter, running the fuel tank
dry and starting the engine by
pushing or towing.

In the event of misfiring, uneven
engine running, a reduction in engine
performance or other unusual
problems, have the cause of the fault
rectified by a workshop as soon as
possible. In an emergency, driving
can be continued for a short period,
keeping vehicle speed and engine
speed low.
**Automatic transmission**

The automatic transmission permits automatic gearshifting (automatic mode) or manual gearshifting (manual mode).

Manual shifting is possible in manual mode by pressing $<$ or $>$ on the selector lever on page 141.

**Transmission display**

In automatic mode, the driving programme is indicated by D in the Driver Information Centre (DIC).

In manual mode, M and the number of the selected gear is indicated.

R indicates reverse gear.

N indicates neutral position.

P indicates park position.

**Selector lever**

The selector lever is locked in P and can only be moved when the ignition is on and the brake pedal is applied.

P = park position, wheels are locked, engage only when the vehicle is stationary and the parking brake is applied

R = reverse gear, engage only when the vehicle is stationary

N = neutral

D = automatic shift mode

M = manual shift mode

$<$ = push to upshift in manual mode

$>$ = push to downshift in manual mode

The mode or selected gear is shown in the transmission display.
Without brake pedal applied, control indicator \( \Rightarrow \) illuminates.

If the selector lever is not in \( P \) when the ignition is switched off, control indicator \( \Rightarrow \) flashes.

To engage \( P, R \) or \( M \), press the release button.

The engine can only be started with the lever in position \( P \) or \( N \). When position \( N \) is selected, press the brake pedal or apply the parking brake before starting.

Do not accelerate while engaging a gear. Never depress the accelerator pedal and brake pedal at the same time.

When a gear is engaged, the vehicle slowly begins to creep when the brake is released.

**Engine braking**

To utilise the engine braking effect, select a lower gear in good time when driving downhill, see manual mode.

**Rocking the vehicle**

Rocking the vehicle is only permissible if the vehicle is stuck in sand, mud or snow. Move the selector lever between \( D \) and \( R \) in a repeat pattern. Do not race the engine and avoid sudden acceleration.

**Parking**

Apply the parking brake and engage \( P \).

The ignition key can only be removed when the selector lever is in position \( P \).

**Manual mode**

Move selector lever to position \( M \). Press \( \downarrow \) on the selector lever to shift to a higher gear.

Press \( \uparrow \) on the selector lever to shift to a lower gear.

If a higher gear is selected when vehicle speed is too low, or a lower gear when vehicle speed is too high, the shift is not executed. This can cause a message in the Driver Information Centre (DIC).

In manual mode, no automatic shifting to a higher gear takes place at high engine revolutions.

**Gear shift indication**

The symbol \( \uparrow \) with a number beside it is indicated when gearshifting is recommended for fuel saving reasons.

Shift indication appears only in manual mode.
Electronic driving programmes

- Following a cold start, the operating temperature programme increases engine speed to quickly bring the catalytic converter to the required temperature.
- The automatic neutral shift function automatically shifts to idling when the vehicle is stopped with a forward gear engaged and the brake pedal is pressed.
- Special programmes automatically adapt the shifting points when driving up inclines or down hills.
- When starting off in snowy or icy conditions or on other slippery surfaces, the electronic transmission control selects a higher gear automatically.

Kickdown
If the accelerator pedal is pressed down completely in automatic mode, the transmission shifts to a lower gear depending on engine speed.

Fault
In the event of a fault, control indicator \( \Rightarrow \) illuminates. Additionally, a message is displayed in the Driver Information Centre (DIC). Vehicle messages \( \textcircled{3} 105 \).

The transmission no longer shifts automatically. Continued travel is possible with manual shifting.
Only the highest gear is available. Depending on the fault, 2nd gear may also be available in manual mode.
Shift only when the vehicle is at a standstill.
Have the cause of the fault remedied by a workshop.

Interruption of power supply
In the event of an interruption of power supply, the selector lever cannot be moved out of the P position. The ignition key cannot be removed from the ignition switch.

If the vehicle battery is discharged, start the vehicle using jump leads \( \textcircled{3} 226 \).

If the vehicle battery is not the cause of the fault, release the selector lever.
1. Apply the parking brake.
2. Release the selector lever trim from the centre console; Poke with a finger into the leather socket in front of the selector lever and push the trim upwards at the front rim from below, as shown in the illustration. Rotate trim to the left.
3. Push down the release lever and move the selector lever out of P or N. If these positions are engaged again, the selector lever will be locked in position again. Have the cause of the power supply interruption remedied by a workshop.

4. Mount the selector lever trim onto the centre console and refit.

Manual transmission

To engage reverse, depress the clutch pedal and then press the release button on the selector lever and engage the gear.

If the gear does not engage, set the lever to neutral, release the clutch pedal and depress again; then repeat gear selection.

Do not slip the clutch unnecessarily.

When operating, depress the clutch pedal completely. Do not use the pedal as a foot rest.

Caution

It is not advisable to drive with the hand resting on the selector lever.

Gear shift indication ◇ 93.
Manual transmission automated

The automated manual transmission permits manual gearshifting (manual mode) or automatic gearshifting (automatic mode), both with automatic clutch control.

Manual shifting is possible by tapping the selector lever in manual mode.

**Note**
When unlocking or opening a vehicle door, a sound may be audible caused by the hydraulic system.

Transmission display

In automatic mode, the driving programme is indicated by D in the Driver Information Centre.

In manual mode, M and the number of the selected gear is indicated.

R indicates reverse gear.

N indicates neutral.

**Starting the engine**

To start the engine, depress the foot brake, if transmission is not in position N.

Transmission automatically shifts to N upon starting. There may be a slight delay.

Starting is not possible if all brake lights fail.

**Stop-start-system**

**Autostop**

If the vehicle is at a standstill and brake pedal is operated, Autostop is activated automatically.

The engine will be switched off while the ignition stays on.

An Autostop is indicated by control indicator (A).

**Autostart**

Release the brake pedal or move selector lever out of D to restart the engine.
When the engine is restarted, control indicator ∆ extinguishes in the DIC. The stop-start system will be disabled on inclines of 15 % or more.

Stop-start-system ▶ 135.

Selector lever

Always move the selector lever in the appropriate direction as far as it will go. Upon release, it automatically returns to the centre position.

N = neutral position
D/M = switch between automatic (D) and manual (M) shift mode. The transmission display shows either D or M with the selected gear
+ = upshifting in manual mode
− = downshifting in manual mode
R = reverse gear. Engage only when vehicle is stationary

If selector lever is moved from R to the left, D is directly engaged.
If selector lever is moved from D to + or −, manual mode M is selected and the transmission shifts.

Starting off
Depress the foot brake and move the selector lever to D/M or R. If D is selected, transmission is in automatic mode and first gear is engaged. If R is selected, reverse gear is engaged. The vehicle starts to move when the foot brake is released.
To start-off without depressing the foot brake, accelerate immediately after engaging a gear as long as D or R flashes.

If neither the accelerator nor the brake pedal are depressed, no gear is engaged and D or R flashes for a brief time in the display.

Stopping the vehicle
In D, first gear is engaged and the clutch is released when the vehicle is stopped. In R, reverse gear remains engaged.

Engine braking

Automatic mode
When driving downhill, the manual transmission automated does not shift into higher gears until a fairly high engine speed has been reached. It shifts down in good time when braking.

Manual mode
To utilise the engine braking effect, select a lower gear in good time when driving downhill. Changing into manual mode is only possible while the engine is running or during an Autostop.
Rocking the vehicle
Rocking the vehicle is only permissible if the vehicle is stuck in sand, mud or snow. Move the selector lever between R and D in a repeat pattern. Do not race the engine and avoid sudden acceleration.

Parking
The most recently engaged gear (see transmission display) remains engaged when switching off ignition. With N, no gear is engaged.
Therefore always apply the parking brake when switching off ignition. If parking brake is not applied, P flashes in the transmission display and the key cannot be removed from the ignition switch. P stops flashing in the transmission display as soon as the parking brake is slightly applied.
When the ignition is switched off, the transmission no longer responds to movement of the selector lever.

Tyre pressure monitoring system
To start the sensor matching process of the tyre pressure monitoring system, the selector lever must be moved and held in position N for five seconds. P illuminates in the transmission display to indicate that the sensor matching process can be started.

Tyre pressure monitoring system  209.

Manual mode
If a higher gear is selected when the engine speed is too low, or a lower gear when the speed is too high, the shift is not executed. This prevents the engine from running at too low or too high an engine speed. A warning message is displayed in the Driver Information Centre (DIC). Vehicle messages  105.
If engine speed is too low, the transmission automatically shifts to a lower gear.

If engine speed is too high, the transmission only switches to a higher gear via kickdown.
When + or - is selected in automatic mode, the transmission switches to manual mode and shifts accordingly.

Gear shift indication
The symbol ▲ with a number alongside it, is indicated when gearshifting is recommended for fuel saving reasons.
Shift indication appears only in manual mode.

Electronic driving programmes
- Following a cold start, the operating temperature programme increases engine speed to quickly bring the catalytic converter to the required temperature.
- The adaptive programme tailors gearshifting to the driving conditions, e.g. greater load or gradients.
Driving and operating

Kickdown
If the accelerator pedal is pressed down completely in automatic mode, the transmission shifts to a lower gear depending on engine speed.

Fault
To prevent damage to the manual transmission automated, the clutch is engaged automatically at high clutch temperatures.

In the event of a fault, control indicator R illuminates. Additionally, a warning message is displayed in the Driver Information Centre. Vehicle messages 93.

Continued driving is restricted or not possible, depending on the fault.

Have the cause of the fault remedied by a workshop.

Brakes
The brake system comprises two independent brake circuits.

If a brake circuit fails, the vehicle can still be braked using the other brake circuit. However, braking effect is achieved only when the brake pedal is depressed firmly. Considerably more force is needed for this. The braking distance is extended. Seek the assistance of a workshop before continuing your journey.

When the engine is not running, the support of the brake servo unit disappears once the brake pedal has been depressed once or twice. Braking effect is not reduced, but braking requires significantly greater force. It is especially important to bear this in mind when being towed.

Control indicator R 93.

Antilock brake system
Antilock brake system (ABS) prevents the wheels from locking.

ABS starts to regulate brake pressure as soon as a wheel shows a tendency to lock. The vehicle remains steerable, even during hard braking.

ABS control is made apparent through a pulse in the brake pedal and the noise of the regulation process.

For optimum braking, keep the brake pedal fully depressed throughout the braking process, despite the fact that the pedal is pulsating. Do not reduce the pressure on the pedal.

After starting off the system performs a self-test which may be audible.

Control indicator R 93.

Adaptive brake light
During full braking, all three brake lights flash for the duration of ABS control.
Fault

**Warning**
If there is a fault in the ABS, the wheels may be liable to lock due to braking that is heavier than normal. The advantages of ABS are no longer available. During hard braking, the vehicle can no longer be steered and may swerve.

Have the cause of the fault remedied by a workshop.

Parking brake

**Manual parking brake**

![Parking brake lever](image)

**Warning**
Always apply parking brake firmly without operating the release button, and apply as firmly as possible on a downhill or uphill slope.
To release the parking brake, pull the lever up slightly, press the release button and fully lower the lever.

To reduce the operating forces of the parking brake, depress the foot brake at the same time.

Control indicator [ ] 93.

**Brake assist**
If the brake pedal is depressed quickly and forcefully, maximum brake force is automatically applied (full braking).
Maintain steady pressure on the brake pedal for as long as full braking is required. Maximum brake force is automatically reduced when the brake pedal is released.

**Hill start assist**
The system helps prevent unintended movement when driving away on inclines.
When releasing the foot brake after stopping on an incline, the brakes remain on for a further two seconds. The brakes release automatically as
soon as the vehicle begins to accelerate or the two seconds holding time is over.
The hill start assist is not active during an Autostop.

Ride control systems

Traction Control system
The Traction Control system (TC) is a component of the Electronic Stability Control (ESC).
TC improves driving stability when necessary, regardless of the type of road surface or tyre grip, by preventing the drive wheels from spinning.
As soon as the drive wheels starts to spin, engine output is reduced and the wheel spinning the most is braked individually. This considerably improves the driving stability of the vehicle on slippery road surfaces.

TC is operational after each engine start as soon as the control indicator \( \text{TC} \) extinguishes.

When TC operates \( \text{TC} \) flashes.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not let this special safety feature tempt you into taking risks when driving.</td>
</tr>
<tr>
<td>Adapt speed to the road conditions.</td>
</tr>
</tbody>
</table>

Deactivation

TC can be switched off when spinning of drive wheels is required: press \( \text{TC} \) briefly.
A status message appears in the Driver Information Centre when TC is deactivated.

Control indicator \( \text{TC} \) illuminates.

TC is reactivated by pressing \( \text{TC} \) again. A status message pops up in the Driver Information Centre when TC is reactivated.

TC is also reactivated the next time the ignition is switched on.

**Fault**

If there is a fault in the system the control indicator \( \text{TC} \) illuminates continuously and a message or a warning code appears in the Driver Information Centre. The system is not operational.

Have the cause of the fault remedied by a workshop.

---

### Electronic Stability Control

Electronic Stability Control (ESC) improves driving stability when necessary, regardless of the type of road surface or tyre grip. It also prevents the drive wheels from spinning. ESC operates in combination with the Traction Control system (TC).

As soon as the vehicle starts to swerve (understeer/oversteer), engine output is reduced and the wheels are braked individually. This considerably improves the driving stability of the vehicle on slippery road surfaces.

ESC is operational after each engine start as soon as the control indicator \( \text{ESC} \) extinguishes.

When ESC operates \( \text{ESC} \) flashes.

---

### Warning

Do not let this special safety feature tempt you into taking risks when driving.

Adapt speed to the road conditions.

Control indicator \( \text{ESC} \) 94.

---

### Deactivation
For a more sporty behaviour ESC and TC can be deactivated together:

- hold \( \text{ } \) pressed for a minimum of 5 seconds: ESC and TC are both deactivated. \( \text{ } \) illuminates and status messages appear in the Driver Information Centre.

- To deactivate only Traction control system press button \( \text{ } \) briefly: TC is inactive but ESC remains active, \( \text{ } \) illuminates. A status message appears in the Driver Information Centre when TC is deactivated.

ESC is reactivated by pressing the \( \text{ } \) button again. If the TC system was previously disabled, both TC and ESC are reactivated. \( \text{ } \) and \( \text{ } \) extinguishes when TC and ESC are reactivated.

ESC is also reactivated the next time the ignition is switched on.

### Fault

If there is a fault in the system the control indicator \( \text{ } \) illuminates continuously and a message or a warning code appears in the Driver Information Centre. The system is not operational.

Have the cause of the fault remedied by a workshop.

### City mode

City mode is a feature which enables increased steering assistance during lower speed conditions, e.g. city traffic or parking. Steering assistance is increased for greater convenience.

Press \( \text{ } \) when engine is running. The system works from standstill up to 35 km/h, and in reverse gear. Above this speed, the system changes to normal mode. When activated, City mode engages automatically below 35 km/h.

An illuminated LED in the City mode button indicates that the system is active and a message pops-up in the Driver Information Centre.

City mode remains active during an Autostop, but is only operational when the engine is running.
Stop-start system  135.

**Deactivation**
Press \( \text{B} \); LED in the button extinguishes and a message pops-up in the Driver Information Centre.
Each time the engine is started, City mode is deactivated.

**Overload**
If the steering in City mode is heavily loaded, e.g. in long parking manoeuvres or heavy city traffic, the system is deactivated for overheating protection. Steering operates in normal mode until City mode activates automatically.

**Fault**
In the event of a fault in the system, control indicator \( \text{c} \) illuminates and a message is displayed in the Driver Information Centre.
Vehicle messages  105.

**System calibration**
If control indicators \( \text{c} \) and \( \text{b} \) illuminate simultaneously, a calibration of the power steering system is necessary. This can occur e.g. when turning the steering wheel for one rotation with ignition switched off. In this case, switch on ignition and turn steering wheel once from lock to lock.
If control indicators \( \text{c} \) and \( \text{b} \) do not extinguish after calibration, seek the assistance of a workshop.

---

**Driver assistance systems**

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
</table>
Driver assistance systems are developed to support the driver and not to replace the driver's attention.
The driver accepts full responsibility when driving the vehicle.
When using driver assistance systems, always take care regarding the current traffic situation.

**Cruise control**
The cruise control can store and maintain speeds of approx. 30 to 200 km/h. Deviations from the stored speeds may occur when driving uphill or downhill.
For safety reasons, the cruise control cannot be activated until the foot brake has been operated once. Activating in first gear is not possible.

Do not use the cruise control if it is not advisable to maintain a constant speed.

**Vehicles with automatic transmission or manual transmission automated**

Only activate cruise control in automatic mode.

Control indicator 96.

---

**Switching on**

Press ; control indicator in instrument cluster illuminates white.

**Activation**

Accelerate to the desired speed and turn thumb wheel to SET/-, the current speed is stored and maintained. Control indicator in instrument cluster illuminates green. Accelerator pedal can be released. Vehicle speed can be increased by depressing the accelerator pedal. When the accelerator pedal is released, the previously stored speed is resumed.

Cruise control remains activated while gearshifting.

---

**Increase speed**

With cruise control active, hold thumb wheel turned to RES/+ or briefly turn to RES/+ repeatedly: speed increases continuously or in small increments. Alternatively accelerate to the desired speed and store by turning to SET/-.

---

**Reduce speed**

With cruise control active, hold thumb wheel turned to SET/- or briefly turn to SET/- repeatedly: speed decreases continuously or in small increments.
Deactivation
Press \( \Rightarrow \); control indicator \( \Rightarrow \) in instrument cluster illuminates white. Cruise control is deactivated. Last stored speed remains in memory for later speed resume.

Automatic deactivation:
- Vehicle speed is below approx. 30 km/h.
- Vehicle speed above approx. 200 km/h.
- The brake pedal is depressed.
- The clutch pedal is depressed for a few seconds.
- The selector lever is in N.
- Engine speed is in a very low range.
- The Traction Control system or Electronic Stability Control is operating.

Resume stored speed
Turn thumb wheel to RES/+ at a speed above 30 km/h. The stored speed will be obtained.

Switching off
Press \( \Rightarrow \), control indicator \( \Rightarrow \) in instrument cluster extinguishes. The stored speed is deleted.
Pressing \( \Rightarrow \) to activate the speed limiter or switching off the ignition also switches off cruise control and deletes the stored speed.

Speed limiter
The speed limiter prevents the vehicle exceeding a preset maximum speed.
The maximum speed can be set at a speed above 25 km/h.
The driver can only accelerate up to the preset speed. Deviations from the limited speed may occur when driving downhill.
The preset speed limit is displayed in the Driver Information Centre (DIC) when the system is active.

Activation
Press \( \Rightarrow \). If cruise control has been activated before, it is switched off when speed limiter is activated and control indicator \( \Rightarrow \) extinguishes.

Set speed limit
With speed limiter active, hold thumb wheel turned to RES/+ or briefly turn to RES/+ repeatedly until the desired maximum speed is displayed in the DIC.
Alternatively, accelerate to the desired speed and briefly turn thumb wheel to SET/-: the current speed is stored as maximum speed. Speed limit is displayed in the DIC.

**Change speed limit**
With speed limiter active, turn thumb wheel to RES/+ to increase or SET/- to decrease the desired maximum speed.

**Exceeding the speed limit**
In the event of an emergency, it is possible to exceed the speed limit by depressing the accelerator pedal firmly beyond the point of resistance. The limited speed will flash in the DIC and a chime sounds during this period.

Release the accelerator pedal and the speed limiter function is reactivated once a speed lower than the limit speed is obtained.

**Deactivation**
Press 🚀: speed limiter is deactivated and the vehicle can be driven without speed limit.
The limited speed will be stored and is indicated in brackets in the DIC. Additionally, a corresponding message appears.

**Resume limit speed**
Turn thumb wheel to RES/+ . The stored speed limit will be obtained.

**Switching off**
Press 🚪 , the speed limit indication extinguishes in the DIC. The stored speed is deleted.
By pressing 🚪 to activate cruise control, speed limiter is also deactivated and the stored speed is deleted.

By switching off the ignition, speed limiter is also deactivated, but the speed limit will be stored for next speed limiter activation.

**Forward collision alert**
The forward collision alert can help to avoid or reduce the harm caused by front-end crashes.
Forward collision alert uses the front camera system in the windscreen to detect a vehicle directly ahead, in your path, within a distance of approx. 60 metres.

A vehicle ahead is indicated by control indicator 🚠.
If a vehicle directly ahead is approached too quickly, a warning chime and an optical alert in the windscreen is provided.
A precondition is that forward collision alert is not deactivated by pressing ✪.

**Activation**
Forward collision alert operates automatically above 40 km/h, if it is not deactivated by pressing ✪, see below.

**Selecting the alert sensitivity**
The alert sensitivity can be set to near, medium or far.

Press ✪, the current setting is shown on the Driver Information Centre (DIC). Press ✪ again to change the alert sensitivity.

A green illuminated vehicle ahead control indicator ✢ illuminates in the instrument cluster when the system has detected a vehicle in the driving path.

When the distance to a preceding moving vehicle becomes too small or when approaching another vehicle too rapidly and a collision is imminent, a red LED warning light is reflected flashing in the windscreen in front of the driver's view.

Simultaneously a warning chime sounds. Depress the brake pedal, if it is required by the situation.

**Deactivation**
The system can be deactivated. Press ✪ repeatedly until the following message appears in the DIC.
General information

⚠️ Warning

Forward collision alert is just a warning system and does not apply the brakes. When approaching a vehicle ahead too rapidly, it may not provide you enough time to avoid a collision.

The driver accepts full responsibility for the appropriate following distance based on traffic, weather and visibility conditions.

The complete attention of the driver is always required while driving. The driver must always be ready to take action and apply the brakes.

System limitations

The system is designed to warn only for vehicles, but may react also on other objects.

In the following cases, forward collision alert may not detect a vehicle ahead or sensor performance is limited:

- on winding roads
- when weather limits visibility, such as fog, rain, or snow
- when the sensor is blocked by snow, ice, slush, mud, dirt, or windscreen damage

Following distance indication

The following distance indication displays the distance to a preceding moving vehicle. The front camera in the windscreen is used to detect the distance of a vehicle directly ahead in the vehicle's path. It is active at speeds above 40 km/h.

When a preceding vehicle is detected ahead, the distance is indicated in seconds, displayed on a page in the Driver Information Centre 97. Press MENU on the turn signal lever to select Vehicle Information Menu and turn the adjuster wheel to choose following distance indication page.

The minimum indicated distance is 0.5 seconds.
Driving and operating

If there is no vehicle ahead or the vehicle ahead is out of range, two dashes will be displayed: -.- sec.

Parking assist

Rear parking assist

⚠️ Warning

It is the driver who bears full responsibility for the parking manoeuvre.
Always check the surrounding area while reversing and using the rear parking assist system.

The rear parking assist makes parking easier by measuring the distance between the vehicle and rear obstacles. It informs and warns the driver by giving acoustic signals and display indication.

The system has four ultrasonic parking sensors in the rear bumper.

Activation

When reverse gear is engaged, the system is ready to operate automatically.
An illuminated LED in the parking assist button P indicates that the system is ready to operate.

Indication

The system warns the driver with acoustic signals against potentially hazardous obstacles behind the vehicle in a distance range up to 1.5 metres. The interval between the sounds becomes shorter as the vehicle gets closer to that obstacle. When the distance is less than approx. 30 cm, the sound is continuous.

Additionally, the distance to rear obstacles is displayed by changing distance lines in the Driver Information Centre (DIC) or, depending on the version, on the Colour-Info-Display.

The distance indication can be inhibited by vehicle messages with a higher priority. After approving the message by pressing SET/CLR on the turn signal lever, distance indication appears again.
Deactivation

The system automatically switches off when reverse gear is disengaged.

Manual deactivation is also possible by pressing the parking assist button P

In both cases, the LED in the button extinguishes.

Fault

In the event of a fault or if the system does not work temporarily, e.g. because of high external noise level or other interference factors, the LED in the button flashes for three seconds and then extinguishes.

Control indicator P
illuminates in the instrument cluster 94 or a message is indicated in the Driver Information Centre.

Front-rear parking assist

⚠️ Warning

The driver bears full responsibility for the parking manoeuvre.
Always check the surrounding area when driving backwards or forwards while using parking assist system.

The front-rear parking assist measures the distance between the vehicle and obstacles in front and behind the vehicle. It informs and warns the driver by giving acoustic signals and display indication.

It uses two different acoustic warning signals for the front and rear monitoring areas, each with a different tone frequency.

The system has four ultrasonic parking sensors each in the rear and front bumper.

If the vehicle is equipped with advanced parking assist, the system has six ultrasonic parking sensors each in both the rear and front bumper.
Vehicles with front-rear parking assist and advanced parking assist are recognisable by \( P \checkmark \Delta \).

Advanced parking assist, see section below.

**Activation and deactivation**

When reverse gear is engaged, the front and rear parking assist is ready to operate.

An illuminated LED in the parking assist button \( P \checkmark \Delta \) or \( P \checkmark \checkmark \) indicates that the system is ready to operate.

The front parking assist can also be activated at a speed up to 11 km/h with a brief press of the parking assist button.

If the \( P \checkmark \Delta \) or \( P \checkmark \checkmark \) is switched on once within an ignition cycle, the front parking assist is deactivated at a speed above 11 km/h. It will be reactivated if vehicle speed has not exceeded 25 km/h beforehand. If vehicle speed has exceeded 25 km/h beforehand, front parking assist remains deactivated when speed drops below 11 km/h.

When the system is deactivated, the LED in the button extinguishes and **Park Assist Off** pops-up in the Driver Information Centre (DIC).

The system is deactivated automatically when vehicle speed exceeds 25 km/h.

**Indication**

The system warns the driver with acoustic signals against potentially hazardous obstacles behind the vehicle in a distance range up to 1.5 metres and in front up to 1.2 metres. Depending on which side of the vehicle is closer to an obstacle, you will hear acoustic warning signals in the vehicle on the respective side. The interval between the sounds becomes shorter as the vehicle gets closer to that obstacle. When the distance is less than approx. 30 cm, the sound is continuous.

Additionally, the distance to rear and front obstacles is displayed by changing distance lines in the Driver Information Centre (DIC) \( \checkmark \) 97 or, depending on the version, on the Colour-Info-Display \( \checkmark \) 103.
The distance to rear and front obstacles is displayed by changing distance lines in the Driver Information Centre (DIC) 97.

The distance indication can be inhibited by vehicle messages with a higher priority. After approving the message by pressing SET/CLR on the turn signal lever, distance indication appears again.

The distance to obstacles is shown on the Colour-Info-Display by coloured zones in front of or behind the vehicle 103.

Fault
In the event of a fault or if the system does not work temporarily, e.g. because of high external noise level or other interference factors, a message pops-up in the DIC. Vehicle messages 105.

Advanced parking assist

⚠️ Warning

The driver bears full responsibility for accepting the parking slot suggested by the system and the parking manoeuvre.
Always check the surrounding area in all directions when using the advanced parking assist.

The advanced parking assist measures a suitable parking slot while passing, calculates the trajectory and automatically steers the vehicle into a parallel or perpendicular parking slot.

Instructions are given in the Driver Information Centre (DIC) 97 or, depending on the version, on the Colour-Info-Display 103, supported by acoustic signals.

The driver must control acceleration, braking and gear shifting, while steering is done automatically.

Advanced parking assist can only be activated when driving forwards.
Advanced parking assist is always combined with front-rear parking assist, see previous section. Both systems use the same sensors in the front and rear bumper.

**Button and operation logic**

Advanced parking assist and front-rear parking assist both use the same button for activation and deactivation:

- A brief press of activates or deactivates the parking assist.
- A long press of (approx. one second) activates or deactivates the advanced parking assist, see separate description below.

Button logic operates the systems by pressing as follows:

- If only front-rear parking assist is active, a brief press deactivates front-rear parking assist.
- If only front-rear parking assist is active, a long press activates advanced parking assist.
- If only advanced parking assist is active and the system is in parking slot searching mode, a brief press activates front-rear parking assist.
- If only advanced parking assist is active and the system is in parking guiding mode, a brief press deactivates advanced parking assist.
- If only advanced parking assist is active, a long press deactivates advanced parking assist.
- If forward gear or neutral is selected, a brief press activates or deactivates only front parking assist.
- If reverse gear is selected, a brief press activates or deactivates front and rear parking assist.

**Activation**

When searching for a parking slot, the system is ready to operate with a long press of .

The system recognises and memorises (10 metres for parallel parking slots or six metres for perpendicular parking slots) even in the parking assist mode. A long press of activates advanced parking assist to start parking manoeuvre.

The system can only be activated at a speed up to 30 km/h and the system searches for a parking slot at a speed up to 30 km/h.
The maximum allowed parallel distance between the vehicle and a row of parked cars is 1.8 metres for parallel parking and 2.5 metres for perpendicular parking.

**Functionality**

**Parking slot searching mode**

**Vehicles with indication in the Driver Information Centre**

When a slot is detected, a visual feedback in the Driver Information Centre (DIC) and an acoustic signal is given.

**Vehicles with indication on the Colour-Info-Display**

Select parallel or perpendicular parking slot by tapping the icon 6 or 7 on the Colour-Info-Display.
When a slot is detected, a visual feedback on the Colour-Info-Display and an acoustic signal is given. If the driver does not stop the vehicle within 10 metres for parallel parking slots or six metres for perpendicular parking slots after a parking slot is proposed, the system starts to search for another suitable parking slot.

**Park guiding mode**
The parking slot suggestion of the system is accepted when the vehicle is stopped by the driver within 10 metres for parallel parking slots or six metres for perpendicular parking slots after the Stop message is given. The system calculates the optimal path into the parking slot. A brief vibration in the steering wheel after engaging reverse gear indicates that the steering is controlled by the system. Then the vehicle is steered into the slot automatically by giving the driver detailed instructions for braking, accelerating and gear shifting. The driver must keep hands away from the steering wheel.

Always pay attention to the sound of the front-rear parking assist. Continuous sound indicates that the distance to an obstacle is less than approx. 30 cm.

If, for any reason, the driver must take over control of the steering, hold the steering wheel only at the outer edge. Automatic steering is cancelled in this event.

**Display indication**
The instructions on the display show:
- General hints and warning messages.
- A hint when driving faster than 30 km/h during parking slot searching mode, or 8 km/h in guiding mode.
- The demand to stop the vehicle, when a parking slot is detected.
- The direction of driving during the parking manoeuvre.
- The demand to shift into reverse or first gear.
- The demand to accelerate or brake.
- For some of the instructions a progress bar is shown in the Driver Information Centre (DIC).
■ The successful completion of the parking manoeuvre indicated by a pop-up symbol and a chime.
■ The cancelling of a parking manoeuvre.

Display priorities
Advanced parking assist indication in the DIC can be inhibited by vehicle messages with a higher priority. After approving the message by pressing SET/CLR on the turn signal lever, advanced parking assist instructions appear again and the parking manoeuvre can be continued.

Deactivation
The system is deactivated by:
■ a long press of 
■ parking manoeuvre successfully ended
■ driving faster than 30 km/h during parking slot search
■ driving faster than 8 km/h during parking guidance
■ driver interference on steering wheel detected
■ exceeding number of maximum gear changes: eight cycles when parallel parking or five cycles when perpendicular parking
■ switching off the ignition
Deactivation by the driver or by the system during manoeuvring will be indicated by Parking Deactivated on the display. Additionally, an acoustic signal sounds.

Fault
A message appears when:
■ There is a fault in the system.
■ The driver did not successfully complete the parking manoeuvre.
■ The system is not operational.
■ Any of the deactivation reasons described above apply.
If an object is detected during parking instructions, Stop is indicated on the display. Removing the object will resume the parking manoeuvre. If the object is not removed, the system will be deactivated. A long press of 
will activate the system and search for a new parking slot.

Basic notes on parking assist systems

⚠️ Warning
Under certain circumstances, various reflective surfaces on objects or clothing as well as external noise sources may cause the system to fail to detect obstacles.
Special attention must be paid to low obstacles which can damage the lower part of the bumper.

 precautions
Performance of the system can be reduced when sensors are covered, e.g. by ice or snow.
Performance of the parking assist system can be reduced due to heavy loading.
Special conditions apply if there are taller vehicles in the vicinity (e.g. off-road vehicles, mini vans, vans). Object identification and
correct distance indication in the upper part of these vehicles cannot be guaranteed.

Objects with a very small reflection cross-section, e.g. objects of narrow size or soft materials, may not be detected by the system.

Parking assist systems do not detect objects outside the detection range.

Note
It is possible that the sensor detects a non-existing object caused by echo disturbance from external acoustic noise or mechanical misalignments (sporadic false warnings may occur).

Make sure that the front number plate is properly mounted (not bent and no gaps to the bumper on the left or right side) and the sensors are firmly in place.

Advanced parking assist system may not respond to changes in the available parking space after initiating a parking manoeuvre. The system may recognize an entry, a gateway, a courtyard or even a crossing as a parking slot. After selecting reverse gear the system will start a parking manoeuvre. Take care regarding the availability of the suggested parking slot.

Surface irregularities, e.g. on construction zones, are not detected by the system. The driver accepts responsibility.

Note
If engaging a forward gear and exceeding a certain speed, the rear parking assist will be deactivated when the rear carrier system is extended.

If engaging reverse at first, the parking assist will detect the rear carrier system and provide a buzzing sound. Press P or D briefly to deactivate the parking assist.

Note
After production, the system requires a calibration. For optimal parking guidance, a driving distance of at least 10 km, including a number of bends, is required.

Side blind spot alert
The Side blind spot alert system detects and reports objects on either side of the vehicle, within a specified "blind spot" zone. The system alerts visually in each exterior mirror, when detecting objects that may not be visible in the interior and exterior mirrors.

Side blind spot alert uses some of the advanced parking assist sensors which are located in the front and rear bumper on both sides of the vehicle.

⚠️ Warning
Side blind spot alert does not replace driver vision.

The system does not detect:
- vehicles outside the side blind zones which may be rapidly approaching
- pedestrians, cyclists or animals

Before changing a lane, always check all mirrors, look over the shoulder and use the turn signal.
When the system detects a vehicle in the side blind zone while driving forward, either while passing a vehicle or being passed, an amber warning symbol will illuminate in the relevant exterior mirror. If the driver then activates the turn signal, the warning symbol starts flashing amber as a warning not to change lanes.

Side blind spot alert is active from speeds of 10 km/h up to 140 km/h. Driving faster than 140 km/h deactivates the system, indicated by low lighting warning symbols in both exterior mirrors. Reducing the speed again will extinguish the warning symbols. If a vehicle is then detected in the blind zone, the warning symbols will illuminate as normal on the relevant side.

When the vehicle is started, both exterior mirror displays will briefly come on to indicate that the system is operating.

The system can be activated or deactivated in the Info-Display, vehicle personalisation 108. Deactivation is indicated by a message in the Driver Information Centre.

**Detection zones**

The detection zones start at the rear bumper and extend approx. three metres rearwards and to the sides. The height of the zone is approx. between 0.5 metres and two metres off the ground.

Side blind spot alert is designed to ignore stationary objects, e.g. guardrails, posts, curbs, walls and beams. Parked vehicles or oncoming vehicles are not detected.

**Fault**

Occasional missed alerts can occur under normal circumstances and will increase in wet conditions.

Side blind spot alert does not operate when the left or right corners of the rear bumper are covered with mud, dirt, snow, ice, slush, or in heavy rainstorms. Cleaning instructions 229.

In the event of a fault in the system or if the system does not work due to temporary conditions, a message is displayed in the Driver Information Centre. Seek the assistance of a workshop.

**Rear view camera**

The rear view camera assists the driver when reversing by displaying a view of the area behind the vehicle. The view of the camera is displayed in the Colour-Info-Display.
Driving and operating

**Warning**

The rear view camera does not replace driver vision. Note that objects that are outside the camera's field of view and the advanced parking assist sensors, e.g. below the bumper or underneath the vehicle, are not displayed.

Do not reverse the vehicle by only looking at the Info-Display and check the surrounding area behind and around the vehicle before reversing.

**Activation**

Rear view camera is automatically activated when reverse gear is engaged.

**Functionality**

The camera is mounted between the number plate lights and has a viewing angle of 130°.

The area displayed by the camera is limited. The distance of the image that appears on the display differs from the actual distance.

**Warning symbols**

Warning symbols are indicated as triangles on the picture, which show obstacles detected by the rear sensors of the advanced parking assist.

**Display settings**

Brightness and contrast can be set by tapping the touch screen display when rear view camera is active.
Deactivation
The camera is deactivated when a certain forward speed is exceeded or if reverse gear is not engaged for approx. 10 seconds.
Activation or deactivation of the visual guiding lines and the alerting symbols can be changed in the Settings menu in the Info-Display. Vehicle personalisation 108.

Fault
Fault messages are displayed with a △ on the top line of the Info-Display.
The rear view camera may not operate properly when:
- The surrounding is dark.
- The sun or the beam of headlights is shining directly into the camera lens.
- Ice, snow, mud, or anything else covers the camera lens. Clean the lens, rinse it with water, and wipe it with a soft cloth.

Traffic sign assistant

Functionality
The traffic sign assistant system detects designated traffic signs via a front camera and displays them in the Driver Information Centre (DIC).

Traffic signs, which will be detected, are:
- The vehicle had a rear end accident.
- There are extreme temperature changes.

Limit and no passing signs
- speed limit
- no passing
- end of speed limit
- end of no passing

Road signs
Beginning and end of:
- motorways
- A-roads
- play streets

Add on signs
- additional hints to traffic signs
- restriction of trailer towing
- tractor constraints
- wet warning
- ice warning
- direction arrows

Speed limit signs and no passing signs are displayed in the DIC until the next speed limit sign or end of speed limit is detected or up to a defined sign timeout.
Driving and operating

Indication of multiple signs on the display is possible.

An exclamation mark in a frame indicates that there is an additional sign detected which cannot be recognised by the system.

The system is active up to a speed of 200 km/h depending on the lighting conditions.

As soon as the speed becomes slower than 55 km/h the display will be reset and the content of the traffic sign page will be cleared, e.g. when entering a city zone. The next recognized speed indication will be displayed.

Display indication

Traffic signs are displayed on the page Traffic sign detection in the Driver Information Centre. Choose Vehicle Information Menu via MENU and select Traffic sign detection with the adjuster wheel on the turn signal lever 97.

When another page on the Driver Information Centre menu was selected and then Traffic sign detection page is chosen again, the last recognised traffic sign will be displayed.

Alert function

Once activated, speed limit and no passing signs are displayed as pop-up alerts in the DIC.
The alert function can be activated or deactivated in the setting menu of the traffic sign assistant page by pressing SET/CLR on the turn signal lever.

Once setting page is displayed, select Alerts ON to activate pop-up alert. Deactivate by selecting Alerts OFF. When switching on the ignition, alert function is deactivated. Pop-up alert is displayed for approx. eight seconds in the DIC.

**System reset**
The content of the traffic sign memory can be cleared in the setting menu of the traffic sign assistant page by selecting Reset Scores and confirm by pressing SET/CLR on the turn signal lever. Upon successful reset, a chime will sound and the following symbol is indicated until the next traffic sign is detected.

In some cases, traffic sign assistant is cleared up automatically by the system.

**Fault**
The traffic sign assistant system may not operate correctly when:
- The area of the windscreen, where the front camera is located, is not clean.
- Traffic signs are completely or partially covered or difficult to discern.
- There are adverse environmental conditions, e.g. heavy rain, snow, direct sunlight or shadows. In this event, No Traffic Sign Detection due to Weather is indicated on the display.
- Traffic signs are incorrectly mounted or damaged.
- Traffic signs do not comply with the Vienna Convention on traffic signs (Wiener Übereinkommen über Straßenverkehrszeichen).

**Caution**
The system is intended to help the driver within a defined speed range to discern certain traffic
Driving and operating

Lane departure warning

The lane departure warning system observes the lane markings between which the vehicle is driving via a front camera. The system detects lane changes and warns the driver in the event of an unintended lane change via visual and acoustic signals.

Criteria for the detection of an unintended lane change are:
- No operation of turn signals.
- No brake pedal operation.
- No active accelerator operation or speeding-up.
- No active steering.

If the driver is performing these actions, no warning will be issued.

Activation

The lane departure warning system is activated by pressing \( \text{[button]} \). The illuminated LED in the button indicates that the system is switched on. When the control indicator \( \text{[light]} \) in the instrument cluster illuminates green, the system is ready to operate.

The system is only operable at vehicle speeds above 56 km/h and if lane markings are available.

When the system recognises an unintended lane change, the control indicator \( \text{[light]} \) changes to yellow and flashes. Simultaneously a chime sound is activated.

Deactivation

The system is deactivated by pressing \( \text{[button]} \), the LED in the button extinguishes.

At speeds below 56 km/h the system is inoperable.

Do not ignore traffic signs which are not displayed by the system.

The system does not discern any other than the conventional traffic signs that might give or end a speed limit.

Do not let this special feature tempt you into taking risks when driving.

Always adapt speed to the road conditions.

The driver assistance systems do not relieve the driver from full responsibility for vehicle operation.
Fault
The lane departure warning system may not operate properly when:
- The windscreen is not clean.
- There are adverse environmental conditions like heavy rain, snow, direct sunlight or shadows.

The system can not operate when no lane marking is detected.

Fuel

Fuel for petrol engines

Only use unleaded fuel that complies with European standard EN 228 or E DIN 51626-1 or equivalent.

Your engine is capable of running with E10 fuel that fulfills these standards. E10 fuel contains up to 10 % bioethanol.

Use fuel with the recommended octane rating 92. Use of fuel with too low an octane rating can reduce engine power and torque and slightly increases fuel consumption.

Caution

Do not use fuel or fuel additives that contain metallic compounds such as manganese-based additives. This may cause engine damage.

Caution

Use of fuel that does not comply to EN 228 or E DIN 51626-1 or equivalent can lead to deposits or engine damage and may affect your warranty.

Caution

Use of fuel with too low an octane rating could lead to uncontrolled combustion and engine damage.

Fuel for diesel engines

Only use diesel fuel that complies with EN 590.

In countries outside the European Union use Euro-Diesel fuel with a sulphur concentration below 50 ppm.
Driving and operating

**Caution**

Use of fuel that does not comply to EN 590 or similar can lead to engine power loss, increased wear or engine damage and may affect your warranty.

Do not use marine diesel oils, heating oils, Aquazole and similar diesel-water emulsions. Diesel fuels must not be diluted with fuels for petrol engines.

**Fuel for liquid gas operation**

Liquid gas is known as LPG (Liquefied Petroleum Gas) or under its French name GPL (Gaz de Pétrole Liquéfié). LPG is also known as Autogas.

LPG consists mainly of propane and butane. The octane rating is between 105 and 115, depending on the butane proportion. LPG is stored liquid at around 5 - 10 bar pressure.

The boiling point depends on the pressure and mixing ratio. At ambient pressure, it is between -42 °C (pure propane) and -0.5 °C (pure butane).

**Caution**

The system works at an ambient temperature of approx. -8 °C to 100 °C.

Full function of the LPG system can only be guaranteed with liquid gas which complies with the minimum requirements of DIN EN 589.

**Fuel selector**

Pressing the LPG button switches between petrol and liquid gas operation as soon as the required parameters (coolant temperature, gas temperature and minimum engine speed) have been reached. The requirements are usually fulfilled after approx. 60 seconds (depending on exterior temperature) and the first firm press on the accelerator. The LED status shows the current operating mode.

- LED off = petrol operation
- LED illuminates = liquid gas operation
- LED flashes = checking of conditions for fuel transition, or fuel transition is denied (message in the DIC appears)

As soon as the liquid gas tanks are empty, petrol operation is automatically engaged until the ignition is switched off.
Every six months, run the petrol tank down until control indicator ✽ illuminates, then refuel. This helps maintain fuel quality and system function for petrol operation.

Fill the tank completely at regular intervals to prevent corrosion in the tank.

**Faults and remedies**

If gas mode is not possible, check the following:

- Is there enough liquid gas present?
- Is there enough petrol present for starting?

Due to extreme temperatures in combination with the gas composition, it may take slightly longer before the system switches from petrol to gas mode.

In extreme situations, the system may also switch back to petrol mode if the minimum requirements are not fulfilled.

Seek the assistance of a workshop in the event of all other faults.

<table>
<thead>
<tr>
<th><strong>Caution</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Repairs and adjustments may only be made by trained specialists in order to maintain the safety and warranty on the LPG system.</td>
</tr>
</tbody>
</table>

Liquid gas is given a particular odour (odorised) so that any leaks can be detected easily.

<table>
<thead>
<tr>
<th><strong>⚠️ Warning</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>If you smell gas in the vehicle or in the immediate vicinity, switch to petrol mode immediately. No smoking. No naked flames or ignition sources.</td>
</tr>
</tbody>
</table>

If the gas odour persists, do not start the engine. Have the cause of the fault remedied by a workshop.

When using underground car parks, follow the instructions of the operator and local laws.

<table>
<thead>
<tr>
<th><strong>⚠️ Danger</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Before refuelling, switch off engine and any external heaters with combustion chambers. Switch off any mobile phones. Follow the operating and safety instructions of the filling station when refuelling.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Note</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>In the event of an accident, switch off the ignition and lights.</td>
</tr>
</tbody>
</table>
**Danger**

Fuel is flammable and explosive. No smoking. No naked flames or sparks.

If you can smell fuel in your vehicle, have the cause of this remedied immediately by a workshop.

**Caution**

In case of misfuelling, do not switch on ignition.

Fuel filler flap is located at right rear side of the vehicle.

The fuel filler flap can only be opened if the vehicle is unlocked. Release the fuel filler flap by pushing the flap. To open, turn the cap slowly to the left.

The fuel filler cap can be retained in the bracket on the fuel filler flap. For refuelling, fully insert the pump nozzle and switch it on. After automatic cut-off, it can be topped up with max. two doses of fuel.

**Caution**

Wipe off any overflowing fuel immediately.

To close, turn the fuel filler cap to the right until it clicks. Close the flap and let engage.
Liquid gas refuelling

Follow the operating and safety instructions of the filling station when refuelling.

The filling valve for the liquid gas is behind the fuel filler cap.

Unscrew protective cap from the filler neck.

Screw the required adapter hand-tight onto the filler neck.

ACME Adapter: Screw the nut of the filling nozzle onto the adapter. Press locking lever on filler nozzle down.

DISH (Italy) filler neck: Place the filler nozzle into the adapter. Press locking lever on filler nozzle down.

Bayonet filler neck: Place filler nozzle on the adapter and turn to the left or right through one quarter turn. Pull locking lever of filler nozzle fully.

EURO filler neck: Press the filler nozzle onto the adapter until it engages.

Press the button of the liquid gas supply point. The filling system stops or begins to run slowly when 80 % of the tank volume is reached (maximum fill level).

Release button on filling system and the filling process stops. Release the locking lever and remove the filler nozzle. A small quantity of liquid gas can escape.

Remove adapter and stow in vehicle.

Fit protective cap to prevent the penetration of foreign bodies into the filler opening and the system.

⚠️ Warning

Due to the system design, an escape of liquid gas after releasing the locking lever is unavoidable. Avoid inhaling.

⚠️ Warning

The liquid gas tank may only be filled to 80 % for safety reasons.
The multivalve on the liquid gas tank automatically limits the fill quantity. If a larger quantity is added, we recommend not exposing the vehicle to the sun until the excess amount has been used up.

**Filling adapter**
As filling systems are not standardised, different adapters are required which are available from Opel Distributors and from Opel Authorised Repairers.

**ACME adapter:** Belgium, Germany, Ireland, Luxembourg, Switzerland

**Bayonet adapter:** Netherlands, Norway, Spain, United Kingdom

**EURO adapter:** Spain

**DISH (Italy) adapter:** Bosnia-Herzegovina, Bulgaria, Denmark, Estonia, France, Greece, Italy, Croatia, Latvia, Lithuania, Macedonia, Austria, Poland, Portugal, Romania, Sweden, Switzerland, Serbia, Slovakia, Slovenia, Czech Republic, Turkey, Ukraine, Hungary

**Fuel filler cap**
Only use genuine fuel filler caps. Diesel-engined vehicles have special fuel filler caps.
Fuel consumption - CO₂- Emissions
The fuel consumption (combined) of the model Opel Corsa is within a range of 7.5 to 3.1 l/100 km.
The CO₂ emission (combined) is within a range of 174 to 82 g/km.
For the values specific for your vehicle, refer to the EEC Certificate of Conformity provided with your vehicle or other national registration documents.

General information
The official fuel consumption and specific CO₂ emission figures quoted relate to the EU base model with standard equipment.
Fuel consumption data and CO₂ emission data are determined according to regulation R (EC) No. 715/2007 (in the latest applicable version), taking into consideration the vehicle weight in running order, as specified by the regulation.
The figures are provided only for the purpose of comparison between different vehicle variants and must not be taken as a guarantee for the actual fuel consumption of a particular vehicle. Additional equipment may result in slightly higher results than the stated consumption and CO₂ figures.
Furthermore, fuel consumption is dependent on personal driving style as well as road and traffic conditions.

Trailer hitch
General information
Only use towing equipment that has been approved for your vehicle. Entrust retrofitting of towing equipment to a workshop. It may be necessary to make changes that affect the cooling system, heat shields or other equipment.
Fitting of towing equipment could cover the opening of the towing eye. If this is the case use the coupling ball bar for towing. Always keep the coupling ball bar in the vehicle.

Driving characteristics and towing tips
Before attaching a trailer, lubricate the coupling ball. However, do not do so if a stabiliser, which acts on the coupling ball, is being used to reduce snaking movements.
For trailers with low driving stability and caravan trailers with a permitted gross vehicle weight of more than
1000 kg a speed of 80 km/h must not be exceeded; the use of a stabiliser is recommended.
If the trailer starts snaking, drive more slowly, do not attempt to correct the steering and brake sharply if necessary.
When driving downhill, drive in the same gear as if driving uphill and drive at a similar speed.
Adjust tyre pressure to the value specified for full load  250.

**Trailer towing**

**Trailer loads**
The permissible trailer loads are vehicle and engine-dependent maximum values which must not be exceeded. The actual trailer load is the difference between the actual gross weight of the trailer and the actual coupling socket load with the trailer coupled.
The permissible trailer loads are specified in the vehicle documents. In general, they are valid for gradients up to max. 12 %
The permitted trailer loads apply up to the specified incline and up to an altitude of 1000 metres above sea level. Since engine power decreases as altitude increases due to the air becoming thinner, therefore reducing climbing ability, the permissible gross train weight also decreases by 10 % for every 1000 metres of additional altitude. The gross train weight does not have to be reduced when driving on roads with slight inclines (less than 8 %, e.g. motorways).
The permissible gross train weight must not be exceeded. This weight is specified on the identification plate  237.

**Vertical coupling load**
The vertical coupling load is the load exerted by the trailer on the coupling ball. It can be varied by changing the weight distribution when loading the trailer.

**Petrol and diesel engines**
The maximum permissible vertical coupling load (55 kg) is specified on the towing equipment identification plate and in the vehicle documents.

Always aim for the maximum load, especially in the case of heavy trailers. The vertical coupling load should never fall below 25 kg.

**Engine B14XEL LPG**
The maximum permissible vertical coupling load (45 kg) is specified on the towing equipment identification plate and in the vehicle documents.
Always aim for the maximum load, especially in the case of heavy trailers. The vertical coupling load should never fall below 25 kg.

**Rear axle load**

**Petrol and diesel engines**
When the trailer is coupled and the towing vehicle fully loaded, the permissible rear axle load (see identification plate or vehicle documents) for passenger vehicles may be exceeded by 70 kg for the 5-door vehicle and 60 kg for the 3-door vehicle, the gross vehicle weight rating by 55 kg.
Engine B14XEL LPG
When the trailer is coupled and the towing vehicle fully loaded, the permissible rear axle load (see identification plate or vehicle documents) for passenger vehicles may be exceeded by 70 kg for the 5-door vehicle and 70 kg for the 3-door vehicle, the gross vehicle weight rating by 45 kg.

Delivery van
When the trailer is coupled and the towing vehicle fully loaded, the permissible rear axle load (see identification plate or vehicle documents) for passenger vehicles may be exceeded by 60 kg, the gross vehicle weight rating by 55 kg.

General
If the permitted rear axle load is exceeded a maximum speed of 100 km/h applies. If lower national maximum speeds are specified for trailer operation, they must be complied with.

Towing equipment

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>When operating without a trailer, remove the coupling ball bar.</td>
</tr>
</tbody>
</table>

Stowage of coupling ball bar
The coupling ball bar is stowed in a bag in the spare wheel well and secured to the lashing eyes in the load compartment.

When inserting, fit protective cap over rotary knob with key.

Fitting the coupling ball bar
Disengage and fold down the socket. Remove the sealing plug from the opening for the coupling ball bar and stow it.
Driving and operating

Checking the tensioning of the coupling ball bar

- The rotary knob rests on the coupling ball bar.
- Green marking on the rotary knob is not visible.
- Locking pin at the top of the coupling ball bar is set inwards.
- The key is in the lock.

Otherwise, the coupling ball bar must be tensioned before it is inserted into the coupling housing:

- Place the key in the lock and unlock the coupling ball bar.
- Push the rotary knob onto the coupling ball bar and rotate right while pressed down until it engages. The key remains in the lock.

Inserting the coupling ball bar

Insert the tensioned coupling ball bar in the opening and push firmly upwards until it audibly engages. The rotary knob snaps back into its original position resting against the coupling ball bar without a gap.

⚠️ Warning

Do not touch rotary knob during insertion.
Green marking on the rotary knob is visible.
Lock coupling ball bar and remove key.

Eye for break-away stopping cable

Attach breakaway stopping cable to eye.

Check that the coupling ball bar is correctly installed

- Green marking on rotary knob is visible.
- There must be no gap between the rotary knob and the coupling ball bar.
- The coupling ball bar must be firmly engaged in the opening.
- The coupling ball bar must be locked and the key removed.

Warning

Towing a trailer is permitted only when a coupling ball bar is fitted correctly. If the coupling ball bar does not engage correctly, seek the assistance of a workshop.

Dismounting the coupling ball bar

Insert the key in the lock and unlock the coupling ball bar.
Push the rotary knob onto the coupling ball bar and rotate right while pressed down until it engages. Pull out the ball bar downwards.

Insert sealing plug in opening for coupling ball bar. Fold away socket.

**Trailer stability assist**

If the system detects snaking movements, engine power is reduced and the vehicle/trailer combination is selectively braked until the snaking ceases. While system is working keep steering wheel as still as possible.

Trailer stability assist (TSA) is a function of the Electronic Stability Control \( \diamond 150. \)
Vehicle care

Towing ....................................... 227
Appearance care ......................... 229

General Information

Accessories and vehicle modifications
We recommend the use of genuine parts and accessories and factory approved parts specific for your vehicle type. We cannot assess or guarantee reliability of other products - even if they have a regulatory or otherwise granted approval.

Do not make any modifications to the electrical system, e.g. changes of electronic control units (chip tuning).

Caution

When transporting the vehicle on a train or on a recovery vehicle, the mud flaps may be damaged.

Vehicle storage

Storage for a long period of time
If the vehicle is to be stored for several months:
- Wash and wax the vehicle.
- Have the wax in the engine compartment and underbody checked.
- Clean and preserve the rubber seals.
- Fill up fuel tank completely.
- Change the engine oil.
- Drain the washer fluid reservoir.
- Check the coolant antifreeze and corrosion protection.
- Adjust tyre pressure to the value specified for full load.
- Park the vehicle in a dry, well ventilated place. Engage first or reverse gear or set selector lever to P. Prevent the vehicle from rolling.
- Do not apply the parking brake.
Vehicle care

- Open the bonnet, close all doors and lock the vehicle.
- Disconnect the clamp from the negative terminal of the vehicle battery. Beware that all systems are not functional, e.g. anti-theft alarm system.

**Putting back into operation**
When the vehicle is to be put back into operation:
- Connect the clamp to the negative terminal of the vehicle battery. Activate the electronics of the power windows.
- Check tyre pressure.
- Fill up the washer fluid reservoir.
- Check the engine oil level.
- Check the coolant level.
- Fit the number plate if necessary.

**End-of-life vehicle recovery**
Information on end-of-life vehicle recovery centres and the recycling of end-of-life vehicles is available on our website. Only entrust this work to an authorised recycling centre.
Gas vehicles must be recycled by a service centre authorised for gas vehicles.

**Vehicle checks**

**Performing work**

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Only perform engine compartment checks when the ignition is off. The cooling fan may start operating even if the ignition is off.</td>
</tr>
</tbody>
</table>
Danger
The ignition system and Xenon headlights use extremely high voltage. Do not touch.

Bonnet
Opening
Pull the release lever and return it to its original position.

Push the safety catch upwards and open the bonnet.

Secure the bonnet support.

If the bonnet is opened during an Autostop, the engine will be restarted automatically for safety reasons.

Closing
Before closing the bonnet, press the support into the holder.
Lower the bonnet and allow it to fall into the latch from a low height (20-25 cm). Check that the bonnet is engaged.

Caution
Do not press the bonnet into the latch, to avoid dents.

Engine oil
Check the engine oil level manually on a regular basis to prevent damage to the engine. Ensure that the correct specification of oil is used.
Recommended fluids and lubricants ❷ 234.
Check with the vehicle on a level surface. The engine must be at operating temperature and switched off for at least five minutes.
Pull out the dipstick, wipe it clean, insert it to the stop on the handle, pull out and read the engine oil level. Insert dipstick to the stop on the handle and make half a turn. Different dipsticks are used depending on engine variant.

When the engine oil level has dropped to the MIN mark, top-up engine oil.

We recommend the use of the same grade of engine oil that was used at the last change.

The engine oil level must not exceed the MAX mark on the dipstick.

Caution

Overfilled engine oil must be drained or suctioned out.

Capacities 249, Engine oil quality/viscosity 234.

Fit the cap on straight and tighten it.
Engine coolant

The coolant provides freeze protection down to approx. -28 °C. In northern countries with very low temperatures the factory filled coolant provides frost protection down to approx. -37 °C.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Only use approved antifreeze.</td>
</tr>
</tbody>
</table>

Coolant level

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Too low a coolant level can cause engine damage.</td>
</tr>
</tbody>
</table>

Different coolant reservoirs are used depending on engine variant.

If the cooling system is cold, the coolant level should be above the filling line mark.

Top-up if the level is low.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Allow the engine to cool before opening the cap. Carefully open the cap, relieving the pressure slowly.</td>
</tr>
</tbody>
</table>

To top up use a 1:1 mixture of released coolant concentrate mixed with clean tap water. If no coolant concentrate is available, use clean tap water. Install the cap tightly. Have the coolant concentration checked and have the cause of the coolant loss remedied by a workshop.
Washer fluid

Fill with clean water mixed with a suitable quantity of windscreen washer fluid which contains antifreeze.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Only washer fluid with a sufficient antifreeze concentration provides protection at low temperatures or a sudden drop in temperature. Use of washer fluid containing isopropanol can damage exterior lamps.</td>
</tr>
</tbody>
</table>

Brakes

In the event of minimum thickness of the brake lining, a squealing noise sounds during braking. Continued driving is possible but have the brake lining replaced as soon as possible. Once new brake linings are installed, do not brake unnecessarily hard for the first few journeys.

Brake fluid

⚠️ Warning

Brake fluid is poisonous and corrosive. Avoid contact with eyes, skin, fabrics and painted surfaces.

Brake fluid level must be between the MIN and MAX marks. If fluid level is below the MIN mark, seek the assistance of a workshop.

Brake and clutch fluid 234.

Vehicle battery

The vehicle is equipped with a lead acid battery. Vehicles with stop-start system will be equipped with an AGM battery which is not a lead acid battery. The vehicle battery is maintenance-free provided that the driving profile allows sufficient charging of the
Battery. Short-distance-driving and frequent engine starts can discharge the vehicle battery. Avoid the use of unnecessary electrical consumers.

Batteries do not belong in household waste. They must be disposed of at an appropriate recycling collection point.

Laying up the vehicle for more than four weeks can lead to vehicle battery discharge. Disconnect the clamp from the negative terminal of the vehicle battery.

Ensure the ignition is switched off before connecting or disconnecting the vehicle battery.

Battery discharge protection  121.

Replacing the vehicle battery

Note
Any deviation from the instructions given in this section may lead to temporary deactivation of the stop-start system.

When the vehicle battery is being replaced, please ensure that there are no open ventilation holes in the vicinity of the positive terminal. If a ventilation hole is open in this area, it must be closed off with a dummy cap, and the ventilation in the vicinity of the negative terminal must be opened.

Only use batteries that allow the fuse box to be mounted above the vehicle battery.

Vehicles with stop-start system
Be sure to have the AGM (Absorptive Glass Mat) battery replaced with another AGM battery.

An AGM battery can be identified by the label on the battery. We recommend the use of an original Opel battery.

Note
Using an AGM vehicle battery different from the original Opel vehicle battery may result in a lower performance of the stop-start system.

We recommend that you have the vehicle battery replaced by a workshop.

Stop-start system  135.
Charging the vehicle battery

<table>
<thead>
<tr>
<th>△ Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>On vehicles with stop-start system, ensure that the charging potential does not exceed 14.6 volts when using a battery charger. Otherwise the vehicle battery might be damaged.</td>
</tr>
</tbody>
</table>

Jump starting 226.

Warning label

Meaning of symbols:
- No sparks, naked flames or smoking.
- Always shield eyes. Explosive gases can cause blindness or injury.
- Keep the vehicle battery out of the reach of children.
- The vehicle battery contains sulfuric acid which could cause blindness or serious burn injuries.
- See the Owner's manual for further information.
- Explosive gas may be present in the vicinity of the battery.

Diesel fuel system bleeding

If the tank has been run dry, the diesel fuel system must be bled. Switch on the ignition three times for 15 seconds at a time. Then crank the engine for a maximum of 40 seconds. Repeat this process after no less than five seconds. If the engine fails to start, seek the assistance of a workshop.

Wiper blade replacement
Lift the wiper arm until it stays in the raised position. Press the catches on both sides, tilt wiper blade at a 90° angle to the wiper arm and remove upwards.
Insert in reverse order.
Lower wiper arm carefully.

**Wiper blade on the rear window**

Lift wiper arm. Disengage wiper blade as shown in illustration and remove.
Attach the wiper blade slightly angled to the wiper arm and push until it engages.
Lower wiper arm carefully.

**Bulb replacement**

Switch off the ignition and switch off the relevant switch or close the doors.
Only hold a new bulb at the base! Do not touch the bulb glass with bare hands.
Use only the same bulb type for replacement.
Replace headlight bulbs from within the engine compartment.

**Bulb check**

After a bulb replacement switch on the ignition, operate and check the lights.

**Halogen headlights**

Halogen headlights with separate bulbs for sidelight, low beam and high beam.

---

Sidelight/daytime running light (1)
Low beam (2)
High beam (3)
Front turn signal lights 197.
**Low beam**

1. Rotate the cap (2) anticlockwise and remove it.

2. Press the clip to disengage bulb holder. Withdraw the bulb holder from the reflector.

3. Detach the bulb from the bulb holder and replace the bulb.

4. Insert the bulb holder with the clip downwards and engage into the reflector until it clicks.

5. Install cap.

**High beam**

1. Rotate the cap (3) anticlockwise and remove it.

3. Detach the bulb from the bulb holder and replace the bulb.

4. Insert the bulb holder with the clip downwards and engage into the reflector until it clicks.

5. Install cap.
2. Press the clip to disengage bulb holder. Withdraw the bulb holder from the reflector.

3. Detach the bulb from the bulb holder and replace the bulb.

4. Insert the bulb holder with the clip downwards and engage into the reflector until it clicks.

5. Install cap.

2. Press both clips together and withdraw the bulb socket from the headlamp housing.

1. Rotate bulb socket (1) anticlockwise to disengage.

3. Remove the bulb from the socket by pulling.

4. Replace and insert new bulb into socket.

5. Insert the bulb socket into the headlamp housing and turn clockwise.
Sidelight/daytime running light with LEDs
Sidelights and daytime running lights are designed as LEDs and cannot be changed. Consult a workshop in case of a defective LED.

Xenon headlights

<table>
<thead>
<tr>
<th>Danger</th>
</tr>
</thead>
<tbody>
<tr>
<td>Xenon headlights work under extremely high electrical voltage. Do not touch. Have bulbs replaced by a workshop.</td>
</tr>
</tbody>
</table>

Sidelight/daytime running lights are designed as LEDs and cannot be changed.
Bulbs for corner lighting can be changed.
Front turn signal lights  197.

Corner lighting

1. Rotate the cap (3) anticlockwise and remove it.

2. Rotate the bulb holder anticlockwise to disengage. Withdraw the bulb holder from the reflector.

3. Remove the bulb from the plug connector by disengaging and pulling.

4. Replace the bulb. Connect and engage bulb holder with the plug connector.

5. Insert the bulb holder into the reflector and rotate clockwise to secure.

6. Fit the cap and rotate clockwise.
Fog lights
The bulbs are accessible from the underside of the vehicle.

1. Turn the bulb holder anti-clockwise and remove it from the reflector.

2. Disengage the bulb socket from the plug connector by pressing the retaining lug.
3. Remove and replace the bulb socket with bulb and attach the plug connector.
4. Insert the bulb socket into the reflector by turning clockwise and engage.

Front turn signal lights
Front turn signal lights consist of long-life bulbs which cannot be changed. Consult a workshop in case of a defective long-life bulb.

Tail lights
1. Release the cover in the load compartment on the respective side and remove.
2. Unscrew both plastic securing nuts from the inside by hand.

3. Carefully withdraw the light assembly from the recesses and remove.

4. Press the retaining lugs and remove the bulb carrier from the light assembly.

5. Remove and replace the bulb by pushing the bulb slightly into the socket and rotating anticlockwise:
   - Tail light/Brake light 1
   - Turn signal light 2

6. Insert and turn bulb clockwise into the tail light assembly. Fit light assembly with the retaining pins into the recesses of the vehicle body and tighten the plastic securing nuts from inside the load compartment.

Close cover and engage.

Reversing light/rear fog light
Left hand drive models
Reversing light is located on the right light assembly in the tailgate, and the rear fog light is located on the left light assembly in the tailgate.

Right hand drive models
Reversing light is located on the left light assembly in the tailgate, and the rear fog light is located on the right light assembly in the tailgate.

The description of bulb replacement is the same for both lights.

1. Remove screw in the tailgate.
2. Move light assembly slightly to the outside, then withdraw from the tailgate.
3. Remove the bulb holder by turning.
4. Remove the bulb by pushing slightly into the socket and rotating anticlockwise. Replace the bulb.
5. Insert the bulb socket into the assembly and turn to secure.
6. Attach light assembly into the tailgate and secure with the screw.
Vehicle care

Side turn signal lights
To replace bulb, remove lamp housing:

1. Slide lamp to its left side and remove with its right end.

2. Turn bulb holder anticlockwise and remove from housing.

3. Pull bulb from bulb holder and replace it.

4. Insert bulb holder and turn clockwise.

5. Insert left end of the lamp, slide to the left and insert right end.

Centre high-mounted brake light
Have LEDs replaced by a workshop.

Number plate light

1. Insert screwdriver in recess of the cover, press to the side and release spring.
2. Remove lamp downwards, taking care not to pull on the cable.

3. Remove bulb holder from lamp housing by turning anticlockwise.

4. Pull bulb from bulb holder and replace it.

5. Insert bulb holder into lamp housing and turn clockwise.

6. Insert lamp into bumper and let engage.

**Interior lights**

**Courtesy light, reading lights**

Have bulbs replaced by a workshop.

**Load compartment light**

Have bulbs replaced by a workshop.

**Dome light**

Have bulbs replaced by a workshop.

**Instrument panel illumination**

Have bulbs replaced by a workshop.

---

**Electrical system**

**Fuses**

Data on the replacement fuse must match the data on the defective fuse.

There are two fuse boxes in the vehicle:

- in the front left of the engine compartment
- in left-hand drive vehicles behind the light switch, or, in right-hand drive vehicles, behind the glovebox

Before replacing a fuse, turn off the respective switch and the ignition.
There are different kinds of fuses in the vehicle.

Depending on the type of fuse, a blown fuse can be recognized by its melted wire. Do not replace the fuse until the cause of the fault has been remedied.

Some functions are protected by several fuses.

Fuses may also be inserted without existence of a function.

**Fuse extractor**
A fuse extractor may be located in the fuse box in the engine compartment.

**Engine compartment fuse box**

Place the fuse extractor on the various types of fuse from the top, and withdraw fuse.

The fuse box is in the front left of the engine compartment.

Disengage the cover and fold it upwards until it stops. Remove the cover vertically upwards.

</table>
Vehicle tools

Tools

Vehicles with tyre repair kit

The tools are located together with the towing eye and tyre repair kit in the load compartment below the floor cover.

On OPC or LPG version or versions with rear carrier system or double load-bay floor, the tools are located together with the towing eye and tyre repair kit on the right side of the load compartment, behind a cover.

Vehicles with spare wheel

The jack, wheel bolt wrench and some tools are located on the right side of the load compartment, behind a cover 72.
Wheels and tyres

Tyre condition, wheel condition
Drive over edges slowly and at right angles if possible. Driving over sharp edges can cause tyre and wheel damage. Do not trap tyres on the kerb when parking.
Regularly check the wheels for damage. Seek the assistance of a workshop in the event of damage or unusual wear.
We recommend not swapping the front wheels with the rear wheels and vice versa, as this can affect vehicle stability. Always use less worn tyres on the rear axle.

Winter tyres
Winter tyres improve driving safety at temperatures below 7 °C and should therefore be fitted on all wheels.
All tyre sizes are permitted as winter tyres ◊ 250.

In accordance with country-specific regulations, affix the speed sticker in the driver's field of view.

Tyre designations
E.g. 195/55 R 16 95 H
195 = tyre width, mm
55 = cross-section ratio (tyre height to tyre width), %
R = belt type: Radial
RF = type: RunFlat
16 = wheel diameter, inches
95 = load index e.g. 95 is equivalent to 690 kg
H = speed code letter

Speed code letter:
Q = up to 160 km/h
S = up to 180 km/h
T = up to 190 km/h
H = up to 210 km/h
V = up to 240 km/h
W = up to 270 km/h

Directional tyres
Directional tyres must be mounted so that they rotate in the correct direction. The proper rotation direction is indicated by a symbol (e.g. an arrow) on the sidewall.

Tyre pressure
Check the pressure of cold tyres at least every 14 days and before any long journey. Do not forget the spare wheel.
This also applies to vehicles with tyre pressure monitoring system.
Unscrew the valve cap.
Tyre pressure \(\geq 250\).
The tyre pressure information label on the right door frame indicates the original equipment tyres and the correspondent tyre pressures.
The tyre pressure data refers to cold tyres. It applies to summer and winter tyres.
The ECO tyre pressure serves to achieve the smallest amount of fuel consumption possible.
Incorrect tyre pressures will impair safety, vehicle handling, comfort and fuel economy and will increase tyre wear.
Tyre pressures differ depending on various options.
For the correct tyre pressure value, follow the procedure below:
- Identify the engine identifier code. Engine data \(\geq 241\).
- Identify the respective tyre.
The tyre pressure tables show all possible tyre combinations \(\geq 250\).
For the tyres approved for your vehicle, refer to the EEC Certificate of Conformity provided with your vehicle or other national registration documents.
The driver is responsible for correct adjustment of tyre pressure.

<table>
<thead>
<tr>
<th>(\Delta) Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>If the pressure is too low, this can result in considerable tyre warm-up and internal damage, leading to tread separation and even to tyre blow-out at high speeds.</td>
</tr>
</tbody>
</table>

If the tyre pressure must be reduced or increased, switch off ignition. After adjusting tyre pressure switch on ignition and select the relevant setting on the page **Tyre load** in the Driver Information Centre \(\geq 97\).

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tyre pressure monitoring system warns only about low tyre pressure condition and does not replace regular tyre maintenance by the driver.</td>
</tr>
</tbody>
</table>

All wheels must be equipped with pressure sensors and the tyres must have the prescribed pressure.

<table>
<thead>
<tr>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>In countries where the tyre pressure monitoring system is legally required, the use of wheels without pressure sensors will invalidate the vehicle type approval.</td>
</tr>
</tbody>
</table>
The current tyre pressures can be shown in the **Vehicle Information Menu** in the Driver Information Centre (DIC).

The menu can be selected by pressing the buttons on the turn signal lever.

Press **MENU** to select the **Vehicle Information Menu**.

Turn the adjuster wheel to select the tyre pressure monitoring system.

Baselevel display and Midlevel display:

The tyre pressure for each tyre is displayed on its own page.

**Uplevel display:**

The tyre pressures for all tyres are displayed on one page.

System status and pressure warnings are displayed by a message indicating the corresponding tyre in the DIC.

The system considers the tyre temperature for the warnings.

A detected low tyre pressure condition is indicated by the control indicator ![control_indicator](attachment:control_indicator.png) 95.

If ![control_indicator](attachment:control_indicator.png) illuminates, stop as soon as possible and inflate the tyres as recommended ![pressure_indicator](attachment:pressure_indicator.png) 250.

If ![control_indicator](attachment:control_indicator.png) flashes for 60-90 seconds and then illuminates continuously, there is a fault in the system. Consult a workshop.
After inflating, some driving may be required to update the tyre pressure values in the DIC. During this time \( \Delta \) may illuminate.

If \( \Delta \) illuminates at lower temperatures and extinguishes after driving, this could be an indicator for approaching a low tyre pressure condition. Check tyre pressure.

Vehicle messages \( \bullet \) 105.

If the tyre pressure must be reduced or increased, switch off ignition.

Only mount wheels with pressure sensors, otherwise the tyre pressure will not be displayed and \( \Delta \) illuminates continuously.

A spare wheel or temporary spare wheel is not equipped with pressure sensors. The tyre pressure monitoring system is not operational for these tyres. Control indicator \( \Delta \) illuminates. For the further three tyres, the system remains operational.

The use of commercially-available liquid tyre repair kits can impair the function of the system. Factory-approved repair kits can be used.

External high-power radio equipment could disrupt the tyre pressure monitoring system.

Each time the tyres are replaced, tyre pressure monitoring system sensors must be dismounted and serviced.

For the screwed sensor; replace valve core and sealing ring. For the clipped sensor; replace complete valve stem.

**Vehicle loading status**

Adjust tyre pressure to load condition according to the tyre information label or tyre pressure chart \( \bullet \) 250, and select the appropriate setting in the menu **Tyre Load** in the Driver Information Centre (DIC), **Vehicle Information Menu** \( \bullet \) 97. This setting is the reference for the tyre pressure warnings.

The menu **Tyre Load** only appears if the vehicle is in a standstill and the parking brake is applied. On vehicles with automatic transmission the selector lever has to be in P.

Baselevel display and Midlevel display:

Select

- **LO** for comfort pressure up to three people.
- **ECO** for Eco pressure up to three people.
- **Hi** for full loading.

Uplevel display:
Vehicle care

Select
- **Light** for comfort pressure up to three people.
- **Eco** for Eco pressure up to three people.
- **Max** for full loading.

**TPMS sensor matching process**

Each TPMS sensor has a unique identification code. The identification code must be matched to a new wheel position after rotating the wheels or exchanging the complete wheel set and if one or more TPMS sensors were replaced. The TPMS sensor matching process should also be performed after replacing a spare wheel with a road wheel containing the TPMS sensor.

The malfunction light (ים) and the warning message or code should go off at the next ignition cycle. The sensors are matched to the wheel positions, using a TPMS relearn tool, in the following order: left side front wheel, right side front wheel, right side rear wheel and left side rear wheel. The turn signal light at the current active position is illuminated until sensor is matched.

Consult your workshop for service or to purchase a relearn tool. There are 2 minutes to match the first wheel position, and 5 minutes overall to match all four wheel positions. If it takes longer, the matching process stops and must be restarted.

The TPMS sensor matching process is:
1. Apply the parking brake.
2. Turn the ignition on.
3. On vehicles with automatic transmission: set the selector lever to P.
   On vehicles with manual transmission automated: Press and hold brake pedal. Move and hold the selector lever for 5 seconds in position N until P is displayed in the DIC. P indicates that the sensor matching process of the TPMS can be started.
   On vehicles with manual transmission: select neutral.
4. Use **MENU** on the turn signal lever to select the **Vehicle Information Menu** in the DIC.
5. Turn the adjuster wheel to scroll to the tyre pressure menu.
   Baselevel display and Midlevel display:
6. Press **SET/CLR** to begin the sensor matching process. A message requesting acceptance of the process should be displayed.

7. Press **SET/CLR** again to confirm the selection. The horn sounds twice to indicate that the receiver is in relearn mode.

8. Start with the left side front wheel.

9. Place the relearn tool against the tyre sidewall, near the valve stem. Then press the button to activate the TPMS sensor. A horn chirp confirms that the sensor identification code has been matched to this wheel position.

10. Proceed to the right side front wheel, and repeat the procedure in Step 9.

11. Proceed to the right side rear wheel, and repeat the procedure in Step 9.

12. Proceed to the left side rear wheel, and repeat the procedure in Step 9. The horn sounds twice to indicate that the sensor identification code has been matched to the left side rear wheel, and the TPMS sensor matching process is no longer active.

13. Turn off the ignition.

14. Set all four tyres to the recommended air pressure level as indicated on the tyre pressure information label.

15. Ensure the tyre loading status is set according to the selected pressure ◇ 97.

**Temperature dependency**

The tyre pressure depends on the temperature of the tyre. During driving, tyre temperature and pressure increase. Tyre pressure values provided on the tyre information label and tyre pressure chart are valid for cold tyres, which means at 20 °C. The pressure increases by nearly 10 kPa for a 10 °C temperature increase. This must be considered when warm tyres are checked.
The tyre pressure value displayed in the DIC shows the real tyre pressure. A cooled down tyre will show a decreased value, which does not indicate an air leak.

**Tread depth**

Check tread depth at regular intervals.

Tyres should be replaced for safety reasons at a tread depth of 2-3 mm (4 mm for winter tyres).

For safety reasons it is recommended that the tread depth of the tyres on one axle should not vary by more than 2 mm.

The legally permissible minimum tread depth (1.6 mm) has been reached when the tread has worn down as far as one of the tread wear indicators (TWI). Their position is indicated by markings on the sidewall.

Tyres age, even if they are not used. We recommend tyre replacement every six years.

**Changing tyre and wheel size**

If tyres of a different size than those fitted at the factory are used, it may be necessary to reprogramme the speedometer as well as the nominal tyre pressure and to make other vehicle modifications.

After converting to a different tyre size, have the label with tyre pressures replaced.

**Caution**

When converting to wheels with 14 inch diameter, the ground clearance will be reduced. This must be considered when passing over obstacles.

**Warning**

Use of unsuitable tyres or wheels may lead to accidents and will invalidate the vehicle type approval.
Wheel covers
Wheel covers and tyres that are factory approved for the respective vehicle and comply with all of the relevant wheel and tyre combination requirements must be used.
If the wheel covers and tyres used are not factory approved, the tyres must not have a rim protection ridge.
Wheel covers must not impair brake cooling.

⚠️ Warning
Use of unsuitable tyres or wheel covers could lead to sudden pressure loss and thereby accidents.

Steel wheels: When using locking wheel nuts, do not attach wheel covers.

Tyre chains

Tyre chains are only permitted on the front wheels.
Always use fine mesh chains that add no more than 10 mm to the tyre tread and the inboard sides (including chain lock).

⚠️ Warning
Damage may lead to tyre blowout.

Tyre chains are permitted on tyres of size 195/55 R16 with rims of size 16 x 6 and 16 x 6.5, the latter only in combination with limited steering angle. Seek the assistance of a workshop.
Tyre chains are not permitted on tyres of size 215/45 R17 and 215/40 R18.
The use of tyre chains is not permitted on the temporary spare wheel.

Tyre repair kit
Minor damage to the tyre tread can be repaired with the tyre repair kit.
Do not remove foreign bodies from the tyres.
Tyre damage exceeding 4 mm or that is at the tyre's side wall near the rim cannot be repaired with the tyre repair kit.
**Warning**

Do not drive faster than 80 km/h.
Do not use for a lengthy period.
Steering and handling may be affected.

If you have a flat tyre:
Apply the parking brake and engage first gear, reverse gear or P.
The tyre repair kit is stowed in the load compartment.
Depending on the equipment, the tyre repair kit is in a compartment in the right sidewall or in a compartment under the floor cover.

**Vehicles with tyre repair kit under the floor cover**

1. Take the tyre repair kit from the compartment.
2. Remove the compressor.
3. Remove the electrical connection cable and air hose from the stowage compartments on the underside of the compressor.
4. Screw the compressor air hose to the connection on the sealant bottle.

5. Fit the sealant bottle into the retainer on the compressor.
   Set the compressor near the tyre in such a way that the sealant bottle is upright.

6. Unscrew valve cap from defective tyre.

7. Screw the filler hose to the tyre valve.

8. The switch on the compressor must be set to 0.

9. Connect the compressor plug to the power outlet or cigarette lighter socket.
   To avoid discharging the battery, we recommend running the engine.

10. Set the rocker switch on the compressor to I. The tyre is filled with sealant.

11. The compressor pressure gauge briefly indicates up to 6 bar whilst the sealant bottle is emptying (approx. 30 seconds). Then the pressure starts to drop.

12. All of the sealant is pumped into the tyre. Then the tyre is inflated.

13. The prescribed tyre pressure should be obtained within 10 minutes. Tyre pressure \( \Phi 250 \). When the correct pressure is obtained, switch off the compressor.

   If the prescribed tyre pressure is not obtained within 10 minutes, remove the tyre repair kit. Move the vehicle one tyre rotation. Reattach the tyre repair kit and continue the filling procedure for 10 minutes. If the prescribed tyre pressure is still not obtained, the tyre is too badly damaged. Seek the assistance of a workshop.
Drain excess tyre pressure with the button over the pressure indicator.
Do not run the compressor for longer than 10 minutes.

14. Detach the tyre repair kit. Push catch on bracket to remove sealant bottle from bracket. Screw the tyre inflation hose to the free connection of the sealant bottle. This prevents sealant from escaping. Stow tyre repair kit in load compartment.

15. Remove any excess sealant using a cloth.

16. Take the label indicating maximum permitted speed from the sealant bottle and affix in the driver's field of view.

17. Continue driving immediately so that sealant is evenly distributed in the tyre. After driving approx. 10 km (but no more than 10 minutes), stop and check tyre pressure. Screw compressor air hose directly onto tyre valve and compressor when doing this.

If tyre pressure is more than 1.3 bar, set it to the correct value. Repeat the procedure until there is no more loss of pressure.

If the tyre pressure has fallen below 1.3 bar, the vehicle must not be used. Seek the assistance of a workshop.

18. Stow away tyre repair kit in load compartment.

Vehicles with tyre repair kit in the sidewall

To open the compartment, disengage the cover and open it.
1. Take the sealant bottle and bracket with air hose from the insert.

2. Detach air hose from bracket and screw onto sealant bottle connection.

3. Position the sealant bottle on the bracket. Make sure that the bottle does not fall.

4. Unscrew valve cap from defective tyre.

5. Screw tyre inflation hose to valve.

6. Screw air hose onto compressor connection.

7. Switch on ignition.
   To avoid discharging the battery, we recommend running the engine.
8. Press on/off switch on the compressor. The tyre is filled with sealant.

9. The compressor pressure gauge briefly indicates up to 6 bar whilst the sealant bottle is emptying (approx. 30 seconds). Then the pressure starts to drop.

10. All of the sealant is pumped into the tyre. Then the tyre is inflated.

11. The prescribed tyre pressure should be obtained within 10 minutes. Tyre pressure \( \geq 250 \). When the correct pressure is obtained, switch off the compressor by pressing the on/off switch again.

12. Push catch on bracket to remove sealant bottle from bracket. Screw the tyre inflation hose to the free connection of the sealant bottle. This prevents sealant from escaping. Stow tyre repair kit in load compartment.

13. Remove any excess sealant using a cloth.

14. Take the label indicating maximum permitted speed from the sealant bottle and affix in the driver's field of view.

15. Continue driving immediately so that sealant is evenly distributed in the tyre. After driving approx. 10 km (but no more than 10 minutes), stop and check tyre pressure. Screw compressor air hose directly onto tyre valve and compressor when doing this.

If tyre pressure is more than 1.3 bar, set it to the correct value. Repeat the procedure until there is no more loss of pressure.

If the tyre pressure has fallen below 1.3 bar, the vehicle must not be used. Seek the assistance of a workshop.

16. Stow away tyre repair kit in load compartment.
General information

Note
The driving characteristics of the repaired tyre are severely affected, therefore have this tyre replaced.

If unusual noise is heard or the compressor becomes hot, turn compressor off for at least 30 minutes.

The built-in safety valve opens at a pressure of 7 bar.

Note the expiry date of the kit. After this date its sealing capability is no longer guaranteed. Pay attention to storage information on sealant bottle.

Replace the used sealant bottle. Dispose of the bottle as prescribed by applicable laws.

The compressor and sealant can be used from approx. -30 °C.

The adapters supplied can be used to pump up other items e.g. footballs, air mattresses, inflatable dinghies etc. They are located on the underside of the compressor. To remove, screw on compressor air hose and withdraw adapter.

Wheel changing

Make the following preparations and observe the following information:

- Park the vehicle on a level, firm and non-skid surface. The front wheels must be in the straight-ahead position.
- Apply the parking brake and engage first gear, reverse gear or P.
- Never change more than one wheel at once.
- Use the jack only to change wheels in case of puncture, not for seasonal winter or summer tyre change.
- The jack is maintenance-free.
- If the ground on which the vehicle is standing is soft, a solid board (max. 1 cm thick) should be placed under the jack.
- Take heavy objects out of the vehicle before jacking up.
- No people or animals may be in the vehicle when it is jacked-up.
- Never crawl under a jacked-up vehicle.
- Do not start the vehicle when it is raised on the jack.
- Before screwing in the wheel bolts, clean them and lightly coat the taper of each wheel bolt with commercially available grease.

Warning

Do not grease the thread of the wheel bolt.

1. Steel wheels:
   Pull off the wheel cover.

Alloy wheels with bolt caps:

Disengage wheel bolt caps with a screwdriver and remove. To protect the wheel, place a soft cloth between the screwdriver and the alloy wheel.
2. Install the wheel wrench ensuring that it locates securely and loosen each wheel bolt by half a turn. The wheels might be protected by locking wheel bolts. To loosen these specific bolts, first attach the adapter for the locking wheel bolts onto the head of the bolt before installing the wheel wrench. The adapter is located in the glovebox.

3. Ensure the jack is correctly positioned under the relevant vehicle jacking point. On versions with sill panelling or retrofitted sill panelling, no jack must be used. The vehicle may be damaged.

4. Set the jack to the necessary height. Position it directly below the jacking point in a manner that prevents it from slipping.
Attach jack handle and with the jack correctly aligned rotate handle until wheel is clear of the ground.

5. Unscrew the wheel bolts.
6. Change the wheel.
7. Screw on the wheel bolts.
8. Lower vehicle.
9. Install the wheel wrench ensuring that it locates securely and tighten each bolt in a crosswise sequence. Tightening torque is 110 Nm.

10. Align the valve hole in the wheel cover of the steel wheel with the tyre valve before installing. Install wheel bolt caps or centre cap on alloy wheel.
11. Install vehicle jacking point cover.
12. Stow and secure the replaced wheel, the vehicle tools 207 and the adapter for the locking wheel bolts 58.
13. Check the tyre pressure of the installed tyre and the wheel bolt torque as soon as possible. Have the defective tyre renewed or repaired as soon as possible.

Jacking position for lifting platform

Rear arm position of the lifting platform located centrally under the recess of the sill.
Vehicle care

Front arm position of the lifting platform at the underbody.

Spare wheel

If mounting a spare wheel, which is different from the other wheels, this wheel might be classified as a temporary spare wheel and the corresponding speed limits apply, even though no label indicates this. Seek the assistance of a workshop to check the applicable speed limit.

The spare wheel has a steel rim.

Caution

The use of a spare wheel that is smaller than the other wheels or in combination with winter tyres could affect driveability. Have the defective tyre replaced as soon as possible.

3-/5-door hatchback

To remove, unscrew wing nut, lift spare wheel, move to a vertical position and remove from above. When stowing the replaced wheel or the temporary spare wheel back in the spare wheel well, always secure with the wing nut.

Delivery van

Remove load floor.
The spare wheel is screwed down together with the floor cover. Unscrew wing nut and lift load cover.

The spare wheel is located in the load compartment beneath the floor covering. It is secured with a wing nut. Fitting a double load-bay floor in this case in the upper position 72.
Remove spacer above the spare wheel, lift the wheel, move to a vertical position and remove from above.

When stowing the replaced wheel or the temporary spare wheel back in the spare wheel well, always insert the adapter and secure the load cover with the wing nut.

Depending on the defective replaced wheel, the spacer can be omitted if necessary, or the wheel can be bolted down without the floor cover.

---

### Temporary spare wheel

**Caution**

The use of the temporary spare wheel could affect driveability. Have the defective tyre renewed or repaired as soon as possible.

Only mount one temporary spare wheel. The permissible maximum speed on the label on the temporary spare wheel is only valid for the factory-fitted tyre size.

If your vehicle gets a flat tyre on the rear while towing another vehicle, mount the temporary spare wheel in the front and the full size tyre in the rear.

Tyre chains 215.

---

### Spare wheel with directional tyre

If possible, fit directional tyres such that they roll in the direction of travel. The rolling direction is indicated by a symbol (e.g. an arrow) on the sidewall.

The following applies to tyres fitted opposing the rolling direction:

- Driveability may be affected. Have the defective tyre renewed or repaired as soon as possible.
- Drive particularly carefully on wet and snow-covered road surfaces.
Jump starting

Do not start with a quick charger. A vehicle with a discharged vehicle battery can be started using jump leads and the vehicle battery of another vehicle.

⚠️ Warning

- Be extremely careful when starting with jump leads. Any deviation from the following instructions can lead to injuries or damage caused by battery explosion or damage to the electrical systems of both vehicles.
- Avoid contact of the battery with eyes, skin, fabrics and painted surfaces. The fluid contains sulphuric acid which can cause injuries and damage in the event of direct contact.

⚠️ Warning

- Never expose the battery to naked flames or sparks.
- A discharged vehicle battery can already freeze at a temperature of 0 °C. Defrost the frozen battery before connecting jump leads.
- Wear eye protection and protective clothing when handling a battery.
- Use a booster battery with the same voltage (12 Volts). Its capacity (Ah) must not be much less than that of the discharged vehicle battery.
- Use jump leads with insulated terminals and a cross section of at least 16 mm² (25 mm² for diesel engines).
- Do not disconnect the discharged vehicle battery from the vehicle.
- Switch off all unnecessary electrical consumers.
- Do not lean over the battery during jump starting.
- Do not allow the terminals of one lead to touch those of the other lead.

- The vehicles must not come into contact with each other during the jump starting process.
- Apply the parking brake, transmission in neutral, automatic transmission in P.
- Open the positive terminal protection caps of both vehicle batteries.
Lead connection order:
1. Connect the red lead to the positive terminal of the booster vehicle battery.
2. Connect the other end of the red lead to the positive terminal of the discharged vehicle battery.
3. Connect the black lead to the negative terminal of the booster vehicle battery.
4. Connect the other end of the black lead to a vehicle grounding point, such as the engine block or an engine mounting bolt. Connect as far away from the discharged vehicle battery as possible, however at least 60 cm.

Route the leads so that they cannot catch on rotating parts in the engine compartment.

To start the engine:
1. Start the engine of the vehicle providing the jump.

2. After 5 minutes, start the other engine. Start attempts should be made for no longer than 15 seconds at an interval of one minute.
3. Allow both engines to idle for approx. 3 minutes with the leads connected.
4. Switch on electrical consumers (e.g. headlights, heated rear window) of the vehicle receiving the jump start.
5. Reverse above sequence exactly when removing leads.

Towing

Towing the vehicle

Insert a screwdriver in the slot at the lower part of the cap. Release the cap by carefully moving the screwdriver downwards.

The towing eye is stowed with the vehicle tools ◇ 207.
Screw in the towing eye as far as it will go until it stops in a horizontal position.

Attach a tow rope – or better still a tow rod – to the towing eye.

The towing eye must only be used for towing and not for recovering the vehicle.

Switch on ignition to release steering wheel lock and to permit operation of brake lights, horn and windscreen wiper.

Transmission in neutral.

**Caution**

- Drive slowly. Do not drive jerkily. Excessive tractive force can damage the vehicle.

When the engine is not running, considerably more force is needed to brake and steer.

To prevent the entry of exhaust gases from the towing vehicle, switch on the air recirculation and close the windows.

Vehicles with automatic transmission: the vehicle must be towed facing forwards, not faster than 80 km/h nor further than 100 km. In all other cases and when the transmission is defective, the front axle must be raised off the ground.

Vehicles with manual transmission automated: the vehicle must only be towed facing forwards with the front axle raised off the ground.

Seek the assistance of a workshop.

After towing, unscrew the towing eye.

**Towing another vehicle**

Insert cap at the top and engage downwards.

Insert a screwdriver in the slot at the lower bend of the cap. Release the cap by carefully moving the screwdriver downwards.

The towing eye is stowed with the vehicle tools 207.
Screw in the towing eye as far as it will go until it stops in a horizontal position.

The lashing eye at the rear underneath the vehicle must never be used as a towing eye.

Attach a tow rope – or even better a tow bar – to the towing eye.

The towing eye must only be used for towing and not for recovering a vehicle.

Caution

Drive slowly. Do not drive jerkily. Excessive tractive force can damage the vehicle.

After towing, unscrew the towing eye. Insert cap at the top and engage downwards.

Appearance care

Exterior care

Locks

The locks are lubricated at the factory using a high quality lock cylinder grease. Use a de-icing agent only when absolutely necessary, as this has a degreasing effect and impairs lock function. After using a de-icing agent, have the locks regreased by a workshop.

Washing

The paintwork of your vehicle is exposed to environmental influences. Wash and wax your vehicle regularly. When using automatic vehicle washes, select a programme that includes waxing. Restrictions for filmed or matt painted body parts or decor tapes, see "Polishing and waxing".
Bird droppings, dead insects, resin, pollen and the like should be cleaned off immediately, as they contain aggressive constituents which can cause paint damage.

If using a car wash, comply with the car wash manufacturer's instructions. The windscreen wiper and rear window wiper must be switched off. Remove antenna and external accessories such as roof racks etc.

If you wash your vehicle by hand, make sure that the insides of the wheel housings are also thoroughly rinsed out.

Clean edges and folds on opened doors and the bonnet as well as the areas they cover.

Caution

Always use a cleaning agent with a pH value of 4 to 9.

Do not use cleaning agents on hot surfaces.

Have the door hinges of all doors greased by a workshop.

Do not clean the engine compartment with a steam-jet or high-pressure jet cleaner.

Thoroughly rinse and leather-off the vehicle. Rinse leather frequently. Use separate leathers for painted and glass surfaces: remnants of wax on the windows will impair vision.

Do not use hard objects to remove spots of tar. Use tar removal spray on painted surfaces.

Exterior lights

Headlight and other light covers are made of plastic. Do not use any abrasive or caustic agents, do not use an ice scraper, and do not clean them dry.

Polishing and waxing

Wax painted parts of the vehicle regularly (at the latest when water no longer beads). Otherwise, the paintwork will dry out.

Polishing is necessary only if the paint has become dull or if solid deposits have become attached to it.

Paintwork polish with silicone forms a protective film, making waxing unnecessary.

Unpainted plastic body parts must not be treated with wax or polishing agents.

Matt filmed body parts or decor tapes must not be polished, to avoid gleaming. Do not use hot wax programmes in automatic car washes if the vehicle is equipped with these parts.

Matt painted decor parts, e.g. mirror housing cover, must not be polished. Otherwise these parts would become agleam or the colour would be dissolved.

Windows and windscreen wiper blades

Use a soft lint-free cloth or chamois leather together with window cleaner and insect remover.

When cleaning the rear window from inside, always wipe in parallel to the heating element to prevent damage.
For mechanical removal of ice, use a sharp-edged ice scraper. Press the scraper firmly against the glass so that no dirt can get under it and scratch the glass.

Clean smearing wiper blades with a soft cloth and window cleaner.

Remove dirt residues from smearing wiper blades by using a soft cloth and window cleaner. Also make sure to remove any residues such as wax, insect residues and similar from the window.

Ice residues, pollution and continuous wiping on dry windows will damage or even destroy the wiper blades.

Sunroof

Never clean with solvents or abrasive agents, fuels, aggressive media (e.g. paint cleaner, acetone-containing solutions etc.), acidic or highly alkaline media or abrasive pads. Do not apply wax or polishing agents to the sunroof.

Wheels and tyres

Do not use high-pressure jet cleaners.

Clean rims with a pH-neutral wheel cleaner.

Rims are painted and can be treated with the same agents as the body.

Paintwork damage

Rectify minor paintwork damage with a touch-up pen before rust forms. Have more extensive damage or rust areas repaired by a workshop.

Underbody

Some areas of the vehicle underbody have a PVC undercoating while other critical areas have a durable protective wax coating.

After the underbody is washed, check the underbody and have it waxed if necessary.

Bitumen/rubber materials could damage the PVC coating. Have underbody work carried out by a workshop.

Before and after winter, wash the underbody and have the protective wax coating checked.

Liquid gas system

Danger

Liquid gas is heavier than air and can collect in sink points.

Take care when performing work at the underbody in a pit.

For painting work and when using a drying booth at a temperature above 60 °C, the liquid gas tank must be removed.

Do not make any modifications to the liquid gas system.

Towing equipment

Do not clean the coupling ball bar with a steam-jet or high-pressure jet cleaner.

Rear carrier system

Clean the rear carrier system with a steam-jet or high-pressure jet cleaner at least once a year.
Operate the rear carrier system periodically if not in regular use, in particular during winter.

**Interior care**

**Interior and upholstery**

Only clean the vehicle interior, including the instrument panel fascia and panelling, with a dry cloth or interior cleaner.

Clean the leather upholstery with clear water and a soft cloth. In case of heavy soiling, use leather care.

The instrument cluster and the displays should only be cleaned using a soft damp cloth. If necessary use a weak soap solution.

Clean fabric upholstery with a vacuum cleaner and brush. Remove stains with an upholstery cleaner.

Clothing fabrics may not be colourfast. This could cause visible discolourations, especially on light-coloured upholstery. Removable stains and discolourations should be cleaned as soon as possible.

Clean seat belts with lukewarm water or interior cleaner.

<table>
<thead>
<tr>
<th><strong>Caution</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Close Velcro fasteners as open Velcro fasteners on clothing could damage seat upholstery. The same applies to clothing with sharp-edged objects, like zips or belts or studded jeans.</td>
</tr>
</tbody>
</table>

**Plastic and rubber parts**

Plastic and rubber parts can be cleaned with the same cleaner as used to clean the body. Use interior cleaner if necessary. Do not use any other agent. Avoid solvents and petrol in particular. Do not use high-pressure jet cleaners.
Service and maintenance

General information

In order to ensure economical and safe vehicle operation and to maintain the value of your vehicle, it is of vital importance that all maintenance work is carried out at the proper intervals as specified.

The detailed, up-to-date service schedule for your vehicle is available at the workshop.

Service display 88.

European service intervals

Maintenance of your vehicle is required every 30,000 km or after one year, whichever occurs first, unless otherwise indicated in the service display.

A shorter service interval can be valid for severe driving behaviour, e.g. for taxis and police vehicles.

The European service intervals are valid for the following countries:

Andorra, Austria, Belgium, Bosnia-Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Greenland, Hungary, Iceland, Ireland, Italy, Latvia, Liechtenstein, Lithuania, Luxembourg, Macedonia, Malta, Monaco, Montenegro, Netherlands, Norway, Poland, Portugal, Romania, San Marino, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, United Kingdom.

International service intervals

Maintenance of your vehicle is required every 15,000 km or after one year, whichever occurs first, unless otherwise indicated in the service display.

The international service intervals are valid for the countries which are not listed in the European service intervals.

Service display 88.
Confirmedions
Confirmation of service is recorded in the Service and Warranty Booklet. The date and mileage is completed with the stamp and signature of the servicing workshop. Make sure that the Service and Warranty Booklet is completed correctly as continuous proof of service is essential if any warranty or goodwill claims are to be met, and is also a benefit when selling the vehicle.

Service interval with remaining engine oil life duration
The service interval is based on several parameters depending on usage. The service display lets you know when to change the engine oil. Service display \(\diamond\) 88.

Recommended fluids, lubricants and parts

Recommended fluids and lubricants
Only use products that meet the recommended specifications. Damage resulting from the use of products not in line with these specifications will not be covered by the warranty.

⚠️ Warning
Operating materials are hazardous and could be poisonous. Handle with care. Pay attention to information given on the containers.

Engine oil
Engine oil is identified by its quality and its viscosity. Quality is more important than viscosity when selecting which engine oil to use. The oil quality ensures e.g. engine cleanliness, wear protection and oil aging control, whereas viscosity grade gives information on the oil's thickness over a temperature range. Dexos is the newest engine oil quality that provides optimum protection for petrol and diesel engines. If it is unavailable, engine oils of other listed qualities have to be used. Recommendations for petrol engines are also valid for Compressed Natural Gas (CNG), Liquified Petroleum Gas (LPG) and Ethanol (E85) fuelled engines.

Select the appropriate engine oil based on its quality and on the minimum ambient temperature \(\diamond\) 238.

Topping up engine oil
Engine oils of different manufacturers and brands can be mixed as long as they comply with the required engine oil quality and viscosity. Use of engine oil with only ACEA A1/B1 or only A5/B5 quality is prohibited, since it can cause long-term engine damage under certain operating conditions.
Select the appropriate engine oil based on its quality and on the minimum ambient temperature 238.

**Additional engine oil additives**
The use of additional engine oil additives could cause damage and invalidate the warranty.

**Engine oil viscosity grades**
The SAE viscosity grade gives information of the thickness of the oil. Multigrade oil is indicated by two figures, e.g. SAE 5W-30. The first figure, followed by a W, indicates the low temperature viscosity and the second figure the high temperature viscosity. Select the appropriate viscosity grade depending on the minimum ambient temperature 238. All of the recommended viscosity grades are suitable for high ambient temperatures.

---

**Coolant and antifreeze**
Use only silicate-free long life coolant (LLC) antifreeze. Consult a workshop.

The system is factory filled with coolant designed for excellent corrosion protection and frost protection down to approx. -28 °C. In northern countries with very low temperatures the factory filled coolant provides frost protection down to approx. -37 °C. This concentration should be maintained all year round. The use of additional coolant additives that intend to give additional corrosion protection or seal against minor leaks can cause function problems. Liability for consequences resulting from the use of additional coolant additives will be rejected.

**Brake and clutch fluid**
Over time, brake fluid absorbs moisture which will reduce braking effectiveness. The brake fluid should therefore be replaced at the specified interval.
Vehicle identification

Vehicle Identification Number

The Vehicle Identification Number is stamped on the identification plate and on the floor pan, under the floor covering, visible under a cover.

The Vehicle Identification Number may be embossed on the instrument panel, visible through the windscreen, or in the engine compartment on the right body panel.
Identification plate

The identification plate is located on the left or right door frame.

Information on identification label:
1 = manufacturer
2 = type approval number
3 = vehicle identification number
4 = permissible gross vehicle weight rating in kg
5 = permissible gross train weight in kg
6 = maximum permissible front axle load in kg
7 = maximum permissible rear axle load in kg
8 = vehicle-specific or country-specific data

The combined total of front and rear axle loads must not exceed the permissible gross vehicle weight. For example, if the front axle is bearing its maximum permissible load, the rear axle can only bear a load that is equal to the gross vehicle weight minus the front axle load.

The technical data is determined in accordance with European Community standards. We reserve the right to make modifications.

Specifications in the vehicle documents always have priority over those given in this manual.

Engine identification

The technical data tables show the engine identifier code. Engine data 241.

To identify the respective engine, refer to the engine power in the EEC Certificate of Conformity provided with your vehicle or other national registration documents.

Customer information

Declaration of conformity

Transmission systems
This vehicle has systems that transmit and/or receive radio waves subject to Directive 1999/5/EC. These systems are in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC. Copies of the original Declarations of Conformity can be obtained on our website.

Jack

Translation of the original declaration of conformity
Declaration of conformity according to EC Directive 2006/42/EC
We declare that the product:
Product designation: Jack
Type/GM part number: 13331922
is in compliance with the provisions of Directive 2006/42/EC.

Applied technical standards:
GMN9737 = jacking
GM 14337 = standard equipment jack – hardware tests
GMN5127 = vehicle integrity – hoisting and service station jacking
GMW15005 = standard equipment jack and spare tyre, vehicle test
ISO TS 16949 = quality management systems

The signatory is authorised to compile the technical documentation.
Rüsselsheim, 31st January 2014

Vehicle data recording and privacy

Event data recorders

Data storage modules in the vehicle

A large number of electronic components of your vehicle contain data storage modules temporarily or permanently storing technical data about the condition of the vehicle, events and errors. In general, this technical information documents the condition of parts, modules, systems or the environment:

- Operating conditions of system components (e.g. filling levels).
- Status messages of the vehicle and its single components (e.g. number of wheel revolutions / rotational speed, deceleration, lateral acceleration).
- Dysfunctions and defects in important system components.

- Vehicle reactions in particular driving situations (e.g. inflation of an airbag, activation of the stability regulation system).
- Environmental conditions (e.g. temperature).

These data are exclusively technical and help identifying and correcting errors as well as optimizing vehicle functions.

Motion profiles indicating travelled routes cannot be created with these data.

If services are used (e.g. repair works, service processes, warranty cases, quality assurance), employees of the service network (manufacturer included) are able to read out this technical information from the event and error data storage modules applying special diagnostic devices. If required, you will receive further information at these workshops. After an error has been corrected, the data are deleted from the error storage module or they are constantly overwritten.

When using the vehicle, situations may occur in which these technical data related to other information (accident report, damages on the vehicle, witness statements etc.) may be associated with a specific person - possibly, with the assistance of an expert.

Additional functions contractually agreed upon with the client (e.g. vehicle location in emergency cases) allow the transmission of particular vehicle data from the vehicle.
Radio Frequency Identification (RFID)
RFID technology is used in some vehicles for functions such as tyre pressure monitoring and ignition system security. It is also used in connection with conveniences such as radio remote controls for door locking/unlocking and starting, and in-vehicle transmitters for garage door openers. RFID technology in Opel vehicles does not use or record personal information or link with any other Opel system containing personal information.
