Vehicle specific data
Please enter your vehicle’s data on
the previous page to keep it easily
accessible. This information is
available in the sections "Service and
maintenance" and "Technical data"
as well as on the identification plate.

Introduction

Your vehicle is a designed
combination of advanced technology,
safety, environmental friendliness
and economy.

This Owner's Manual provides you
with all the necessary information to
enable you to drive your vehicle
safely and efficiently.

Make sure your passengers are
aware of the possible risk of accident
and injury which may result from
improper use of the vehicle.

You must always comply with the
specific laws and regulations of the
country that you are in. These laws
may differ from the information in this

Disregarding the description given in
this manual may affect your warranty.

When this Owner's Manual refers to a
workshop visit, we recommend your
Opel Service Partner. For gas
vehicles, we recommend an Opel
Repairer authorised for servicing gas
vehicles.

All Opel Service Partners provide
first-class service at reasonable
prices. Experienced mechanics
trained by Opel work according to
specific Opel instructions.

The customer literature pack should
always be kept ready to hand in the
vehicle.

Using this manual

- This manual describes all options
  and features available for this
  model. Certain descriptions,
  including those for display and
  menu functions, may not apply to
  your vehicle due to model
  variant, country specifications,
  special equipment or
  accessories.
- The "In brief" section will give you
  an initial overview.

- The table of contents at the
  beginning of this manual and
  within each section shows where
  the information is located.
- The index will enable you to
  search for specific information.
- This Owner's Manual depicts left-
  hand drive vehicles. Operation is
  similar for right-hand drive
  vehicles.
- The Owner's Manual uses the
  engine identifier code. The
  corresponding sales designation
  and engineering code can be
  found in the section "Technical
data".
- Directional data, e.g. left or right,
or front or back, always relate to
  the direction of travel.
- Displays may not support your
  specific language.
- Display messages and interior
  labelling are written in bold
  letters.
Introduction

Danger, Warnings and Cautions

⚠️ Danger
Text marked ⚠️ Danger provides information on risk of fatal injury. Disregarding this information may endanger life.

⚠️ Warning
Text marked ⚠️ Warning provides information on risk of accident or injury. Disregarding this information may lead to injury.

Caution
Text marked Caution provides information on possible damage to the vehicle. Disregarding this information may lead to vehicle damage.

Symbols
Page references are indicated with 🔄. 🔄 means "see page".

Chronological order to select menu entries in the vehicle personalisation is indicated with 📚.

Page references and index entries refer to the indented headings given in the section table of content.

We wish you many hours of pleasurable driving.

Adam Opel GmbH
Initial drive information

Vehicle unlocking

Press 🛠️ to unlock the doors and load compartment. Open the doors by pulling the handles.
Press 🛠️ to unlock the tailgate only.

Tailgate

After unlocking, press the touchpad switch above the licence plate and open the tailgate.
Radio remote control ➔ 23.
Central locking system ➔ 25.
Electronic key system ➔ 24.
Load compartment ➔ 31.
Seat adjustment

Longitudinal adjustment

Pull handle, slide seat, release handle. Try to move the seat back and forth to ensure that the seat is locked in place.

Seat position 44.
Seat adjustment 45.

Backrests inclination

Turn handwheel. Do not lean on backrest when adjusting.

Pressing \(\text{e} \) also activates the heated exterior mirrors.

Heated exterior mirrors \(\text{\textcircled{36}}\).

Electronic climate control system

Demisting and defrosting the windows

Heating and ventilation system, air conditioning system

- Press \(\text{\textcircled{2}}\): the air distribution is directed towards the windscreen.
- Set temperature controller \(\text{\textcircled{3}}\) to warmest level.
- Switch on air conditioning \(\text{A/C} \) if required.
- Set fan speed \(\text{\textcircled{9}}\) to highest level.
- Switch on heated rear window \(\text{\textcircled{b}}\).
In brief

- Switch on heated windscreen.
- Open side air vents as required and direct them towards the door windows.

Heating and ventilation system \(\#\) 120.
Air conditioning system \(\#\) 121.
Heated windscreen \(\#\) 40.

Electronic climate control system

- Press \(\bigcirc\). The LED in the button illuminates to indicate activation.
- Temperature and air distribution are set automatically and the fan runs at high speed.
- Switch on air conditioning by pressing A/C, if required.
- Switch on heated rear window \(\bigcirc\).
- Switch on heated windscreen \(\bigcirc\).

Electronic climate control system \(\#\) 124.

Transmission

Manual transmission

To engage reverse on 5-speed transmission, depress the clutch pedal and then push and move the selector lever to the right and rear.
To engage reverse on 6-speed transmission, depress the clutch pedal, pull the ring under the selector lever and move the selector lever to the left and front.

Automatic transmission

P : park position
R : reverse
N : neutral mode
D : automatic mode
M : manual mode
+ : upshift
− : downshift

Automatic transmission 145.

Starting off

Check before starting off

- tyre pressure and condition 206, 239
- Engine oil level and fluid levels 188.
- All windows, mirrors, exterior lighting and number plates are free from dirt, snow and ice and are operational.
- Proper position of mirrors, seats, and seat belts 35, 44, 50.
- Brake function at low speed, particularly if the brakes are wet.
Starting the engine

Ignition switch

- Turn key to position 1.
- Move the steering wheel slightly to release the steering wheel lock.
- Automatic transmission: operate brake pedal and move selector lever to P or N.
- Do not operate accelerator pedal.
- Turn key to position 2 and release after engine has been started.

Diesel engine starts after control indicator for preheating extinguishes.

Starting the engine 136.

Start power button

Manual transmission: operate clutch and brake pedal.
Automatic transmission: operate brake pedal and move selector lever to P or N.
Do not operate accelerator pedal.
Press and release Start/Stop button. Diesel engine starts after control indicator for preheating extinguishes.
Stop-start system

If the vehicle is at a low speed or at a standstill and certain conditions are fulfilled, an Autostop is activated.

An Autostop is indicated by control indicator (A).

Manual transmission: to restart the engine, depress the clutch pedal again. Control indicator (A) extinguishes.

Automatic transmission: to restart the engine, release the brake pedal. Control indicator (A) extinguishes.

Stop-start system 138.

Parking

⚠️ Warning

- Do not park the vehicle on an easily ignitable surface. The high temperature of the exhaust system could ignite the surface.
- Always apply the parking brake. Activate the manual parking brake without pressing the release button. Apply as firmly as possible on a downhill slope or uphill slope. Depress brake pedal at the same time to reduce operating force.
- Switch off the engine.
- If the vehicle is on a level surface or uphill slope, engage first gear or set the selector lever to position P before removing the ignition key or switching off ignition on vehicles with power button. On an uphill slope, turn the front wheels away from the kerb.

If the vehicle is on a downhill slope, engage reverse gear or set the selector lever to position P before removing the ignition key or switching off ignition on vehicles with power button. Turn the front wheels towards the kerb.
- Close the windows.
- Remove the ignition key from the ignition switch or switch off ignition on vehicles with power button. Turn the steering wheel until the steering wheel lock is felt to engage.
- Lock the vehicle with  on the radio remote control.

Activate the anti-theft alarm system 33.
- The engine cooling fans may run after the engine has been switched off 187.
Caution

After running at high engine speeds or with high engine loads, operate the engine briefly at a low load or run in neutral for approx. 30 seconds before switching off, in order to protect the turbocharger.

Replacement keys
The key number is specified on a detachable tag.
The key number must be quoted when ordering replacement keys as it is a component of the immobiliser system.
Locks 221.
Central locking 25.
Starting the engine 136.
Radio remote control 23.
Electronic key 24.
The code number of the adapter for the locking wheel nuts is specified on a card. It must be quoted when ordering a replacement adapter.
Wheel changing 213.
Key with foldaway key section

Press button to extend. To fold the key, first press the button.

Radio remote control

Enables operation of the following functions via the use of the remote control buttons:

- central locking system \(\triangleright \) 25
- anti-theft locking system \(\triangleright \) 32
- anti-theft alarm system \(\triangleright \) 33
- tailgate unlocking \(\triangleright \) 25
- power windows \(\triangleright \) 38
- mirrors folding

The remote control has a range of up to 100 metres, but may also be much less due to external influences. The hazard warning flashers confirm operation.

Handle with care, protect from moisture and high temperatures and avoid unnecessary operation.

Replacing battery in radio remote control

Replace the battery as soon as the range reduces.

Batteries do not belong in household waste. They must be disposed of at an appropriate recycling collection point.
1. To unclip the cover insert a small screwdriver between the back cover and the remote control.
2. Remove the back cover.
3. Extract the flat battery from its location.
4. Replace battery with a battery of the same type. Pay attention to the installation position.
5. Clip the cover in place.

Fault
If the central locking system cannot be operated with the radio remote control, the cause may be one of the following:
- Fault in radio remote control.
- The range is exceeded.
- The battery voltage is too low.
- Frequent, repeated operation of the radio remote control while not in range, which will require re-synchronisation.
- Overload of the central locking system by operating at frequent intervals, the power supply is interrupted for a short time.
- Interference from higher-power radio waves from other sources.

Manual unlocking ◊ 25.

Electronic key system
Enables a keyless operation of the following functions:
- central locking system ◊ 25
- ignition switching on and starting the engine ◊ 136

The electronic key simply needs to be on the driver’s person.
Additionally, the electronic key includes the functionality of the radio remote control ◊ 23.
Handle with care, protect from moisture and high temperatures and avoid unnecessary operation.
Replacing battery in electronic key

Replace the battery as soon as the system no longer operates properly or the range is reduced. The need for battery replacement is indicated by a message in the Driver Information Centre 102.

Batteries do not belong in household waste. They must be disposed of at an appropriate recycling collection point.

1. To unclip the cover insert a small screwdriver in the cutout.
2. Remove the cover.
3. Extract the flat battery from its location.
4. Replace battery with a battery of the same type. Pay attention to the installation position.
5. Clip the cover in place.

Fault

If the central locking cannot be operated or the engine cannot be started, the cause may be one of the following:

- Fault in electronic key.
- Electronic key is out of reception range.
- The battery voltage is too low.
- Overload of the central locking system by operating at frequent intervals, the power supply is interrupted for a short time.
- Interference from higher-power radio waves from other sources.

To rectify the cause of the fault, change the position of the electronic key.

Manual unlocking 25.

Central locking system

Unlocks and locks doors, load compartment and fuel filler flap.

Pull an interior door handle fully to unlock and open the respective door.
Note
In the event of an accident in which airbags or belt pretensioners are deployed, the vehicle is automatically unlocked.

Note
A short time after unlocking with the remote control the doors are locked automatically if no door has been opened.

Remote control operation

Unlocking

Unlocking mode can be set in the vehicle personalisation menu in the Info-Display. Two settings are selectable:

- All doors, load compartment and fuel filler flap will be unlocked by pressing once.
- Only the driver’s door and fuel filler flap will be unlocked by pressing once. To unlock all doors and load compartment, press twice.

Select the relevant setting in the Vehicle personalisation.

Vehicle personalisation 103.

Unlocking the tailgate

Press longer to unlock the tailgate only.

Unlocking and opening the tailgate 31.

Locking

Close doors, load compartment and fuel filler flap.

Press .

If a door is not closed properly, the central locking system will not work.

Confirmation

Operation of the central locking system is confirmed by the hazard warning flashers.
Electronic key system operation

The electronic key must be outside the vehicle, within a range of approx. one metre of the relevant door side.

Unlocking

Pass your hand behind any door handle to unlock the vehicle or press the tailgate touchpad.

Unlocking mode can be set in the vehicle personalisation. Three settings are selectable:

- Only the driver's door will be unlocked by passing your hand behind the driver's door handle.
- All doors, load compartment and fuel filler flap will be unlocked by passing your hand behind any of the door handles or by pressing the tailgate touchpad.
- Only the tailgate will be unlocked by pressing the tailgate touchpad.

Vehicle personalisation 103

Locking

Press with a finger or thumb on one of the door handles (at the markings) or press the tailgate touchpad.

All doors, load compartment and fuel filler flap will be locked.
The system locks if any door has been opened and all doors are now closed.

If the driver’s door is not closed properly, the electronic key remains in the vehicle or the ignition is not off, locking will not be permitted and a warning chime sounds.

If there have been two or more electronic keys in the vehicle and the ignition was on once, the doors will be locked even if just one electronic key is taken out of the vehicle.

Unlocking and opening the tailgate
The tailgate can be unlocked and opened by pushing the touchpad under the tailgate moulding when the electronic key is in range. The doors remain locked depending on the configuration in the vehicle personalisation.

Load compartment 31
Vehicle personalisation 103

Operation with buttons on the electronic key

The central locking system can also be operated with the buttons on the electronic key.
Press ‡ to unlock the driver's door and the fuel filler flap or all doors, the fuel filler flap and the tailgate.
Press ‡ to lock the driver's door and the fuel filler flap or all doors, the fuel filler flap and the tailgate.
Press ‡ longer to unlock and open only the tailgate or all doors, the fuel filler flap and the tailgate.
Remote control operation 25.

Confirmation
Operation of central locking system is confirmed by the hazard warning flashers.

Central locking buttons
Locks or unlocks all doors, the load compartment and fuel filler flap from the passenger compartment via a switch.

Press ‡ to lock. The LED in the button illuminates.
Press ‡ again to unlock. The LED in the button extinguishes.
Operation with the key in case of a central locking system fault

In case of a fault, e.g. vehicle battery or remote control/electronic key battery is discharged, the driver's door can be locked or unlocked with the mechanical key.

Manual unlocking
Electronic key: press and hold the latch to extract the integral key.

Manually unlock the driver's door by inserting and turning the key in the lock cylinder.

The other doors can be opened by pulling the interior handle. The load compartment and fuel filler flap will possibly not be unlocked.

By switching on the ignition, the anti-theft locking system is deactivated.

Manual locking

Manually lock the driver's door by inserting and turning the key in the lock cylinder.

To lock the other doors, first remove the black cover by inserting a key and turning clockwise.

Insert key into the recess and move latch sideways.

Remove key and attach the black cover.

The fuel filler flap and tailgate are possibly not locked.

Automatic locking

Automatic locking after driving off

This system allows automatic locking of the doors as soon as the speed of the vehicle exceeds 10 km/h.
If one of the doors or the load compartment is open, the automatic central locking does not take place. This is signalled by the sound of the locks rebounding, accompanied by illumination of \# in the instrument panel, an audible signal and the display of an alert message.

You can activate or deactivate this function permanently. With the ignition on, press \( \& \) until an audible signal starts and a corresponding message is displayed.

The state of the system stays in memory when switching off the ignition.

### Automatic relock after unlocking

This feature automatically locks all doors, load compartment and fuel filler flap a short time after unlocking with the remote control or electronic key, provided no door has been opened.

### Child locks

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use the child locks whenever children are occupying the rear seats.</td>
</tr>
</tbody>
</table>

### Mechanical child locks

Turn the red child lock in the rear doors to the horizontal position by using a key. The door cannot be opened from the inside.

To deactivate, turn the child lock to the vertical position.
Electric child locks

Remotely operated system to prevent opening of the rear doors using their interior controls and use of the rear electric windows.

Switching on
Press ã. The indicator lamp in the button comes on, accompanied by a confirmation message. This indicator lamp remains on until the child lock is switched off.

Switching off
Press ã again. The indicator lamp on button goes off, accompanied by a confirmation message. This indicator lamp remains on while child lock is switched on.

Doors
Load compartment
Tailgate
Opening

After unlocking, press the touchpad switch above the licence plate and open the tailgate.
Keys, doors and windows

Closing

Use the interior handle.
Do not push the touchpad switch whilst closing as this will unlock the tailgate again.

Central locking system 25.

General hints for operating tailgate

**Danger**
Do not drive with the tailgate open or ajar, e.g. when transporting bulky objects, since toxic exhaust gases, which cannot be seen or smelled, could enter the vehicle. This can cause unconsciousness and even death.

**Caution**
Before opening the tailgate, check overhead obstructions, e.g. a garage door, to avoid damage to the tailgate. Always check the moving area above and behind the tailgate.

**Note**
The installation of certain heavy accessories onto the tailgate may affect its ability to remain open.

**Note**
At low outside temperatures the tailgate may not open fully by itself. In this event, lift the tailgate manually to its normal end position.

Vehicle security

Anti-theft locking system

**Warning**
Do not use the system if there are people in the vehicle! The doors cannot be unlocked from the inside.

The system deadlocks all the doors. All doors must be closed otherwise the system cannot be activated.

Unlocking the vehicle disables the mechanical anti-theft locking system. This is not possible with the central locking button.
Activating

Press å on the radio remote control twice within five seconds.

Anti-theft alarm system
The anti-theft alarm system is combined with the anti-theft locking system.
It monitors:
- doors, tailgate, bonnet
- passenger compartment including adjoining load compartment

• vehicle inclination, e.g. if it is raised
• ignition

Activation
All doors must be closed and the electronic key of the electronic key system must not remain in the vehicle. Otherwise the system cannot be activated.
- Radio remote control: self-activated 30 seconds after locking the vehicle by pressing å once.
- Electronic key system: self-activated 30 seconds after locking the vehicle by pressing with a finger or thumb on one of the front door handles at the markings.

• Radio remote control or electronic key: directly by pressing å twice within five seconds.
• Electronic key system with passive locking enabled: briefly activated after passive locking occurs.

Note
Changes to the vehicle interior such as the use of seat covers and open windows, could impair the function of passenger compartment monitoring.
Activation without monitoring of passenger compartment and vehicle inclination

Switch off the monitoring of passenger compartment and vehicle inclination when animals are being left in the vehicle, because of high volume ultrasonic signals or movements triggering the alarm. Also switch off when the vehicle is on a ferry or train.

1. Close tailgate, bonnet, windows.
2. Press 📦. LED in the button 📦 illuminates for a maximum of ten minutes.
3. Close doors.
4. Activate the anti-theft alarm system.

Status message is displayed in the Driver Information Centre.

Indication

LED in the central locking button flashes if the anti-theft alarm system is activated.

Seek the assistance of a workshop in the event of faults.

Deactivation

Radio remote control: Unlocking the vehicle by pressing 🛠 deactivates the anti-theft alarm system.

Electronic key system: Unlocking the vehicle by pressing on one of the front door handles at the markings deactivates the anti-theft alarm system.

The electronic key must be outside the vehicle, within a range of approx. one metre of the relevant door side.

The system is not deactivated by unlocking the driver’s door with the key or with the central locking button in the passenger compartment.
Alarm

When triggered, the alarm horn sounds and the hazard warning lights flash simultaneously. The number and duration of alarm signals are stipulated by legislation.

The anti-theft alarm system can be deactivated by pressing ⏰, by pressing the switch on the door handle with electronic key system or switching on the ignition.

The anti-theft alarm system can be deactivated by pressing ⏰, by pressing on one of the front door handles at the markings with electronic key system or switching on the ignition.

A triggered alarm, which has not been interrupted by the driver, will be indicated by the hazard warning lights. They will flash quickly three times the next time the vehicle is unlocked with the radio remote control. Additionally a warning message is displayed in the Driver Information Centre after switching on the ignition.

Vehicle messages ⏯ 102.

If the vehicle’s battery is to be disconnected (e.g. for maintenance work), the alarm siren must be deactivated as follows: switch the ignition on then off, then disconnect the vehicle’s battery within 15 seconds.

Immobiliser

The system is part of the ignition switch and checks whether the vehicle is allowed to be started with the key being used.

The immobiliser is activated automatically after the key has been removed from the ignition switch.

Note

Radio Frequency Identification (RFID) tags may cause interference with the key. Do not have it placed near the key when starting the vehicle.

Note

The immobiliser does not lock the doors. You should always lock the vehicle after leaving it and switch on the anti-theft alarm system ⏯ 25, ⏯ 33.

Exterior mirrors

Convex shape

The convex exterior mirror on the driver's side contains an aspherical area and reduces blind spots. The shape of the mirror makes objects appear smaller, which will affect the ability to estimate distances.

Side blind spot alert ⏯ 169.

Electric adjustment

Select the relevant exterior mirror by pushing the mirror button to the left or right.
Then swivel the control to adjust the mirror.

**Folding mirrors**

For pedestrian safety, the exterior mirrors will swing out of their normal mounting position if they are struck with sufficient force. Reposition the mirror by applying slight pressure to the mirror housing.

**Electric folding**

Pull mirror button rearwards. Both exterior mirrors will fold.
Pull mirror button rearwards again to return both exterior mirrors to their original position.
If an electrically folded mirror is manually extended, pulling mirror button rearwards will only electrically extend the other mirror.

**Heated mirrors**

Operated by pressing $\text{Heater}$. Heating works with the engine running and is switched off automatically after a short time.
Heated rear window $\Rightarrow 39$. 
**Interior mirrors**

**Manual anti-dazzle**

To reduce dazzle, adjust the lever on the underside of the mirror housing.

**Automatic anti-dazzle**

Dazzle from following vehicles at night is automatically reduced.

**Windows**

**Windscreen**

**Windscreen stickers**

Do not attach stickers such as toll road stickers or similar on the windscreen in the area of the interior mirror. Otherwise the detection zone of the sensor and the view area of the camera in the mirror housing could be restricted.

**Windscreen replacement**

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
</table>

If the vehicle has a front-looking camera sensor for the driver assistance systems, it is very important that any windscreen replacement is performed accurately according to Opel specifications. Otherwise, these systems may not work properly and there is a risk of unexpected behaviour and/or messages from these systems.
Caution
If the vehicle is equipped with a Head-up display, it is very important that any windscreen replacement is performed accurately according to Opel specifications. Otherwise, the system may not work properly and the image may look out of focus.

Power windows

⚠️ Warning
Take care when operating the power windows. Risk of injury, particularly to children.
If there are children on the rear seats, switch on the child safety system for the power windows.
Keep a close watch on the windows when closing them. Ensure that nothing becomes trapped in them as they move.

Switch on ignition to operate power windows.

Operate the switch for the respective window by pushing to open or pulling to close.
Pushing or pulling gently to the first detent: window moves up or down as long as the switch is operated.
Pushing or pulling firmly to the second detent then releasing: window moves up or down automatically with safety function enabled. To stop movement, operate the switch once more in the same direction.

Safety function
If the window glass encounters resistance above the middle of the window during automatic closing, it is immediately stopped and opened again.

Override safety function
In the event of closing difficulties due to frost or the like, switch on the ignition, then pull the switch to the first detent and hold. The window moves up without safety function enabled. To stop movement, release the switch.
Child safety system for rear windows

Press  to deactivate rear door power windows; the LED illuminates. To activate, press  again.

Operating windows from outside

The windows can be operated remotely from outside the vehicle.

Press and hold  to open windows.
Press and hold  to close windows.
Release button to stop window movement.
If the windows are fully opened or closed, the hazard warning lights will flash twice.

Overload

If the windows are repeatedly operated within short intervals, the window operation is disabled for some time.

Initialising the power windows

If the windows cannot be closed automatically (e.g. after disconnecting the vehicle battery), a warning message is displayed in the Driver Information Centre.
Vehicle messages 102.
Activate the window electronics as follows:

1. Close doors.
2. Switch on ignition.
3. Pull switch until the window is closed and keep pulling for additional two seconds.
4. Push switch until the window is completely open and keep pushing for additional two seconds.
5. Repeat for each window.

Heated rear window

Operated by pressing  together with heated exterior mirrors.
Heating works with the engine running and is switched off automatically after a short time.
Depending on climate control system, is located at a different position. Climate Control systems 120.

Vehicles with heating and ventilation system or air conditioning system

**Heated windscreen**
Operated by pressing . LED in button illuminates.
Heating works with the engine running and is switched off automatically after a short time.
Depending on climate control system, is located at a different position.

Vehicles with electronic climate control system
Sun visors
The sun visors can be folded down or swivelled to the side to prevent dazzling.
The covers of the mirrors should be closed when driving.
A ticket holder is located on the backside of the sun visor.

Roof

Glass panel
Do not affix any stickers to the roof.
Do not cover the vehicle using a tarpaulin.

Sunblind
The sunblind is electrically operated.

Press $\downarrow$ gently to the first detent at the rear: the sunblind is opened as long as the switch is operated.

Press $\downarrow$ firmly to the second detent and then release at the rear: the sunblind is opened as long as the switch is operated.

Press $\downarrow$ gently to the first detent at the front: the sunblind is closed as long as the switch is operated.

Press $\downarrow$ firmly to the second detent and then release at the front: the sunblind is closed as long as the switch is operated.

Safety function
If the sunblind encounters resistance during automatic closing, it is immediately stopped and opened again.

Function standby
In ignition switch position 1 the sunblind is operational $\downarrow$ 133.

Initialising after a power failure
After a power failure, it may only be possible to operate the sunblind to a limited extent. Initialise the system as follows:
1. Turn key in ignition switch to position 1.

2. Press \( N \) twice gently to the first detent at the rear, the sunblind opens slightly.

3. Immediately press \( N \) twice gently to the first detent at the front, the sunblind closes slightly.
   After step 3 the sunblind is in initialising mode without safety function.

4. Press \( N \) gently to the first detent at the rear until the sunblind is completely opened.

5. Press \( N \) gently to the first detent at the front until the sunblind is completely closed.

After this procedure, the sunblind is initialised with safety function activated.

When \( N \) is pressed firmly to the second detent during initialising, the procedure is cancelled.

Head restraints

Position

⚠️ Warning

Only drive with the head restraint set to the proper position.

The upper edge of the head restraint should be at upper head level. If this is not possible for extremely tall people, set to highest position, and set to lowest position for small people.

Head restraints on front seats

Height adjustment

Press release button, adjust height, engage.
### Front seats

#### Seat position

<table>
<thead>
<tr>
<th><strong>△ Warning</strong></th>
<th>Only drive with the seat correctly adjusted.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>△ Danger</strong></td>
<td>Do not sit closer than 25 cm to the steering wheel, to permit safe airbag deployment.</td>
</tr>
<tr>
<td><strong>△ Warning</strong></td>
<td>Never adjust seats while driving as they could move uncontrollably.</td>
</tr>
</tbody>
</table>

- Sit with buttocks as far back against the backrest as possible. Adjust the distance between the seat and the pedals so that legs are slightly angled when fully pressing the pedals. Slide the front passenger seat as far back as possible.
- Set seat height high enough to have a clear field of vision on all sides and of all display instruments. There should be at least one hand of clearance between head and the roof frame. Your thighs should rest lightly on the seat without pressing into it.
Sit with shoulders as far back against the backrest as possible. Set the backrest rake so that it is possible to easily reach the steering wheel with arms slightly bent. Maintain contact between shoulders and the backrest when turning the steering wheel. Do not angle the backrest too far back. We recommend a maximum rake of approx. 25°.

Adjust seat and steering wheel in a way that the wrist rests on top of the steering wheel while the arm is fully extended and shoulders on the backrest.

Adjust the steering wheel 75.

Adjust the head restraint 43.

Adjust the thigh support so that there is a space approx. two fingers wide between the edge of the seat and the hollow of the knee.

Adjust the lumbar support so that it supports the natural shape of the spine.

Seat adjustment

Drive only with engaged seats and backrests.

Longitudinal adjustment

Pull handle, slide seat, release handle. Try to move the seat back and forth to ensure that the seat is locked in place.

Backrest inclination

Turn handwheel. Do not lean on backrest when adjusting.
Seating, restraints

**Seat height**

Lever pumping motion
- **up**: seat higher
- **down**: seat lower

**Seat inclination**

Press switch
- **top**: front end higher
- **bottom**: front end lower

**Lumbar support**

Adjust lumbar support using the four-way switch to suit personal requirements.

- Moving support up and down: push switch up or down.
- Increasing and decreasing support: push switch forwards or backwards.
Adjustable thigh support

Pull the lever and slide the thigh support.

Armrest

Armrest can be folded up.

Heating

Adjust heating to the desired setting by pressing for the respective seat one or more times. The control indicator in the button indicates the setting.

Prolonged use of the highest setting for people with sensitive skin is not recommended.

Seat heating is operational when engine is running.

During an Autostop, seat heating is also operational.

Stop-start system 138.
Rear seats

Longitudinal adjustment

On vehicles with sliding rear seats, both parts of the rear seat can be individually moved forwards or backwards.

⚠️ Warning

Seat backrests must be completely folded up or down to have the seats engaged in the guide rails.
Only drive with the seats engaged in the guide rails.

Pull handle, slide seat, release handle and allow seat to engage. The seats can be engaged in intermediate positions.

Folding backrests 66.

⚠️ Warning

Never adjust seats while driving as they could move uncontrollably.

Armrest

The armrest contains cupholders. Folding down armrest 66.
Seat belts

The seat belts are locked during heavy acceleration or deceleration of the vehicle, holding the occupants in the seat position. Therefore the risk of injury is considerably reduced.

⚠️ Warning

Fasten seat belt before each trip. In the event of an accident, people not wearing seat belts endanger their fellow occupants and themselves.

Seat belts are designed to be used by only one person at a time. Child restraint system 58.

Periodically check all parts of the belt system for damage, soiling and proper functionality.

Have damaged components replaced. After an accident, have the belts and triggered belt pretensioners replaced by a workshop.

Note

Make sure that the belts are not damaged by shoes or sharp-edged objects or trapped. Prevent dirt from getting into the belt retractors.

Seat belt reminder

Each seat is equipped with a seat belt reminder, indicated by a control indicator X for the respective seat in the roof console 90.

Belt force limiters

Stress on the body is reduced by the gradual release of the belt during a collision.

Belt pretensioners

In the event of a head-on, rear-end or side-on collision of a certain severity, the front and rear seat belts are tightened. The front seat belts are tightened by two pretensioners per seat. The outer rear seat belts are tightened by one pretensioner per seat.

⚠️ Warning

Incorrect handling (e.g. removal or fitting of belts) can trigger the belt pretensioners.

Deployment of the belt pretensioners is indicated by continuous illumination of control indicator v 91.

Triggered belt pretensioners must be replaced by a workshop. Belt pretensioners can only be triggered once.

Note

Do not affix or install accessories or other objects that may interfere with the operation of the belt pretensioners. Do not make any
modifications to belt pretensioner components as this will invalidate the operating permit of your vehicle.

**Three-point seat belt**

**Fasten**

Withdraw the belt from the retractor, guide it untwisted across the body and insert the latch plate into the buckle. Tighten the lap belt regularly whilst driving by pulling the shoulder belt.

Loose or bulky clothing prevents the belt from fitting snugly. Do not place objects such as handbags or mobile phones between the belt and your body.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>The belt must not rest against hard or fragile objects in the pockets of your clothing.</td>
</tr>
</tbody>
</table>

Seat belt reminder 🔴 90.

**Unfasten**

To release belt, press red button on belt buckle.

**Centre seat belt of the second seat row**

The centre seat is equipped with a particular three-point seat belt.
Pull latch plates with the belt out of belt holder in the roof.

Insert lower latch plate into left-hand buckle (1) at the centre seat. Guide the upper latch plate with the belt over the lap area and the shoulder (do not twist) and insert it into right-hand buckle (2) at centre seat.

To unfasten the seat belt, first press the button on the right-hand buckle (2) and remove upper latch plate. Then press the button on the left-hand buckle (1) and remove lower latch plate. The seat belt retracts automatically.

**Using the seat belt while pregnant**

**Warning**

The lap belt must be positioned as low as possible across the pelvis to prevent pressure on the abdomen.
Airbag system

The airbag system consists of a number of individual systems depending on the scope of equipment.

When triggered, the airbags inflate within milliseconds. They also deflate so quickly that it is often unnoticeable during the collision.

⚠️ Warning

The airbag system deploys in an explosive manner, repairs must be performed by skilled personnel only.

⚠️ Warning

Adding accessories that change the vehicle’s frame, bumper system, height, front end or side sheet metal, may keep the airbag system from working properly. The operation of the airbag system can also be affected by changing any parts of the front seats, seat belts, airbag sensing and diagnostic module, steering wheel, instrument panel, inner door seals including the speakers, any of the airbag modules, ceiling or pillar trim, front sensors, side impact sensors or airbag wiring.

Note

The airbag systems and belt pretensioner control electronics are located in the centre console area. Do not put any magnetic objects in this area.

Do not affix any objects onto the airbag covers and do not cover them with other materials. Have damaged covers replaced by a workshop.

Each airbag is triggered only once. Have deployed airbags replaced by a workshop. Furthermore, it may be necessary to have the steering wheel, the instrument panel, parts of the panelling, the door seals, handles and the seats replaced.

Do not make any modifications to the airbag system as this will invalidate the vehicle operating permit.

Control indicator 🚨 for airbag systems ⚠️ 91.

Child restraint systems on front passenger seat with airbag systems

Warning according to ECE R94.02:

EN: NEVER use a rearward-facing child restraint on a seat protected by an ACTIVE AIRBAG in front of it; DEATH or SERIOUS INJURY to the CHILD can occur.

DE: Nach hinten gerichtete Kindersitze NIEMALS auf einem Sitz verwenden, der durch einen davor befindlichen AKTIVEN AIRBAG
Seats, restraints

geschützt ist, da dies den TOD oder SCHwere VERLETZUNGEN DES KINDes zur Folge haben kann.

FR: NE JAMAIS utiliser un siège d'enfant orienté vers l'arrière sur un siège protégé par un COUSSIN GONFLABLE ACTIF placé devant lui, sous peine d'infliger des BLESSURES GRAVES, voire MORTELLES à l'ENFANT.

ES: NUNCA utilice un sistema de retención infantil orientado hacia atrás en un asiento protegido por un AIRBAG FRONTAL ACTIVO. Peligro de MUERTE o LESIONES GRAVES para el NIÑO.

RU: ЗАПРЕЩАЕТСЯ устанавливать детское удерживающее устройство лицом назад на сиденье автомобиля, оборудованном фронтальной подушкой безопасности, если ПОДУШКА НЕ ОТКЛЮЧЕНА! Это может привести к СМЕРТИ или СЕРЬЕЗНЫМ ТРАВМАМ РЕБЕНКА.

NL: Gebruik NOOIT een achterwaarts gericht kinderzitje op een stoel met een ACTIEVE AIRBAG ervoor, om DODELIJK of ERNSTIG LETSEL van het KIND te voorkomen.

DA: Brug ALDRIG en bagudvendt autostol på et forsøde med AKTIV AIRBAG, BARNET kan komme i LIVSFARE eller komme ALVORLIGT TIL SKADE.

SV: Använd ALDRIG en bakåtvänd barnstol på ett säte som skyddas med en framförvarande AKTIV AIRBAG. DÖDSFALL eller ALLVARLIGA SKADOR kan drabba BARNET.

FI: ÄLÄ KOSKAAN sijoita taaksepäin suunnattua lasten turvaistuita istuimelle, jonka edessä on AKTIIVINEN TURVATYYNYN, LAPSIVOI KUOLLA tai VAMMAUTUA VAKAVASTI.

NO: Bakovervendt barnesikringsutstyr må ALDRI brukes på et sete med AKTIV KOLLISJONSPUTE foran, da det kan føre til at BARNET utsettes for LIVSFARE og fare for ALVORLIGE SKADER.

PT: NUNCA use um sistema de retenção para crianças voltado para trás num banco protegido com um AIRBAG ACTIVO na frente do mesmo, poderá ocorrer a PERDA DE VIDA ou FERIMENTOS GRAVES na CRIANÇA.

IT: Non usare mai un sistema di sicurezza per bambini rivolto all'indietro su un sedile protetto da AIRBAG ATTIVO di fronte ad esso: pericolo di MORTE o LESIONI GRAVI per il BAMBINO!

EL: ΠΟΤΕ μη χρησιμοποιείτε παιδικό κάθισμα ασφαλείας με φορά προς τα πίσω σε κάθισμα που προστατεύεται από μετωπικό ΕΝΕΡΓΟ ΑΕΡΟΣΑΚΟ, διότι το παιδί μπορεί να υποστεί ΘΑΝΑΣΙΜΟ ή ΣΟΒΑΡΟ ΤΡΑΥΜΑΤΙΣΜΟ.

PL: NIE WOLNO montować fotelika dziecięcego zwróconego tylem do kierunku jazdy na fotelu, przed którym znajduje się WŁĄCZONA PODUSZKA POWIETRZNA. Niezastosowanie się do tego zalecenia może być przyczyną ŚMIERCI lub POWAŻNYCH OBRAŻEŃ u DZIECKA.
Seats, restraints

TR: Arkaya bakan bir çocuk emniyet sistemini KESİNLİKLE önünde bir AKTİF HAVA YASTIĞI ile korunmakta olan bir koltukta kullanmayıniz. ÇOCUK ÖLEBİLİR veya AĞIR ŞEKİLDE YARALANABİLİR.

UK: НІКОЛИ не використовуйте систему безпеки для дітей, що встановлюється обличчям назад, на сидінні з УВІМКНЕНОЮ ПОДУШКОЮ БЕЗПЕКИ, інакше це може призвести до СМЕРТІ чи СЕРЬОЗНОГО ТРАВМУВАННЯ ДИТИНИ.

HU: SOHA ne használjon hátrafelé néző biztonsági gyerekülést előlről KÉSZÍLTETTE SÉRÜLÉSÉT okozhatja.

HR: NIKADA nemojte koristiti sustav zadržavanja za djecu okrenut prema natrag na sjedalu s AKTIVNIM VAŽDUŠNIM JASTUKOM ispred, nes to bi moglo dovesti do ZAGINJE NEGO ili da bih TESKO POVREDIO.

MK: НИКОГАШ не користете детско седиште свртено наназад на седиште заштитено со АКТИВНО ВОЗДУШНО ПЕРНИЧЕ пред него, затоа што детето може ДА ЗАГИНЕ или да биде ТЕШКО ПОВРЕДЕНО.

BG: НИКОГА не използвайте детска седалка, гледаща назад, върху седалка, която е защитена чрез АКТИВНА ВЪЗДУШНА ВЪЗГЛАВНИЦА пред нея - може да се стигне до СМЪРТ или СЕРИОЗНО НАРАНЯВАНЕ на детето.

RO: Nu utilizaţi NICIODATĂ un scaun pentru copil îndreptat spre partea din spate a maşinii pe un scaun protejat de un AIRBAG ACTIV în fața sa; acest lucru poate duce la DECESUL sau VĂTĂMAREA GRAVĂ a COPILULUI.

CS: NIKDY nepoužívejte dětský zádržný systém instalovaný proti směru jízdy na sedadle, které je chráněno před sedadlem AKTIVNÍM AIRBAGEM. Mohlo by dojít k VÁŽNÉMU PORANĚNÍ nebo ÚMRTÍ DÍTĚTE.

SK: NIKDY nepoužívajte detskú sedačku otočenú vzad na sedadle chránenom AKTÍVNYM AIRBAGOM, pretože môže dôjsť k SMRTI alebo VÁŽNYM ZRANENIAM DIEŤAŤA.

LT: JOKIU BŪDU nemontuokite atgal atgręžtos vaiko tvirtinimo sistemos sėdyneje, prieš kurią įrengta AKTYVI Oro PAGALVĖ, nes VAIKAS GALI ŽŪTI arba RIMTAI SUSIŽALOTI.

LV: NEKĀDĀ GADĪJUMĀ neizmantojiet uz aizmuguri vērstu bērnu sēdeklītī sēdvietā, kas tiek aizsargāta ar tās priekšu uzstādītu AKTĪVU DROŠĪBAS SPILVENU, jo pretējā gadījumā BĒRNS var gūt SMAGAS TRAUMAS vai IET BOJĀ.
Front airbag system

The front airbag system consists of one airbag in the steering wheel and one in the instrument panel on the front passenger side. These can be identified by the word **AIRBAG**.

The front airbag system is triggered in the event of a front-end impact of a certain severity. The ignition must be switched on.

The inflated airbags cushion the impact, thereby reducing the risk of injury to the upper body and head of the front seat occupants considerably.

### Warning

Optimum protection is only provided when the seat is in the proper position.

**Seat position** 44.

Keep the area in which the airbag inflates clear of obstructions.

Fit the seat belt correctly and engage securely. Only then is the airbag able to protect.

Side airbag system

The airbag label is located on both sides of the front passenger sun visor.

Airbag deactivation 57.
The side airbag system consists of an airbag in each front seat backrest. This can be identified by the word AIRBAG.

The side airbag system is triggered in the event of a side impact of a certain severity. The ignition must be switched on.

The inflated airbags cushion the impact, thereby reducing the risk of injury to the upper body and pelvis in the event of a side-on collision considerably.

⚠️ Warning
Keep the area in which the airbag inflates clear of obstructions.

Note
Only use protective seat covers that have been approved for the vehicle. Be careful not to cover the airbags.

Curtain airbag system
The curtain airbag system consists of an airbag in the roof frame on each side. This can be identified by the word AIRBAG on the roof pillars. The curtain airbag system is triggered in the event of a side-on impact of a certain severity. The ignition must be switched on.

The inflated airbags cushion the impact, thereby reducing the risk of injury to the head in the event of a side-on impact considerably.

⚠️ Warning
Keep the area in which the airbag inflates clear of obstructions.

The hooks on the handles in the roof frame are only suitable for hanging up light articles of clothing, without coat hangers. Do not keep any items in these clothes.
Airbag deactivation

The front passenger airbag system must be deactivated for child restraint system on the passenger seat according to the instructions in the table 61. The side airbag and curtain airbag systems, the belt pretensioners and all driver airbag systems will remain active.

The front passenger airbag system can be deactivated via a key-operated switch on the passenger side of the instrument panel.

Use the ignition key to choose the position:

- **OFF**: front passenger airbag is deactivated and will not inflate in the event of a collision. Control indicator **OFF** illuminates continuously in the centre console
- **ON**: front passenger airbag is active

⚠️ Danger

Deactivate passenger airbag only in combination with the use of a child restraint system, subject to the instructions and restrictions in the table 61. Otherwise, there is a risk of fatal injury for a person occupying a seat with a deactivated front passenger airbag.

If the control indicator **ON** illuminates for approx. 60 seconds after the ignition is switched on, the front passenger airbag system will inflate in the event of a collision.

If the control indicator **OFF** illuminates after the ignition is switched on, the front passenger airbag system is deactivated. It stays on while the airbag is deactivated.

If both control indicators are illuminated at the same time, there is a system failure. The status of the system is not discernible, therefore no person is allowed to occupy the front passenger seat. Contact a workshop immediately.
Consult a workshop immediately if neither of the two control indicators are illuminated.
Change status only when the vehicle is stopped with the ignition off.
Status remains until the next change.
Control indicator for airbag deactivation 91.

### Child restraints

#### Child restraint systems

<table>
<thead>
<tr>
<th>![Danger]</th>
<th>If using a rear-facing child restraint system on the front passenger seat, the airbag system for the front passenger seat must be deactivated. This also applies to certain forward-facing child restraint systems as indicated in the tables 61.</th>
</tr>
</thead>
</table>

Airbag deactivation 57.
Airbag label 52.

We recommend a child restraint system which is tailored specifically to the vehicle. For further information, contact your workshop.

When a child restraint system is being used, pay attention to the following usage and installation instructions and also those supplied with the child restraint system.

Always comply with local or national regulations. In some countries, the use of child restraint systems is forbidden on certain seats.

Child restraint systems can be fastened with:
- Three-point seat belt
- ISOFIX brackets
- Top-tether anchor

#### Three-point seat belt

Child restraint systems can be fastened by using a three-point seat belt.

#### ISOFIX brackets
Fasten vehicle-approved ISOFIX child restraint systems to the ISOFIX brackets. Specific vehicle ISOFIX child restraint system positions are marked in the ISOFIX table 61. ISOFIX brackets are indicated by a label on the backrest.

An i-size child restraint system is an universal ISOFIX child restraint system according UN Regulation No. 129.

All i-size child restraint systems can be used on any vehicle seat suitable for i-size, i-size table 61.

Either a Top-tether strap or a support leg must be used in addition to the ISOFIX brackets.

i-size child seats and vehicle seats with i-size approval are marked with i-size symbol, see illustration.

### Top-tether anchors

Top-tether anchors are marked with the symbol 🍂 for a child seat.

In addition to the ISOFIX brackets, fasten the Top-tether strap to the Top-tether anchors.

ISOFIX child restraint systems of universal category positions are marked in the table by IUF 61.

### Selecting the right system

The rear seats are the most convenient location to fasten a child restraint system.

Children should travel facing rearwards in the vehicle as long as possible. This makes sure that the child's backbone, which is still very weak, is under less strain in the event of an accident.

Suitable are restraint systems that comply with valid UN ECE regulations. Check local laws and regulations for mandatory use of child restraint systems.

The following child restraints are recommended for the following weight classes:

- Maxi Cosi Cabriofix for group 0, group 0+
- Duo Plus for group I
- Kidfix XP for group II/III
- Graco Junior for group III

Ensure that the child restraint system to be installed is compatible with the vehicle type.

Ensure that the mounting location of the child restraint system within the vehicle is correct, see following tables.
Seats, restraints

Allow children to enter and exit the vehicle only on the side facing away from the traffic.

When the child restraint system is not in use, secure the seat with a seat belt or remove it from the vehicle.

**Note**
Do not affix anything on the child restraint systems and do not cover them with any other materials.

A child restraint system which has been subjected to stress in an accident must be replaced.
Child restraint installation locations

Permissible options for fastening a child restraint system with a three-point seat belt

---

**Warning**

Do not store heavy or sharp objects in the storage compartments. Otherwise, the storage compartment lid could open and vehicle occupants could be injured by objects being thrown around in the event of hard braking, a sudden change in direction or an accident.

---

**Glovebox**

On some versions the glovebox is ventilated. Air ventilation and temperature depend on the settings of the climate control system. The air vent in the glove box can be closed ⦿ 129.

Other versions may have a CD player in the glove box.

The glovebox should be closed whilst driving.

**Cupholders**

Cupholders are located in the centre console.
Additional cupholders are located in the rear armrest. Fold down armrest.

Centre console storage
The storage container can be used to store small items.

Depending on the version, the storage compartment is located under a cover.

Load compartment
The rear seat backrest is divided in two parts. Both parts can be folded down.

Before folding rear seat backrests, execute the following if necessary:
- Remove the load compartment cover 69.
- Press and hold the catch to push the head restraints down 43.

Load compartment extension
(version with fixed rear seats)

- Pull the release lever on one or both outer sides and fold down
the backrests onto the seat cushion.

When folding the backrests, insert the seat belts in the guiding latches and pull the seat belts along with them.

- To fold up, raise the backrests and guide them into an upright position until they engage audibly.

The backrests are properly engaged when the red mark near the release lever is no longer visible.

**Warning**

When folding up, ensure that backrests are securely locked in position before driving. Failure to do so may result in personal injury or damage to the load or vehicle in the event of hard braking or a collision.

- Pull the loop and fold down the backrest onto the seat cushion.

Load compartment extension (version with sliding rear seats)

**Without folding backrests**
Move both rear seats to the most forward position 48.

**With folding backrests**
- Move both rear seats to the most rearward position 48.

**Load compartment extension (version with sliding rear seats)**

**Without folding backrests**
Move both rear seats to the most forward position 48.

**With folding backrests**
- Move both rear seats to the most rearward position 48.

- Pull the loop and fold down the backrest onto the seat cushion.
To fold down the backrest from the load compartment, lift the release lever.

**Note**
Fold up the armrest before folding down the relevant part of the backrest. Otherwise this part of the backrest can not be folded down.

When folding the backrests, insert the seat belts in the guiding latches and pull the seat belts along with them.

- To fold up, raise the backrests and guide them into an upright position until they engage audibly.

Folding the armrest in the rear centre backrest

Pull the loop to fold down the rear armrest.
The armrest can also be folded down from the rear by pulling the loop. Suitable for loading long, narrow objects. Ensure that the armrest engages after folding up.

**Load compartment cover**
Do not place any objects on the cover.

**Removing cover**
Unhook retaining straps from tailgate.

Lift cover, slightly angle and turn it. Remove the cover.

**Stowing**
The load compartment cover can be stored behind the rear seat backrests. Unhook retaining straps and lift the cover backwards until it unlatches. Then slide it down in the guides behind the seat backrests.

**Fitting cover**
Engage cover in side guides and fold downwards. Attach the retaining straps to the tailgate.

**Rear floor storage cover**
The rear floor cover can be removed. Raise cover at the recess and remove.
The cover can also be stored behind the rear seats.

**Double load floor**

The double load floor can be inserted in the load compartment in two positions:

- lower position above the spare wheel well cover
- upper position interlocked with the grab handle into back panel trim

To remove, press the handle to unlock the load floor and lift it up while using the handle.

If mounted in the upper position, the space between the load floor and the spare wheel well cover can be used as a storage compartment.

In this position, if the rear seat backrests are folded forwards, an almost completely flat load bay is created.

In the upper position, the double load floor is able to withstand a maximum load of 100 kg. In the lower position, the double load floor is able to withstand the maximum permissible load.

**Lashing eyes**

The lashing eyes are designed to secure items against slippage, e.g. using lashing straps or luggage net.
Warning triangle

Stow the warning triangle in the space at the rear of the load compartment and secure it with the velcro fastener.

First aid kit

Fold down the cover on the left side of the load compartment.

Stow the first aid kit in the stowage compartment.
Storage

Roof rack system

Roof rack

For safety reasons and to avoid damage to the roof, the vehicle-approved roof rack system is recommended.

Follow the installation instructions and remove the roof rack when not in use.

Mounting roof rack

Open all doors.

Mounting points are located in each door frame of the vehicle body.

Detach the cover from each mounting point and fasten the roof rack with the attached screws.

Loading information

● Heavy objects in the load compartment should be placed against the seat backrests. Make sure that the backrests are securely engaged, i.e. no longer showing the red marks on the side near the release lever or on the loop. If objects can be stacked, heavier objects should be placed at the bottom.

● Secure objects with lashing straps attached to lashing eyes 70.
- Secure loose objects in the load compartment to prevent from sliding.
- When transporting objects in the load compartment, the backrests of the rear seats must not be angled forward.
- Do not allow the load to protrude above the upper edge of the backrests.
- Do not place any objects on the load compartment cover or the instrument panel, and do not cover the sensor on top of the instrument panel.
- The load must not obstruct the operation of the pedals, parking brake and gear selector, or hinder the freedom of movement of the driver. Do not place any unsecured objects in the interior.
- Do not drive with an open load compartment.

⚠️ Warning

Always make sure that the load in the vehicle is securely stowed. Otherwise objects can be thrown around inside the vehicle and cause personal injury or damage to the load or car.

- The payload is the difference between the permitted gross vehicle weight (see identification plate 228) and the EC kerb weight.

To calculate the payload, enter the data for your vehicle in the weights table at the front of this manual.

The EC kerb weight includes weights for the driver (68 kg), luggage (7 kg) and all fluids (fuel tank 90% full).

Optional equipment and accessories increase the kerb weight.

- Driving with a roof load increases the sensitivity of the vehicle to cross-winds and has a detrimental effect on vehicle handling due to the vehicle's higher centre of gravity. Distribute the load evenly and secure it properly with retaining straps. Adjust the tyre pressure and vehicle speed according to the load conditions. Check and retighten the straps frequently. Do not drive faster than 120 km/h.

The permissible roof load is 60 kg. The roof load is the combined weight of the roof rack and the load.

Controls

Steering wheel adjustment

Unlock lever, adjust steering wheel, then engage lever and ensure it is fully locked.
Do not adjust steering wheel unless vehicle is stationary and steering wheel lock has been released.

Steering wheel controls
Some driver assistance systems, Infotainment system and a connected mobile phone can be operated via the controls on the steering wheel.

Driver assistance systems 152.
Further information is available in the Infotainment manual.

Heated steering wheel
Activate heating by pressing .
Activation is indicated by the LED in the button.
Instruments and controls

The recommended grip areas of the steering wheel are heated quicker and to a higher temperature than the other areas.

Heating is operational when the engine is running and during an Autostop.

Stop-start system ⇐ 138.

Horn

Windscreen wiper/washer

Windscreen wiper with adjustable wiper interval

HI : fast
LO : slow
INT : interval wiping
OFF : off

For a single wipe when the windscreen wiper is off, press the lever downwards to position 1x.

Do not use if the windscreen is frozen.

Switch off in car washes.

Adjustable wiper interval

Wiper lever in position INT.

Turn the adjuster wheel to adjust the wiping frequency.
Windscreen wiper with rain sensor

HI : fast
LO : slow
AUTO : automatic wiping with rain sensor
OFF : off

In AUTO position, the rain sensor detects the amount of water on the windscreen and automatically regulates the frequency of the windscreen wiper.

For a single wipe when the windscreen wiper is off, press the lever downwards to position 1x.

Do not use if the windscreen is frozen.

Switch off in car washes.

Adjustable sensitivity of the rain sensor

Wiper lever in position AUTO.
Turn the adjuster wheel to adjust the sensitivity of the rain sensor.

Keep the sensor free from dust, dirt and ice.
Control indicator \(\mathcal{A}\) 76.

Windscreen washer
Instruments and controls

Pull lever. Washer fluid is sprayed onto the windscreen and the wiper wipes a few times.
Washer fluid 189.

Rear window wiper/washer

Rear window wiper

Turn outer cap to activate the rear window wiper:
OFF : off
INT : intermittent operation
ON : continuous operation

Do not use if the rear window is frozen.

Switch off in car washes. The rear window wiper comes on automatically when the windscreen wiper is switched on and reverse gear is engaged.
Activation or deactivation of this function can be changed in the Vehicle personalisation menu 103.

Rear window washer

Push lever. Washer fluid is sprayed onto the rear window and the wiper wipes a few times.

The rear window washer system is deactivated when the fluid level is low.
Washer fluid 189.

Outside temperature

A drop in temperature is indicated immediately and a rise in temperature after a time delay.

Illustration shows an example.
If outside temperature drops to 3 °C, a warning message is displayed in the Driver Information Centre.
**Warning**

The road surface may already be icy even though the display indicates a few degrees above 0 °C.

**Clock**

Date and time are shown in the Info-Display 98.

Setting date and time, see Infotainment manual.

**Power outlets**

A 12 Volt power outlet is located in the centre console.

Another power outlet is located in the console between the front seats.

Do not exceed the maximum power consumption of 120 watts.

With ignition off, the power outlet is deactivated. Additionally, the power outlet is deactivated in the event of low vehicle battery voltage.

Electrical accessories that are connected must comply with the electromagnetic compatibility requirements laid down in DIN VDE 40 839.

Do not connect any current-delivering accessories, e.g. electrical charging devices or batteries.

Do not damage the outlets by using unsuitable plugs.

Stop-start system 138.

**USB charging port**

One or two USB ports are located in the centre console. Both USB ports are prepared for charging devices.

When two USB ports are available, the upper USB port can be used to connect a phone for phone projection.
Instruments and controls

**Note**
The sockets must always be kept clean and dry.

**Inductive charging**

<table>
<thead>
<tr>
<th>△ Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inductive charging can affect the operation of implanted pacemakers or other medical devices. If applicable, seek medical advice before using the inductive charging device.</td>
</tr>
</tbody>
</table>

**Warning**
Remove any metal objects from the charging device before charging a mobile phone, as these objects could become very hot.

To charge a device, the ignition must be switched on.

LED status on the charging device (see arrow):
- **Illuminates green:**
  - mobile phone with inductive charging functionality was recognised.
- **Illuminates yellow:**
  - metall objects have been detected in the charging area. Remove objects to allow charging.
  - mobile phone was not placed properly.

PMA or Qi compatible mobile phones can be charged inductively.
A back cover with an integrated coil (e.g. Samsung 4 and 5) or a jacket (e.g. some iPhone models) may be required to charge a mobile phone.
The mobile phone must be smaller than 8 cm in width and 15 cm in length to fit into the charging device.
Protective cover for the mobile phone could have impact on the inductive charging.

To charge a mobile phone:
1. Remove all objects from the charging device.
2. Place the mobile phone with the display facing upwards on the charging device.
3. Ensure that the mobile phone is located at the right bottom corner of the charging device.

In the case that the yellow LED illuminates:
1. Remove the mobile phone from the charging device.
2. Rotate the mobile phone by 180°.
3. Wait three seconds after the LED has extinguished and place the mobile phone on the charging device again.
4. Ensure that the mobile phone is located at the right bottom corner of the charging device.

**Cigarette lighter**

The cigarette lighter is located behind the storage cover below the climate controls. Press cover to open.
Press in cigarette lighter. It switches off automatically once the element is glowing. Pull out lighter.

**Ashtrays**

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>To be used only for ash and not for combustible rubbish.</td>
</tr>
</tbody>
</table>

A portable ashtray can be placed in the cupholders.
Warning lights, gauges and indicators

Instrument cluster
Depending on the version, two instrument clusters are available:
Baselevel instrument cluster
Instruments and controls

Midlevel instrument cluster

Speedometer
Indicates vehicle speed.

**Odometer**

The total recorded distance is displayed in km.

**Trip odometer**

The recorded distance since the last reset is displayed in the Driver Information Centre.

Trip odometer counts up to 9,999 km and then restarts at 0.

Press **000** for 2 seconds to reset trip odometer.

Two trip odometer pages are selectable in the trip/fuel information menu for different trips ☞ 96.

**Tachometer**

Displays the engine speed.

Drive in a low engine speed range for each gear as much as possible.

**Caution**

If the needle is in the red warning zone, the maximum permitted engine speed is exceeded. Engine at risk.
Fuel gauge

Displays the fuel level in the tank.
Control indicator \(\bullet\) illuminates if the level in the tank is low.
Never run the fuel tank dry.
Because of the fuel remaining in the tank, the top-up quantity may be less than the specified fuel tank capacity.

Fuel selector

Liquid gas operation, LPG

Pressing LPG switches between petrol and liquid gas operation as soon as the required parameters (coolant temperature, gas temperature and minimum engine speed) have been reached. The requirements are usually fulfilled after approximately 60 seconds (depending on exterior temperature) and the first firm press on the accelerator. The status LED shows the current operating mode.

LED off : petrol operation
LED flashes : checking conditions for fuel transition to liquid gas operation. Illuminates if conditions are fulfilled.
LED illuminates : liquid gas operation
LED flashes 5 times and extinguishes : liquid gas tank is empty or failure in liquid gas system. A message is displayed in the Driver Information Centre.

If the fuel tank is empty, the engine will not start.
The selected fuel mode is stored and reactivated at the next ignition cycle if conditions allow.
As soon as the liquid gas tank is empty, petrol operation is automatically engaged until the ignition is switched off.
When switching automatically between petrol or gas operation, a brief delay of engine tractive power may be noticeable.
Every six months, run the petrol tank down until control indicator \( \text{Y} \) illuminates, then refuel. This helps maintain fuel quality and system function for petrol operation.

Fill the tank completely at regular intervals to prevent corrosion in the tank.

Faults and remedies
If gas mode is not possible, check the following:
- Is there enough liquid gas present?
- Is there enough petrol present for starting?

Due to extreme temperatures in combination with the gas composition, it may take slightly longer before the system switches from petrol to gas mode.

In extreme situations, the system may also switch back to petrol mode if the minimum requirements are not fulfilled. If conditions allow, it may be possible to manually switch back to liquid gas operation.

Seek the assistance of a workshop in the event of all other faults.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Repairs and adjustments may only be made by trained specialists in order to maintain the safety and warranty on the LPG system.</td>
</tr>
</tbody>
</table>

Liquid gas is given a particular odour (odorised) so that any leaks can be detected easily.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>If you smell gas in the vehicle or in the immediate vicinity, switch to petrol mode immediately. No smoking. No naked flames or ignition sources.</td>
</tr>
</tbody>
</table>

If the gas odour persists, do not start the engine. Have the cause of the fault remedied by a workshop.

When using underground car parks, follow the instructions of the operator and local laws.

Note
In the event of an accident, switch off the ignition and lights.

Fuel for liquid gas operation □ 178.

**Engine coolant temperature gauge**

Displays the coolant temperature.

<table>
<thead>
<tr>
<th>Temperature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>50</td>
<td>engine operating temperature not yet reached</td>
</tr>
<tr>
<td>90</td>
<td>normal operating temperature</td>
</tr>
<tr>
<td>130</td>
<td>temperature too high</td>
</tr>
</tbody>
</table>

Control indicator \( \bullet \) illuminates if engine coolant temperature is too high.
<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>If engine coolant temperature is too high, stop vehicle, switch off engine. Danger to engine. Check coolant level.</td>
</tr>
</tbody>
</table>

**Engine oil level monitor**

The state of the engine oil level is displayed in the Driver Information Centre for a few seconds following the service information after switching on the ignition.

A proper state of oil level is indicated by the message **Oil level correct**.

If oil level is low, 💥 flashes and **Oil level incorrect** is indicated, accompanied by the ⛽ indicator. Confirm oil level by using the oil dipstick and top up engine oil respectively. Engine oil 188.

A fault of measurement is indicated by the message **Oil level measurement invalid**. Check oil level manually by using the dipstick.

**Service display**

The service system informs when to change the engine oil and filter or a vehicle service is required. Based on driving conditions, the interval at which an engine oil and filter change is required can vary considerably.

Service information 224

A required service due is displayed in the Driver Information Centre for seven seconds after switching on the ignition.

If no service is required for the next 3000 km or more, no service information appears in the display.

If service due is required within the next 3000 km, the remaining distance or time duration is indicated for several seconds. Simultaneously symbol 🔴 lights up permanently as reminder.

If service due is less than 1000 km, 🔴 flashes and then lights up permanently. Remaining distance or time duration is indicated for several seconds.

Overdue service is indicated by a message in the Driver Information Centre which indicates the overdue distance. 🔴 flashes and then lights up permanently until service is executed.

**Reset of service interval**

After each service, the service indicator must be reset to ensure proper functionality. It is recommended to seek the assistance of a workshop.

If service is executed by yourself, operate as following:

- switch off ignition
- press and hold button ⬤ or CHECK
• switch on ignition; the distance indication begins a countdown
• when the display indicates =0, release the button. Symbol \ disappears

Retrieving service information
To retrieve the status of the service information at any time press button ➔ or CHECK. The service information is displayed for a few seconds.
Service information ➔ 224.

Control indicators
The control indicators described are not present in all vehicles. The description applies to all instrument versions. Depending on the equipment, the position of the control indicators may vary. When the ignition is switched on, most control indicators will illuminate briefly as a functionality test.

The control indicator colours mean:
red : danger, important reminder
yellow : warning, information, fault
green : confirmation of activation
blue : confirmation of activation
white : confirmation of activation

See all control indicators on different instrument clusters ➔ 82.

Turn signal
❖ illuminates or flashes green.

Illuminates briefly
The parking lights are switched on.

Flashes
A turn signal or the hazard warning flashers are activated.
Rapid flashing: failure of a turn signal light or associated fuse, failure of turn signal light on trailer.
Bulb replacement ➔ 192, Fuses ➔ 200.
Turn signals ➔ 115.

Seat belt reminder

Seat belt reminder on all seats
❖ illuminates or flashes red in the instrument cluster together with the indication in the roof console for each seat belt.

• When the ignition is switched on, ❖ in the instrument cluster and the symbol for the respective seat in the roof console comes
on, if the seat belt of any occupied seat has not been fastened.

- After running up, \( \mathcal{A} \) in the instrument cluster and the symbol for the respective seat in the roof console flashes for a certain time together with a chime. After a certain time of driving \( \mathcal{A} \) illuminates constantly until the seat belt of the respective seat has been fastened or if any passenger has unfastened the seat belt.

**Airbag and belt tensioners**

\( \mathcal{P} \) illuminates red.

When the ignition is switched on, the control indicator illuminates for approx. four seconds. If it does not illuminate, does not go out after four seconds or illuminates whilst driving, there is a fault in the airbag system. Seek the assistance of a workshop. The airbags and belt pretensioners may fail to trigger in the event of an accident.

Deployment of the belt pretensioners or airbags is indicated by continuous illumination of \( \mathcal{P} \).

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Have the cause of the fault remedied immediately by a workshop.</td>
</tr>
</tbody>
</table>

Belt pretensioners, airbag system \( \mathcal{P} \) 49, 52.

**Airbag deactivation**

\( \mathcal{A} \) illuminates yellow.

When \( \mathcal{A} \) illuminates or flashes yellow.

- The front passenger airbag is activated.

\( \mathcal{A} \) OFF illuminates yellow.

- The front passenger airbag is deactivated.

Airbag deactivation \( \mathcal{P} \) 57.

**Charging system**

\( \mathcal{E} \) illuminates red.

Illuminates when the ignition is switched on and extinguishes shortly after the engine starts.

**Illuminates when the engine is running**

Stop, switch off engine. Vehicle battery is not charging. Engine cooling may be interrupted. The brake servo unit may cease to be effective. Seek the assistance of a workshop.

**Malfunction indicator light**

\( \mathcal{O} \) illuminates or flashes yellow.
Instruments and controls

Illuminates when the ignition is switched on and extinguishes shortly after the engine starts.

Illuminates when the engine is running

Fault in the emission control system. The permitted emission limits may be exceeded.
Seek the assistance of a workshop immediately.

Flashes when the engine is running

The engine management system has a fault that could lead to catalytic converter damage. Ease up on the accelerator until the flashing stops.
Seek the assistance of a workshop immediately.

Service vehicle soon

Illuminates yellow.
Illuminates briefly when the ignition is switched on.
May illuminate together with other control indicators and a corresponding message in the Driver Information Centre.
Seek the assistance of a workshop immediately.

Stop engine

STOP illuminates red.
Illuminates briefly when the ignition is switched on.
Illuminates together with other control indicators, accompanied by a warning chime and a corresponding message in the Driver Information Centre.
Stop engine immediately and seek the assistance of a workshop.

System check

illuminates yellow or red.
Illuminates yellow
A minor engine fault has been detected.

Illuminates red
A major engine fault has been detected.
Stop engine as soon as possible and seek the assistance of a workshop.

Brake and clutch system

illuminates red.
The brake and clutch fluid level is too low, when manual parking brake is not applied 190.

⚠️ Warning

Stop. Do not continue your journey. Consult a workshop.

Illuminates when the manual parking brake is applied and ignition is switched on 149.

Antilock brake system (ABS)

illuminates yellow.
Instruments and controls

Illuminates for a few seconds after the ignition is switched on. The system is ready for operation when the control indicator extinguishes.

If the control indicator does not go out after a few seconds, or if it illuminates while driving, there is a fault in the ABS. The brake system remains operational but without ABS regulation.

Antilock brake system  149.

Gear shifting

▲ with the number of a higher gear is indicated, when upshifting is recommended for fuel saving reasons.

Lane departure warning

≠ flashes yellow when the system recognises an unintended lane change.

Lane departure warning  174.

Electronic Stability Control and Traction Control system

≠ illuminates or flashes yellow.

Electronic Stability Control and Traction Control system off

≠ illuminates yellow.

The systems are deactivated.

Flashes

The system is actively engaged. Engine output may be reduced and the vehicle may be braked automatically to a small degree. Electronic Stability Control and Traction Control system  150.

Engine coolant temperature

● illuminates red.

Illuminates when the engine is running

Stop, switch off engine.

Caution

Coolant temperature too high.
Instruments and controls

Check coolant level immediately

If there is sufficient coolant, consult a workshop.

Preheating

Preheating of Diesel engine is activated. Only activates when outside temperature is low. Start the engine when control indicator extinguishes.

Diesel particle filter

The diesel particle filter requires cleaning.

Continue driving until the control indicator extinguishes.

Illuminates temporarily

Start of saturation of the particle filter. Start cleaning process as soon as possible by driving at a vehicle speed of at least 60 km/h.

Illuminates constantly

Indication of a low additive level. Seek the assistance of a workshop.

Diesel particle filter

Illuminates

Tyre pressure loss in one or more wheels. Stop immediately and check tyre pressure.

Flashes

Fault in system. Consult a workshop.

Engine oil pressure

Illuminates red.

Illuminates when the engine is running

Deflation detection system

Caution

Engine lubrication may be interrupted. This may result in damage to the engine and/or locking of the drive wheels.

1. Depress clutch.
2. Select neutral gear.
3. Move out of the flow of traffic as quickly as possible without impeding other vehicles.
4. Switch off ignition.

### Warning

**Warning**

When the engine is off, considerably more force is needed to brake and steer.
During an Autostop, the brake servo unit will still be operational.
Do not remove key until vehicle is stationary, otherwise the steering wheel lock could engage unexpectedly.

Check oil level before seeking assistance of a workshop 188.

**Low fuel**

● illuminates yellow.
Level in fuel tank is too low.
Refuelling 179.
Bleeding the diesel fuel system 191.

**Autostop**

( ) illuminates or flashes green.

**Illuminates green**

Engine is in an Autostop.

**Flashes green**

Autostop is temporarily unavailable, or Autostop mode is invoked automatically.
Stop-start system 138.

**Exterior light**

Œ illuminates green.
The exterior lights are on 111.

**High beam**

Œ illuminates blue.
Illuminated when high beam is on or during headlight flash 112.

**High beam assist**

Œ illuminates green.
The high beam assist is activated, see Adaptive forward lighting 113.

**Low beam**

ŒD illuminates green.
Illuminated when low beam is on.

**Fog light**

ŒD illuminates green.
The front fog lights are on 115.

**Rear fog light**

Œ illuminates yellow.
The rear fog light is on 116.

**Rain sensor**

Œ illuminates green.
Illuminated when rain sensor position on wiper stalk is selected.

**Side blind spot alert**

ŒD illuminates green.
The system is active.

**Cruise control**

Œ illuminates in the Driver Information Centre.
Cruise control \(\diamondsuit\) 152.

**Speed limiter**
\(\triangleright\) illuminates in the Driver Information Centre.

Speed limiter \(\diamondsuit\) 154.

**Traffic sign assistant**
\(\circlearrowleft\) displays by the front camera detected traffic signs in the Driver Information Centre.

Traffic sign assistant \(\diamondsuit\) 152.

**Door open**
\(\#\) illuminates red.

A door or the tailgate is open.

---

**Information displays**

**Driver Information Centre**

The Driver Information Centre is located in the instrument cluster.

Depending on the version and the instrument cluster, the Driver Information Centre is available as Baselevel or Midlevel display.

Driver Information Centre indicates:
- overall and trip odometer
- digital speed indication
- trip/fuel information menu
- gear shift indication
- service information
- vehicle and warning messages
- driver assistance messages
- pop-up messages

**Selecting menus and functions**

The menus and functions can be selected via the buttons on the turn signal lever.
Trip/fuel information menu, Baselevel display

Turn the adjuster wheel to select a page:

**Trip odometer**
The recorded distance since the reset.
Press 000 for 2 seconds to reset trip odometer.

**Average fuel consumption**
Display of average consumption. The measurement can be reset at any time and starts with a default value. To reset, press SET/CLR for a few seconds.

**Average speed**
Display of average speed. The measurement can be reset at any time. To reset, press SET/CLR for a few seconds.

**Fuel range**
Range is calculated from current fuel level and current consumption. The display shows average values. After refuelling, the range is updated automatically after a brief delay.
When the level in the fuel tank is low, a message appears on the display and the control indicator ● in the fuel gauge illuminates ♦ 95.

**Instantaneous Fuel Consumption**
Display of the instantaneous consumption.

**Digital speed**
Digital display of the instantaneous speed.

Trip/fuel information menu, Midlevel display

Different pages with combined information can be selected.
Turn the adjuster wheel to select a page.

**Information page:**
**Fuel range**
Range is calculated from current fuel level and current consumption. The display shows average values. After refuelling, the range is updated automatically after a brief delay.
Instruments and controls

When the level in the fuel tank is low, a message appears on the display and the control indicator ● in the fuel gauge illuminates 95.

**Instantaneous Fuel Consumption**
Display of the instantaneous consumption.

**Trip 1 page:**
**Average speed**
Display of average speed. The measurement can be reset at any time.

**Average fuel consumption**
Display of average consumption. The measurement can be reset at any time and starts with a default value.

**Distance travelled**
Displays the current distance for trip 1 since the reset.
The values of trip 1 page can be reset by pressing SET/CLR for a few seconds.

**Trip 2 page:**
**Average speed**
Display of average speed. The measurement can be reset at any time.

**Average fuel consumption**
Display of average consumption. The measurement can be reset at any time and starts with a default value.

**Distance travelled**
Displays the current distance for trip 2 since a certain reset.
The values of trip 2 page can be reset by pressing SET/CLR for a few seconds.

**Digital speed page**
Digital display of the instantaneous speed.

**Stop and Start time counter**
A time counter calculates the time spent in STOP mode during a journey. It resets to zero every time the ignition is switched on.

**Compass page**
Displays the geographic direction of driving.

**Blank page**
No trip/fuel information is displayed.

**Info display**
The Info-Display is located in the instrument panel near the instrument cluster.
Depending on the vehicle configuration the vehicle has a
- **Graphic-Info-Display**
- **7'' Colour-Info-Display with touchscreen functionality**
- **8'' Colour-Info-Display with touchscreen functionality**

The Info displays can indicate:
- time 79
- outside temperature 78
- date 79
- Infotainment system, see description in the Infotainment manual
- indication of rear view camera 173
• indication of panoramic view system  170
• indication of parking assist instructions  161
• navigation, see description in the Infotainment manual
• vehicle and system messages  102
• settings for vehicle personalisation  103

Graphic-Info-Display

Press  to switch on the display.
Press MENU to select main menu page.

Press  to select a menu page.
Press OK to confirm a selection.
Press BACK to exit a menu without changing a setting.

7” Colour-Info-Display

Selecting menus and settings
Menus and settings are accessed via the display.

Touch required menu display icon with the finger.
Touch a respective icon to confirm a selection.

Touch  to return to the next higher menu level.
Press  to return to the homepage.
For further information, see Infotainment manual.
Vehicle personalisation  103.

8” Colour-Info-Display

Selecting menus and settings
There are three options to operate the display:
• via buttons below the display
• by touching the touchscreen with the finger
• via speech recognition
Instruments and controls

Button and touch operation

Press ⊕ to switch on the display.
Press SET to select system settings (units, language, time and date).
Press í to select vehicle settings or driving functions.
Touch required menu display icon or a function with the finger.
Confirm a required function or selection by touching.
Touch ← on the display to exit a menu without changing a setting.
For further information, see Infotainment manual.

Speech recognition
Description see Infotainment manual.
Vehicle personalisation ➥ 103.

Head-up display
The Head-up display (HUD) displays driver information concerning the instrument cluster onto a foldable projection plane on the driver's side.
The information appears as an image projected from a lens in the instrument panel onto the projection plane directly ahead in driver's view. The image appears focused out toward the front of the vehicle.

Head-up display views:
- vehicle speed
- speed limits by the traffic sign assistant
- set speed of speed limiter
- set speed of cruise control
- navigation information.

Adjust position of Head-up display image
1. Adjust the driver's seat.
2. Start the engine.
3. Press Δ or ∨ to centre the image. It can only be adjusted up and down, not side to side.
Warning

If the head-up display image is too bright or too high in your field of view, it may obstruct your view when it is dark outside. Be sure to keep the head-up display image dim and placed low in your field of view.

Adjust brightness

The Head-up display image will automatically dim and brighten to compensate for outside lighting. Brightness can also be adjusted manually as needed:
Press ☺ to brighten the display. Press ☹ to dim the display.

The image can temporarily light up depending on angel and position of sunlight.

Switching off

Press ☹ and hold to turn the Head-up display off.

Language

Preferred language can be set in vehicle personalisation menu ☛ 103.

Units

Units can be changed in vehicle personalisation menu ☛ 103.

Care of Head-up display

Clean the screen of the Head-up display with a soft cloth sprayed with glass cleaner. Wipe the lens gently, then dry it.

System limitations

Head-up display may not operate properly when:

- The lens in the instrument panel is covered by objects or not clean.
- Display brightness is too dim or bright.
- Image is not adjusted to the proper height.
- The driver wears polarized sunglasses.

If the head-up image is not correct for other reasons, contact a workshop.
Vehicle messages

Messages are indicated in the Driver Information Centre, in some cases together with a warning and signal chime.

Press **SET/CLR** on the turn signal lever to confirm a message.

Vehicle and service messages

The vehicle messages are displayed as text. Follow the instructions given in the messages.

Messages in the Colour-Info-Display

Some important messages may appear additionally in the Info-Display. Some messages only pop-up for a few seconds.

Warning chimes

When starting the engine or whilst driving

Only one warning chime will sound at a time.

The warning chime regarding not fastened seat belts has priority over any other warning chime.

- If a seat belt is not fastened.
- If a door or the tailgate is not fully closed when starting off.
- If a certain speed is exceeded with parking brake applied.
- If cruise control deactivates automatically.
- If a programmed speed or speed limit is exceeded.

- If a warning message appears in the Driver Information Centre.
- If the electronic key is not in the passenger compartment.
- If the parking assist detects an object.
- If an unintended lane change occurs.
- If the diesel particle filter has reached the maximum filling level.

When the vehicle is parked and/or the driver's door is opened

- With exterior lights on.

During an Autostop

- If the driver's door is opened.
- If any condition for an autostart is not fulfilled.

Battery voltage

When the vehicle battery voltage is running low, a warning message will appear in the Driver Information Centre.
When the vehicle is being driven, the load reduction function temporarily deactivates certain functions, such as the air conditioning, the heated rear screen, heated steering wheel, etc. The deactivated functions are reactivated automatically as soon as conditions permit.

**Vehicle personalisation**

The vehicle's behaviour can be personalised by changing the settings in the Info-Display.

Depending on vehicle equipment and country-specific regulations some of the functions described below may not be available.

Some functions are only displayed or active when the engine is running.

**Graphic-Info-Display**

Press MENU to open the menu page.

Use four-way button to operate the display:

*Select Personalisation-configuration, OK.*

**Unit settings**

Select Display configuration, OK.

Select Choise of units, OK.

Select desired settings, OK.

**Language settings**

Select Display configuration, OK.

Select Choise of language, OK.

Select desired language, OK.

**Vehicle settings**

Select Define vehicle parameters, OK.

In the corresponding submenus the following settings can be changed:

- Lighting.
  - *Follow me home headlamps:* Activation and setting duration time.
  - *Welcome lighting:* Activation and setting duration time.

- Comfort
  - *Ambient lighting:* Activation/Deactivation.
**Instruments and controls**

- **Vehicle**
  - **Unlocking boot only:** Activation/Deactivation.
  - **Plip action:** Driver/all doors.

- **Driving assistance**
  - **Fatigue Detection system:** Activation/Deactivation.
  - **Speed recommendation:** Activation/Deactivation.

**7” Colour-Info-Display**

- **Rear wiper in reverse gear:** Activation/Deactivation.

Use touch buttons to operate the display:

- **Select Settings.**

- **Unit settings**
  - **Select Units**
  - Change units for **Consumption and Distance** and **Temperature**.

*Touch \( \uparrow \) repeatedly to return to the homepage.*

- **Language settings**
  - **Select Language.**
  - Change language by touching the respective entry.

*Touch \( \uparrow \) repeatedly to return to the homepage.*

- **Vehicle settings**
  - **Select Vehicle.**

*In the corresponding submenus the following settings can be changed:*  

- **Collision / Detection Systems**
  - **Side Blind Spot Alert:** Activates or deactivates side blind spot alert.

- **Auto Wipe in Reverse Gear:** Activates or deactivates automatic switching on of the rear window wiper when reverse gear is engaged.

- **Drowsy Driver Alert:** Activates or deactivates the driver drowsiness system.

- **Speed Limit Information:** Activates or deactivates the speed limit information by traffic sign recognition.

- **Rear View Camera Guidelines:** Activates or deactivates the rear view camera guidelines on the Info display.

- **Luminosity**
  - **Ambient Lighting:** Activates or deactivates the ambient lighting and adjusts its brightness.
  - **Welcome Lighting:** Activates or deactivates and changes the duration of welcome lighting.
Exit Lighting: Activates or deactivates and changes the duration of exit lighting.

- Remote Lock, Unlock, Start

Remote Door Unlock: Changes the configuration to unlock the driver’s door only or all doors when pressing ᵉ on the remote control.

Unlock boot only: Activates or deactivates unlocking the tailgate only when pressing ᵇ on the remote control.

Touch ↹ repeatedly to return to the homepage.

8" Colour-Info-Display

Press SET to open settings menu. Use touch buttons to operate the display.

Unit settings
Select System settings.
Change units for Consumption and Distance and Temperature. Confirm with ✓
Touch ← repeatedly to exit the menu.

Language settings
Select Languages.

Change language by touching the respective entry.
Confirm with ✓
Touch ← repeatedly to exit the menu.

Vehicle settings

Press ⌁.
Select Vehicle settings.
In the corresponding submenus the following settings can be changed:

- Headlights

Welcome lighting: Activates or deactivates the function and adjusts its duration.
Instruments and controls

Guide-me-home lighting: Activates or deactivates the function and adjusts its duration.

- Comfort
  Mood lighting: Adjusts the brightness of the ambient lighting.

Rear wiper in reverse: Activates or deactivates automatic switching on of the rear window wiper when reverse gear is engaged.

- Vehicle access
  Door unlock: boot only: Activates or deactivates unlocking the tailgate only when pressing on the remote control.

Door unlock: driver only: Changes the configuration to unlock the driver's door only or all doors when pressing on the remote control.

- Safety
  Driver attention warning: Activates or deactivates the driver drowsiness system.

Driving functions

Press .
Select Driving functions.

In the corresponding submenus the following settings can be changed:

- Park Assist: Activates advanced park assist, a parking maneuver can be selected.
- Blind Spot Sensors: Activates or deactivates side blind spot alert.
- Panoramic view system: Activation/deactivation of the function.

Telematics service

OnStar

OnStar is a personal connectivity and service assistant with integrated Wi-Fi hotspot. The OnStar service is available 24 hours a day, seven days a week.

Note
OnStar is not available for all markets. For further information, contact your workshop.

Note
In order to be available and operational, OnStar needs a valid OnStar subscription, functioning vehicle electrics, ignition on, mobile service and GPS satellite link.

To activate the OnStar services and set up an account, press and speak with an advisor.
Depending on the equipment of the vehicle, the following services are available:

- Emergency services and support in the case of a vehicle breakdown
- Wi-Fi hotspot
- Smartphone application
- Remote control, e.g. location of the vehicle, activation of horn and lights, control of central locking system
- Stolen vehicle assistance
- Vehicle diagnostics

**Note**
The OnStar module of the vehicle is deactivated after ten days without an ignition cycle. Functions requiring a data connection will be available again after switching on the ignition.

### OnStar buttons

- **Privacy button**
  Press and hold ⏯ until a message is heard to activate or deactivate the transmission of the vehicle location.
  Press ⏯ to answer a call or to end a call to an advisor.
  Press ⏯ to access the Wi-Fi settings.

- **Service button**
  Press ⏯ to establish a connection to an advisor.

- **SOS button**
  Press ⏯ to establish a priority emergency connection to a specially trained emergency advisor.

- **Status LED**
  Green: The system is ready with activated transmission of the vehicle location.
  Green flashing: The system is on a call.
  Red: A problem arose.
  Off: The system is ready with deactivated transmission of the vehicle location or the system is in standby mode.
  Red / green flashing for a short period of time: The transmission of the vehicle location has been deactivated.

### OnStar services

- **General services**
  If you need any information e.g. opening hours, points of interest and destinations or if you need any support e.g. in the case of a vehicle breakdown.
Instruments and controls

breakdown, a flat tyre and empty fuel tank, press ☎ to establish a connection to an advisor.

Emergency services
In the case of an emergency situation, press ☎ and talk to an advisor. The advisor then contacts emergency or assistance service providers and directs them to your vehicle.

In the case of an accident with activation of airbags or belt tensioners, an automatic emergency call is established. The advisor is immediately connected to your vehicle to see whether help is needed.

Note
Establishing an emergency call may not be possible in areas without sufficient network availability or due to hardware damage during an accident.

Wi-Fi hotspot
The Wi-Fi hotspot of the vehicle provides internet connectivity with a maximum speed of 4G/LTE.

Note
The Wi-Fi hotspot functionality is not available for all markets.

Up to seven devices may be connected.

To connect a mobile device with the Wi-Fi hotspot:
1. Press ☎ and then select Wi-Fi settings on the Info-Display. The settings displayed include the Wi-Fi hotspot name (SSID), password and connection type.
2. Start a Wi-Fi network search on your mobile device.
3. Select your vehicle hotspot (SSID) when listed.
4. When prompted, enter the password on your mobile device.

Note
To change the SSID or password, press ☎ and talk to an advisor or log in to your account.

Smartphone app
With the myOpel smartphone app, some vehicle functions can be operated remotely.

The following functions are available:
• Lock or unlock vehicle.
• Honk horn or flash lights.
• Check fuel level.
• Locate vehicle on a map.
• Manage Wi-Fi settings.

To operate these functions, download the app from App Store® or Google Play™ Store.

Remote control
If desired, use any phone to call an advisor, who can remotely operate specific vehicle functions. Find the respective OnStar phone number on our country-specific website.

The following functions are available:
• Lock or unlock vehicle.
• Provide information on the vehicle location.
• Honk horn or flash lights.
Stolen vehicle assistance
If the vehicle is stolen, report the theft to the authorities and request OnStar stolen vehicle assistance. Use any phone to call an advisor. Find the respective OnStar phone number on our country-specific website. OnStar can provide support in locating and recovering the vehicle.

Theft alert
When the anti-theft alarm system is triggered, a notification is sent to OnStar. You are then informed about this event by text message or email.

Restart prevention
By sending remote signals, OnStar can prevent the vehicle from restarting once it has been turned off.

On-demand diagnostics
At any time e.g. if the vehicle displays a vehicle message, press ☐ to contact an advisor and ask to complete a real-time diagnostic check to directly determine the issue. Depending on the results, the advisor will provide further support.

Diagnostic report
The vehicle automatically transmits diagnostic data to OnStar which sends a monthly email report to you and your preferred workshop.

Note
The workshop notification function can be disabled in your account.

The report contains the status of key operating systems of the vehicle like engine, transmission, airbags, ABS, and other major systems. It also provides information on possible maintenance items and tyre pressure (only with tyre pressure monitoring system).

To look at the information in greater detail, select the link within the email and log in to your account.

OnStar settings

OnStar PIN
To have full access to all OnStar services, a four-digit PIN is required. The PIN has to be personalised when first talking to an advisor.

To change the PIN, press ☐ to call an advisor.

Account data
An OnStar subscriber has an account where all the data is stored. To request a change of the account information, press ☐ and talk to an advisor or log in to your account.

If the OnStar service is used on another vehicle, press ☐ and request that the account be transferred to the new vehicle.

Note
In any case, if the vehicle is disposed of, sold or otherwise transferred, immediately inform OnStar about the changes and terminate the OnStar service on this vehicle.

Vehicle location
The vehicle location is transmitted to OnStar when service is requested or triggered. A message on the Info-Display informs about this transmission.

To activate or deactivate the transmission of the vehicle location, press and hold ☐ until an audio message is heard.
The deactivation is indicated by the status light flashing red and green for a short period of time and each time the vehicle is started.

**Note**
If the transmission of the vehicle location is deactivated, some services are no longer available.

**Note**
The vehicle location always remains accessible to OnStar in the case of an emergency.

Find the privacy policy in your account.

**Software updates**
OnStar may remotely carry out software updates without further notice or consent. These updates are to enhance or maintain safety and security or the operation of the vehicle.

These updates may concern privacy issues. Find the privacy policy in your account.

Exterior lighting

Light switch

Turn light switch:
AUTO : automatic light control
switches automatically between daytime running light and headlight
 риск : sidelights
ID : headlights

Control indicator риск ID 95.

Tail lights

Tail lights are illuminated together with low/high beam and sidelights.
When the automatic light control function is switched on and the engine is running, the system switches between daytime running lights and headlights automatically depending on the external lighting conditions and information given by the rain sensor system.

Daytime running light 113.

**Automatic headlight activation**
During poor lighting conditions headlights are switched on.

**Adaptive forward lighting**
Additional, headlights are switched on if the windscreen wipers have been activated for several wipes.

**Tunnel detection**
When a tunnel is entered headlights are switched on immediately.

**High beam**
Push lever to switch from low to high beam.
Pull lever to deactivate high beam.

**Headlight flash**
To activate the headlight flash, pull lever.
Pulling lever deactivates high beam.

**High beam assist**
113.
Headlight range adjustment

Manual headlight range adjustment

To adapt headlight range to the vehicle load to prevent dazzling: turn thumb wheel ? to required position.

0 : front seats occupied
1 : all seats occupied
2 : all seats occupied and load compartment laden
3 : driver's seat occupied and load compartment laden

Daytime running lights

Daytime running lights increases visibility of the vehicle during daylight. They are switched on automatically during daytime when engine is running.

The system switches between daytime running lights and low beam automatically, depending on the lighting conditions.

Adaptive forward lighting

The Adaptive forward lighting functions are only available with LED headlights.

LED headlights for low and high beam ensure better visibility under all conditions.

Operation is the same as for halogen headlights.

Adaptive forward lighting functions are active automatically with light switch in position AUTO. Adaptive forward lighting includes following functions:

- cornering lights
- high beam assist
- automatic headlight levelling

Cornering light

When turning off, depending on the steering angle and the turn signal light, particular LEDs are triggered which illuminate the direction of travel. It is activated up to a speed of 40 km/h.

High beam assist

This feature allows high beam to function as the main driving light at night and when vehicle speed exceeds 25 km/h.
It switches automatically to low beam when:
- The camera or a sensor in the windscreen detects the lights of oncoming or preceding vehicles.
- The vehicle speed drops below 15 km/h.
- It is foggy or snowy.
- Driving in urban areas.

If there are no restrictions detected, the system switches back to high beam.

**Activation**

Activate this function pressing a button on the turn and lane change lever. The LED of the button illuminates if the high beam assist is activated. The high beam is switched on automatically at a speed above 25 km/h.

The green control indicator 照亮s continuously when the assist is activated, the blue one 照亮s when high beam is on.

**Deactivation**

Deactivate this function pressing a button on the turn and lane change lever.

If a headlight flash is activated when the high beam assist is activated and low beam is on, the high beam assist will be deactivated. The system changes to high beam.

If a headlight flash is activated when the high beam assist is activated and high beam is on, the high beam assist will be deactivated. The system changes to low beam.

To reactivate the high beam assist, flash the headlights again.

**Automatic headlight levelling**

To prevent oncoming traffic from being dazzled, headlight levelling is automatically adjusted based on the load in the vehicle.

**Fault in Adaptive forward lighting-LED system**

When the system detects a failure in the Adaptive forward lighting-LED headlight system, a warning is displayed in the Driver Information Centre.

**Hazard warning flashers**

Operated by pressing ▲.
When braking in an emergency, the hazard warning flashers are switched on automatically depending on the force of deceleration. They are switched off automatically the first time you accelerate if you press ▲.

**Turn and lane-change signals**

Move the lever past the resistance point to switch on constantly. When the steering wheel moves opposite, the turn signal is automatically deactivated. Switch off manually by moving the lever to its original position.

Tap shortly to switch on for three flashes, e.g., when changing lanes. Move the lever to the resistance point and hold for flashing until lever is released.

If you forget to cancel the turn and lane-change signals for more than twenty seconds, the volume of the audible signal will increase if the speed is above 60 km/h.

**Front fog lights**

Operated by pressing ♂.
Light switch in position AUTO: switching on front fog lights will switch headlights on automatically.

lever up : right turn signal
lever down : left turn signal

A resistance point can be felt by moving the lever.
Rear fog light

Operated by pressing Õ‡.
Light switch in position AUTO: switching on rear fog light will switch headlights on automatically.
Light switch in position ßß: rear fog light can only be switched on with front fog lights.
The vehicle rear fog light is deactivated when towing a trailer or a plug is connected with the socket, e.g. when a bicycle carrier is used.

Parking lights

When the vehicle is parked, the parking lights on one side can be activated:
1. Switch off ignition.
2. Move turn signal lever all the way up (right parking lights) or down (left parking lights).
Confirmed by a signal and the corresponding turn signal control indicator.

Reversing lights

The reversing light comes on when the ignition is on and reverse gear is selected.

Misted light covers

The inside of the light housing may mist up briefly in poor, wet and cold weather conditions, in heavy rain or after washing. The mist disappears quickly by itself; to help switch on the headlights.
Interior lighting

Instrument panel illumination control

Brightness of the following lights can be adjusted in position AUTO when the light sensor detects night conditions, or in position $\Rightarrow$ or $\Rightarrow$:

- instrument panel illumination
- Info-Display
- illuminated switches and operation elements

Turn thumb wheel $\mathcal{O}$ and hold until the desired brightness is obtained.

Interior lights

During entry and exit of the vehicle, the front and rear courtesy lights automatically switch on and then off after a delay.

**Note**
In the event of an accident with airbag deployment the courtesy lights are turned on automatically.

Front courtesy light

Operate rocker switch:

- $\mathcal{O}$: automatic switching on and off
- press $\mathcal{O}$: on
- press $\mathcal{O}$: off

Rear courtesy lights

Illuminate in conjunction with the front courtesy light depending on rocker switch position.

Reading lights

Operated by pressing $\mathcal{O}$ and $\mathcal{O}$ in the courtesy lights.
Illustration shows rear courtesy lights.

**Sunvisor lights**
Illuminates when the cover is opened.

---

**Lighting features**

**Centre console lighting**
A spotlight integrated in the overhead console illuminates the centre console when headlights are switched off.

**Entry lighting**

**Welcome lighting**
Some or all of the following lights are switched on for a short time by unlocking the vehicle with the radio remote control:
- headlights
- tail lights
- number plate lights
- instrument panel light
- interior lights
The number of activated lights depends on the surrounding light conditions.
The lighting switches off immediately when the ignition is switched on.

---

Starting off

This function can be activated or deactivated in the vehicle personalisation.
Vehicle personalisation 103.
The following lights will additionally switch on when the driver's door is opened:
- illumination of some switches
- Driver Information Centre
- door pocket lights

**Exit lighting**

The following lights are switched on if the key is removed from the ignition switch:
- interior lights
- instrument panel light
They will switch off automatically after a delay. This function works only in the dark. Theatre lighting is activated if the driver's door is opened during this time.
Battery discharge protection

Vehicle battery state of charge function

The function guarantees longest vehicle battery life via a generator with controllable power output and optimised power distribution.

To prevent discharge of the vehicle battery when driving, the following systems are reduced automatically in two stages and finally switched off:

- auxiliary heater
- heated rear window and mirrors
- heated seats
- fan

In the second stage, a message which confirms the activation of the vehicle battery discharge protection will be displayed in the Driver Information Centre.

Switching off electric lights

To prevent discharge of the vehicle battery when the ignition is switched off, some interior lights are switched off automatically after some time.

- heated seats ↪

Some changes of settings are indicated briefly in the Info-Display. Activated functions are indicated by the LED in the respective button.

Temperature ↪

Adjust the temperature by turning \ to the desired temperature.
red area : warmer
blue area : colder
Climate control

Heating will not be fully effective until the engine has reached normal operating temperature.

Air distribution 🛡️ ⬅️ ➩ ⬗️

Press:

🛡️ : to windscreen and front door windows
مخاطر: : to head area and rear seats via adjustable front air vents
➡️ : to front and rear foot well and windscreen

Combinations are possible.

Fan speed 🌪️

Adjust the air flow by turning 🌪️ to the desired speed.

to the right ➩ : increase
to the left ⬗️ : decrease

Air conditioning A/C

Press A/C to switch on cooling. Activation is indicated by the LED in the button. Cooling is only functional when the engine is running and climate control fan is switched on. Press A/C again to switch off cooling. The air conditioning system cools and dehumidifies (dries) as soon as the outside temperature is slightly above the freezing point. Therefore condensation may form and drip from under the vehicle.

If no cooling or drying is required, switch off the cooling system for fuel saving reasons.

Activated cooling may inhibit Autostops. Stop-start system 🔴 138.

Demisting and defrosting the windows 🛡️

- Press 🛡️: the air distribution is directed towards the windscreen.
- Set temperature controller 🌡️ to warmest level.
- Switch on air conditioning A/C if required.
- Set fan speed 🌪️ to highest level.
- Switch on heated rear window 🌡️.
- Switch on heated windscreen 🚩.
- Open side air vents as required and direct them towards the door windows.

**Note**
If 🚩 is pressed while the engine is running, an Autostop will be inhibited until 🚩 is pressed again.
If 🚩 is pressed while the engine is in an Autostop, the engine will restart automatically.

Stop-start system 138.

**Air recirculation system 🚩**

Press 🚩 to activate air recirculation mode, LED is indicated.
Select air recirculation to assist in cooling the interior or in blocking outside odours or exhaust.
Press 🚩 again to deactivate air recirculation mode.

⚠️ **Warning**

The exchange of fresh air is reduced in air recirculation mode. In operation without cooling, the air humidity increases, so the windows may mist up from inside. The quality of the passenger compartment air deteriorates, which may cause the occupants to feel drowsy.

In warm and very humid ambient air conditions, the windscreen may mist up from outside when cold air is directed towards it. If windscreen mists up from outside, activate windscreen wiper and deactivate 🚩.

**Maximum cooling**

Briefly open the windows so that hot air can disperse quickly.
- Switch on air conditioning A/C.
- Press 🚩 for air recirculation system on.
- Press ⬇️ for air distribution.
- Set temperature control ⬆️ ⬇️ to coldest level.
- Set fan speed ⬆️ to highest level.
- Open all vents.
Heated rear window, windscreen and exterior mirrors

Heated seats

Electronic climate control system

The dual zone climate control allows different temperatures for driver side and front passenger side. In automatic mode, temperature, fan speed and air distribution are regulated automatically.

Illustration shows functions which may not be available for your particular vehicle.

Controls for:
- temperature on driver side
- MENU enters the Climate setting menu in the Info-Display
- fan speed
- automatic mode AUTO
- temperature on front passenger side
- cooling A/C
- manual air recirculation
- demisting and defrosting
- heated rear window and exterior mirrors
- heated windscreen
- heated seats

Activated functions are indicated by the LED in the respective control.

The electronic climate control system is only fully operational when the engine is running.

Climate settings menu (MENU button)

Settings for
- air distribution
- fan speed
- temperature for driver and passenger side 19°/21°
- dual zone temperature synchronisation MONO
- air conditioning ON/OFF
- automatic mode AUTO

can be triggered manually in the Climate setting menu. Press MENU to enter the menu and follow the touch buttons.
Climate control

Climate setting menu can also be displayed

- by selecting **Climate** on the 7'' Colour-Info-Display or
- by pressing 🌡 and then selecting **Climate** from the menu on the 8'' Colour-Info-Display.

**Automatic mode AUTO**

Basic settings for automatic control with maximum comfort:

- Press **AUTO** to start the air conditioning automatically.
- Open all air vents to allow optimised air distribution in automatic mode.

- Set the preselected temperatures for driver and front passenger using the left and right control dial. Recommended temperature is 22 °C. Temperature is indicated in displays beside the control dials and in the climate settings menu.
- Air recirculation mode 🌡 should be deactivated. When deactivated the LED in the button is not illuminated.

**Manual settings**

Climate control system settings can be changed by activating the following functions:

- Fan speed 🚀
  
  Adjust the air flow by turning rotary knob 🚀 to the desired speed. Turn left to decrease or turn right to increase. Fan speed can also be changed by touch buttons in the climate settings display. Press **MENU** to enter the menu.
  
  Turning rotary knob 🚀 anticlockwise: fan and cooling are switched off.
  
  To return to automatic mode, press **AUTO**.
Air distribution

Press **MENU** to enter the menu.

Touch (in the Colour-Info-Display):

- **l**: to windscreen and front door windows
- **M**: to head area and rear seats via adjustable air vents
- **K**: to front and rear foot well and windscreen

To return to automatic air distribution, press **AUTO**.

Temperature preselection

Set the preselected temperatures separately for driver and front passenger to the desired value using the left and right control dials. The dial on the passenger side changes the temperature for the passenger side. The dial on the driver's side changes the temperature for the driver's side or for both sides depending on activation of synchronisation **MONO** in the climate settings menu. Press **MENU** to enter the menu.

Recommended temperature is 22 °C. Temperature is indicated in displays beside the control dials and in the climate settings menu.

If the minimum temperature **Lo** is set, the climate control system runs at maximum cooling, if cooling **A/C** is switched on.

If the maximum temperature **Hi** is set, the climate control system runs at maximum heating.

**Note**

If **A/C** is switched on, reducing the set cabin temperature can cause the engine to restart from an Autostop or inhibit an Autostop.

Stop-start system  

Dual zone temperature synchronisation **MONO** or **SYNC**

Press **MENU** to enter the menu. Touch **MONO** or **SYNC** to link passenger side temperature setting to the driver side.

When passenger side control dial will be adjusted, synchronisation is deactivated.
Air conditioning A/C

Press **A/C** to switch on cooling. The LED in the button illuminates to indicate activation. Cooling is only functional when the engine is running and climate control fan is switched on. Press **A/C** again to switch off cooling.

The air conditioning system cools and dehumidifies (dries) when outside temperature is above a specific level. Therefore condensation may form and drip from under the vehicle.

If no cooling or drying is required, switch off the cooling system for fuel saving reasons.

Manual air recirculation 🔄

Press 🔄 to activate the air recirculation mode. The LED in the button illuminates to indicate activation.

Press 🔄 again to deactivate recirculation mode.

⚠️ Warning

The exchange of fresh air is reduced in air recirculation mode. In operation without cooling, the air humidity increases, so the windows may mist up from inside. The quality of the passenger compartment air deteriorates, which may cause the occupants to feel drowsy.

In warm and very humid ambient air conditions, the windscreen may mist up from outside, when cold air is directed towards it. If windscreen mists up from outside, activate windscreen wiper and deactivate 🔄.
Climate control

Demisting and defrosting the windows

- Press ❄️ The LED in the button illuminates to indicate activation.
- Temperature and air distribution are set automatically and the fan runs at high speed.
- Switch on air conditioning by pressing A/C, if required.
- Switch on heated rear window.
- Switch on heated windscreen.
- To return to previous mode press ❄️ again, to return to automatic mode press AUTO.

Note
If ❄️ is pressed while the engine is running, an Autostop will be inhibited until ❄️ is pressed again.
If ❄️ is pressed while the engine is in an Autostop, the engine will restart automatically.

Stop-start system ❍ 138.

Deactivation of Electronic climate control system
Cooling, fan and automatic mode can be switched off by turning control dial ❆ anticlockwise.
Activation by switching on the fan or pressing AUTO.

Heated rear window, windscreen and exterior mirrors ❏ 39

Heated seats ❈ 47

Auxiliary heater

Air heater
Quickheat is an electric auxiliary air heater which automatically warms up the passenger compartment more quickly.
Air vents

Adjustable air vents

Centre air vents in the instrument panel

Direct the flow of air by tilting and swivelling the slats.
To close the vent, swivel the slats inwards.

Outer air vents in the instrument panel

Direct the flow of air by tilting and swivelling the slats.
To close the vent, swivel the slats outwards.

Centre air vent on top of the instrument panel

Close air flow by turning the thumb wheel to the front.
Air vent in the glovebox

The air vent can be opened or closed by turning. At least two air vents must be open while cooling is on.

⚠️ Warning
Do not attach any objects to the slats of the air vents. Risk of damage and injury in case of an accident.

Fixed air vents
Additional air vents are located beneath the windscreen and door windows and in the foot wells.

Maintenance

Air intake
The air intake in front of the windscreen in the engine compartment must be kept clear to allow air intake. Remove any leaves, dirt or snow.

Cabin air filter
Change filter regularly for maximum effect. More frequent passenger compartment air filter replacement may be needed, if you drive in areas with heavy traffic, poor air quality,
areas with high dust levels or which are sensitive to environmental allergens.
Passenger compartment air filter replacement may also be needed if there is reduced air flow, windows fogging up, or odors.
Your dealer can help to determine when it is the right time to replace the filter.

### Air conditioning regular operation

In order to ensure continuously efficient performance, cooling must be operated for a few minutes once a month, irrespective of the weather and time of year. Operation with cooling is not possible when the outside temperature is too low.

### Service

For optimal cooling performance, it is recommended to annually check the climate control system, starting three years after initial vehicle registration, including:

- functionality and pressure test
- heating functionality
- leakage check
- check of drive belts
- cleaning of condenser and evaporator drainage
- performance check
- cabin air filter check

Driving hints

Control of the vehicle

Never coast with engine not running

Many systems will not function in this situation (e.g. brake servo unit, power steering). Driving in this manner is a danger to yourself and others. All systems function during an Autostop.

Stop-start system 138.

Idle boost

If charging of the vehicle battery is required due to battery condition, the power output of the generator must be increased. This will be achieved by an idle boost which may be audible. A message appears in the Driver Information Centre.

Pedals

To ensure the pedal travel is uninhibited, there must be no mats in the area of the pedals.

Use only floor mats, which fit properly and are fixed by the retainers on the driver side.

Steering

If power steering assist is lost because the engine stops or due to a system malfunction, the vehicle can be steered but may require increased effort.

Starting and operating

New vehicle running-in

Do not brake unnecessarily hard for the first few journeys. During the first drive, smoke may occur because of wax and oil evaporating off the exhaust system. Park the vehicle in the open for a while after the first drive and avoid inhaling the fumes. During the running-in period, fuel and engine oil consumption may be higher. Additionally, the cleaning process of the diesel particle filter may take place more often. Diesel particle filter 141. Autostop may be inhibited to allow charging of the vehicle battery.

Ignition switch positions

Turn key:
Driving and operating

0 : ignition off: Some functions remain active until key is removed or driver's door is opened, provided the ignition was on previously.

1 : ignition on power mode: Ignition is on, diesel engine is preheating. Control indicators illuminate and most electrical functions are operable.

2 : engine start: Release key after after engine has been started.

Steering wheel lock
Remove key from ignition switch and turn steering wheel until it engages.

<table>
<thead>
<tr>
<th>△ Danger</th>
</tr>
</thead>
<tbody>
<tr>
<td>Never remove the key from ignition switch during driving as this will cause steering wheel lock.</td>
</tr>
</tbody>
</table>

Power button
Electronic key must be inside the vehicle.

Engine start
Operate clutch pedal (manual transmission) or brake pedal (automatic transmission) and press Start/Stop. Release button after starting procedure begins. Diesel engine starts after preheating.

<table>
<thead>
<tr>
<th>Ignition on power mode without starting the engine</th>
</tr>
</thead>
<tbody>
<tr>
<td>Press Start/Stop without operating clutch or brake pedal. Control indicators illuminate and most electrical functions are operable.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Engine and ignition off</th>
</tr>
</thead>
<tbody>
<tr>
<td>Press Start/Stop briefly in each mode or when engine is running and vehicle is stationary. Some functions remain active until driver's door is opened, provided the ignition was on previously.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Emergency shut off during driving</th>
</tr>
</thead>
<tbody>
<tr>
<td>Press Start/Stop for five seconds.</td>
</tr>
</tbody>
</table>

| 136. Steering wheel locks as soon as vehicle is stationary. |

Steering wheel lock
The steering wheel lock activates automatically when:
- The vehicle is stationary.
- The ignition has been switched off.

To release steering wheel lock, open and close driver's door and switch on accessory mode or start the engine directly.
Driving and operating

⚠️ Warning

If the vehicle battery is discharged, the vehicle must not be towed, tow-started or jump-started as the steering wheel lock cannot be disengaged.

Operation on vehicles with electronic key system in case of failure

If either the electronic key fails or the battery of the electronic key is weak, the Driver Information Centre may display **No Remote Detected** or **Replace Battery in Remote Key** when you try to start the vehicle.

Hold the electronic key with buttons outside at the marking on the steering column cover as shown in the illustration.

Depress the clutch pedal (manual transmission) or the brake pedal (automatic transmission or manual transmission automated) and press **Start/Stop** button to start the engine.

This option is intended for emergencies only. Replace the electronic key battery as soon as possible ⬇️ 24.

For unlocking or locking the doors, see fault in radio remote control unit or electronic key system ⬇️ 25.

Power saving mode

This function manages the duration of using certain systems to avoid discharging of the vehicle battery. After the engine has stopped, some systems can still be used such as the audio and telematics system, windscreen wipers, dipped beam headlamps, courtesy lamps, etc. for a total maximum time of about forty minutes.

Changing into power saving mode

When a certain discharging status of the vehicle battery is achieved, the active functions are switched in standby mode. A message appears in the Driver Information Centre indicating **Power saving mode**.

A telephone call being made at this time will be maintained for around 10 minutes with the Bluetooth handsfree system of the Infotainment system.
Deactivating power saving mode

Standby mode is reactivated automatically next time the vehicle is driven. To use the functions immediately, start the engine:

- for less than ten minutes to use the systems for approximately five minutes
- for more than ten minutes to use the systems for up to approximately thirty minutes.

Have the engine run for the duration specified to ensure that the battery charge is sufficient. Do not repeatedly and continuously restart the engine in order to charge the battery.

Starting the engine

Vehicles with ignition switch

Turn key briefly to position 2 and release after the engine has been started.

Manual transmission: during an Autostop, the engine can be started by depressing the clutch pedal § 138.

Automatic transmission: during an Autostop, the engine can be started by releasing the brake pedal § 138.

Vehicles with power button

Turn key to position 1 to release the steering wheel lock.

Manual transmission: operate clutch and brake pedal.

Automatic transmission: operate brake pedal and move selector lever to P or N.

Do not operate accelerator pedal.

Diesel engines: wait until control indicator 🟢 extinguishes.

Manual transmission: operate clutch and brake pedal.
Automatic transmission: operate brake pedal and move selector lever to P or N.
Do not operate accelerator pedal.
Press and release **Start/Stop**: an automatic procedure operates the starter with a short delay until the engine is running.
Before restarting or to switch off the engine when vehicle is stationary, press **Start/Stop** once more briefly.
Manual transmission: during an Autostop, the engine can be started by depressing the clutch pedal

Automatic transmission: during an Autostop, the engine can be started by releasing the brake pedal

Emergency shut off during driving
If the engine needs to be switched off during driving in case of emergency, press **Start/Stop** for five seconds.

### Danger

Switching off the engine during driving may cause loss of power support for brake and steering systems. Assistance systems and airbag systems are disabled. Lighting and brake lights will extinguish. Therefore power down the engine and ignition while driving only when required in case of emergency.

### Starting the vehicle at low temperatures

Starting the engine without additional heaters is possible down to -25 °C for diesel engines and -30 °C for petrol engines. Required is an engine oil with the correct viscosity, the correct fuel, performed services and a sufficiently charged vehicle battery. With temperatures below -30 °C the automatic transmission requires a warming phase of approx. five minutes. The selector lever must be in position P.

### Heating functionalities

**Note**
Individual heating functionalities, such as heated seats or heated steering wheel, may be temporarily unavailable in the event of electrical loading constraints. Functions will be resumed after some minutes.

### Turbo engine warm-up

Upon start-up, engine available torque may be limited for a short time, especially when the engine temperature is cold. The limitation is to allow the lubrication system to fully protect the engine.

### Overrun cut-off

The fuel supply is automatically cut off during overrun, i.e. when the vehicle is driven with a gear engaged but accelerator pedal is released. Depending on driving conditions, the overrun cut-off may be deactivated.
Driving and operating

Stop-start system
The stop-start system helps to save fuel and to reduce the exhaust emissions. When conditions allow, it switches off the engine as soon as the vehicle is at a low speed or at a standstill, e.g. at a traffic light or in a traffic jam.

Activation
The stop-start system is available as soon as the engine is started, the vehicle starts-off and the conditions as stated below in this section are fulfilled.

Deactivation
Deactivate the stop-start system manually by pressing \( \text{\textcopyright} \). The deactivation is indicated when the LED in the button illuminates.

Autostop
Vehicles with manual transmission
An Autostop can be activated at a standstill.
Activate an Autostop as follows:
- Depress the clutch pedal.
- Set the lever to neutral.
- Release the clutch pedal.
The engine will be switched off while the ignition stays on.

Vehicles with automatic transmission
If the vehicle is at a standstill with depressed brake pedal, Autostop is activated automatically.
The engine will be switched off while the ignition stays on.
The stop-start system will be disabled on inclines.

Indication
An Autostop is indicated by control indicator \( \text{\textcircled{A}} \).
During an Autostop, the heating and brake performance will be maintained.

Conditions for an Autostop
The stop-start system checks if each of the following conditions is fulfilled.
- The stop-start system is not manually deactivated.
- The driver's door is closed or the driver's seat belt is fastened.
- The vehicle battery is sufficiently charged and in good condition.
- The engine is warmed up.
- The engine coolant temperature is not too high.
• The engine exhaust temperature is not too high, e.g. after driving with high engine load.
• The ambient temperature is sufficient.
• The climate control system allows an Autostop.
• The brake vacuum is sufficient.
• The self-cleaning function of the diesel particle filter is not active. Otherwise an Autostop will be inhibited.

Certain settings of the climate control system may inhibit an Autostop. See Climate control chapter for more details 121.

If an autostop is temporarily not available, ▲ flashes green 95.

Immediately after driving at a higher speed an Autostop may be inhibited.

New vehicle running-in 133.

**Vehicle battery discharge protection**
To ensure reliable engine restarts, several vehicle battery discharge protection features are implemented as part of the stop-start system.

**Power saving measures**
During an Autostop, several electrical features such as auxiliary electric heater or rear window heating are disabled or switched to a power saving mode. The fan speed of the climate control system is reduced to save power.

**Restart of the engine by the driver**

**Vehicles with manual transmission**

**Conventional restart**
All engines have conventional restart.

Depress the clutch pedal without depressing the brake pedal to restart the engine.

On engines with late restart a conventional restart is only possible without depressed brake pedal.

**Restart of the engine by the stop-start system**

The selector lever must be in neutral to enable an automatic restart.

If one of the following conditions occurs during an Autostop, the engine will be restarted automatically by the stop-start system:

• The stop-start system is manually deactivated.
• The driver’s seat belt is unfastened or the driver's door is opened.
• The engine temperature is too low.
• The charging level of the vehicle battery is below a defined level.
• The brake vacuum is not sufficient.
• The climate control system requests an engine start.
• The air conditioning is manually switched on.

If an electrical accessory, e.g. a portable CD player, is connected to the power outlet, a brief power drop during the restart might be noticeable.
Parking

\textbf{\textit{\textbf{Warning}}}

- Do not park the vehicle on an easily ignitable surface. The high temperature of the exhaust system could ignite the surface.
- Always apply the parking brake. Activate the manual parking brake without pressing the release button. Apply as firmly as possible on a downhill slope or uphill slope. Depress brake pedal at the same time to reduce operating force.
- Switch off the engine.
- If the vehicle is on a level surface or uphill slope, engage first gear or set the selector lever to position P before removing the ignition key or switching off ignition on vehicles with power button. On an uphill slope, turn the front wheels away from the kerb.

If the vehicle is on a downhill slope, engage reverse gear or set the selector lever to position P before removing the ignition key or switching off ignition on vehicles with power button. Turn the front wheels towards the kerb.
- Close the windows.
- Remove the ignition key from the ignition switch or switch off ignition on vehicles with power button. Turn the steering wheel until the steering wheel lock is felt to engage.
- Lock the vehicle.
- Activate the anti-theft alarm system.
- The engine cooling fans may run after the engine has been switched off \(\Phi\) 187.

\textbf{\textit{Caution}}

After running at high engine speeds or with high engine loads, operate the engine briefly at a low load or run in neutral for approx. 30 seconds before switching off, in order to protect the turbocharger.

\textbf{\textit{Note}}

In the event of an accident with airbag deployment, the engine is switched off automatically if the vehicle comes to a standstill within a certain time.

\textbf{Emergency operation under extreme cold temperatures}

\textbf{\textit{Warning}}

This emergency operation may only be carried out in case of extremely cold temperatures and if the vehicle is parked on a level surface.

In countries with extreme cold temperatures it may be necessary to park the vehicle without applied parking brake.

This is an emergency operation to avoid freezing of the parking brake.
Engine exhaust

Danger
Engine exhaust gases contain poisonous carbon monoxide, which is colourless and odourless and could be fatal if inhaled.
If exhaust gases enter the interior of the vehicle, open the windows.
Have the cause of the fault rectified by a workshop.
Avoid driving with an open load compartment, otherwise exhaust gases could enter the vehicle.

Diesel particle filter

Automatic cleaning process
The diesel particle filter system filters harmful soot particles out of the exhaust gases.
The start of saturation of the particle filter is indicated by the temporary illumination of † or ☹, accompanied by a message in the Driver Information Centre.

As soon as the traffic conditions permit, regenerate the filter by driving at a vehicle speed of at least 60 km/h until the control indicator extinguishes.

Note
On a new vehicle, the first particle filter regeneration operations may be accompanied by a burning smell, which is normal. Following prolonged operation of the vehicle at very low speed or at idle, you may, in exceptional circumstances, notice the emission of water vapour at the exhaust on acceleration. This does not affect the behaviour of the vehicle or the environment.

Cleaning process not possible
If † or ☹ stays on, accompanied by an audible signal and a message, this indicates that the particle filter additive level is too low.
The reservoir must be topped-up without delay. Seek the assistance of a workshop.

Catalytic converter
The catalytic converter reduces the amount of harmful substances in the exhaust gases.

Caution
Fuel grades other than those listed on pages 177, 233 could damage the catalytic converter or electronic components.
Unburnt petrol will overheat and damage the catalytic converter. Therefore avoid excessive use of the starter, running the fuel tank dry and starting the engine by pushing or towing.

In the event of misfiring, uneven engine running, a reduction in engine performance or other unusual problems, have the cause of the fault rectified by a workshop as soon as possible. In an emergency, driving can be continued for a short period, keeping vehicle speed and engine speed low.
AdBlue

General information

The selective catalytic reduction (BluelInjection) is a method to substantially reduce the nitrogen oxides in the exhaust emission. This is achieved by injecting a Diesel Exhaust Fluid (DEF) into the exhaust system. The ammonia released by the fluid reacts with nitrous gases ($NO_x$) from the exhaust and turns it into nitrogen and water.

The designation of this fluid is AdBlue®. It is a non-toxic, non-flammable, colourless and odourless fluid which consists of 32% urea and 68% water.

⚠️ Warning

Avoid contact of your eyes or skin with AdBlue.
In case of eye or skin contact, rinse off with water.

Caution

Avoid contact of the paintwork with AdBlue.
In case of contact, rinse off with water.

AdBlue freezes at a temperature of approx. -11 °C. As the vehicle is equipped with an AdBlue pre-heater, the emissions reduction at low temperatures is ensured. The AdBlue pre-heater works automatically.

Level warnings

The AdBlue consumption is approximately 0.7 litres per 1000 km. The consumption can be higher depending on driving behaviour (e.g. high load or towing).

Depending on the calculated range of AdBlue, different messages are displayed in the Driver Information Centre. The messages and the restrictions are a legal requirement.

The first possible warning message appears at an AdBlue range below 2400 km, shows up at each start and each 300 km range reduction:

Top up AdBlue: Starting impossible in 2400 km

Additionally, control indicator  illuminate continuously and a chime sounds with every message pop-up.

At an AdBlue range below 600 km, the following warning message is being displayed, shows up at each start and each 20 km range reduction:

Top up AdBlue: Starting impossible in 600 km

Additionally, control indicator  flashes continuously and a chime sounds with every message pop-up.

Note

In case of high AdBlue consumption, the Driver Information Centre may display this warning without the previous warning stages.

The last warning level is entered when the AdBlue tank is empty.
Restart of the engine is not possible.
The following warning message is being displayed and cannot be dismissed:

**Top up AdBlue: Starting impossible**

Additionally, control indicator \[\text{\(\uparrow\)}\] flashes continuously and engine cannot be restarted until AdBlue tank is being filled with at least 5 litres.

**High emission warnings**

If the exhaust emission rises above a certain value, warnings similar to the range warnings will be displayed in the Driver Information Centre.

Requests to have the exhaust system checked and finally the announcement of the prevention of an engine restart are displayed. These restrictions are a legal requirement.

Consult a workshop for assistance.

---

### Refilling AdBlue

<table>
<thead>
<tr>
<th><strong>Caution</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Only use AdBlue that complies with European standards DIN 70 070 and ISO 22241-1.</td>
</tr>
<tr>
<td>Do not use additives.</td>
</tr>
<tr>
<td>Do not dilute AdBlue.</td>
</tr>
<tr>
<td>Otherwise the selective catalytic reduction system could be damaged.</td>
</tr>
</tbody>
</table>

**Note**

Whenever a filling pump with a nozzle for passenger cars is not available at a filling station, use only AdBlue bottles or canisters with a sealed refill adapter for refilling, to prevent splashback and overspill, and in order to ensure that the fumes from the tank are captured and do not emerge. AdBlue in bottles or canisters is available in many filling stations and can be purchased e.g. at Opel dealers and other retail outlets.

Since AdBlue has a limited durability, check the date of expiry before refilling.

**Note**

When AdBlue-tank is empty, refill at least five litres to ensure that the new AdBlue level is being detected.

In case AdBlue refill is not successfully detected:

1. Continuously drive the vehicle for ten minutes making sure that vehicle speed is always higher than 20 km/h.
2. If AdBlue refill is detected successfully, AdBlue supply-driven warnings or limitations will disappear.

If AdBlue refill is still not detected, seek the assistance of a workshop.

If AdBlue must be refilled at temperatures below -11 °C, the refilling of AdBlue may not be detected by the system. In this event, park the vehicle in a space with a higher ambient temperature until AdBlue is liquified.
Note
When unscrewing the protective cap from the filler neck, ammonia fumes may emerge. Do not inhale as the fumes have a pungent smell. The fumes are not harmful by inhalation.

It is recommended to fill the AdBlue tank completely.
The vehicle must be parked on a level surface.
The filler neck for AdBlue is located behind the fuel filler flap, which is located at left rear side of the vehicle.
The fuel filler flap can only be opened if the vehicle is unlocked.
1. Remove key from ignition switch.
2. Close all doors to avoid ammonia fumes entering the interior of the vehicle.
3. Release the fuel filler flap by pushing the flap △ 179.
4. Unscrew protective cap from the filler neck.
5. Open AdBlue canister.
6. Mount one end of the hose on the canister and screw the other end on the filler neck.
7. Lift the canister until it is empty, or until the flow from the canister has stopped. This can take up to five minutes.
8. Place the canister on the ground to empty the hose, wait 15 seconds.
9. Unscrew the hose from the filler neck.
10. Mount the protective cap and turn clockwise until it engages.

Note
Dispose of AdBlue canister according to environmental requirements. Hose can be reused after flushing with clear water before AdBlue dries out.
**Automatic transmission**

The automatic transmission permits automatic gearshifting (automatic mode) or manual gearshifting (manual mode).

Manual shifting is possible in manual mode by tapping the selector lever to + or - 146.

**Transmission display**

The mode or selected gear is shown in the Driver Information Centre.

In automatic mode, the driving programme is indicated by **D**.

In manual mode, **M** and the number of the selected gear is indicated.

**R** indicates reverse gear.

**N** indicates neutral position.

**P** indicates park position.

**Selector lever**

Move the selector lever in the shifting gate as shown in the illustration above.

**P** : park position, wheels are locked, engage only when the vehicle is stationary and the parking brake is applied

**R** : reverse gear, engage only when the vehicle is stationary

**N** : neutral

**D** : automatic mode

**M** : manual mode

**↑** : upshift in manual mode

**↓** : downshift in manual mode

The selector lever is locked in **P** and can only be moved when the ignition is on and the brake pedal is applied.

The engine can only be started with the lever in position **P** or **N**. When position **N** is selected, press the brake pedal or apply the parking brake before starting.

Do not accelerate while engaging a gear. Never depress the accelerator pedal and brake pedal at the same time.

When a gear is engaged, the vehicle slowly begins to creep when the brake is released.
Driving and operating

Engine braking
To utilise the engine braking effect, select a lower gear in good time when driving downhill, see manual mode.

Rocking the vehicle
Rocking the vehicle is only permissible if the vehicle is stuck in sand, mud or snow. Move the selector lever between D and R in a repeat pattern. Do not race the engine and avoid sudden acceleration.

Parking
Apply the parking brake and engage P.

Manual mode
Move selector lever out of position D towards the left in position M.
Tap selector lever upwards + to shift to a higher gear.
Tap the selector lever downwards - to shift to a lower gear.
If a higher gear is selected when vehicle speed is too low, or a lower gear when vehicle speed is too high, the shift is not executed. This can cause a message in the Driver Information Centre.

In manual mode, no automatic shifting to a higher gear takes place at high engine revolutions.

Gear shift indication
▲ with the number of a higher gear is indicated, when upshifting is recommended for fuel saving reasons.
Shift indication appears only in manual mode.

Electronic driving programmes
● Following a cold start, the operating temperature programme increases engine speed to quickly bring the catalytic converter to the required temperature.
● Special programmes automatically adapt the shifting points when driving up inclines or down hills.
● In snowy or icy conditions or on other slippery surfaces, the electronic transmission control...
enables the driver to select manually first, second or third gear for starting off.

**Kickdown**
Pressing down the accelerator pedal beyond the kickdown detent will lead to maximum acceleration independent of selected driving mode. The transmission shifts to a lower gear depending on engine speed.

**Fault**
In the event of a fault a message is displayed in the Driver Information Centre. Vehicle messages ⦜ 102.
Electronic transmission control enables only third gear. The transmission no longer shifts automatically.
Do not drive faster than 100 km/h.
Have the cause of the fault remedied by a workshop.

** Interruption of power supply**
In the event of an interruption of power supply, the selector lever cannot be moved out of the P position. The ignition key cannot be removed from the ignition switch.
If the vehicle battery is discharged, start the vehicle using jump leads ⦜ 217.
If the vehicle battery is not the cause of the fault, release the selector lever.
1. Apply the parking brake.
2. Release the selector lever trim from the centre console. Poke with a finger into the leather socket below the selector lever and push the trim upwards.
3. Push down the button and move the selector lever out of P. Have the cause of the power supply interruption remedied by a workshop.
4. Mount the selector lever trim onto the centre console and refit.
Manual transmission

To engage reverse on 5-speed transmission, depress the clutch pedal and move the selector lever to the right and rear.

To engage reverse on 6-speed transmission, depress the clutch pedal, pull the ring under the selector lever and move the selector lever quite to the left and front.

If the gear does not engage, set the lever to neutral, release the clutch pedal and depress again; then repeat gear selection.

Do not slip the clutch unnecessarily. When operating, depress the clutch pedal completely. Do not use the pedal as a foot rest.

When clutch slip is detected for a specific time, the engine power will be reduced. A warning is displayed in the Driver Information Centre. Release the clutch.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>It is not advisable to drive with the hand resting on the selector lever.</td>
</tr>
</tbody>
</table>

Gear shift indication 93.

Stop-start system 138.
Brakes

The brake system comprises two independent brake circuits.

If a brake circuit fails, the vehicle can still be braked using the other brake circuit. However, braking effect is achieved only when the brake pedal is depressed firmly. Considerably more force is needed for this. The braking distance is extended. Seek the assistance of a workshop before continuing the journey.

When the engine is not running, the support of the brake servo unit disappears once the brake pedal has been depressed once or twice. Braking effect is not reduced, but braking requires significantly greater force. It is especially important to bear this in mind when being towed.

Control indicator 🔄 92.

Antilock brake system

Antilock brake system (ABS) prevents the wheels from locking.

ABS starts to regulate brake pressure as soon as a wheel shows a tendency to lock. The vehicle remains steerable, even during hard braking.

ABS control is made apparent through a pulse in the brake pedal and the noise of the regulation process.

For optimum braking, keep the brake pedal fully depressed throughout the braking process, despite the fact that the pedal is pulsating. Do not reduce the pressure on the pedal.

When braking in an emergency, the hazard warning flashers are switched on automatically depending on the force of deceleration. They are switched off automatically the first time you accelerate.

After starting off, the system performs a self-test which may be audible.

Control indicator 🔄 92.

Fault

⚠️ Warning

If there is a fault in the ABS, the wheels may be liable to lock due to braking that is heavier than normal. The advantages of ABS are no longer available. During hard braking, the vehicle can no longer be steered and may swerve.

Have the cause of the fault remedied by a workshop.

Parking brake

⚠️ Warning

Before leaving the vehicle, check parking brake status. Control indicator 🔄 must illuminate constantly.
Manual parking brake

Control indicator (3) 92.

Brake assist
If brake pedal is depressed quickly and forcefully, maximum brake force is automatically applied.
Operation of brake assist might become apparent by a pulse in the brake pedal and a greater resistance when depressing the brake pedal.
Maintain steady pressure on the brake pedal as long as full braking is required. Maximum brake force is automatically reduced when brake pedal is released.

Hill start assist
The system helps prevent unintended movement when driving away on inclines.
When releasing the brake pedal after stopping on an incline, brakes remain on for further two seconds. The brakes release automatically as soon as the vehicle begins to accelerate.

Warning
Always apply parking brake firmly without operating the release button, and apply as firmly as possible on a downhill or uphill slope.
To release the parking brake, pull the lever up slightly, press the release button and fully lower the lever.
To reduce the operating forces of the parking brake, depress the foot brake at the same time.

Ride control systems

Electronic Stability Control and Traction Control system
Electronic Stability Control improves driving stability when necessary, regardless of the type of road surface or tyre grip.
As soon as the vehicle starts to swerve (understeer/oversteer), engine output is reduced and the wheels are braked individually.
Electronic Stability Control operates in combination with the Traction Control system. It prevents the driven wheels from spinning.
The Traction Control system is a component of the Electronic Stability Control.
Traction Control improves driving stability when necessary, regardless of the type of road surface or tyre grip, by preventing the driven wheels from spinning.
As soon as the driven wheels starts to spin, engine output is reduced and the wheel spinning the most is braked.
Driving and operating

individually. This considerably improves the driving stability of the vehicle on slippery road surfaces.

Electronic Stability Control and Traction Control are operational after each engine start as soon as the control indicator \( \mathbb{B} \) extinguishes.

When Electronic Stability Control and Traction Control operate, \( \mathbb{B} \) flashes.

⚠️ Warning

Do not let this special safety feature tempt you into taking risks when driving.
Adapt speed to the road conditions.

Control indicator \( \mathbb{B} \) 93.

Deactivation

Electronic Stability Control and Traction Control can be deactivated, everytime it is required: press \( \mathbb{A} \).

Control indicator \( \mathbb{A} \) illuminates.

Control indicator \( \mathbb{A} \) 93.

A status message appears in the Driver Information Centre when Electronic Stability Control Traction Control are deactivated.

Electronic Stability Control and Traction Control are reactivated by pressing the \( \mathbb{A} \) button again, by applying the brake or in the case that the vehicle is driven faster than 50 km/h.

\( \mathbb{A} \) extinguishes when Electronic Stability Control and Traction Control are reactivated.

Electronic Stability Control and Traction Control are also reactivated the next time the ignition is switched on.

Fault

If there is a fault in the system, the control indicator \( \mathbb{B} \) illuminates continuously and a message appears in the Driver Information Centre. The system is not operational.

Have the cause of the fault remedied by a workshop.
Driver assistance systems

⚠️ Warning

Driver assistance systems are developed to support the driver and not to replace the driver’s attention.

The driver stays in full control of the vehicle and accepts full responsibility when driving the vehicle.

When using driver assistance systems, always take care regarding the current traffic situation and follow applicable traffic rules.

Cruise control

The cruise control can store and maintain speeds above 40 km/h. Additionally at least the third gear must be engaged on manual transmission, on automatic transmission position D or the second or a higher gear in position M must be selected.

Deviations from the stored speeds may occur when driving uphill or downhill.

The system maintains the vehicle speed at the preset speed by the driver, without any action on the accelerator pedal.

The preset speed can be exceeded temporarily by pressing the accelerator pedal.

The status and preset speed is displayed in the Driver Information Centre.

Do not use the cruise control if it is not advisable to maintain a constant speed.

Activating in first gear is not possible.

Control indicator ⚠️ 95.

Switching on

Press ⚠️ on the steering wheel: symbol ⚠️ and Pause are indicated in the Driver Information Centre. The system is still not active.
Activation

Setting speed by the driver

Accelerate to the desired speed and press toggle switch once briefly to RES/+ or SET/-. The current speed is stored and maintained. Accelerator pedal can be released.

The preset speed can then be changed by pressing toggle switch to RES/+ to increase or SET/- to decrease the speed. Short press changes speed in small steps, long press in large steps.

Speed value is indicated in the Driver Information Centre.

Adopting speed by the traffic sign assistant

The intelligent speed adaptation informs the driver when a speed limit is detected by the traffic sign assistant. If the cruise control is active, the recognised speed limit will be displayed in the Driver Information Centre and "MEM" illuminates.

Press MEM on the steering wheel to request saving of the suggested speed.

Press MEM on the steering wheel once more to confirm and save the new speed setting.

This speed is the new value for the cruise control.

This function can be deactivated or activated in the personalisation menu, 103.
Driving and operating

Exceeding the set speed
Vehicle speed can be increased by depressing the accelerator pedal. When the accelerator pedal is released, the previously stored speed is resumed.

Deactivation
Press \( \text{Cruise Control Off Symbol} \): cruise control is in pause mode, Pause is indicated. The vehicle is driven without cruise control.

Cruise control is deactivated, but not switched off. Last stored speed remains in memory for later speed resume.

Cruise control is deactivated automatically:
- The brake pedal is depressed.
- The clutch pedal is depressed.
- Vehicle speed is below 40 km/h.
- The Traction Control system or Electronic Stability Control is operating.
- The selector lever is in N.

Resume stored speed
Press toggle switch to \( \text{RES/+ Symbol} \) or \( \text{Pause Symbol} \) at a speed above 40 km/h. The stored speed will be obtained.

Switching off
Press \( \text{Cruise Control Off Symbol} \): the cruise control mode is deselected and the cruise control indication extinguishes in the Driver Information Centre.
Pressing \( \text{Speed Limiter Symbol} \) to activate the speed limiter deactivates cruise control.
Switching off the ignition cancels any programmed speed value.

Fault
In the event of a cruise control fault, the speed is cleared resulting in flashing of the dashes.

Speed limiter
The speed limiter prevents the vehicle exceeding a preset maximum speed.
The maximum speed can be set at speeds above 30 km/h.

The driver can accelerate the vehicle up to the preset speed. Deviations from the limited speed may occur when driving downhill.
The preset speed can be exceeded temporarily by pressing the accelerator pedal firmly.
The status and preset speed limit is displayed in the Driver Information Centre.

Switching on
Press \( \text{Cruise Control On Symbol} \), symbol \( \text{Cruise Control On Symbol} \) and Pause are indicated in the Driver Information Centre. The system is still not active.
Activation

Setting speed by the driver

Press toggle switch once briefly to RES/+ or SET/-. Following the preset speed can be set by pressing toggle switch to RES/+ to increase or SET/- to decrease the desired maximum speed. Short press changes preset speed in small steps, long press in large steps. Speed value is indicated in the Driver Information Centre.

Press \( \wedge \) to activate speed limiter.

Adopting speed by the traffic sign assistant

The intelligent speed adaptation informs the driver when a speed limit is detected by the traffic sign assistant. If the speed limiter is active, the recognised speed limit will be displayed in the Driver Information Centre and "MEM" illuminates.

Press MEM on the steering wheel to request saving of the suggested speed.

Press MEM on the steering wheel once more to confirm and save the new speed setting.

This speed is the new value for the speed limiter.

This function can be deactivated or activated in the personalisation menu, \( \diamond \) 103.

Exceeding the speed limit

In the event of an emergency, it is possible to exceed the speed limit by a "kickdown". In this case the preset speed value flashes.

Release the accelerator pedal and the speed limiter function is reactivated once a speed lower than the limit speed is obtained.

Deactivation

Press \( \wedge \): speed limiter is in pause mode, Pause is indicated. The vehicle is driven without speed limit.
Driving and operating

Speed limiter is deactivated, but not switched off. Last stored speed remains in memory for later speed resume.

Resume limit speed
Press Ñ. The stored speed limit will be obtained.

Switching off
Press ß, the speed limiter mode is deselected and the speed limit indication extinguishes in the Driver Information Centre.
Pressing Ù to activate cruise control deactivates speed limiter.
The preset speed remains in the memory when the ignition is switched off.

Fault
In the event of a speed limiter fault, the speed is cleared resulting in flashing of the dashes.
The speed limiter may not operate correctly if traffic signs do not comply with the Vienna Convention on Road Signs and Signals (Wiener Übereinkommen über Straßenverkehrszeichen).

Forward collision alert
The forward collision alert may help to avoid or reduce the harm caused by front-end crashes.
The forward collision alert uses the front camera in the windscreen to detect a vehicle directly ahead, in your path.
The system triggers different level of alerts depending on the risk of collision detected. The alerts are displayed in the Driver Information Centre.
Level 1: A visual alert is displayed.
Level 2: A visual alert is displayed and an audible alert sounds.

Caution
The colour lighting of this control indicator does not correspond to local traffic laws on following distance. The driver bears full responsibility for maintaining safe following distance according to applicable traffic rules, weather and road conditions etc. at all times.

⚠️ Warning
Forward collision alert is just a warning system and does not apply the brakes. When approaching a vehicle ahead too rapidly, it may not provide you enough time to avoid a collision.
The driver accepts full responsibility for the appropriate following distance based on traffic, weather and visibility conditions.
The complete attention of the driver is always required while driving. The driver must always be ready to take action and apply the brakes.
When the time to a potential collision with a vehicle in front gets too small and a collision is imminent, a warning is displayed in the Driver Information Centre.

Simultaneously a warning chime sounds. Depress the brake pedal and steer the vehicle, if it is required by the situation.

**Operation conditions**

The following condition must be fulfilled for proper operation:

The speed must be between 5 km/h and 140 km/h.

**Activation**

To use forward collision alert, active safety braking has to be activated in the vehicle personalisation.

**Selecting the alert sensitivity**

The alert sensitivity has to be set to close, normal or distant in the vehicle personalisation menu.

**Deactivation**

The system can only be deactivated by deactivating the active emergency braking in the vehicle personalisation.

**System limitations**

Forward collision alert is designed to warn on vehicles only, but may react also to other objects.

In the following cases, forward collision alert may not detect a vehicle ahead or sensor performance is limited:

- Driving on winding or hilly roads.
- During nighttime driving.
- Weather limits visibility, such as fog, rain, or snow
- The windscreen is damaged or affected by foreign items, e.g. stickers.

**Active emergency braking**

Active emergency braking can help to reduce the damage and injury from crashes with vehicles, pedestrians and obstacles directly ahead, when a collision can no longer be avoided either by manual braking or by steering. Before the active emergency braking applies, the driver is warned by the forward collision alert or the front pedestrian protection alert.

The feature uses various inputs (e.g. camera sensor, brake pressure, vehicle speed) to calculate the probability of a frontal collision.

**Warning**

This system is not intended to replace the driver responsibility for driving the vehicle and looking ahead. Its function is limited to supplemental use only to reduce the vehicle speed before a collision.

The system may not react to animals. After a sudden lane change, the system needs a certain time to detect the next preceding vehicle.

The driver must always be ready to take action and apply the brakes and steer to avoid collisions.
Driving and operating

Operation conditions
Active emergency braking is equipped with a front camera and operates in forward gear above walking speed up to 85 km/h.

Activation
Active emergency braking can be activated in the vehicle personalisation menu \( \rightarrow \) 103.

Functionality
The system includes:
- brake preparation system
- emergency automatic braking
- forward looking brake assist
- forward collision alert
- front pedestrian protection

Brake preparation system
When approaching a vehicle ahead or a pedestrian so quickly that a collision is likely, the brake preparation system slightly pressurizes the brakes. This reduces the response time, when a manual or automatic braking is requested.

The brake system is prepared so that braking can occur more rapidly.

Emergency automatic braking
After activation of brake preparation system and just before the imminent collision, this function automatically applies limited braking to reduce the impact speed of the collision or prohibit a crash. Depending on the situation, the vehicle may automatically brake moderately or hard. This front automatic braking can only occur if a vehicle \( \rightarrow \) 156 or a pedestrian \( \rightarrow \) 159 ahead is detected.

Emergency automatic braking may slow the vehicle to a complete stop to try to avoid a potential crash.

\( \Delta \) Warning
Emergency automatic braking is an emergency crash preparation feature and is not designed to avoid crashes. Do not rely on the system to brake the vehicle. Emergency automatic braking will not brake outside of its operating speed range and only responds to detected vehicles and pedestrians.

Forward looking brake assist
In addition to the brake preparation system and emergency automatic braking, the forward looking brake assist function makes the brake assist more sensitive. Therefore, pressing the brake pedal less strongly results in immediate hard braking. This function helps the driver brake quicker and harder before the imminent collision.

\( \Delta \) Warning
Active emergency braking is not designed to apply hard autonomous braking or to automatically avoid a collision. It is designed to reduce the vehicle speed before a collision. It may not react to animals. After a sudden
Driving and operating

lane change, the system needs a certain time to detect the next preceding vehicle.

The complete attention of the driver is always required while driving. The driver must always be ready to take action and apply the brakes and steer to avoid collisions.

The system is designed to work with all occupants wearing their seat belts.

**Forward collision alert**

◊ 156

**Front pedestrian protection**

◊ 159.

**Deactivation**

Active emergency braking can be deactivated in the vehicle personalisation menu ◊ 103. If deactivated a message is displayed in the Driver Information Centre.

**System limitations**

In some cases, the active emergency braking system may provide an automatic braking in situations that seem to be unnecessary, for instance in parking garages, due to traffic signs in a curve or due to vehicles in another lane. This is normal operation, the vehicle does not need service. Firmly apply the accelerator pedal to override the automatic braking if the situation and the surroundings permit.

In the following cases, active emergency braking performance is limited:

- Driving on winding or hilly roads.
- Detecting all vehicles, especially vehicles with a trailer, tractors, muddy vehicles, etc.
- Detecting a vehicle when weather limits visibility, such as in fog, rain, or snow.
- During nighttime driving.
- Weather limits visibility, such as fog, rain, or snow.
- The windscreen is damaged or affected by foreign items, e.g. stickers.

Complete attention is always required while driving, and you should be ready to take action and apply the brakes and/or steer the vehicle to avoid crashes.

**Fault**

In case the system requires a service, a message is displayed in the Driver Information Centre.

If the system does not work as it should do, vehicle messages are displayed in the Driver Information Centre.

Vehicle messages ◊ 102.

**Front pedestrian protection**

Front pedestrian protection may help to avoid or reduce the harm caused by front-end crashes with nearby pedestrians when driving in a forward gear.
Front pedestrian protection uses the front camera in the windscreen to detect a pedestrian directly ahead, in your path.

The system triggers different level of alerts depending on the risk of collision detected. The alerts are displayed in the Driver Information Centre.

Level 1: A visual alert is displayed.
Level 2: A visual alert is displayed and an audible alert sounds.

⚠️ Danger

Front pedestrian braking does not provide an alert or automatically brake the vehicle, unless it detects a pedestrian.

The system may not detect pedestrians, including children, when the pedestrian is not directly ahead, not fully visible, not standing upright, or when part of a group.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The colour lighting of this control indicator does not correspond to local traffic laws on following distance. The driver bears full responsibility for maintaining safe following distance according to applicable traffic rules, weather and road conditions etc. at all times.</td>
</tr>
</tbody>
</table>

When the time to a potential collision with a pedestrian in front gets too small and a collision is imminent, a warning is displayed in the Driver Information Centre.

Simultaneously a warning chime sounds. Depress the brake pedal and steer the vehicle, if it is required by the situation.

اوي Operation conditions

The following condition must be fulfilled for proper operation:
The speed must be between 5km/h and 60 km/h.

 Activation

To use the system, active safety braking has to be activated in the vehicle personalisation 103.

 Selecting the alert sensitivity

The alert sensitivity has to be set to close, normal or distant in the vehicle personalisation menu 103.

 Deactivation

The system can only be deactivated by deactivating the active emergency braking in the vehicle personalisation, 103.

 System limitations

Front pedestrian protection is designed to warn on pedestrians only, but may react also to other objects.

In the following cases, the system may not detect a pedestrian ahead or sensor performance is limited:
• Driving on winding or hilly roads.
• During nighttime driving.
Driving and operating

- Weather limits visibility, such as fog, rain, or snow
- The windscreen is damaged or affected by foreign items, e.g. stickers.

Parking assist

General information

When attaching a trailer or bike carrier to the trailer hitch, the parking assist is deactivated.

⚠️ Warning

The driver bears full responsibility for the parking manoeuvre.
Always check the surrounding area when driving backwards or forwards while using parking assist system.

Rear parking assist

The rear parking assist makes parking easier by measuring the distance between the vehicle and rear obstacles. It informs and warns the driver by giving acoustic signals and display indication.

The system operates with ultrasonic parking sensors in the rear bumper.

Activation

Rear parking assist is activated when reverse gear is engaged and ignition is switched on.
The system is ready to operate when the LED in the parking assist button \(P\) \(\square\) OFF does not illuminate.

Indication

The system warns the driver with acoustic signals against potentially hazardous obstacles behind the vehicle in a distance range up to 50 cm while reverse gear is engaged. Depending on which side of the vehicle is closer to an obstacle, you will hear acoustic warning signals in the vehicle on the respective side. The interval between the sounds becomes shorter as the vehicle gets closer to that obstacle. When the distance is less than approx. 30 cm, the sound is continuous.
Additionally, the distance to rear obstacles is displayed by changing distance lines in the Info Display \( 98 \). When the obstacle is very close, \( \Delta \) for Danger is displayed in the screen.

**Deactivation**

The system is switched off when reverse gear is disengaged. Press \( P\Delta \) OFF to deactivate the system manually. The LED in the button illuminates when the system is deactivated.

**Front-rear parking assist**

The front-rear parking assist measures the distance between the vehicle and obstacles in front and behind the vehicle. It informs and warns the driver by giving acoustic signals and display indication. It uses two different acoustic warning signals for the front and rear monitoring areas, each with a different tone frequency.

The system operates with ultrasonic parking sensors in the rear and front bumper.

**Activation**

In addition to the rear parking assist, the front parking assist is triggered when an obstacle is detected in front and the speed of the vehicle is still below 10 km/h.

The system is ready to operate when the LED in the parking assist button \( P\Delta \) does not illuminate.

When the system is deactivated, the LED in the button illuminates.

**Indication**

The system warns the driver with acoustic signals against potentially hazardous obstacles in front of the vehicle and behind the vehicle.
Depending on which side of the vehicle is closer to an obstacle, you will hear acoustic warning signals in the vehicle on the respective side. The interval between the sounds becomes shorter as the vehicle gets closer to that obstacle. When the distance is less than approx. 30 cm, the sound is continuous.

Additionally, the distance to rear and front obstacles is displayed by changing distance lines in the Info-Display 98.

**Deactivation**

The system is deactivated automatically when vehicle speed exceeds 10 km/h or if the vehicle stops for more than three seconds in a forward gear or if no further obstacles are detected.

Manual deactivation is also possible by pressing the parking assist button P. When the system is deactivated manually, the LED in the button extinguishes and a message pops-up in the Driver Information Centre.

After a manual deactivation, the front-rear parking assist is activated again if P is pressed or if reverse gear is engaged.

**System limitations**

In the event of a fault or if the system does not work temporarily, e.g. because of high external noise level or other interference factors, Service in the cluster instrument illuminates. A message is indicated in the Driver Information Centre.

**Warning**

Under certain circumstances, various reflective surfaces on objects or clothing as well as external noise sources may cause the system to fail to detect obstacles.

Special attention must be paid to low obstacles which can damage the lower part of the bumper.

**Caution**

Performance of the system can be reduced when sensors are covered, e.g. by ice or snow.

Performance of the parking assist system can be reduced due to heavy loading.

Special conditions apply if there are taller vehicles in the vicinity (e.g. off-road vehicles, mini vans, vans). Object identification and correct distance indication in the upper part of these vehicles cannot be guaranteed.
Objects with a very small reflection cross-section, e.g. objects of narrow size or soft materials, may not be detected by the system. Parking assist systems do not detect objects outside the detection range.

Advanced parking assist

⚠️ Warning

The driver bears full responsibility for accepting the parking slot suggested by the system and the parking manoeuvre.

Always check the surrounding area in all directions when using the advanced parking assist.

The advanced parking assist measures a suitable parking slot while passing, calculates the trajectory and automatically steers the vehicle while parking.

Advanced parking assist provides assistance for the following manoeuvres:

- Entry into a parallel parking slot.
- Entry into a perpendicular parking slot.
- Exit from a parallel parking slot.

The driver must control acceleration, braking and gear shifting, while steering is done automatically. The driver can take control at any time by gripping the steering wheel.

It may be necessary to move forwards and backwards more than once.

Instructions are given in the Info-Display 98.

Advanced parking assist can only be activated when driving forwards.

Advanced parking assist is always combined with front-rear parking assist.

The system has six ultrasonic parking sensors each in both the rear and front bumper.

Entry into a parallel parking slot

**Activation**

7" Colour-Info-Display: to search for a parking slot, activate the system by selecting Park Assist on the homepage of the touch screen. Then select Enter parallel parking space.
8" Colour-Info-Display: to search for a parking slot, activate the system by pressing §. Select Driving functions on the touch screen and then Park Assist. Select Enter parallel parking space.

illuminates in the instrument cluster to confirm the function.

Slow down the vehicle speed below 20 km/h.

Select parking side by switching on turn signal indicator on the respective side.

The allowed parallel distance between the vehicle and a row of parked cars is between 0.5 metres and 1.5 metres.

The system will not identify slots that are clearly smaller or larger than the vehicle.

When a free slot is detected, a visual feedback on the Colour-Info-Display and a first acoustic signal is given. Drive slowly forwards. When the second acoustic signal is given, stop the vehicle, select reverse gear, release the steering wheel and start moving without exceeding 7 km/h.

Move forwards and backwards while observing the warnings of the Parking assist until the end of manoeuvre is indicated. When finished, illuminates in the instrument cluster.

Entry into a perpendicular parking slot

Activation

7" Colour-Info-Display: to search for a parking slot, activate the system by selecting Park Assist on the homepage of the touch screen. Then select Enter perpendicular parking space.
8" Colour-Info-Display: when search for a parking slot, activate the system by pressing É. Select Driving functions on the touch screen and then Park Assist. Select Enter bay parking space.

é illuminates in the instrument cluster to confirm the function.

Slow down the vehicle speed below 20 km/h.

Select parking side by switching on turn signal indicator on the respective side.

The allowed parallel distance between the vehicle and a row of parked cars is between 0.5 metres and 1.5 metres.

When several successive slots are found, the vehicle will be directed towards the last one.

When a free slot is detected, a visual feedback on the Colour-Info-Display and an acoustic signal is given. Stop the vehicle, select reverse gear, release the steering wheel and start moving without exceeding 7 km/h.

Move forwards and backwards as instructed by observing the warnings of the Parking assist and paying attention to the acoustic signals until the end of manoeuvre is indicated. When finished, é extinguishes in the instrument cluster.

During the parking manoeuvre, the system is automatically deactivated once the rear of the vehicle is within 50 cm of an obstacle.
Exiting a parallel parking slot

Activation
7" Colour-Info-Display: when exiting a parallel parking slot, activate the system by selecting Park Assist on the homepage of the touch screen. Then select Exit parallel parking space.

8" Colour-Info-Display: when exiting a parallel parking slot, activate the system by pressing . Select Driving functions on the touch screen and then Park Assist. Select Exit parallel parking space.

Select exit side by switching on the respective turn signal indicator.

Engage reverse or forward gear, release the steering wheel and start moving without exceeding 5 km/h.

Move forwards and backwards while observing the warnings of the Parking assist until the end of manoeuvre is indicated. The manoeuvre is complete when the vehicle's front wheels are out of the parking slot and $\text{P}_\text{S}$ extinguishes in the instrument cluster.

After deactivation check control over the vehicle.

Display indication

The instructions on the display show:
- General hints and warning messages.
- The demand to stop the vehicle, when a parking slot is detected.
- The direction of driving during the parking manoeuvre.
- The demand to shift into reverse or first gear.
- The demand to stop or to drive slowly.
- The successful completion of the parking manoeuvre indicated by a pop-up symbol and a chime.
- The cancelling of a parking manoeuvre.

Deactivation

The current park assist manoeuvre is cancelled via the button to return to the previous screen in the Colour-Info-Display. To deactivate the system completely, press $\text{P} \Rightarrow \text{Off}$ in the centre console.
The system is deactivated automatically:
- if the ignition is switched off
- if stalling the engine
- if no manoeuvre is started within 5 minutes of selection of the type of manoeuvre
- after a prolonged stop of the vehicle during a manoeuvre
- if the electronic stability control (ESC) is triggered
- if the speed of the vehicle exceeds the stated limit
- when the driver interrupts movement of the steering wheel
- after 4 manoeuvre cycles
- on opening the driver's door
- if one of the front wheels encounters an obstacle
- parking manoeuvre successfully ended

Deactivation by the driver or by the system during manoeuvring will be indicated on the display. Additionally, an acoustic signal sounds.

The system is switched off automatically when towing a electrically connected trailer.

Contact your dealer to switch off the system for a prolonged period.

**Fault**

In the event of a fault, \( \square \) flashes for a few seconds, accompanied by an acoustic signal. If the fault occurs during the use of the system, \( \square \) extinguishes.

In the event of a fault in the power steering, \( \heartsuit \) flashes in the instrument panel, accompanied by a message.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Under certain circumstances, various reflective surfaces on objects or clothing as well as external noise sources may cause the system to fail to detect obstacles. Special attention must be paid to low obstacles which can damage the lower part of the bumper.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Performance of the system can be reduced when sensors are covered, e.g. by ice or snow. Performance of the parking assist system can be reduced due to heavy loading. Special conditions apply if there are taller vehicles in the vicinity (e.g. off-road vehicles, mini vans, vans). Object identification and correct distance indication in the upper part of these vehicles cannot be guaranteed. Objects with a very small reflection cross-section, e.g. objects of narrow size or soft materials, may not be detected by the system. Parking assist systems do not detect objects outside the detection range.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>It is possible that the sensor detects a non-existing object caused by echo disturbance from external...</td>
</tr>
</tbody>
</table>
acoustic noise or mechanical misalignments (sporadic false warnings may occur).

Make sure that the front number plate is properly mounted (not bent and no gaps to the bumper on the left or right side) and the sensors are firmly in place.

Advanced parking assist system may not respond to changes in the available parking space after initiating a parking manoeuvre. The system may recognize an entry, a gateway, a courtyard or even a crossing as a parking slot. After selecting reverse gear the system will start a parking manoeuvre. Take care regarding the availability of the suggested parking slot.

Surface irregularities, e.g. on construction zones, are not detected by the system. The driver accepts responsibility.

**Side blind spot alert**

The Side blind spot alert system detects and reports objects on either side of the vehicle, within a specified "blind spot" zone. The system displays a visual alert in each exterior mirror, when detecting objects that may not be visible in the interior and exterior mirrors.

Side blind spot alert uses some of the advanced parking assist sensors which are located in the front and rear bumper on both sides of the vehicle.

**⚠️ Warning**

Side blind spot alert does not replace driver vision.

The system does not detect:
- vehicles outside the side blind zones which may be rapidly approaching
- pedestrians, cyclists or animals

Before changing a lane, always check all mirrors, look over the shoulder and use the turn signal.

**Activation**

7” Colour-Info-Display: select **Blind spot monitoring** on the homepage of the touch screen. System is activated by viewing 📚.

8” Colour-Info-Display: press 🎯. Select **Driving functions** on the touch screen and then **Blind spot monitoring**. System is activated by viewing on. 🟢 illuminates continuously green in the instrument cluster to confirm the function.

**Functionality**

When the system detects a vehicle in the side blind zone while driving forwards, a round LED will illuminate in the relevant exterior mirror.

The LED comes on immediately when being passed.
The LED comes on after a delay when passing another vehicle slowly.

**Operation conditions**

The following conditions must be fulfilled for proper operation:

- All vehicles are moving in the same direction and in adjacent lanes.
- The speed of your vehicle is between 12 and 140 km/h.
- Passing a vehicle with a speed difference of less than 10 km/h.
- Another vehicle is passing with a speed difference of less than 25 km/h.
- The traffic flow is normal.
- Driving on a straight or slightly curved road.
- The vehicle is not pulling a trailer.

No alert will be given in the following situations:

- In the presence of non-moving objects (parked vehicles, barriers, street lamps, road signs...).
- With vehicles moving in the opposite direction.
- Driving on a winding road or a sharp corner.
- When passing (or being passed by) a very long vehicle (lorry, coach...) which is at the same time detected at the rear in the blind spot angle and present in the driver's forward field of vision.
- In very heavy traffic: vehicles detected in front and behind are confused with a lorry or a stationary object.
- When passing too quickly.

**Deactivation**

The system is deactivated in the vehicle personalisation 3. The &extinguishes in the instrument cluster. Additionally, an acoustic signal sounds

The state of the system is stored when switching off the ignition. The system is automatically deactivated when towing an electrically connected trailer.

**Fault**

In the event of a fault, the &flashes for a few moments in the instrument panel, accompanied by SERVICE and a display message. Contact a dealer or a qualified workshop to have the system checked.

**Panoramic view system**

This system allows views of the vehicle's surroundings to be displayed as a nearly 180° picture in the Info display, like a bird's eye view. The system uses:

- rear camera, installed in the tailgate
- ultrasonic parking sensors in the rear bumper

The screen in the Info display is divided into two parts: on the right there is a view from above the vehicle,
and on the left there is the view from the rear displayed. The parking sensors complete the information on the view from above the vehicle.

**Activation**

Panoramic view system is activated by:
- engaging reverse gear
- driving up to 10 km/h

**Functionality**

Different views can be selected in the left part of the display. Change the type of view at any time during a manoeuvre by pressing the touch field in the left lower zone of the display:
- Rear view
- Auto mode
- Zoom view
- 180° view

The display is immediately updated with the type of view selected.

AUTO mode is activated by default. In this mode, the system selects the best view, standard or zoom, to display according to the information from the parking sensors.

The state of the system is not kept in memory when the ignition is switched off.

**Rear view**

The area behind the vehicle is displayed in the screen. The vertical lines represent the width of the vehicle with mirrors unfolded. The direction of the lines changes with the position of the steering wheel.

The first horizontal line represents a distance of about 30 cm beyond the edge of vehicle's rear bumper. The upper horizontal lines represent distances of about one and two metres beyond the edge of your vehicle's rear bumper.

This view is available in AUTO mode or in the view selection menu.
Auto mode
This mode is activated by default. Using sensors in the rear bumper, the automatic view changes from a rear view to a view from above, as an obstacle is approached during a manoeuvre.

Zoom view
The camera records the vehicle's surroundings during the manoeuvre in order to reconstruct a view from above the rear of the vehicle in its near surroundings, allowing the vehicle to be manoeuvred around obstacles nearby. This view is available with AUTO mode or in the view selection menu.

180° view
The 180° view facilitates reversing out of a parking bay, making it possible to see the approach of vehicles, pedestrians and cyclists. This view is not recommended for carrying out a complete manoeuvre. It is made up of three areas: left 1, centre 2 and right 3. This view is available from the view selection menu only.

Deactivation
Panoramic view system is deactivated when:
- driving faster than 10 km/h
- seven seconds after disengaging reverse gear
- by pressing the icon ⊗ in the left upper corner of the touch screen
- opening the tailgate

General information

⚠️ Warning
The panoramic view system does not replace driver vision. It will not display children, pedestrians, cyclists, crossing traffic, animals, or any other objects outside of the camera view area, e.g. below the bumper, or underneath the vehicle.

Do not drive or park the vehicle using only the panoramic view system.

Always check the surrounding of the vehicle before driving.
Driving and operating

Displayed images may be further or closer than they appear. The area displayed is limited and objects that are close to either edge of the bumper or under the bumper are not displayed on the screen.

System limitations

Caution

For optimal operation of the system, it is important to keep the lens of the camera in the tailgate between the number plate lights always clean. Rinse the lens with water and wipe with a soft cloth. Do not clean the lens with a steam-jet or high-pressure jet cleaner.

The panoramic view system may not operate properly when:

- The surrounding is dark.
- The sun or the beam of headlights is shining directly into the camera lenses.
- During nighttime driving.
- Weather limits visibility, such as fog, rain, or snow.
- The camera lenses are blocked by snow, ice, slush, mud, dirt.
- The vehicle is towing a trailer.
- The vehicle had an accident.
- There are extreme temperature changes.

Rear view camera

The rear view camera assists the driver when reversing by displaying a view of the area behind the vehicle. The view of the camera is displayed in the Info-Display.

Warning

The rear view camera does not replace driver vision. Note that objects that are outside the camera's field of view and the parking assist sensors, e.g. below the bumper or underneath the vehicle, are not displayed.

Do not reverse or park the vehicle using only the rear view camera. Always check the surrounding of the vehicle before driving.

Switching on

Rear view camera is automatically activated when reverse gear is engaged.

Functionality

The camera is mounted above the licence plate.
Driving and operating

The area displayed by the camera is limited. The distance of the image that appears on the display differs from the actual distance.

**Guide lines**

The vertical lines represent the general direction of the vehicle and the distance between the vertical lines corresponds to the width of your vehicle without mirrors. The first horizontal line represents a distance of about 30 cm beyond the edge of vehicle’s rear bumper. The upper horizontal lines represent distances of about 1 and 2 metres beyond the edge of your vehicle’s rear bumper. The crossing curves represent the maximum turning circle.

**Deactivation of guide lines**

Guide lines can be deactivated in the Info-Display. Select Settings, Vehicle, Collision detection, Rear view camera guide lines. Info-Display 98.

**Switching off**

The camera is switched off when a certain forward speed is exceeded or if reverse gear is disengaged for approx. 10 seconds.

**System limitations**

The rear view camera may not operate properly when:
- The camera lenses are blocked by snow, ice, slush, mud, dirt. Clean the lense, rinse with water, and wipe with a soft cloth.
- The tailgate will be opened.
- The vehicle is towing an electrically connected trailer.
- The vehicle had a rear end accident.
- There are extreme temperature changes.

**Lane departure warning**

The lane departure warning system observes the lane markings between which the vehicle is driving via a front camera. The system detects lane changes and warns the driver in the event of an unintended lane change via visual and acoustic signals.

Criteria for the detection of an unintended lane change are:
- No operation of turn signals.
- No brake pedal operation.
- No active accelerator operation or speeding-up.
Driving and operating

If the driver is active, no warning will be issued.

**Activation**

The lane departure warning system is activated by pressing the button. The system is switched on when the LED in the button is not illuminated. The system is only operable at vehicle speeds above 60 km/h and if lane markings are available. When the system recognises an unintended lane change, the control indicator flashes yellow. Simultaneously a chime sound is activated.

**Deactivation**

The system is deactivated by pressing the button, the LED in the button illuminates. At speeds below 60 km/h the system is inoperable.

**Fault**

In the event of a fault, SERVICE appears in the instrument panel, accompanied by a display message. Contact a dealer or a qualified workshop to have the system checked. The lane departure warning system may not operate properly when:

- The windscreen is not clean.
- There are adverse environmental conditions like heavy rain, snow, direct sunlight or shadows.

The system can not operate when no lane marking is detected.

**System limitations**

The system performance may not operate properly when:

- Vehicle speed is below 60 km/h.
- Driving on winding or hilly roads.
- During nighttime driving.
- Weather limits visibility, such as fog, rain, or snow.
- The sensor in the windscreen is blocked by snow, ice, slush, mud, dirt, windscreen damage or affected by foreign items, e.g. stickers.
- The sun is shining directly into the camera lens.
- Close vehicles ahead.
- Banked roads.
- Road edges.
- Roads with poor lane markings.
- Sudden lighting changes.
Driver alert
The driver alert system monitors the driving time and the vigilance of the driver. Monitoring the vigilance of the driver is based on the trajectory variations of the vehicle compared to the lane markings.
The system includes a driving time alert combined with driver drowsiness detection.

⚠️ Warning
The system cannot replace the need for vigilance on the part of the driver. It is recommended that you take a break as soon as you feel tired or at least every two hours. Do not take the wheel if you are tired.

Activation or Deactivation
The system can be activated or deactivated in the vehicle personalisation ▶️ 103
The state of the system stays in memory when the ignition is switched off.

Driving time alert
The driver gets notified by a pop-up reminder symbol ⏳ in the Driver Information Centre simultaneously with an acoustic alert if the driver has not taken a break after two hours of driving at a speed above 65 km/h. The alert is repeated hourly until the vehicle is stopped, no matter how vehicle speed evolves.
The counting of driving time alert is reset when the ignition has been switched off for a few minutes.

Driver drowsiness detection
The system monitors the driver's level of vigilance. A camera at the top of the windsreen detects variations in trajectory compared to the lane markings. This system is particularly suited to fast roads (speed higher than 65 km/h).
If the trajectory of the vehicle suggests a certain level of drowsiness or inattention by the driver, the system triggers the first level of alert. The driver is notified by a message and an audible signal is given.
After three first level alerts, the system triggers a new alert with a message, accompanied by a more pronounced audible signal.
In certain driving conditions (poor road surface or strong winds), the system may give alerts independent of the driver's level of vigilance.
The driver drowsiness detection is reinitialised when the ignition has been switched off for a few minutes or the speed remains below 65 km/h for a few minutes.

System limitations
In the following situations, the system may not operate properly or even not operate at all:
- Poor visibility caused by inadequate lighting of the roadway, falling snow, heavy rain, dense fog etc.
Driving and operating

- Dazzle caused by headlamps of an oncoming vehicles, low sun, reflections on damp roads, leaving a tunnel, alternating shade and light etc.
- Windscreen area in front of the camera covered by dirt, snow, stickers etc.
- No lane markings detected or multiple lane markings due to roadworks
- Close vehicles ahead
- Winding roads or narrow roads

Fuel

Fuel for petrol engines

Only use unleaded fuel that complies with European standard EN 228 or E DIN 51626-1 or equivalent.

The engine is capable of running with fuel that contains up to 10% ethanol (e.g. named E10).

Use fuel with the recommended octane rating. A lower octane rating can reduce engine power and torque and slightly increases fuel consumption.

Caution

- Do not use fuel or fuel additives that contain metallic compounds such as manganese-based additives. This may cause engine damage.

Caution

Use of fuel that does not comply to EN 228 or E DIN 51626-1 or equivalent can lead to deposits or engine damage.

Caution

Use of fuel with a lower octane rating than the lowest possible rating could lead to uncontrolled combustion and engine damage.

The engine specific requirements regarding octane rating are given in the engine data overview 233. A country-specific label at the fuel filler flap can supersede the requirement.

Fuel additives outside Europe

Fuel should contain detergent additives that help prevent engine and fuel system deposits from forming. Clean fuel injectors and intake valves will allow the emission control system to work properly.
Some fuel does not contain sufficient quantities of additive to keep fuel injectors and intake valves clean. To make up for this lack of detergency, add Fuel System Treatment PLUS to the fuel tank at every engine oil change or every 10,000 km, whichever occurs first. It is available at your workshop.

Fuels containing oxygenates such as ethers and ethanol, as well as reformulated fuel, are available in some cities. If these fuels comply with the previously described specification, then they are acceptable to use. However, E85 (85% ethanol) and other fuels containing more than 15% ethanol must be used only in FlexFuel vehicles.

Caution
Do not use fuel containing methanol. It can corrode metal parts in the fuel system and also damage plastic and rubber parts. This damage would not be covered by the vehicle warranty.

Fuel for diesel engines
Only use diesel fuel that complies with EN 590.
In countries outside the European Union use Euro-Diesel fuel with a sulfur concentration below 50 ppm.

Caution
Use of fuel that does not comply to EN 590 or similar can lead to engine powerloss, increased wear or engine damage.

Do not use marine diesel oils, heating oils, Aquazole and similar diesel-water emulsions. Diesel fuels must not be diluted with fuels for petrol engines.

Low temperature operation
At temperatures below 0° C, some diesel products with biodiesel blends may clog, freeze or gel, which may affect the fuel supply system. Starting and engine operation may not work properly. Make sure to fill winter grade diesel fuel at ambient temperatures below 0° C.

Arctic grade diesel fuel can be used in extreme cold temperatures below -20° C. Using this fuel grade in warm or hot climates is not recommended and may cause engine stalling, poor starting or damage on the fuel injection system.

Fuel for liquid gas operation
Liquid gas is known as LPG (Liquefied Petroleum Gas) or under its French name GPL (Gaz de Pétrole Liquéfié). LPG is also known as Autogas.
LPG consists mainly of propane and butane. The octane rating is between 105 and 115, depending on the butane proportion. LPG is stored as a liquid at a pressure of approximately five to ten bar.

The boiling point depends on the pressure and the mixing ratio. At ambient pressure, it is between -42 °C (pure propane) and -0.5 °C (pure butane).

**Caution**

The system works at an ambient temperature of approx. -8 °C to 100 °C.

Full functioning of the LPG system can only be guaranteed with liquid gas which complies with the minimum requirements of DIN EN 589.

### Refuelling

**Danger**

Fuel is flammable and explosive. No smoking. No naked flames or sparks.

If you can smell fuel in your vehicle, have the cause of this remedied immediately by a workshop.

**Caution**

In case of misfuelling, do not switch on ignition.

Fuel filler flap is located at left rear side of vehicle.

Before refuelling, switch off ignition and any external heaters with combustion chambers.

Follow the operating and safety instructions of the filling station when refuelling.
The fuel filler flap can only be opened if the vehicle is unlocked. Release the fuel filler flap by pushing the flap.

**Petrol and Diesel refuelling**

To open, turn the cap slowly anticlockwise.

The fuel filler cap can be attached to the hook on the fuel filler flap.

To refuel, fully insert the pump nozzle and switch it on.

After the automatic cut-off, the tank can be topped up by operating the pump nozzle a maximum of two more times.

<table>
<thead>
<tr>
<th><strong>Caution</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Wipe off any overflowing fuel immediately.</td>
</tr>
</tbody>
</table>

To close, turn the fuel filler cap clockwise.

Close the flap and allow it to engage.

**Fuel filler cap**

Only use genuine fuel filler caps. Diesel-engined vehicles have special fuel filler caps.
Driving and operating

Trailer hitch

General information
The factory-fitted towing equipment is folded up under the rear bumper fascia.
Entrust retrofitting of towing equipment to a workshop. It may be necessary to make changes that affect the cooling system, heat shields or other equipment. Only use towing equipment that has been approved for your vehicle.
To avoid vehicle damage, the power tailgate cannot be operated with the radio remote control when a trailer is electrically connected.
The bulb outage detection function for trailer brake light cannot detect a partial bulb outage, e.g. in case of four times five watt bulbs, the function only detects lamp outage when only a single five Watt lamp remains or none remain.
Fitting of towing equipment could cover the opening of the towing eye. If this is the case use the coupling ball bar for towing.

Driving characteristics and towing tips
Before attaching a trailer, lubricate the coupling ball. However, do not do so if a stabiliser, which acts on the coupling ball, is being used to reduce snaking movements.
During trailer towing do not exceed a speed of 80 km/h. A maximum speed of 100 km/h is only appropriate if an oscillation damper is used and the permissible gross trailer weight does not exceed the vehicle’s curb weight.
For trailers with low driving stability and caravan trailers, the use of an oscillation damper is strongly recommended.
If the trailer starts snaking, drive more slowly, do not attempt to correct the steering and brake sharply if necessary.
When driving downhill, drive in the same gear as if driving uphill and drive at a similar speed.
Adjust tyre pressure to the value specified for full load 239.

Trailer towing

Trailer loads
The permissible trailer loads are vehicle and engine-dependent maximum values which must not be exceeded. The actual trailer load is the difference between the actual gross weight of the trailer and the actual coupling socket load with the trailer coupled.
The permissible trailer loads are specified in the vehicle documents. In general, they are valid for gradients up to 12%.
The permissible trailer load applies up to the specified incline and at sea level. Since engine power decreases as altitude increases due to the air becoming thinner, therefore reducing climbing ability, the permissible gross train weight also decreases by 10% for every 1000 metres of altitude. The gross train weight does not have to be reduced when driving on roads with slight inclines (less than 8%, e.g. motorways).
The permissible gross train weight must not be exceeded. This weight is specified on the identification plate [228].

**Vertical coupling load**

The vertical coupling load is the load exerted by the trailer on the coupling ball. It can be varied by changing the weight distribution when loading the trailer.

The maximum permissible vertical coupling load of 60 kg is specified on the towing equipment identification plate and in the vehicle documents. Always aim for the maximum load, especially in the case of heavy trailers. The vertical coupling load should never fall below 25 kg.

**Rear axle load**

When the trailer is coupled and the towing vehicle fully loaded, the permissible rear axle load (see identification plate or vehicle documents) may be exceeded by 60 kg, the gross vehicle weight rating must not be exceeded. If the permissible rear axle load is exceeded, a maximum speed of 100 km/h applies.

**Towing equipment**

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>When operating without a trailer, remove the coupling ball bar.</td>
</tr>
</tbody>
</table>

**Stowage of coupling ball bar**

The bag with the coupling ball bar is stowed on the rear floor cover in the load compartment.

Place the strap through the rear right lashing eye, wrap around twice and tighten the strap to secure the bag.

**Fitting the coupling ball bar**
Swivel the connecting socket downwards. Remove the sealing plug from the opening for the coupling ball bar and stow it.

**Checking the tensioning of the coupling ball bar**
- Red marking on rotary knob must point towards green marking on coupling ball bar.
- The gap between the rotary knob and the coupling ball bar must be approx. 6 mm.
- The key must be in position 3.

Otherwise, the coupling ball bar must be tensioned before being inserted:

- Unlock coupling ball bar by turning key to position 3.
- Pull out rotary knob and turn clockwise as far as it will go.

**Inserting the coupling ball bar**

Insert the tensioned coupling ball bar in the opening and push firmly upwards until it audibly engages. The rotary handle snaps back into its original position resting against the coupling ball bar without a gap.

**Warning**

Do not touch rotary handle during insertion.

Lock the coupling ball bar by turning the key to position 3. Remove the key and close the protective flap.
Driving and operating

Effective stopping cable

Attach breakaway stopping cable to eye.

Check that the coupling ball bar is correctly installed
- Green marking on rotary knob must point towards green marking on coupling ball bar.
- There must be no gap between the rotary handle and the coupling ball bar.
- The coupling ball bar must be firmly engaged in the opening.
- The coupling ball bar must be locked and the key removed.

⚠️ Warning

Towing a trailer is permitted only when a coupling ball bar is fitted correctly. If the coupling ball bar does not engage correctly, seek the assistance of a workshop.

Dismounting the coupling ball bar

Open the protective flap and turn the key to position 2 to unlock the coupling ball bar. Pull out rotary handle and turn clockwise as far as it will go. Pull out coupling ball bar downwards. Insert sealing plug in opening.

Swivel the connecting socket upwards. Stow the coupling ball bar in the bag and secure by fixing the strap through the rear right lashing eye. Wrap around twice and tighten the strap to secure the bag.
### General Information

Accessories and vehicle modifications

We recommend the use of genuine parts and accessories and factory approved parts specific for your vehicle type. We cannot assess or guarantee reliability of other products - even if they have a regulatory or otherwise granted approval.

Any modification, conversion or other changes made to standard vehicle specifications (including, without limitation, software modifications, modifications of the electronic control units) may invalidate the warranty offered by Opel. Furthermore, such changes may affect driver assistance systems, may impact fuel consumption, CO₂ emissions and other emissions of the vehicle and cause the vehicle to no longer conform to the operating permit, impacting the validity of your vehicle registration.
Caution

When transporting the vehicle on a train or on a recovery vehicle, the mud flaps might be damaged.

Vehicle storage

Storage for a long period of time

If the vehicle is to be stored for several months:

- Wash and wax the vehicle.
- Have the wax in the engine compartment and underbody checked.
- Clean and preserve the rubber seals.
- Fill up fuel tank completely.
- Change the engine oil.
- Drain the washer fluid reservoir.
- Check the coolant antifreeze and corrosion protection.
- Adjust tyre pressure to the value specified for full load.

- Park the vehicle in a dry, well ventilated place. Engage first or reverse gear or set selector lever to P. Prevent the vehicle from rolling.
- Do not apply the parking brake.
- Open the bonnet, close all doors and lock the vehicle.
- Disconnect the clamp from the negative terminal of the vehicle battery. Beware that all systems are not functional, e.g. anti-theft alarm system.

Putting back into operation

When the vehicle is to be put back into operation:

- Connect the clamp to the negative terminal of the vehicle battery. Activate the electronics of the power windows.
- Check tyre pressure.
- Fill up the washer fluid reservoir.
- Check the engine oil level.
- Check the coolant level.
- Fit the number plate if necessary.

End-of-life vehicle recovery

Information on end-of-life vehicle recovery centres and the recycling of end-of-life vehicles is available on our website, where legally required. Only entrust this work to an authorised recycling centre.
Vehicle checks

Performing work

⚠️ Warning

Only perform engine compartment checks when the ignition is off. The cooling fan may start operating even if the ignition is off.

⚠️ Danger

The ignition system uses extremely high voltage. Do not touch.

Bonnet

Opening

Open the driver's door.

Pull the release lever and return it to its original position.

Bonnet

Closing

Move the safety catch sideways to the left vehicle side and open the bonnet. The bonnet is held open automatically.

If the bonnet is opened during an Autostop, the engine will be restarted automatically for safety reasons. Stop-start system ◇ 138.

Closing

Lower the bonnet and let it fall into the latch from a low height (20-25 cm). Check that the bonnet is engaged.
Caution

Do not press the bonnet into the latch to avoid dents.

Engine oil

Check the engine oil level manually on a regular basis to prevent damage to the engine. Ensure that the correct specification of oil is used.

Recommended fluids and lubricants

The maximum engine oil consumption is 0.6 litres per 1000 km.

Check with the vehicle on a level surface. The engine must be at operating temperature and switched off for at least five minutes.

Pull out the dipstick, wipe it clean, reinsert it fully, pull out and read the engine oil level.

When the engine oil level has dropped to the MIN mark, top up the engine oil.

Different dipsticks are used depending on engine variant.

We recommend the use of the same grade of engine oil that was used at last change.
The engine oil level must not exceed the **MAX** mark on the dipstick.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Overfilled engine oil must be drained or suctioned out.</td>
</tr>
</tbody>
</table>

Capacities ◊ 238.
Fit the cap on straight and tighten it.

**Engine coolant**
The coolant provides freeze protection down to approx. -37 °C.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Only use approved antifreeze.</td>
</tr>
</tbody>
</table>

Coolant and antifreeze ◊ 226.

**Coolant level**

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Too low a coolant level can cause engine damage.</td>
</tr>
</tbody>
</table>

If the cooling system is cold, the coolant level should be above the **MIN** mark. Top up if the level is low.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Allow the engine to cool before opening the cap. Carefully open the cap, relieving the pressure slowly.</td>
</tr>
</tbody>
</table>

To top up, use a 1:1 mixture of released coolant concentrate mixed with clean tap water. If no coolant concentrate is available, use clean tap water. Install the cap tightly. Have the coolant concentration checked and have the cause of the coolant loss remedied by a workshop.

**Washer fluid**
Fill with clean water mixed with a suitable quantity of approved windscreen washer fluid which contains antifreeze.
Vehicle care

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Only washer fluid with a sufficient antifreeze concentration provides protection at low temperatures or a sudden drop in temperature.</td>
</tr>
</tbody>
</table>

Washer fluid ◆ 226.

Brakes

In the event of minimum thickness of the brake lining, a squealing noise sounds during braking.

Continued driving is possible but have the brake lining replaced as soon as possible.

Once new brake linings are installed, do not brake unnecessarily hard for the first few journeys.

Brake fluid

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Brake fluid is poisonous and corrosive. Avoid contact with eyes, skin, fabrics and painted surfaces.</td>
</tr>
</tbody>
</table>

The brake fluid level must be between the MIN and MAX marks.

If fluid level is below MIN seek the assistance of a workshop.

Brake and clutch fluid ◆ 226.

Vehicle battery

The vehicle battery is maintenance-free provided that the driving profile allows sufficient charging of the battery. Short-distance-driving and frequent engine starts can discharge the battery. Avoid the use of unnecessary electrical consumers.

Batteries do not belong in household waste. They must be disposed of at an appropriate recycling collection point.

Laying up the vehicle for more than four weeks can lead to battery discharge. Disconnect the clamp from the negative terminal of the vehicle battery.

Ensure the ignition is switched off before connecting or disconnecting the vehicle battery.

Battery discharge protection ◆ 119.

Disconnecting the battery

If the vehicle's battery is to be disconnected (e.g. for maintenance work), the alarm siren must be deactivated as follows: Switch the ignition on then off, then disconnect the vehicle's battery within 15 seconds.
After having reconnected the battery of a vehicle equipped with an anti-theft alarm system, wait 10 minutes until you start the engine.

Replacing the vehicle battery

Note
Any deviation from the instructions given in this section may lead to temporary deactivation or disturbance of the stop-start system.

When the vehicle battery is being replaced, please ensure that there are no open ventilation holes in the vicinity of the positive terminal. If a ventilation hole is open in this area, it must be closed off with a dummy cap, and the ventilation in the vicinity of the negative terminal must be opened.

Ensure that the battery is always replaced by the same type of battery. The vehicle battery has to be replaced by a workshop.

Stop-start system  138.

Charging the vehicle battery

⚠️ Warning
On vehicles with stop-start system, ensure that the charging potential does not exceed 14.6 volts when using a battery charger. Otherwise the vehicle battery might be damaged.

Jump starting  217.

Warning label

Meaning of symbols:
• No sparks, naked flames or smoking.
• Always shield eyes. Explosive gases can cause blindness or injury.
• Keep the vehicle battery out of reach of children.
• The vehicle battery contains sulphuric acid which could cause blindness or serious burn injuries.
• See the Owner's Manual for further information.
• Explosive gas may be present in the vicinity of the vehicle battery.

Diesel fuel system bleeding
If the tank has been run dry, the diesel fuel system must be bled. Switch on the ignition three times for 15 seconds at a time. Then crank the engine for a maximum of 40 seconds. Repeat this process after no less than five seconds. If the engine fails to start, seek the assistance of a workshop.
Wiper blade replacement

Lift the wiper arm until it stays in the raised position, press button to disengage the wiper blade and remove.

Attach the wiper blade slightly angled to the wiper arm and push until it engages.

Lower wiper arm carefully.

Wiper blade on the rear window

Lift wiper arm. Disengage wiper blade as shown in illustration and remove.

Attach the wiper blade slightly angled to the wiper arm and push until it engages.

Lower wiper arm carefully.

Bulb replacement

Switch off the ignition and switch off the relevant switch or close the doors.

Only hold a new bulb at the base. Do not touch the bulb glass with bare hands.

Use only the same bulb type for replacement.

Replace headlight bulbs from within the engine compartment.

Bulb check

After a bulb replacement switch on the ignition, operate and check the lights.

Halogen headlights

Halogen headlights with separate housings for low beam and high beam/turn signal light.
High beam, turn signal light (1)
Low beam (2)

High beam

1. Rotate the cap (1) anticlockwise and remove it.

2. Withdraw the upper bulb holder from the reflector housing.

3. Remove the bulb from the plug connector by pulling.
4. Replace the bulb and connect it to the plug connector.
5. Insert and push the bulb holder into the reflector housing by setting the lug into position.
6. Fit the cap and rotate clockwise.

Turn signal light

1. Rotate the cap (1) anticlockwise and remove it.
2. Rotate the lower bulb holder anticlockwise to disengage. Withdraw the bulb holder from the reflector housing.

3. Press latch and remove the bulb from the bulb holder.

4. Replace the bulb and attach it to the bulb holder.

5. Insert the bulb holder into the reflector housing and rotate clockwise.

6. Fit the cap and rotate clockwise.

Low beam

1. Rotate the cap (2) anticlockwise and remove it.

2. Lift the retainer, then pull the plug connector backwards.

3. Fold down the retainer and remove the bulb from the reflector housing.
4. Replace the bulb and push it into the reflector housing by setting the lug into position.
5. Fold up the retainer and hold in position.
6. Attach the plug connector to the bulb and fix it with the retainer.
7. Fit the cap and rotate clockwise.

**Sidelight/Daytime running light**
In case of defective LEDs, have them replaced by a workshop.

**LED headlights**
Headlights for low and high beam, sidelights, daytime running lights and turn signal lights are designed as LEDs and can not be changed.
Have lights repaired by a workshop in case of failure.

**Fog lights**
The bulbs are accessible from the underside of the vehicle.

1. Turn the bulb holder anti-clockwise and remove it from the reflector housing.

2. Disengage the bulb socket from the plug connector by pressing the retaining lug.
3. Remove and replace the bulb socket with bulb and attach the plug connector.
4. Insert the bulb socket into the reflector housing by turning clockwise and engage.

**Tail lights**
Depending on version, tail lights and brake lights are designed as LEDs. In case of failure, have LEDs replaced by a workshop.
Light assembly in the body

Detaching the light assembly

1. Unscrew the two screws that secure the light assembly.
2. Remove the light assembly by pulling it straight back.
3. Remove the three screws that secure the bulb carrier.
4. **Version without LED**
   - Remove the bulb by pulling and replace.
   - Tail light/Brake light 1
   - Turn-signal light 2

**Version with LED**
- Only turn signal light bulb can be replaced.

Remove the bulb socket from the light assembly by turning it anticlockwise.
Remove the turn signal light bulb from the socket by pulling it straight out.
Replace bulb.

**Attaching the light assembly**
1. Attach the bulb carrier to the light assembly and secure with the three screws.

2. Attach the light assembly to the vehicle body as shown in the illustration and secure with the two screws.

**Light assembly in the tailgate**

Detaching the light assembly

1. Release the cover in the tailgate and remove it.
2. Unscrew the plastic securing nut by hand.

3. Carefully withdraw the light assembly from the recesses and remove.

4. Press latch to release and remove bulb carrier.

5. **Version without LED**

Remove and replace the bulb:
- Tail light 1
- Rear fog light (left side), reverse light (right side) 2
- Rear fog light (right side), reverse light (left side) 2

**Version with LED**

Only reverse light bulb can be replaced.

Remove the bulb socket from the light assembly by turning it anticlockwise.

Remove the bulb from the socket by pulling it straight out.
Replace bulb.

**Attaching the light assembly**
1. Attach bulb carrier to the light assembly.
2. Attach the light assembly to the tailgate.
3. Secure the light assembly with the plastic securing nut.
4. Attach the cover to the tailgate.

**Side turn signal lights**
To replace bulb, remove lamp housing:

1. Slide lamp to its left side and remove with its right end.
2. Turn bulb holder anticlockwise and remove from housing.
3. Pull bulb from bulb holder and replace it.
4. Insert bulb holder and turn clockwise.
5. Insert left end of the lamp, slide to the left and insert right end.

**Number plate light**
The number plate light is designed as LEDs and can not be changed. In case of defective LEDs, have them replaced by a workshop.

**Interior lights**
**Courtesy light, reading lights**
Have bulbs replaced by a workshop.

**Load compartment light**
Have bulbs replaced by a workshop.

**Instrument panel illumination**
Have bulbs replaced by a workshop.

---

### Electrical system

#### Fuses

Data on the replacement fuse must match the data on the defective fuse. There are three fuse boxes in the vehicle:
- engine compartment
- instrument panel

Before replacing a fuse, turn off the respective switch and the ignition. A blown fuse can be recognised by its melted wire.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not replace the fuse until the cause of the fault has been remedied.</td>
</tr>
</tbody>
</table>

Some functions are protected by several fuses. Fuses may also be inserted without existence of a function.

---

**Fuse extractor**

A fuse extractor may be located in the fuse box in the engine compartment.
Place the fuse extractor on the various types of fuse from the top or side, and withdraw fuse.

**Engine compartment fuse box**

The fuse box is in the front left of the engine compartment. Disengage the cover and remove it.

### Vehicle tools

#### Tools

**Vehicles with spare wheel**

The jack, tools, a strap for securing a damaged wheel and the towing eye are placed in the tool box in the right wall of the load compartment. Spare wheel $\Diamond$ 216.

**Vehicles without spare wheel**

The screwdriver and the towing eye are located in a box below the floor cover in the load compartment. Tyre repair kit $\Diamond$ 210.
Wheels and tyres

Tyre condition, wheel condition

Drive over edges slowly and at right angles if possible. Driving over sharp edges can cause tyre and wheel damage. Do not trap tyres on the kerb when parking.

Regularly check the wheels for damage. Seek the assistance of a workshop in the event of damage or unusual wear.

Winter tyres

Winter tyres improve driving safety at temperatures below 7 °C and should therefore be fitted on all wheels.

In accordance with country-specific regulations, affix the speed sticker in the driver's field of view.

All tyre sizes are permitted as winter tyres 239.

Tyre designations

E.g. 195/65 R 15 91 T
195 : tyre width, mm
65 : cross-section ratio (tyre height to tyre width), %
R : belt type: Radial
RF : type: RunFlat
15 : wheel diameter, inches
91 : load index e.g. 95 is equivalent to 615 kg
T : speed code letter

Speed code letter:
Q : up to 160 km/h
S : up to 180 km/h
T : up to 190 km/h
H : up to 210 km/h
V : up to 240 km/h
W : up to 270 km/h

Choose a tyre appropriate for the maximum speed of your vehicle.

The maximum speed is achievable at kerb weight with driver (75 kg) plus 125 kg payload. Optional equipment could reduce the maximum speed of the vehicle.

Performance 235.

Directional tyres

Directional tyres should be mounted so that they rotate in the correct direction. The proper rotation direction is indicated by a symbol (e.g. an arrow) on the sidewall.

Tyre pressure

Check the pressure of cold tyres at least every 14 days and before any long journey. Do not forget the spare wheel. This also applies to vehicles with tyre pressure monitoring system.

Tyre pressure 239.
The tyre pressure information label on the left door frame indicates the original equipment tyres and the correspondent tyre pressures. The tyre pressure data refers to cold tyres. It applies to summer and winter tyres. Always inflate the spare tyre to the pressure specified for full load. The ECO tyre pressure serves to achieve the smallest amount of fuel consumption possible. Incorrect tyre pressures will impair safety, vehicle handling, comfort and fuel economy and will increase tyre wear. Tyre pressures differ depending on various options. For the correct tyre pressure value, follow the procedure below:

1. Identify drive axle and body style.
2. Identify the engine identifier code. Engine data 233.
3. Identify the respective tyre. The tyre pressure tables show all possible tyre combinations 239.

For the tyres approved for your vehicle, refer to the EEC Certificate of Conformity provided with your vehicle or other national registration documents. The driver is responsible for correct adjustment of tyre pressure.

⚠️ Warning
If the pressure is too low, this can result in considerable tyre warm-up and internal damage, leading to tread separation and even to tyre blow-out at high speeds.

⚠️ Warning
For specific tyres the recommended tyre pressure as shown in the tyre pressure table may exceed the maximum tyre pressure as indicated on the tyre. Never exceed the maximum tyre pressure as indicated on the tyre.

Temperature dependency
The tyre pressure depends on the temperature of the tyre. During driving, tyre temperature and pressure increase. Tyre pressure values provided on the tyre information label and tyre pressure chart are valid for cold tyres, which means at 20 °C. The pressure increases by nearly 10 kPa for a 10 °C temperature increase. This must be considered when warm tyres are checked.

Tyre deflation detection system
The tyre deflation detection system continually checks the rotation speed of all four wheels and warns on low tyre pressure condition once vehicle is driving. This is achieved by comparing tyre rolling circumference with reference values. If a tyre loses pressure the control indicator illuminates and a warning message is displayed in the Driver Information Centre.
In this case reduce speed, avoid sharp cornering and strong braking. Stop at next safe opportunity and check tyre pressure.

Control indicator \( \square \) 94.

After adjusting tyre pressure initialise system to extinguish the control indicator and restart system.

**Caution**

Deflation detection system warns just about low tyre pressure condition and does not replace regular tyre maintenance by the driver.

In case of a system malfunction a message is displayed in the Driver Information Centre. Set correct tyre pressure and reinitialise system. If the failure continues to be displayed, contact a workshop. The system is inoperable when ABS or ESC has a malfunction or a temporary spare wheel is used. Once the road tyre has been refitted, check the tyre pressure with cold tyres and initialise the system.

### System initialisation

![System initialisation](image)

After tyre pressure correction or wheel change, the system must be initialised to learn new circumference reference values:

1. Always ensure that all four tyres have correct tyre pressure \( \diamond \) 239.
2. Apply manual parking brake.
3. Press \( \square \) to reset deflation detection system.
4. Reset is confirmed by pop-up indication.

After initialisation system automatically calibrates to new tyre pressures during driving. After longer drive the system will adopt and monitor new pressures.

Always check tyre pressure with cold tyres.

System has to be reinitialised when:

- Tyre pressure has been changed
- Load condition has been changed
- Wheels have been swapped or exchanged

The system will not warn instantaneously on a tyre blow out or a rapid deflation. This is due to required calculation time.

### Tread depth

Check tread depth at regular intervals.

Tyres should be replaced for safety reasons at a tread depth of 2-3 mm (4 mm for winter tyres).
For safety reasons, it is recommended that the tread depth of the tyres on one axle should not vary by more than 2 mm.

The legally permissible minimum tread depth (1.6 mm) has been reached when the tread has worn down as far as one of the tread wear indicators (TWI). Their position is indicated by markings on the sidewall.

If there is more wear at the front than the rear, swap round front wheels and rear wheels periodically. Ensure that the direction of rotation of the wheels remains the same.

Tyres age, even if they are not used. We recommend tyre replacement every 6 years.

Changing tyre and wheel size

If tyres of a different size than those fitted at the factory are used, it may be necessary to reprogramme the speedometer as well as to reinitialise the tyre deflation detection system and make other vehicle modifications.

Tyre deflation detection system § 207.

Have the label with tyre pressures replaced.

⚠️ Warning

The use of unsuitable tyres or wheels may lead to accidents and will invalidate the vehicle operating permit.

Wheel covers

Wheel covers and tyres that are factory approved for the respective vehicle and comply with all of the relevant wheel and tyre combination requirements must be used.

If the wheel covers and tyres used are not factory approved, the tyres must not have a rim protection ridge.

Wheel covers must not impair brake cooling.

⚠️ Warning

Use of unsuitable tyres or wheel covers could lead to sudden pressure loss and thereby accidents.

Vehicles with steel wheels: When using locking wheel nuts, do not attach wheel covers.
Tyre chains

Tyre chains are only permitted on the front wheels.
Always use fine mesh chains that add no more than 10 mm to the tyre tread and the inboard sides (including chain lock).

**Warning**

Damage may lead to tyre blowout.

Tyre chains are only permitted on tyres of size 195/65 R15 91 and 195/60 R16 89

Temporary spare wheel

Tyre chains are not permitted on the temporary spare wheel.

**Tyre repair kit**

Minor damage to the tyre tread can be repaired with the tyre repair kit.
Do not remove foreign bodies from the tyres.
Tyre damage exceeding 4 mm or that is at tyre's sidewall cannot be repaired with the tyre repair kit.

**Warning**

Do not drive faster than 80 km/h.
Do not use for a lengthy period.
Steering and handling may be affected.

If you have a flat tyre:
Apply the parking brake and engage first gear, reverse gear or P.

The tyre repair kit is in the load compartment below the floor cover.

1. Remove the sealant bottle and the compressor.
2. Pull speed limit label from sealant bottle and place it in driver's visible area.
3. Remove the electrical connection cable and air hose from the stowage compartments on the underside of the compressor.

4. Screw the compressor air hose to the connection on the sealant bottle.

5. Fit the sealant bottle into the bracket on the compressor. Set the compressor near the tyre in such a way that the sealant bottle is upright.

6. Unscrew valve cap from defective tyre.

7. Screw the filler hose to the tyre valve.

8. The switch on the compressor must be set to "O".

9. Connect the compressor plug to the power outlet or cigarette lighter socket. To avoid discharging the battery, we recommend running the engine.

10. Set the rocker switch on the compressor to "I". The tyre is filled with sealant.

11. The compressor pressure gauge briefly indicates up to 6 bar whilst the sealant bottle is emptying (approx. 30 seconds). Then the pressure starts to drop.
12. All of the sealant is pumped into the tyre. Then the tyre is being inflated.

13. The prescribed tyre pressure should be obtained within ten minutes.

   Tyre pressure 239.

   When the correct pressure is obtained, switch off the compressor.

   If the prescribed tyre pressure is not obtained within ten minutes, remove the tyre repair kit. Move the vehicle one tyre rotation. Reattach the tyre repair kit and continue the filling procedure for ten minutes. If the prescribed tyre pressure is still not obtained, the tyre is too badly damaged. Seek the assistance of a workshop.

14. Detach the tyre repair kit. Remove sealant bottle from bracket. Screw the filler hose to the free connection of the sealant bottle. This prevents sealant from escaping. Stow tyre repair kit in load compartment.

15. Remove any excess sealant using a cloth.

16. Continue driving immediately so that sealant is evenly distributed in the tyre. After driving approx. 5 km (but no more than ten minutes), stop and check tyre pressure. Screw compressor air hose directly onto tyre valve when doing this. Fill tyre as described before. Drain excess tyre pressure with the button on the air hose.

   If tyre pressure hasn't decreased under 1.5 bar, set it to the correct value. Otherwise the vehicle must not be used. Seek assistance of a workshop. 239
Repeat the checking procedure once more after driving further 10 km (but no more than ten minutes) to check that there is no more loss of pressure.

If the tyre pressure has fallen below 1.5 bar, the vehicle must not be used. Seek the assistance of a workshop.

17. Stow away tyre repair kit in load compartment.

**Note**
The driving characteristics of the repaired tyre are severely affected, therefore have this tyre replaced.

If unusual noise is heard or the compressor becomes hot, turn compressor off for at least 30 minutes.

The built-in safety valve opens at a pressure of seven bar.

Note the expiry date of the kit. After this date its sealing capability is no longer guaranteed. Pay attention to storage information on sealant bottle.

 Replace the used sealant bottle. Dispose of the bottle as prescribed by applicable laws.

The compressor and sealant can be used from approx. -30 °C.

**Wheel changing**

Some vehicles are equipped with a tyre repair kit instead of a spare wheel.

Make the following preparations and observe the following information:

- Park the vehicle on a level, firm and non-skid surface. The front wheels must be in the straight-ahead position.
- Apply the parking brake and engage first gear, reverse gear or P.
- Remove the spare wheel.
- Never change more than one wheel at once.
- Use the jack only to change wheels in case of puncture, not for seasonal winter or summer tyre change.
- The jack is maintenance-free.

- If the ground on which the vehicle is standing is soft, a solid board (max. 1 cm thick) should be placed under the jack.
- Take heavy objects out of the vehicle before jacking up.
- No people or animals may be in the vehicle when it is jacked-up.
- Never crawl under a jacked-up vehicle.
- Do not start the vehicle when it is raised on the jack.
- Before screwing in the wheel bolts, clean them.

⚠️ **Warning**

Do not grease wheel bolts.

⚠️ **Warning**

Ensure to use always the correct wheel bolts if changing the wheels. When installing the spare wheel, the bolts for alloy wheels can also be used.
Note that the spare wheel is secured by the conical contact of each bolt if the wheel bolts for the alloy wheels are used. In this case, the washers do not come into contact with the spare wheel.

1. Disengage wheel bolt caps with a screwdriver and remove.
   - Steel wheels with cover: Pull off the wheel cover.
   - Alloy wheels: Disengage wheel bolt caps with a screwdriver and remove. To protect the wheel, place a soft cloth between the screwdriver and the alloy wheel.

2. Fold out the wheel wrench and install ensuring that it locates securely and loosen each wheel bolt by half a turn.
   - The wheels might be protected by locking wheel bolts. To loosen these specific bolts, first attach the adapter for the locking wheel bolts onto the head of the bolt before installing the wheel wrench. The adapter is located in the load compartment under the rear floor cover.

3. Ensure the jack is correctly positioned under the relevant vehicle jacking point.

4. Set the jack to the necessary height. Position it directly below
the jacking point in a manner that prevents it from slipping.

Ensure that the edge of the body fits into the notch of the jack.

Attach wheel wrench and with the jack correctly aligned rotate wheel wrench until wheel is clear of the ground.

5. Unscrew the wheel bolts.

6. Change the wheel. Spare wheel ø 216.

7. Screw on the wheel bolts.

8. Lower vehicle.

9. Install the wheel wrench ensuring that it is located securely and tighten each bolt in a crosswise sequence. Tightening torque is 100 Nm for all wheels.

   If the vehicle is equipped with alloy wheels, note that the wheel bolts can also be used for the steel spare wheel. In this case, the spare wheel is secured by the conical contact of each bolt.

10. Align the valve hole in the wheel cover with the tyre valve before installing.

11. Stow and secure the replaced wheel ø 216, the vehicle tools ø 105 and the adapter for the locking wheel bolts ø 65.

12. Check the tyre pressure of the installed tyre and the wheel bolt torque as soon as possible.

   Have the defective tyre renewed or repaired as soon as possible.

**Jacking position for lifting platform**

Rear arm position of the lifting platform at the underbody.
Front arm position of the lifting platform at the underbody.

**Spare wheel**

**Mounting the temporary spare wheel**

Only mount one temporary spare wheel. Do not drive faster than 80 km/h. Take curves slowly. Do not use for a long period of time.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The use of a spare wheel that is smaller than the other wheels or in combination with winter tyres could affect driveability. Have the defective tyre replaced as soon as possible.</td>
</tr>
</tbody>
</table>

The temporary spare wheel has a steel rim.

The temporary spare wheel is located in the load compartment beneath the floor covering.

To remove:
1. Open the floor cover.

2. The temporary spare wheel is secured with a wing nut. Turn wing nut anticlockwise and remove the wheel.

   There is a box with tools in the right wall of the load compartment. Vehicle tools 205

3. When, after a wheel change, no wheel is placed in the spare wheel well, secure the tool box by turning right back the wing nut and close the floor cover.

4. After a wheel change back to a full size wheel, place the spare wheel outside up in the well and secure with the wing nut.

If your vehicle gets a flat tyre on the rear while towing another vehicle, mount the temporary spare wheel in the front and the full tyre in the rear.

**Tyre chains 210.**

**Stowing a damaged full size wheel in the load compartment**

The spare wheel well is not designed for other tyre sizes than the temporary spare wheel. A damaged full size wheel must be stowed in the load compartment.
compartment and secured with a strap. Vehicle tools 205. To secure the wheel:

1. Position the wheel outside up close to one sidewall of the load compartment.

2. Place the loop end of the strap through the front lashing eye on the appropriate side.

3. Place the hook end of the strap through the loop and pull it until the strap is fastened securely to the lashing eye.

4. Insert the strap through the spokes of the wheel as shown in the illustration.

5. Mount the hook to the rear lashing eye.

6. Tighten the strap and secure it using the buckle.

---

**Danger**

Always drive with folded up and engaged rear seat backrests when stowing a damaged full size wheel in the load compartment.

---

**Jump starting**

Do not start with quick charger.

A vehicle with a discharged vehicle battery can be started using jump leads and the vehicle battery of another vehicle.

<table>
<thead>
<tr>
<th><strong>Warning</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Be extremely careful when starting with jump leads. Any deviation from the following instructions can lead to injuries or damage caused by battery explosion or damage to the electrical systems of both vehicles.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th><strong>Warning</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Avoid contact of the battery with eyes, skin, fabrics and painted surfaces. The fluid contains sulphuric acid which can cause injuries and damage in the event of direct contact.</td>
</tr>
</tbody>
</table>

- Never expose the vehicle battery to naked flames or sparks.
• A discharged vehicle battery can already freeze at a temperature of 0 °C. Defrost the frozen battery before connecting jump leads.

• Wear eye protection and protective clothing when handling a battery.

• Use a booster battery with the same voltage (12 Volts). Its capacity (Ah) must not be much less than that of the discharged vehicle battery.

• Use jump leads with insulated terminals and a cross section of at least 16 mm² (25 mm² for diesel engines).

• Do not disconnect the discharged vehicle battery from the vehicle.

• Switch off all unnecessary electrical consumers.

• Do not lean over the vehicle battery during jump starting.

• Do not allow the terminals of one lead to touch those of the other lead.

• The vehicles must not come into contact with each other during the jump starting process.

• Apply the parking brake, transmission in neutral, automatic transmission in P.

3. Connect the black lead to the negative terminal of the booster battery.

4. Connect the other end of the black lead to a vehicle grounding point of your vehicle in the engine compartment.

Route the leads so that they cannot catch on rotating parts in the engine compartment.

To start the engine:

1. Start the engine of the vehicle providing the jump.

2. After five minutes, start the other engine. Start attempts should be made for no longer than 15 seconds at an interval of one minute.

3. Allow both engines to idle for approx. three minutes with the leads connected.

4. Switch on electrical consumers (e.g. headlights, heated rear window) of the vehicle receiving the jump start.

5. Reverse above sequence exactly when removing leads.

Open the positive terminal protection caps of both vehicle batteries.

Lead connection order:

1. Connect the red lead to the positive terminal of the booster battery.

2. Connect the other end of the red lead to the positive terminal of the discharged battery.
Towing

Towing the vehicle

Insert a screwdriver in the slot at the bottom of the cap. Release the cap by carefully moving the screwdriver downwards.

The towing eye is stowed with the vehicle tools 205.

Screw in the towing eye as far as it will go until it stops in a horizontal position.

Attach a tow rope – or better still a tow rod – to the towing eye.

The towing eye must only be used for towing and not for recovering the vehicle.

Switch on ignition to release steering wheel lock and to permit operation of brake lights, horn and windscreen wiper.

Switch the selector lever to neutral.

Release the parking brake.

Caution

Drive slowly. Do not drive jerkily. Excessive tractive force can damage the vehicle.

When the engine is not running, considerably more force is needed to brake and steer.

To prevent the entry of exhaust gases from the towing vehicle, switch on the air recirculation and close the windows.

Vehicles with automatic transmission: The vehicle must be towed facing forwards, not faster than 80 km/h nor further than 100 km. In all other cases and when the transmission is defective, the front axle must be raised off the ground.

Seek the assistance of a workshop.

After towing, unscrew the towing eye.

Insert cap with the outer flange into the recess and fix cap by pushing.
Towing another vehicle

Insert a screwdriver in the slot at the bottom of the cap. Release the cap by carefully moving the screwdriver downwards.

The towing eye is stowed with the vehicle tools 205.

Screw in the towing eye as far as it will go until it stops in a horizontal position.

The lashing eye at the rear underneath the vehicle must never be used as a towing eye.

Attach a tow rope – or better still a tow rod – to the towing eye.

The towing eye must only be used for towing and not for recovering a vehicle.

Caution

Drive slowly. Do not drive jerkily. Excessive tractive force can damage the vehicle.

After towing, unscrew the towing eye. Insert cap with the upper flange into the recess and fix cap by pushing.
Appearance care

Exterior care

Locks

The locks are lubricated at the factory using a high quality lock cylinder grease. Use a de-icing agent only when absolutely necessary, as this has a degreasing effect and impairs lock function. After using a de-icing agent, have the locks regreased by a workshop.

Washing

The paintwork of your vehicle is exposed to environmental influences. Wash and wax your vehicle regularly. When using automatic vehicle washes, select a programme that includes waxing.

Bird droppings, dead insects, resin, pollen and the like should be cleaned off immediately, as they contain aggressive constituents which can cause paint damage.

If using a vehicle wash, comply with the vehicle wash manufacturer's instructions. The windscreen wiper and rear window wiper must be switched off. Remove antenna and external accessories such as roof racks etc.

If you wash your vehicle by hand, make sure that the insides of the wheel housings are also thoroughly rinsed out.

Wax painted parts of the vehicle regularly.

Clean edges and folds on opened doors and the bonnet as well as the areas they cover.

Clean bright metal mouldings with a cleaning solution approved for aluminium to avoid damages.

Caution

Always use a cleaning agent with a pH value of four to nine.

Do not use cleaning agents on hot surfaces.

Do not clean the engine compartment with a steam-jet or high-pressure jet cleaner.

Thoroughly rinse and leather-off the vehicle. Rinse leather frequently. Use separate leathers for painted and glass surfaces: remnants of wax on the windows will impair vision.

Have the door hinges of all doors greased by a workshop.

Do not use hard objects to remove spots of tar. Use tar removal spray on painted surfaces.

Exterior lights

Headlight and other light covers are made of plastic. Do not use any abrasive or caustic agents, do not use an ice scraper, and do not clean them dry.

Polishing and waxing

Wax the vehicle regularly (at the latest when water no longer beads). Otherwise, the paintwork will dry out.

Polishing is necessary only if the paint has become dull or if solid deposits have become attached to it.
Paintwork polish with silicone forms a protective film, making waxing unnecessary. Plastic body parts must not be treated with wax or polishing agents.

**Windows and windscreen wiper blades**

Use a soft lint-free cloth or chamois leather together with window cleaner and insect remover.

When cleaning the rear window from inside, always wipe in parallel to the heating element to prevent damage. For mechanical removal of ice, use a sharp-edged ice scraper. Press the scraper firmly against the glass so that no dirt can get under it and scratch the glass.

Clean smearing wiper blades with a soft cloth and window cleaner. Remove dirt residues from smearing wiper blades by using a soft cloth and window cleaner. Also make sure to remove any residues such as wax, insect residues and similar from the window.

Ice residues, pollution and continuous wiping on dry windows will damage or even destroy the wiper blades.

**Glass panel**

Never clean with solvents or abrasive agents, fuels, aggressive media (e.g. paint cleaner, acetone-containing solutions etc.), acidic or highly alkaline media or abrasive pads.

**Wheels and tyres**

Do not use high-pressure jet cleaners.

Clean rims with a pH-neutral wheel cleaner.

Rims are painted and can be treated with the same agents as the body.

**Paintwork damage**

Rectify minor paintwork damage with a touch-up pen before rust forms. Have more extensive damage or rust areas repaired by a workshop.

**Underbody**

Some areas of the vehicle underbody have a PVC undercoating while other critical areas have a durable protective wax coating. After the underbody is washed, check the underbody and have it waxed if necessary. Bitumen/rubber materials could damage the PVC coating. Have underbody work carried out by a workshop. Before and after winter, wash the underbody and have the protective wax coating checked.

**Liquid gas system**

Liquid gas is heavier than air and can collect in sink points. Take care when performing work at the underbody in a pit.
For painting work and when using a drying booth at a temperature above 60 °C, the liquid gas tank must be removed.

Do not make any modifications to the liquid gas system.

**Towing equipment**

Do not clean the coupling ball bar with a steam-jet or high-pressure jet cleaner.

**Interior care**

**Interior and upholstery**

Only clean the vehicle interior, including the instrument panel fascia and panelling, with a dry cloth or interior cleaner.

Clean the leather upholstery with clear water and a soft cloth. In case of heavy soiling, use leather care.

The instrument cluster and the displays should only be cleaned using a soft damp cloth. If necessary use a weak soap solution.

Clean fabric upholstery with a vacuum cleaner and brush. Remove stains with an upholstery cleaner. Clothing fabrics may not be colourfast. This could cause visible discolourations, especially on light-coloured upholstery. Removable stains and discolourations should be cleaned as soon as possible.

Clean seat belts with lukewarm water or interior cleaner.

**Plastic and rubber parts**

Plastic and rubber parts can be cleaned with the same cleaner as used to clean the body. Use interior cleaner if necessary. Do not use any other agent. Avoid solvents and petrol in particular. Do not use high-pressure jet cleaners.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Close Velcro fasteners as open Velcro fasteners on clothing could damage seat upholstery. The same applies to clothing with sharp-edged objects, like zips or belts or studded jeans.</td>
</tr>
</tbody>
</table>
General information

In order to ensure economical and safe vehicle operation and to maintain the value of your vehicle, it is of vital importance that all maintenance work is carried out at the proper intervals as specified.

The detailed, up-to-date service schedule for your vehicle is available at the workshop.

Severe operating conditions exist if one or more of the following circumstances occur frequently: Cold starting, stop and go operation, e.g. for taxis and police vehicles, trailer operation, mountain driving, driving on poor and sandy road surfaces, increased air pollution, presence of airborne sand and high dust content, driving at high altitude and large variations of temperature.

Under these severe operating conditions, certain service work may be required more frequently than the regular service interval indicated in the service display. Contact a workshop for customised service schedules.

Service display 89.

Service intervals - country group 1

Maintenance of your vehicle is required every 25,000 km or after one year, whichever occurs first, unless otherwise indicated in the service display.

These service intervals are valid for the following countries:

Andorra, Austria, Belgium, Cyprus, Denmark, Finland, France, Germany, Greece, Greenland, Iceland, Ireland, Italy, Liechtenstein, Luxembourg, Malta, Monaco, Netherlands, Norway, Portugal, San Marino, Spain, Sweden, Switzerland, United Kingdom.

Service intervals - country group 2

Maintenance of your vehicle equipped with engine EB2F, EB2DT or EB2DTS is required every 15,000 km or after one year, whichever occurs first, unless
otherwise indicated in the service
display. Maintenance of your vehicle
with any other engine than mentioned
before is required every 25,000 km or
after one year, whichever occurs first,
unless otherwise indicated in the
service display.
These service intervals are valid for
the following countries:
Albania, Estonia, Latvia, Lithuania,
Macedonia, Montenegro, Poland,
Serbia, Slovenia.

Service intervals - country group 3
Maintenance of your vehicle
equipped with engine EB2DTS is
required every 10,000 km or after one
year, whichever occurs first, unless
otherwise indicated in the service
display. Maintenance of your vehicle
equipped with engine EB2F or
EB2DT is required every 15,000 km
or after one year, whichever occurs
first, unless otherwise indicated in the
service display. Maintenance of your
vehicle with any other engine than
mentioned before is required every
25,000 km or after one year,

whichever occurs first, unless
otherwise indicated in the service
display.
These service intervals are valid for
the following countries:
Bosnia-Herzegovina, Bulgaria,
Croatia, Czech Republic, Hungary,
Romania, Slovakia.

Service intervals - country group 4
Maintenance of your vehicle is
required every 10,000 km or after one
year, whichever occurs first, unless
otherwise indicated in the service
display.
These service intervals are valid for
the countries which are not listed in
country group 1, 2 or 3.

Confirmations
Confirmation of service is recorded in
the Service and warranty booklet.
The date and mileage is completed
with the stamp and signature of the
servicing workshop.
Make sure that the Service and
warranty booklet is completed
correctly as continuous proof of
service is essential if any warranty or
goodwill claims are to be met, and is
also a benefit when selling the
vehicle.
Recommended fluids, lubricants and parts

Recommended fluids and lubricants

Only use products that meet the recommended specifications.

⚠️ Warning

Operating materials are hazardous and could be poisonous. Handle with care. Pay attention to information given on the containers.

Engine oil

Engine oil is identified by its quality and its viscosity. Quality is more important than viscosity when selecting which engine oil to use. The oil quality ensures e.g. engine cleanliness, wear protection and oil aging control, whereas viscosity grade gives information on the oil’s thickness over a temperature range.

Dexos is the newest engine oil quality that provides optimum protection for gasoline and diesel engines. If it is unavailable, engine oils of other listed qualities have to be used. Recommendations for gasoline engines are also valid for Compressed Natural Gas (CNG), Liquified Petroleum Gas (LPG) and Ethanol (E85) fuelled engines.

Select the appropriate engine oil based on its quality and on the minimum ambient temperature ≥ 230.

Topping up engine oil

Caution

In case of any spilled oil, wipe it up and dispose it properly.

Engine oils of different manufacturers and brands can be mixed as long as they comply with the required engine oil quality and viscosity.

Use of engine oils for all petrol engines with only ACEA quality is prohibited, since it can cause engine damage under certain operating conditions.

Select the appropriate engine oil based on its quality and on the minimum ambient temperature ≥ 230.

Additional engine oil additives

The use of additional engine oil additives could cause damage and invalidate the warranty.

Engine oil viscosity grades

The SAE viscosity grade gives information of the thickness of the oil. Multigrade oil is indicated by two figures, e.g. SAE 5W-30. The first figure, followed by a W, indicates the low temperature viscosity and the second figure the high temperature viscosity.

Select the appropriate viscosity grade depending on the minimum ambient temperature ≥ 230.
All of the recommended viscosity grades are suitable for high ambient temperatures.

**Coolant and antifreeze**

Use only organic acid type-long life coolant (LLC) antifreeze approved for the vehicle. Consult a workshop.

The system is factory filled with coolant designed for excellent corrosion protection and frost protection down to approx. -37 °C. This concentration should be maintained all year round. The use of additional coolant additives that intend to give additional corrosion protection or seal against minor leaks can cause function problems. Liability for consequences resulting from the use of additional coolant additives will be rejected.

**Washer fluid**

Use only washer fluid approved for the vehicle to prevent damage of wiper blades, paintwork, plastic and rubber parts. Consult a workshop.

**Brake and clutch fluid**

Over time, brake fluid absorbs moisture which will reduce braking effectiveness. The brake fluid should therefore be replaced at the specified interval.
Vehicle identification

Vehicle Identification Number

The Vehicle Identification Number may be stamped on the identification plate and on the floor pan, under the floor covering, visible under a cover.

The Vehicle Identification Number may be embossed on the instrument panel, visible through the windshield, or in the engine compartment on the right body panel.

Identification plate

The identification plate is located on the front left or right door frame.
Information on identification label:
1: manufacturer
2: type approval number
3: vehicle identification number
4: permissible gross vehicle weight rating in kg
5: permissible gross train weight in kg
6: maximum permissible front axle load in kg
7: maximum permissible rear axle load in kg
8: vehicle-specific or country-specific data

The combined total of front and rear axle loads must not exceed the permissible gross vehicle weight. For example, if the front axle is bearing its maximum permissible load, the rear axle can only bear a load that is equal to the gross vehicle weight minus the front axle load.

The technical data is determined in accordance with European Community standards. We reserve the right to make modifications. Specifications in the vehicle documents always have priority over those given in this manual.

Engine identification
The technical data tables show the engine identifier code. Engine data 233.
To identify the respective engine, refer to the engine power in the EEC Certificate of Conformity provided with your vehicle or other national registration documents.

Customer information

Declaration of conformity

Transmission systems

This vehicle has systems that transmit and/or receive radio waves subject to Directive 1999/5/EC or 2014/53/EU. The manufacturers of the systems listed below declare conformity with Directive 1999/5/EC or 2014/53/EU. The full text of the EU declaration of conformity for each system is available at the following internet address: www.opel.com/conformity

Importer is
Opel / Vauxhall, Bahnhofsplatz, 65423 Ruesselsheim am Main, Germany.

### Radio remote control transmitter
Hülsbeck & Fürst GmbH & Co. KG
Steeger Str. 17, 42551 Velbert, Germany

- Operation frequency: 433.92 MHz
- Maximum output: 10 dBm

### Radio remote control receiver
Delphi European, Middle Eastern & African Regional Offices Customer Technology
Center Avenue de Luxembourg, L-4940 Bascharage, G.D. of Luxembourg

- Operation frequency: 119.0 - 128.6 kHz
- Maximum output: 16 dBμA/m @ 10m

### Electronic key transmitter
Valeo
43 Rue Bayen, 75017 Paris, France

- Operation frequency: 433.92 MHz
- Maximum output: 10 dBm

### Immobiliser
KOSTAL of America, Inc.
350 Stephenson Hwy, Troy MI 48083, USA

- Operation frequency: 125 kHz
- Maximum output: 5 dBμA/m at 10m
Jack
Translation of the original declaration of conformity
Declaration of conformity according to EC Directive 2006/42/EC
We declare that the product:
Product designation: Jack
Type/GM part number: 3637376
Type/PSA part number: 9649243380
is in compliance with the provisions of Directive 2006/42/EC.
Applied technical standards:
GMN9737 : jacking
GM 14337 : standard equipment jack – hardware tests
GMW15005 : standard equipment jack and spare tyre, vehicle test
ISO TS 16949 : quality management systems

The signatory is authorised to compile the technical documentation.
Rüsselsheim, 13th December 2016
signed by
André-Alexander Konter
Engineering Group Manager Tyre and Wheel Systems
Adam Opel AG
D-65423 Rüsselsheim

Collision damage repair
Paint thickness
Due to production techniques, the thickness of the paint can vary between 50 and 400 µm.
Therefore, different paint thickness is no indicator for a collision damage repair.

Software acknowledgement
Certain OnStar components include libcurl and unzip software and other third party software. Below are the notices and licenses associated with libcurl and unzip and for other third party software please see http://www.lg.com/global/support/opensource/index.

unzip

This is version 2005-Feb-10 of the Info-ZIP copyright and license. The definitive version of this document should be available at ftp://ftp.info-zip.org/pub/infozip/license.html indefinitely.

Copyright (c) 1990-2005 Info-ZIP. All rights reserved.

For the purposes of this copyright and license, "Info-ZIP" is defined as the following set of individuals:

This software is provided “as is,” without warranty of any kind, express or implied. In no event shall Info-ZIP or its contributors be held liable for any direct, indirect, incidental, special or consequential damages arising out of the use of or inability to use this software.

Permission is granted to anyone to use this software for any purpose, including commercial applications, and to alter it and redistribute it freely, subject to the following restrictions:

1. Redistributions of source code must retain the above copyright notice, definition, disclaimer, and this list of conditions.

2. Redistributions in binary form (compiled executables) must reproduce the above copyright notice, definition, disclaimer, and this list of conditions in documentation and/or other materials provided with the distribution. The sole exception to this condition is redistribution of a standard UnZipSFX binary (including SFXWiz) as part of a self-extracting archive; that is
permitted without inclusion of this license, as long as the normal SFX banner has not been removed from the binary or disabled.

3. Altered versions—including, but not limited to, ports to new operating systems, existing ports with new graphical interfaces, and dynamic, shared, or static library versions—must be plainly marked as such and must not be misrepresented as being the original source. Such altered versions also must not be misrepresented as being Info-ZIP releases—including, but not limited to, labeling of the altered versions with the names “Info-ZIP,” “Zip,” “UnZip,” “UnZipSFX,” “WiZ,” “Pocket UnZip,” “Pocket Zip,” and “MacZip” for its own source and binary releases.

Software update
The Infotainment system can download and install selected software updates over a wireless connection.

Note
The availability of these over-the-air vehicle software updates varies by vehicle and country. Find more information on our home page.

Internet connection
Downloading over-the-air vehicle software updates requires internet connectivity, which can be accessed through the vehicle’s built-in OnStar connection or another password-protected Wi-Fi hotspot, e.g. provided by a mobile phone.

To connect the Infotainment system to a hotspot, select Settings on the home screen, Wi-Fi and then Manage Wi-Fi Networks. Select the desired Wi-Fi network, and follow the on-screen prompts.

Updates
The system will prompt for certain updates to be downloaded and installed. There is also an option to check for updates manually.

To manually check for updates, select Settings on the home screen, Software Information and then System Update. Follow the on-screen prompts.

Note
Steps for downloading and installing updates may vary by vehicle.

Note
During the installation process, the vehicle may not be operational.

**Data storage modules in the vehicle**

A large number of electronic components of your vehicle contain data storage modules temporarily or permanently storing technical data about the condition of the vehicle, events and errors. In general, this technical information documents the condition of parts, modules, systems or the environment:

- operating conditions of system components (e.g. filling levels)
- status messages of the vehicle and its single components (e.g. number of wheel revolutions / rotational speed, deceleration, lateral acceleration)
- dysfunctions and defects in important system components
- vehicle reactions in particular driving situations (e.g. inflation of an airbag, activation of the stability regulation system)
- environmental conditions (e.g. temperature)

These data are exclusively technical and help identifying and correcting errors as well as optimising vehicle functions.

Motion profiles indicating travelled routes cannot be created with these data.

If services are used (e.g. repair works, service processes, warranty cases, quality assurance), employees of the service network (manufacturer included) are able to read out this technical information from the event and error data storage modules applying special diagnostic devices. If required, you will receive further information at these workshops. After an error has been corrected, the data are deleted from the error storage module or they are constantly overwritten.

When using the vehicle, situations may occur in which these technical data related to other information (accident report, damages on the vehicle, witness statements etc.) may be associated with a specific person - possibly, with the assistance of an expert.

Additional functions contractually agreed upon with the client (e.g. vehicle location in emergency cases) allow the transmission of particular vehicle data from the vehicle.

### Radio Frequency Identification (RFID)

RFID technology is used in some vehicles for functions such as tyre pressure monitoring and ignition system security. It is also used in connection with conveniences such as radio remote controls for door locking/unlocking and starting, and in-vehicle transmitters for garage door openers. RFID technology in Opel vehicles does not use or record personal information or link with any other Opel system containing personal information.
