Vehicle specific data
Please enter your vehicle's data on the previous page to keep it easily accessible.
Please refer to the sections "Service and maintenance", "Technical data", the vehicle's identification plate and national registration documents.

Introduction
Your vehicle is a designed combination of advanced technology, safety, environmental friendliness and economy.
This Owner's Manual provides you with all the necessary information to enable you to drive your vehicle safely and efficiently.
Make sure your passengers are aware of the possible risk of accident and injury which may result from improper use of the vehicle.
You must always comply with the specific laws and regulations of the country that you are in. These laws may differ from the information in this Owner's Manual.

Disregarding the description given in this manual may affect your warranty. When this Owner's Manual refers to a workshop visit, we recommend your Opel Service Partner.
All Opel Service Partners provide first-class service at reasonable prices. Experienced mechanics trained by Opel work according to specific Opel instructions.
The customer literature pack should always be kept ready to hand in the vehicle.

Using this manual
- This manual describes all options and features available for this model. Certain descriptions, including those for display and menu functions, may not apply to your vehicle due to model variant, country specifications, special equipment or accessories.
- The "In brief" section will give you an initial overview.

- The table of contents at the beginning of this manual and within each section shows where the information is located.
- The index will enable you to search for specific information.
- This Owner's Manual depicts left-hand drive vehicles. Operation is similar for right-hand drive vehicles.
- The Owner's Manual uses the engine identifier code. The corresponding sales designation and engineering code can be found in the section "Technical data".
- Directional data, e.g. left or right, or front or back, always relate to the direction of travel.
- Displays may not support your specific language.
- Display messages and interior labelling are written in bold letters.

Your Opel Team
Initial drive information

Vehicle unlocking

Press  to unlock the vehicle. Open the doors by pulling the handles.
Press  to unlock the tailgate only.

Tailgate

After unlocking, press the tailgate button and open the tailgate.
Radio remote control  22.
Central locking system  24.
Electronic key system  23.
Load compartment  30.
Seat adjustment

Longitudinal adjustment

Pull handle, slide seat, release handle. Try to move the seat back and forth to ensure that the seat is locked in place.

Seat position ➔ 46.
Manual seat adjustment ➔ 47.

Backrests inclination

Turn handwheel. Do not lean on backrest when adjusting.
Seat position ➔ 46.
Manual seat adjustment ➔ 47.

Seat height

Lever pumping motion
up : seat higher
down : seat lower

Seat position ➔ 46.
Manual seat adjustment ➔ 47.
In brief

Seat inclination

Press switch
top : front end higher
bottom : front end lower

Seat position 46.
Manual seat adjustment 47.

Head restraint adjustment

Press release button, adjust height, engage.
Head restraints 45.

Seat belt

Pull out the seat belt and fasten in seat belt buckle. The seat belt must not be twisted and must fit close against the body. The backrest must not be tilted back too far (maximum approx. 25°).

To unfasten seat belt, press red button on seat belt buckle.
Seat position 46.
Seat belts 52.
Airbag system 55.

**Mirror adjustment**

**Interior mirror**

To adjust the mirror, move the mirror housing in the desired direction.

- Automatic anti-dazzle interior mirror 39.

**Exterior mirrors**

Select the relevant exterior mirror by pushing the mirror button to the left or right. Adjust respective mirror by the four-way control.

- Convex mirrors 37.
- Electric adjustment 37.
- Folding mirrors 38.
- Heated mirrors 38.

**Steering wheel adjustment**

Unlock lever, adjust steering wheel, then engage lever and ensure it is fully locked. Do not adjust steering wheel unless vehicle is stationary and steering wheel lock has been released.

- Seat position 46.
- Ignition positions 135.

Automatic transmission  148.

Starting off

Check before starting off

- tyre pressure  232 and condition  267
- engine oil level and fluid levels  215
- all windows, mirrors, exterior lighting and number plates are free from dirt, snow and ice and are operational
- proper position of mirrors  37, seats  46 and seat belts  53
- brake function at low speed, particularly if the brakes are wet
Starting the engine

Ignition switch

- turn key to position 1
- move the steering wheel slightly to release the steering wheel lock
- manual transmission: operate clutch and brake pedal
- automatic transmission: operate brake pedal and move selector lever to P or N
- do not operate accelerator pedal

- Diesel engine: wait until control indicator ! for preheating extinguishes
- turn key to position 2 and release after engine has been started

Start power button

- manual transmission: operate clutch and brake pedal
- automatic transmission: operate brake pedal and move selector lever to P or N
- do not operate accelerator pedal
- press Start/Stop button
- release button after starting procedure begins
Stop-start system

If the vehicle is at a low speed or at a standstill and certain conditions are fulfilled, an Autostop is activated.

An Autostop is indicated by control indicator A.

Manual transmission: to restart the engine, depress the clutch pedal again. Control indicator A extinguishes.

Automatic transmission: to restart the engine, release the brake pedal. Control indicator A extinguishes.

Stop-start system ◀ 139.

Parking

⚠️ Warning

- Do not park the vehicle on an easily ignitable surface. The high temperature of the exhaust system could ignite the surface.
- Always apply the parking brake.
- If the vehicle is on a level surface or uphill slope, engage first gear or set the selector lever to position P. On an uphill slope, turn the front wheels away from the kerb.
- If the vehicle is on a downhill slope, engage reverse gear or set the selector lever to position P. Turn the front wheels towards the kerb.
- Close the windows.
- Switch off the engine.
- Remove the ignition key from the ignition switch or switch off ignition on vehicles with power button. Turn the steering wheel until the steering wheel lock is felt to engage.

- Lock the vehicle with ☾ on the radio remote control.
- Activate the anti-theft alarm system ☾ 35.
- The engine cooling fans may run after the engine has been switched off ☾ 214.

⚠️ Caution

After running at high engine speeds or with high engine loads, operate the engine briefly at a low load or run in neutral for approx. 30 seconds before switching off, in order to protect the turbocharger.

Keys, locks ☾ 21.

Replacement keys
The key number is specified on a detachable tag.
The key number must be quoted when ordering replacement keys as it is a component of the immobiliser system.
Locks ◊ 247.
Central locking ◊ 24.
Starting the engine ◊ 137.
Radio remote control ◊ 22.
Electronic key ◊ 23.
The code number of the adapter for the locking wheel nuts is specified on a card. It must be quoted when ordering a replacement adapter.
Wheel changing ◊ 239.
Key with foldaway key section

Press button to extend. To fold the key, first press the button.

Radio remote control

Enables operation of the following functions via the use of the remote control buttons:

- central locking system 24
- anti-theft locking system 35
- anti-theft alarm system 35
- tailgate unlocking and opening
- power windows 40
- mirrors folding 38

The remote control has a range of up to 100 m, but may also be much less due to external influences. The hazard warning flashers confirm operation.

Handle with care, protect from moisture and high temperatures and avoid unnecessary operation.

Replacing battery in radio remote control

Replace the battery as soon as the range reduces.

Batteries do not belong in household waste. They must be disposed of at an appropriate recycling collection point.
1. Remove the back cover from the remote control.
2. Extract the flat battery from its location.
3. Replace battery with a battery of the same type. Pay attention to the installation position.
4. Clip the back cover in place.

Fault
If the central locking system cannot be operated with the radio remote control, the cause may be one of the following:

- Fault in radio remote control.
- Electronic key is out of reception range.
- The battery voltage is too low.
- Overload of the central locking system by operating at frequent intervals, the power supply is interrupted for a short time.
- Interference from higher-power radio waves from other sources.

Electronic key system

Enables a keyless operation of the following functions:

- central locking system ✤ 24
- power tailgate ✤ 30
- ignition switching on and starting the engine ✤ 137

The electronic key simply needs to be on the driver's person.

Additionally, the electronic key includes the functionality of the radio remote control ✤ 22.

Handle with care, protect from moisture and high temperatures and avoid unnecessary operation.
Note
To save battery power, the keyless functions are set to stand-by after 21 days of non-use. To reactivate the functions, press a button on the electronic key.

Replacing battery in electronic key
Replace the battery as soon as the system no longer operates properly or the range is reduced. The need for battery replacement is indicated by a message in the Driver Information Centre 107.

1. Remove the cover.
2. Extract the flat battery from its location.
3. Replace battery with a battery of the same type. Pay attention to the installation position.
4. Clip the cover in place.

Fault
If the central locking cannot be operated or the engine cannot be started, the cause may be one of the following:
- Fault in electronic key.
- Electronic key is out of reception range.
- The battery voltage is too low.
- Overload of the central locking system by operating at frequent intervals, the power supply is interrupted for a short time.
- Interference from higher-power radio waves from other sources.

To rectify the cause of the fault, change the position of the electronic key.

Central locking system
Unlocks and locks doors, load compartment and fuel filler flap.
A pull on an interior door handle unlocks the respective door. Pulling the handle once more opens the door.

Note
In the event of an accident in which airbags or belt pretensioners are deployed, the vehicle is automatically unlocked.

Note
A short time after unlocking with the remote control the doors are locked automatically if no door has been
opened. A precondition is that the setting is activated in the vehicle personalisation 108.

Remote control operation

Unlocking

Press  .

Unlocking mode can be set in the vehicle personalisation menu in the Info Display. Two settings are selectable:

- All doors, load compartment and fuel filler flap will be unlocked by pressing  once.
- Only the driver's door and fuel filler flap will be unlocked by pressing  once. To unlock all doors, load compartment and fuel filler flap, press  twice.

Select the relevant setting in the Vehicle personalisation.

Vehicle personalisation 108.

Unlocking the tailgate

Press  longer to unlock the tailgate only.

Unlocking and opening the tailgate 30.

Locking

Close doors, load compartment and fuel filler flap.

Press  .

If the vehicle is not closed properly, the central locking system will not work.

Confirmation

Operation of the central locking system is confirmed by the hazard warning flashers. A precondition is that the setting is activated in the vehicle personalisation 108.
Electronic key system operation

Unlocking

The electronic key must be outside the vehicle, within a range of approx. 1 m of the relevant door side.

Pass a hand behind the door handle of a front door to unlock the vehicle or press the tailgate button.

Unlocking mode can be set in the vehicle personalisation menu in the Info Display. Two settings are selectable:

- Only the driver's door and fuel filler flap will be unlocked by passing a hand behind the driver's door handle.
- All doors, load compartment and fuel filler flap will be unlocked by passing a hand behind the passenger's door handle or by pressing the tailgate button.
- Only the tailgate will be unlocked by pressing the tailgate button.

Vehicle personalisation ➤ 108.

Locking

Press marking of the front door handles.

Entire vehicle will be locked.
If the vehicle is not closed properly, the electronic key remains in the vehicle or the ignition is not off, locking will not be permitted and a warning chime sounds.

Keep the hand behind the door handle or keep the tailgate button pressed to close the windows.

Unlocking and opening the tailgate
The tailgate can be unlocked and opened hands-free by pushing the touchpad under the tailgate moulding when the electronic key is in range. The doors remain locked.
Load compartment 30.

Operation with buttons on the electronic key

![Electronic key](image)

The central locking system can also be operated with the buttons on the electronic key.
Press ‡ to unlock.
Press † to lock.
Press ‡ longer to unlock and open only the power tailgate.
Remote control operation 24.

Confirmation
Operation of central locking system is confirmed by the hazard warning flashers. A precondition is that the setting is activated in the vehicle personalisation 108.

Central locking button
Locks or unlocks all doors, the load compartment and fuel filler flap from inside the passenger compartment.

![Central locking button](image)

Press ‡ to lock. The LED in the button illuminates.
Press ‡ again to unlock. The LED in the button extinguishes.
Operation with the key in case of a central locking system fault

In case of a fault, e.g. vehicle battery or remote control / electronic key battery is discharged, the driver's door can be locked or unlocked with the mechanical key.

**Manual unlocking**
Electronic key: press and hold the latch to extract the integral key.

Manually unlock the driver's door by inserting and turning the key in the lock cylinder.

The other doors can be opened by pulling the interior handle. The load compartment and fuel filler flap will possibly not be unlocked.

By switching on the ignition, the anti-theft locking system is deactivated.

**Manual locking**

Manually lock the driver's door by inserting and turning the key in the lock cylinder.

To lock the other doors, remove the black cover by using a key.

Insert key carefully and move to the inner side of the door without turning the key.

Remove key and attach black cover.

The fuel filler flap and tailgate are possibly not locked.

**Automatic locking**

**Automatic locking after driving off**

This system allows automatic locking of the doors and tailgate as soon as the speed of the vehicle exceeds a certain speed.
If one of the doors or the tailgate is open, the automatic central locking does not take place. This is signalled by the sound of the locks rebounding, accompanied by illumination of ⬇️ in the instrument cluster, an audible signal and the display of an alert message.

This function can be activated or deactivated at any time. With the ignition on, press ⬇️ until an audible signal starts and a corresponding message is displayed.

The state of the system stays in memory when switching off the ignition.

Automatic relock after unlocking

This feature automatically locks all doors, load compartment and fuel filler flap a short time after unlocking with the remote control or electronic key, provided no door has been opened.

Child locks

⚠️ Warning

Use the child locks whenever children are occupying the rear seats.

Mechanical child locks

Turn the red child lock in the rear door to the horizontal position by using a key. The door cannot be opened from the inside.

To deactivate, turn the child lock to the vertical position.
Electric child locks

Remotely operated system to prevent opening of the rear doors via the interior door handles and the use of the rear power windows.

**Switching on**
Press Δ. The indicator light in the button comes on, accompanied by a confirmation message. This indicator light remains on until the child lock is switched off.

**Switching off**
Press Δ again. The indicator light on button goes off, accompanied by a confirmation message.

Doors

Load compartment

Tailgate

Opening

After unlocking, press the tailgate button and open the tailgate.

Closing

Use the interior handle.
Do not push the touchpad whilst closing as this will unlock the tailgate again.
Central locking system 24.
**Power tailgate**

⚠️ **Warning**

Take care when operating the power tailgate. Risk of injury, particularly to children.
Keep a close watch on the movable tailgate when operating. Ensure that nothing becomes trapped during operating and no one is standing within the moving area.

The power tailgate can be operated by:
- Pressing ⌁ longer on the electronic key.
- Hands-free operation with motion sensor below the rear bumper.
- The tailgate button and ⌁ in the open tailgate.

On vehicles with automatic transmission, the tailgate can only be operated when the vehicle is stationary and automatic transmission in P.

The turn lights flash and a chime sounds when the power tailgate is operating.

**Note**
Operating the power tailgate does not operate the central locking system. To open the tailgate with the button on the electronic key, or with the tailgate button or via hands-free operation, it is not necessary to unlock the vehicle. A precondition is that the electronic key is outside the vehicle, within a range of approx. 1 m of the tailgate.

Do not leave the electronic key in the load compartment.

Lock the vehicle after closing if it was unlocked previously.

Central locking system ⚜️ 24.

**Operation with the electronic key**

Press ⌁ longer to open or close the tailgate.
Hands-free operation

To open or close the tailgate move the foot below the rear bumper back and forth in the area below the number plate. Do not hold the foot longer or move too slow below the bumper. The electronic key must be outside the vehicle, within a range of approx. 1 m of the tailgate.

Activation or deactivation of hands-free operation can be set in the menu Settings → Vehicle in the Info Display. Info Display → 103. Vehicle personalisation → 108.

⚠️ Danger

Do not touch any vehicle parts below the vehicle during hands-free operation. There is a risk of injury from hot engine parts.

Automatic locking after hands-free operation

Press button ⚒️ in the open tailgate, the whole vehicle will be locked after hands-free closing of the tailgate.

Operation with the tailgate button

To open the tailgate, press the tailgate button until the tailgate starts to move. If the vehicle is locked, the electronic key must be outside the vehicle, within a range of approx. 1 m of the tailgate.
To close, press $$\text{T}$$ in the open tailgate until the tailgate starts to move.

**Stop or change direction of movement**

Stop movement of the tailgate immediately:

- press $$\text{P}$$ longer on the electronic key, or
- press the tailgate button, or
- press $$\text{T}$$ on the open tailgate

Pressing one of the switches again will reverse the direction of movement.

**Adjust reduced opening height**

1. Open power tailgate with any operation switch.
2. Stop movement at the desired height by pressing $$\text{P}$$, if required, manually move the stopped tailgate to the desired position.
3. Press and hold the button $$\text{P}$$ on the inside of the open tailgate for 3 seconds.

**Note**

Adjusting opening height should be programmed at ground level.

A chime sound indicates the new setting and the turn lights will flash. The reduced height can only set at an opening angle of above 30°.

To delete reduced height position, open tailgate in half position and press $$\text{P}$$ for 3 seconds.

The tailgate can only be held open if a minimum height is exceeded (minimum opening angle from 30°). The opening height cannot be programmed below that height.

**Safety function**

If the power tailgate encounters an obstacle during opening or closing, the direction of movement will automatically be reversed slightly. Multiple obstacles in one power cycle will deactivate the function. In this case, close or open the tailgate manually.

The power tailgate has pinch sensors on the side edges. If the sensors detect obstacles between tailgate and chassis, the tailgate will open, until it is activated again or closed manually.

The safety function is indicated by a warning chime.
Remove all obstacles before resuming normal power operation.

If the vehicle is equipped with factory-fitted towing equipment and a trailer is electrically connected, the power tailgate can only be opened with the tailgate button or closed with $<$ in the open tailgate. Ensure that there are no obstacles in the moving area.

**Overload**
If the power tailgate is repeatedly operated at short intervals, the function is disabled for some time. Move tailgate manually into end position to reset the system.

**Initialising power tailgate**
If the power tailgate cannot be operated automatically (e.g. after disconnecting the vehicle battery), a warning message is displayed in the Driver Information Centre. Activate electronics as follows:

1. Open tailgate manually.
2. Close tailgate manually.
3. Switch on ignition.

Seek the assistance of a workshop if the problem is not solved.

**General hints for operating tailgate**

**Danger**
Do not drive with the tailgate open or ajar, e.g. when transporting bulky objects, since toxic exhaust gases, which cannot be seen or smelled, could enter the vehicle. This can cause unconsciousness and even death.

**Caution**
Before opening the tailgate, check overhead obstructions, e.g. a garage door, to avoid damage to the tailgate. Always check the moving area above and behind the tailgate.

**Note**
The installation of certain heavy accessories onto the tailgate may affect its ability to remain open.

**Note**
The operation of the power tailgate is disabled under low vehicle battery conditions. In this case, the tailgate may not even by manually operable.

**Note**
With the power tailgate disabled and all doors unlocked, the tailgate can only be operated manually. In this event, manually closing the tailgate requires significantly greater force.

**Note**
At low outside temperatures the tailgate may not open fully by itself. In this case lift the tailgate manually to its normal end position.
Vehicle security

Anti-theft locking system

⚠️ Warning

Do not use the system if there are people in the vehicle! The doors cannot be unlocked from the inside.

The system deadlocks all the doors. All doors must be closed otherwise the system cannot be activated.

Unlocking the vehicle disables the mechanical anti-theft locking system. This is not possible with the central locking button.

Activating

Press ✿ on the radio remote control twice within 5 seconds.

Anti-theft alarm system

The anti-theft alarm system is combined with the anti-theft locking system.

It monitors:
- doors, tailgate, bonnet
- passenger compartment including adjoining load compartment

- vehicle inclination, e.g. if it is raised
- ignition

Activation

All doors, the load compartment and the engine compartment must be closed and the electronic key must not remain in the vehicle.

- Radio remote control: activated 45 seconds after locking the vehicle by pressing ✿ once.
- Electronic key system: activated 45 seconds after locking the vehicle by pressing with a finger or thumb on one of the front door handles at the markings.

If a door, the tailgate or the bonnet is not properly closed, the vehicle is not locked. However, the anti-theft alarm is self-activated after 45 seconds.

Note

Changes to the vehicle interior such as the use of seat covers and open windows, could impair the function of passenger compartment monitoring.
Activation without monitoring of passenger compartment and vehicle inclination

Switch off the monitoring of passenger compartment and vehicle inclination when animals are being left in the vehicle, because of high volume ultrasonic signals or movements triggering the alarm. Also switch off when the vehicle is on a ferry or train.

1. Close tailgate, bonnet, windows.
2. Switch off ignition and press \( \text{Α} \) within 10 seconds until the LED in the button \( \text{Α} \) illuminates.
3. Close doors.
4. Activate the anti-theft alarm system.

**Indication**

LED in the \( \text{Α} \) button flashes if the anti-theft alarm system is activated. The hazard warning lights illuminates for a few seconds.

**Deactivation**

Radio remote control: Unlocking the vehicle by pressing \( \text{Α} \) deactivates the anti-theft alarm system.

Electronic key system: Unlocking the vehicle by pressing \( \text{Α} \) deactivates the anti-theft alarm system.

The electronic key must be outside the vehicle, within a range of approx. 1 m of the relevant door side.

The system is not deactivated by unlocking the driver’s door with the key or with the central locking button in the passenger compartment.

The hazard warning lights flash for a few seconds.

**Alarm**

When triggered, the alarm siren sounds and the hazard warning lights flash simultaneously. The number and duration of alarm signals are stipulated by legislation.

The anti-theft alarm system can be deactivated by pressing \( \text{Α} \), by pressing on one of the front door handles at the markings with electronic key system or switching on the ignition.
A triggered alarm, which has not been interrupted by the driver, will be indicated by the LED in the button. The LED will flash quickly the next time the vehicle is unlocked with the radio remote control.

If the battery has been reconnected (e.g. after maintenance work), wait for 10 minutes to restart the engine.

Fault

If the LED in the button illuminates permanently when switching on the ignition, seek the assistance of a workshop.

Locking the vehicle without activation of the anti-theft alarm

Lock the vehicle by locking the driver’s door with the integral key.

Immobiliser

The system is part of the ignition switch and checks whether the vehicle is allowed to be started with the key being used.

The immobiliser is activated automatically after the key has been removed from the ignition switch.

Note

Radio Frequency Identification (RFID) tags may cause interference with the key. Do not have it placed near the key when starting the vehicle.

Note

The immobiliser does not lock the doors. Always lock the vehicle after leaving it.

Switch on the anti-theft alarm system.

Emergency operation of electronic key

Exterior mirrors

Convex shape

The shape of the mirror makes objects appear smaller, which will affect the ability to estimate distances.

Side blind spot alert

Electric adjustment

Select the relevant exterior mirror by pushing the mirror button to the left or right.

Then swivel the control to adjust the mirror.
For pedestrian safety, the exterior mirrors will swing out of their normal mounting position if they are struck with sufficient force. Reposition the mirror by applying slight pressure to the mirror housing.

**Folding mirrors**

**Electric folding**

- Pull mirror button rearwards. Both exterior mirrors will fold.
- Pull mirror button rearwards again to return both exterior mirrors to their original position.
- If an electrically folded mirror is manually extended, pulling mirror button rearwards will only electrically extend the other mirror.

**Automatic folding**

- When the vehicle is unlocked, the mirrors swing to their normal mounting position. When the vehicle is locked, the mirrors are folded down.

To enable or disable automatic folding of the exterior mirrors, consult a workshop.

**Heated mirrors**

- Operated by pressing 🛡️.
- Heating works with the engine running and is switched off automatically after a short time.
- Heated rear window ⬇️ 41.
Interior mirrors

Manual anti-dazzle

To reduce dazzle, adjust the lever on the underside of the mirror housing.

Automatic anti-dazzle

Dazzle from following vehicles is automatically reduced, when driving in the dark.

Windows

Windscreen

Windscreen stickers

Do not attach stickers such as toll road stickers or similar on the windscreen in the area of the interior mirror. Keep the sensor free from dust, dirt and ice. Otherwise the detection zone of the rain sensor / light sensor and the view area of the camera in the mirror housing could be restricted.

Sensors ◇ 81, ◇ 114
## Windscreen replacement

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>If the vehicle has a front-looking camera sensor for the driver assistance systems, it is very important that any windscreen replacement is performed accurately according to Opel specifications. Otherwise, these systems may not work properly and there is a risk of unexpected behaviour and/or messages from these systems.</td>
</tr>
</tbody>
</table>

## Power windows

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Take care when operating the power windows. Risk of injury, particularly to children. If there are children on the rear seats, switch on the child safety system for the power windows.</td>
</tr>
</tbody>
</table>

Keep a close watch on the windows when closing them. Ensure that nothing becomes trapped in them as they move.

Switch on ignition to operate power windows.

Operate the switch for the respective window by pushing to open or pulling to close.

Pushing or pulling gently to the first detent: window moves up or down as long as the switch is operated.

Pushing or pulling firmly to the second detent then releasing: window moves up or down automatically with safety function enabled. To stop movement, operate the switch once more in the same direction.

### Safety function

If the window glass encounters resistance above the middle of the window during automatic closing, it is immediately stopped and opened again.

### Override safety function

In the event of closing difficulties due to frost or the like, switch on the ignition, then pull the switch to the first detent and hold. The window moves up without safety function enabled. To stop movement, release the switch.
Child safety system for rear windows

Press ⌠ to deactivate rear door power windows; the LED illuminates. To activate, press ⌠ again.

Operating windows from outside

The windows can be operated remotely from outside the vehicle.

Press and hold ⌠ to close windows. Release button to stop window movement.
If the windows are fully closed, the hazard warning lights will flash twice.

Overload

If the windows are repeatedly operated within short intervals, the window operation is disabled for some time.

Initialising the power windows

If the windows cannot be closed automatically (e.g. after disconnecting the vehicle battery), a warning message is displayed in the Driver Information Centre.
Vehicle messages ⧗ 107.
Activate the window electronics as follows:
1. Close doors.
2. Switch on ignition.
3. Pull switch until the window is closed and keep pulling for additional 2 seconds.
4. Push switch until the window is completely open and keep pushing for additional 2 seconds.
5. Repeat for each window.

Heated rear window

Operated by pressing ⌠ together with heated exterior mirrors.
Heating works with the engine running and is switched off automatically after a short time.
Depending on climate control system, is located at a different position.

Vehicles with heating and ventilation system or air conditioning system

Heated windscreen
Operated by pressing . LED in button illuminates.
Heating works with the engine running and is switched off automatically after a short time.
Depending on climate control system, is located at a different position.
Sun visors
The sun visors can be folded down or swivelled to the side to prevent dazzling.
If the sun visors have integral mirrors, the mirror covers should be closed when driving.
A ticket holder is located on the backside of the sun visor.

Roller blinds
To reduce sunlight at the second row seats, pull the blind upwards using the grip and engage it at the top of the door frame.

Roof

Glass panel

Sunblind

Press gently to the first detent at the rear: the sunblind is opened as long as the switch is operated.
Press firmly to the second detent and then release at the rear: the sunblind is opened as long as the switch is operated.
Press gently to the first detent at the front: the sunblind is closed as long as the switch is operated.
Press firmly to the second detent and then release at the front: the sunblind is closed as long as the switch is operated.

Safety function
If the sunblind encounters resistance during automatic closing, it is immediately stopped and opened again.

Function standby
In ignition switch position 1 the sunblind is operational.

Initialising after a power failure
After a power failure, it may only be possible to operate the sunblind to a limited extent. Initialise the system as follows:
1. Turn key in ignition switch to position 1.
2. Press twice gently to the first detent at the rear, the sunblind opens slightly.
3. Immediately press twice gently to the first detent at the front, the sunblind closes slightly.
After step 3 the sunblind is in initialising mode without safety function.

4. Press $\mathcal{N}$ gently to the first detent at the rear until the sunblind is completely opened.

5. Press $\mathcal{N}$ gently to the first detent at the front until the sunblind is completely closed.

After this procedure, the sunblind is initialised with safety function activated.

When $\mathcal{N}$ is pressed firmly to the second detent during initialising, the procedure is cancelled.

Head restraints

Position

⚠️ Warning

Only drive with the head restraint set to the proper position.

Adjustment

Head restraints on front seats

Height adjustment

Pull the head restraint upwards or press the catch to release and push the head restraint downwards.

The upper edge of the head restraint should be at upper head level. If this is not possible for extremely tall people, set to highest position, and set to lowest position for small people.
Head restraints on rear seats

Height adjustment
Pull the head restraint upwards or press the catch to release and push the head restraint downwards.

Removal
Press catch, pull the respective head restraint upwards and remove.

Front seats

Seat position

⚠️ Warning
Only drive with the seat correctly adjusted.

⚠️ Warning
Never adjust seats while driving as they could move uncontrollably.

⚠️ Danger
Do not sit closer than 25 cm to the steering wheel, to permit safe airbag deployment.

⚠️ Warning
Never store any objects under the seats.

- Sit with buttocks as far back against the backrest as possible. Adjust the distance between the seat and the pedals so that legs are slightly angled when pressing the pedals. Slide the front passenger seat as far back as possible.

- Set seat height high enough to have a clear field of vision on all sides and of all display instruments. There should be at least one hand of clearance between head and the roof frame. Your thighs should rest lightly on the seat without pressing into it.
• Sit with shoulders as far back against the backrest as possible. Set the backrest rake so that it is possible to easily reach the steering wheel with arms slightly bent. Maintain contact between shoulders and the backrest when turning the steering wheel. Do not angle the backrest too far back. We recommend a maximum rake of approx. 25°.

• Adjust seat and steering wheel in a way that the wrist rests on top of the steering wheel while the arm is fully extended and shoulders are on the backrest.

• Adjust the steering wheel 80.

• Adjust the head restraint 45.

• Adjust the height of the seat belt 53.

• Adjust the thigh support so that there is a space approx. two fingers wide between the edge of the seat and the hollow of the knee.

• Adjust the lumbar support so that it supports the natural shape of the spine.

---

### Manual seat adjustment

Drive only with engaged seats and backrests.

#### Longitudinal adjustment

Pull handle, slide seat, release handle. Try to move the seat back and forth to ensure that the seat is locked in place.

#### Backrest inclination

Turn handwheel. Do not lean on backrest when adjusting.

---
Seat height

Lever pumping motion
up : seat higher
down : seat lower

Seat inclination

Press switch
at the rear : front end higher
at the front : front end lower

Lumbar support

Adjust lumbar support using the four-way switch to suit personal requirements.
Moving support up and down: push switch up or down.
Increasing and decreasing support: push switch forwards or backwards.
Adjustable thigh support

Pull the lever and slide the thigh support.

Power seat adjustment

⚠️ Warning

Care must be taken when operating the power seats. There is a risk of injury, particularly for children. Objects could become trapped.

Keep a close watch on the seats when adjusting them. Vehicle passengers should be informed accordingly.

Longitudinal adjustment

Move switch forwards / backwards.

Seat height

Move switch upwards / downwards.

Seat inclination
Move front of switch upwards / downwards.

**Backrest inclination**

Turn switch forwards / backwards. Lumbar support, adjustable thigh support, see manual seat adjustment 47.

**Memory function for power seat adjustment**

Two different driver's seat settings can be stored. Vehicle personalisation 108.

**Storing memory position**
- Adjust driver's seat to desired position.
- Press and hold M and 1 or 2 simultaneously until a chime sounds.

**Recall of memory positions**
Press and hold 1 or 2 until the stored seat position has been reached. Releasing the button during seat movement cancels the recall.

**Safety function**
If the driver's seat encounters resistance during movement, the recall may stop. After removing the obstruction, press and hold the appropriate memory position button for 2 seconds. Try recalling the memory position again. If the recall does not operate, consult a workshop.

**Overload**
If the seat setting is electrically overloaded, the power supply is automatically cut-off for a short time.

**Note**
After an accident in which airbags have been deployed, the memory function for each position button will be deactivated.
Armrest

The armrest can be slid forwards by 10 cm. Pull the handle to slide the armrest. Under the armrest there is a storage compartment.

Heating

Adjust heating to the desired setting by pressing \( \mathbb{H} \) for the respective seat one or more times. The control indicator in the button indicates the setting.

Prolonged use of the highest setting for people with sensitive skin is not recommended.

Seat heating is operational when engine is running and during an Autostop.

Stop-start system \( \blacklozenge \) 139.

Ventilating

Activate ventilation by pressing \( \mathbb{H} \) for the respective front seat.

Ventilated seats are operational when engine is running and during an Autostop.

Stop-start system \( \blacklozenge \) 139.
Rear seats

Armrest

Fold armrest down. The armrest contains cupholders.

Heating

Adjust seat heating by turning thumb wheel 🔄 for the respective rear outer seat to the desired setting.

Prolonged use of the highest setting for people with sensitive skin is not recommended.

Seat heating is operational when engine is running and during an Autostop.

Seat belts

The seat belts are locked during heavy acceleration or deceleration of the vehicle, holding the occupants in the seat position. Therefore the risk of injury is considerably reduced.

⚠️ Warning

Fasten seat belt before each trip.

In the event of an accident, people not wearing seat belts endanger their fellow occupants and themselves.
Seat belts are designed to be used by only one person at a time.

Child restraint system ◇ 62.

Periodically check all parts of the seat belt system for damage, soiling and proper functionality.

Have damaged components replaced. After an accident, have the seat belts and triggered seat belt pretensioners replaced by a workshop.

Note
Make sure that the seat belts are neither damaged by shoes or sharp-edged objects nor trapped. Prevent dirt from getting into the seat belt retractor.

Seat belt reminder
Each seat is equipped with a seat belt reminder, indicated by a control indicator ✉️ for the respective seat in the overhead console.

Seat belt reminder ◇ 94.

Seat belt force limiters
Stress on the body is reduced by the gradual release of the seat belt during a collision.

Seat belt pretensioners
In the event of a head-on, rear-end or side-on collision of a certain severity, the front seat belts and the outer rear seat belts are tightened by seat belt pretensioners.

⚠️ Warning
Incorrect handling (e.g. removal or fitting of seat belts) can trigger the seat belt pretensioners.

Deployment of the seat belt pretensioners is indicated by continuous illumination of control indicator ✉️.

Airbag and seat belt pretensioners ◇ 94

Triggered seat belt pretensioners must be replaced by a workshop. Seat belt pretensioners can only be triggered once.

Note
Do not affix or install accessories or other objects that may interfere with the operation of the seat belt pretensioners. Do not make any modifications to seat belt pretensioner components as this will invalidate the vehicle operating permit.

Three-point seat belt

Fasten

Withdraw the seat belt from the retractor, guide it untwisted across the body and insert the latch plate into
the buckle. Tighten the lap belt regularly whilst driving by pulling the shoulder belt.

Loose or bulky clothing prevents the seat belt from fitting snugly. Do not place objects such as handbags or mobile phones between the seat belt and your body.

⚠️ Warning

The seat belt must not rest against hard or fragile objects in the pockets of your clothing.

Seat belt reminder ⚠️ 94.

### Height adjustment

1. Pull seat belt out slightly.
2. Press the button to disengage the height adjuster and push it upwards or downwards.

Adjust the height so that the seat belt lies across the shoulder. It must not lie across the throat or upper arm. Do not adjust while driving.
Unfasten

To release seat belt, press red button on seat belt buckle.

Using seat belts while pregnant

⚠️ Warning

The lap belt must be positioned as low as possible across the pelvis to prevent pressure on the abdomen.

Airbag system

The airbag system consists of a number of individual systems depending on the scope of equipment.

When triggered the airbags inflate within milliseconds. They also deflate so quickly that it is often unnoticeable during the collision.

⚠️ Warning

The airbag system deploys in an explosive manner, repairs must be performed by skilled personnel only.

⚠️ Warning

Adding accessories that change the vehicle's frame, bumper system, height, front end or side sheet metal, may keep the airbag system from working properly. The operation of the airbag system can also be affected by changing any parts of the front seats, seat belts,
airbag sensing and diagnostic module, steering wheel, instrument panel, inner door seals including the speakers, any of the airbag modules, ceiling or pillar trim, front sensors, side impact sensors or airbag wiring.

**Note**
The airbag systems and belt pretensioner control electronics are located in the centre console. Do not put any magnetic objects in this area.

Do not affix any objects onto the airbag covers and do not cover them with other materials. Have damaged covers replaced by a workshop.

Each airbag is triggered only once. Have deployed airbags replaced by a workshop. Furthermore, it may be necessary to have the steering wheel, the instrument panel, parts of the paneling, the door seals, handles and the seats replaced.

Do not make any modifications to the airbag system as this will invalidate the vehicle operating permit.

Control indicator  🍄 for airbag systems 🍄 94.

**Child restraint systems on front passenger seat with airbag systems**

Warning according to ECE R94.02:

**EN:** NEVER use a rearward-facing child restraint on a seat protected by an ACTIVE AIRBAG in front of it; DEATH or SERIOUS INJURY to the CHILD can occur.

**DE:** Nach hinten gerichtete Kindersitze NIEMALS auf einem Sitz verwenden, der durch einen davor befindlichen AKTIVEN AIRBAG geschützt ist, da dies den TOD oder SCHWERE VERLETZUNGEN DES KINDES zur Folge haben kann.

**FR:** NE JAMAIS utiliser un siège d'enfant orienté vers l'arrière sur un siège protégé par un COUSSIN GONFLABLE ACTIF placé devant lui, sous peine d'infliger des BLESSURES GRAVES, voire MORTELLES à l'ENFANT.

**ES:** NUNCA utilice un sistema de retención infantil orientado hacia atrás en un asiento protegido por un AIRBAG FRONTAL ACTIVO. Peligro de MUERTE o LESIONES GRAVES para el NIÑO.

**RU:** ЗАПРЕЩАЕТСЯ устанавливать детское удерживающее устройство лицом назад на сиденье автомобиля, оборудованном фронтальной подушкой безопасности, если ПОДУШКА НЕ ОТКЛЮЧЕНА! Это может привести к СМЕРТИ или СЕРЬЕЗНЫМ ТРАВМАМ РЕБЕНКА.
NL: Gebruik NOOIT een achterwaarts gericht kinderzitje op een stoel met een ACTIEVE AIRBAG ervoor, om DODELIJK of ERNSTIG LETSEL van het KIND te voorkomen.

DA: Brug ALDRIG en bagudvendt autostol på et forsæde med AKTIV AIRBAG, BARNET kan komme i LIVSFARE eller komme ALVORLIGT TIL SKADE.

SV: Använd ALDRIG en bakåtvänd barnstol på ett säte som skyddas med en framförvarande AKTIV AIRBAG. DÖDSFALL eller ALLVARLIGA SKADOR kan drabba BARNET.

FI: ÄLÄ KOSKAAN sijoita taaksepäin suunnattua lasten turvaistuinta istuimelle, jonka edessä on AKTIIVINEN TURVATYYNY, LAPSI VOI KUOLLA tai VAMMAUTUA VAKAVASTI.

NO: Bakovervendt barnesikringsutstyr må ALDRI brukes på et sete med AKTIV KOLLISJONSPUTE foran, da det kan føre til at BARNET utsettes for LIVSFARE og fare for ALVORLIGE SKADER.

PT: NUNCA use um sistema de retenção para crianças voltado para trás num banco protegido com um AIRBAG ACTIVO na frente do mesmo, poderá ocorrer a PERDA DE VIDA ou FERIMENTOS GRAVES na CRIANÇA.

IT: Non usare mai un sistema di sicurezza per bambini rivolto all’indietro su un sedile protetto da AIRBAG ATTIVO di fronte ad esso: pericolo di MORTE o LESIONI GRAVI per il BAMBINO!

EL: ΠΟΤΕ μη χρησιμοποιείτε παιδικό κάθισμα ασφαλείας με φορά προς τα πίσω σε κάθισμα που προστατεύεται από μετωπικό ΕΝΕΡΓΟ ΑΕΡΟΣΑΚΟ, διότι το παιδί μπορεί να υποστεί ΘΑΝΑΣΙΜΟ ή ΣΟΒΑΡΟ ΤΡΑΥΜΑΤΙΣΜΟ.

PL: NIE WOLNO montować fotelika dziecięcego zwróconego tylem do kierunku jazdy na fotelu, przed którym znajduje się WŁĄCZONA PODUSZKA POWIETRZNA. Niezastosowanie się do tego zalecenia może być przyczyną ŚMIERCI lub POWAŻNYCH OBRAŻEN u DZIECKA.

TR: Arkaya Bakan bir çocuk emniyet sistemini KESİNLİKLE öndünde bir AKTİF HAVA YASTIĞI ile korunmakta olan bir koltukta kullanmayınız. ÇOCUK ÖLEBİLİR veya AĞIR ŞEKİLLE YARALANABİLİR.

UK: НІКОЛІ не використовуйте систему безпеки для дітей, що встановлюється обличчям назад, на сидінні з УВІМКНЕНОЮ ПОДУШКОЮ БЕЗПЕКИ, інакше це може призвести до СМЕРТІ чи СЕРІЙОЗНОГО ТРАВМУВАННЯ ДИТИНИ.

SK: NIKDY nepoužívajte detskú sedačku otočenú vzad na sedadle chránenom AKTÍVNYM AIRBAGOM, pretože môže dôjsť k SMRTI alebo VÁŽNYM ZRANENIAM DIEŤAŤA.

ET: ÄRGE kasutage tahapoole suunatud lapseturvaistet istmel, mille ees on AKTIIVSE TURVAPADJAGA kaitstud iste, sest see võib põhjustada LAPSE SURMA või TÔSI SE VIGASTUSE.

MT: QATT tuża trażżin għat-tfal li jhares lejn in-naħa ta' wara fuq sit protett b‘AIRBAG ATTIV quddiemu; dan jista’ jikkawża I-MEWT jew ĠRIEĦI SERJI lit-TFAL.

GA: Ná húsáid srian sábháilteacha linbh cűil RIAMH ar shuiochán a bhfuil mála aer ag feidhmiú os a chomhair. Tá baol BÁIS nó GORTÚ DONA don PHÁISTE ag baint leis. Beyond the warning required by ECE R94.02, for safety reasons a forward-facing child restraint system must only be used subject to the instructions and restrictions in the table 65. The airbag label is located on both sides of the front passenger sun visor. Airbag deactivation 60.
Front airbag system
The front airbag system consists of one airbag in the steering wheel and one in the instrument panel on the front passenger side. These can be identified by the word AIRBAG.
The front airbag system is triggered in the event of a front-end impact of a certain severity. The ignition must be switched on.

The inflated airbags cushion the impact, thereby reducing the risk of injury to the upper body and head of the front seat occupants considerably.

⚠️ Warning

- Optimum protection is only provided when the seat is in the proper position.
- Seat position 46.
- Keep the area in which the airbag inflates clear of obstructions.
- Fit the seat belt correctly and engage securely. Only then is the airbag able to protect.

Side airbag system
The side airbag system consists of an airbag in each front seat backrest. This can be identified by the word AIRBAG.
The side airbag system is triggered in the event of a side impact of a certain severity. The ignition must be switched on.

The inflated airbags cushion the impact, thereby reducing the risk of injury to the upper body and pelvis in the event of a side-on collision considerably.
**Curtain airbag system**

The curtain airbag system consists of an airbag in the roof frame on each side. This can be identified by the word AIRBAG on the roof pillars.

The curtain airbag system is triggered in the event of a side-on impact of a certain severity. The ignition must be switched on.

The inflated airbags cushion the impact, thereby reducing the risk of injury to the head in the event of a side-on impact considerably.

---

**Warning**

Keep the area in which the airbag inflates clear of obstructions.

---

**Airbag deactivation**

The front passenger airbag system must be deactivated for child restraint system on the passenger seat according to the instructions in the table 65. The side airbag and curtain airbag systems, the belt pretensioners and all driver airbag systems will remain active.

The front passenger airbag system can be deactivated via a key-operated switch in the glovebox.
Use the ignition key to choose the position:

**OFF**: front passenger airbag is deactivated and will not inflate in the event of a collision, control indicator OFF illuminates continuously in the centre console.

**ON**: front passenger airbag is active

<table>
<thead>
<tr>
<th><strong>Danger</strong></th>
</tr>
</thead>
</table>

Deactivate passenger airbag only in combination with the use of a child restraint system, subject to the instructions and restrictions in the table 95. Otherwise, there is a risk of fatal injury for a person occupying a seat with a deactivated front passenger airbag.

If the control indicator **ON** illuminates for approx. 60 seconds after the ignition is switched on, the front passenger airbag system will inflate in the event of a collision.

If the control indicator **OFF** illuminates after the ignition is switched on, the front passenger airbag system is deactivated. It stays on while the airbag is deactivated.

If both control indicators are illuminated at the same time, there is a system failure. The status of the system is not discernible, therefore no person is allowed to occupy the front passenger seat. Contact a workshop immediately.

Consult a workshop immediately if neither of the two control indicators are illuminated.

Change status only when the vehicle is stopped with the ignition off.

Status remains until the next change.

Control indicator for airbag deactivation 95.
Child restraints

Child restraint systems

Always comply with local or national regulations. In some countries, the use of child restraint systems is forbidden on certain seats.

Child restraint systems can be fastened with:
- Three-point seat belt
- ISOFIX brackets
- Top-tether

**Three-point seat belt**

Child restraint systems can be fastened by using a three-point seat belt. After fastening the child restraint system the seat belt has to be tightened.

**ISOFIX brackets**

Fasten vehicle-approved ISOFIX child restraint systems to the ISOFIX brackets. Specific vehicle ISOFIX child restraint system positions are marked in the ISOFIX table.

ISOFIX brackets are indicated by a label on the backrest.

An i-Size child restraint system is an universal ISOFIX child restraint system according UN Regulation No. 129.

All i-Size child restraint systems can be used on any vehicle seat suitable for i-Size, i-Size table.

---

**Danger**

If using a rear-facing child restraint system on the front passenger seat, the airbag system for the front passenger seat must be deactivated. This also applies to certain forward-facing child restraint systems as indicated in the tables.

Airbag deactivation.
Airbag label.

We recommend a child restraint system which is tailored specifically to the vehicle. For further information, contact your workshop.

Before fastening a child seat adjust the head restraint.

When a child restraint system is being used, pay attention to the following usage and installation instructions and also those supplied with the child restraint system.
Either a Top-tether strap or a support leg must be used in addition to the ISOFIX brackets.

i-Size child seats and vehicle seats with i-Size approval are marked with i-Size symbol, see illustration.

**Top-tether anchors**

Top-tether anchors are marked with the symbol 🛥️ for a child seat.

In addition to the ISOFIX brackets, fasten the Top-tether strap to the Top-tether anchors.

ISOFIX child restraint systems of universal category positions are marked in the table by IUF ☐ 65.

**Selecting the right system**

The rear seats are the most convenient location to fasten a child restraint system.

Children should travel facing rearwards in the vehicle as long as possible. This makes sure that the child’s backbone, which is still very weak, is under less strain in the event of an accident.

Suitable are child restraint systems that comply with valid UN ECE regulations. Check local laws and regulations for mandatory use of child restraint systems.

The following child restraints are recommended for the following weight classes:

- **Group 0, Group 0+**: Maxi Cosi Cabriofix with or without ISOFIX base for children up to 13 kg
- **Group I**: Duo Plus with ISOFIX and Top-tether for children from 9 kg to 18 kg
- **Group II, Group III**: Kidfix XP with or without ISOFIX for children from 15 kg to 36 kg
- **Group III**: Graco Booster for children from 22 kg to 36 kg

Ensure that the child restraint system to be installed is compatible with the vehicle type.

Ensure that the mounting location of the child restraint system within the vehicle is correct, see following tables.

Allow children to enter and exit the vehicle only on the side facing away from the traffic.

When the child restraint system is not in use, secure the seat with a seat belt or remove it from the vehicle.
Note
Do not affix anything on the child restraint systems and do not cover them with any other materials.
A child restraint system which has been subjected to stress in an accident must be replaced.
## Child restraint installation locations

Permissible options for fastening a child restraint system with a three-point seat belt

<table>

</table>
IL : suitable for particular ISOFIX restraint systems of the 'specific-vehicle', 'restricted' or 'semi-universal' categories. The ISOFIX restraint system must be approved for the specific vehicle type (refer to the vehicle type list of the child restraint system)

IUF : suitable for ISOFIX forward-facing child restraint systems of universal category approved for use in this weight class

X : no ISOFIX child restraint system approved in this weight class

1 : move seat forwards as far as necessary and adjust seat backrest inclination as far as necessary to a vertical position to ensure that the belt runs forwards from the upper anchorage point

2 : move seat height adjustment upwards as far as necessary and adjust seat backrest inclination as far as necessary to a vertical position to ensure that the belt is tight on the buckle side

3 : move the respective front seat ahead of the child restraint system forwards as far as necessary

4 : adjust the respective headrest as necessary or remove if required

ISOFIX size class and seat device

A – ISO/F3 : forward-facing child restraint system for children of maximum size in the weight class 9 to 18 kg

B – ISO/F2 : forward-facing child restraint system for smaller children in the weight class 9 to 18 kg

B1 – ISO/F2X : forward-facing child restraint system for smaller children in the weight class 9 to 18 kg

C – ISO/R3 : rear-facing child restraint system for children of maximum size in the weight class up to 18 kg

D – ISO/R2 : rear-facing child restraint system for smaller children in the weight class up to 18 kg

E – ISO/R1 : rear-facing child restraint system for young children in the weight class up to 13 kg

F – ISO/L1 : left lateral facing position child restraint system (carry-cot)

G – ISO/L2 : right lateral facing position child restraint system (carry-cot)

Permissible options for fitting an i-Size child restraint system with ISOFIX brackets

i - U : suitable for i-Size 'universal' forward and rearward facing child restraint systems
X : seating position not suitable for i-Size 'universal' child restraint systems.
Storage compartments

**Warning**

Do not store heavy or sharp objects in the storage compartments. Otherwise, the storage compartment lid could open and vehicle occupants could be injured by objects being thrown around in the event of hard braking, a sudden change in direction or an accident.

Glovebox

On some versions the glovebox is ventilated. Air ventilation and temperature depend on the settings of the climate control system. The air vent in the glovebox can be closed

Other versions may have a CD player in the glovebox.

The glovebox should be closed whilst driving.

Cupholders

Cupholders are located in the centre console.
Additional cupholders are located in the rear armrest. Fold down armrest.

Centre console storage

The storage container can be used to store small items.
Depending on the version, the storage compartment is located under a cover.

Load compartment

The rear seat backrest is divided into 2/3 to 1/3 parts. Both parts can be folded down individually to increase the size of the load compartment.
Before folding rear seat backrests, execute the following if necessary:

- Move front seats forward if necessary.
- Remove the load compartment cover.
- Press and hold the catch to push the head restraints down.

Load compartment cover  72.
Head restraints  45

Load compartment extension

- Check that the outer seat belts are lying correctly on the backrests.
• Pull the release lever on one or both outer sides and fold down the backrests onto the seat cushion.

• Alternatively fold seat backrests from the load compartment: pull switch on left or right sidewall of the load compartment to fold the corresponding part of the rear seat backrest.

⚠️ Warning

Take care when operating the rear backrests from the load compartment. The backrest is folded with considerable power. Risk of injury, particularly to children.
Ensure that nothing is attached to the rear seats or located on the seat cushion.

• To fold up, raise the backrests and guide them into an upright position until they engage audibly.

⚠️ Warning

When folding up, ensure that backrests are securely locked in position before driving. Failure to do so may result in personal injury or damage to the load or vehicle in the event of hard braking or a collision.
Storage

Opening the pass through in the centre backrest

Fold down the rear armrest.

Pull grip and open the cover.

Suitable for loading long, narrow objects.

Load compartment cover
Do not place any objects on the cover.

Removing cover

Unhook retaining straps from tailgate.

Fitting cover

Engage cover in side guides and fold downwards. Attach the retaining straps to the tailgate.

Lift cover at the rear and push it upwards at the front.
Remove the cover.
Rear floor storage cover

The rear floor cover can be lifted and removed. Raise cover at the loop and remove.

To hold the load compartment cover in an upright position, lift it up past the retractable stops.

Double load floor

The double load floor can be inserted in the load compartment in two positions:

- lower position above the spare wheel well cover
- upper position interlocked with the grab handle into back panel trim

To remove, press the handle to unlock the load floor and lift it up while using the handle.

If mounted in the upper position, the space between the load floor and the spare wheel well cover can be used as a storage compartment.

In this position, if the rear seat backrests are folded forwards, an almost completely flat load bay is created.

In the upper position, the double load floor is able to withstand a maximum load of 100 kg. In the lower position, the double load floor is able to withstand the maximum load of 150 kg.
Lashing eyes

The lashing eyes are designed to secure items against slippage, e.g. using lashing straps or luggage net.

Safety net

The safety net can be installed behind the rear seats or, if the rear seat backrests are folded, behind the front seats.

Passengers must not be transported behind the safety net.

Installation

Behind the rear seats

- There are installation openings on both sides in the roof frame above the rear seats: suspend and engage rod of net at one side, compress rod and suspend and engage at the other side.
- Attach the hooks of safety net straps in the lashing eyes behind the rear seats.
- Tension both straps by pulling at the loose end.
- Rear seat backrests must be raised up.

Behind the front seats

Note

For hybrid vehicles, no safety net can be installed behind the front seats.
● There are installation openings on both sides in the roof frame above the front seats: suspend and engage rod of net at one side, compress rod and suspend and engage at the other side.

● Attach hooks of safety net straps to loops in the floor in front of the rear seats. To get access to the loops, push in the perforated parts in the floor cover on both sides.

● Tension both straps by pulling at the loose end.

● Push down head restraints and fold down rear seat backrests 70.

---

**Removal**

Pull the flap at the tightener on both sides to release the straps. Detach hooks from the loops.

Unhook the safety net rods from the installation openings in the roof frame.

Roll up the net and secure with a strap.
**Warning triangle**

Stow the warning triangle in the space on the inside of the tailgate and secure it with the Velcro® fastener.

**First aid kit**

Stow the first aid kit in the storage compartment on the right side of the load compartment.

**Roof rack system**

**Roof rack**

For safety reasons and to avoid damage to the roof, the vehicle-approved roof rack system is recommended. Follow the installation instructions and remove the roof rack when not in use.

**Vehicles with roof railing**

Fasten the roof rack in the roof railing above the mounting points located in each door frame of the vehicle body.
Vehicles without roof railing

Open all doors.
Mounting points are located in each door frame of the vehicle body.
Detach the cover from each mounting point and fasten the roof rack with the attached screws.

Loading information

- Heavy objects in the load compartment should be placed against the seat backrests. Make sure that the backrests are securely engaged. If objects can be stacked, heavier objects should be placed at the bottom.
- Prevent sliding of loose objects by securing them with straps attached to the lashing eyes ☐ 74.
- Do not allow the load to protrude above the upper edge of the backrests.

- Do not place any objects on the load compartment cover or the instrument panel, and do not cover the sensor on top of the instrument panel.
- The load must not obstruct the operation of the pedals, parking brake and gear selector, or hinder the freedom of movement of the driver. Do not place any unsecured objects in the interior.
- Do not drive with an open load compartment.

⚠️ Warning

Always make sure that the load in the vehicle is securely stowed. Otherwise objects can be thrown around inside the vehicle and cause personal injury or damage to the load or car.

- The payload is the difference between the permitted gross vehicle weight (see identification plate ☐ 257) and the EC kerb weight.
To calculate the payload, enter the data for your vehicle in the weights table at the front of this manual.

The EC kerb weight includes weights for the driver (68 kg), luggage (7 kg) and all fluids (fuel tank 90% full).

Optional equipment and accessories increase the kerb weight.

- Driving with a roof load increases the sensitivity of the vehicle to cross-winds and has a detrimental effect on vehicle handling due to the vehicle’s higher centre of gravity. Distribute the load evenly and secure it properly with retaining straps. Adjust the tyre pressure and vehicle speed according to the load conditions. Check and retighten the straps frequently.

Do not drive faster than 120 km/h.

The permissible roof load is 85 kg. The roof load is the combined weight of the roof rack and the load.

Unlock lever, adjust steering wheel, then engage lever and ensure it is fully locked.
Do not adjust steering wheel unless vehicle is stationary and steering wheel lock has been released.

Cruise control and speed limiter are operated via the controls on the left side of the steering wheel.
Additionally, adaptive cruise control can be set by using the controls on the left side of the steering wheel.
Infotainment system can be operated via the controls on the right side of the steering wheel.
Driver assistance systems 160.
Further information is available in the Infotainment manual.
Heated steering wheel

Activate heating by pressing ⚡. Activation is indicated by the LED in the button.

Heating is operational when the engine is running and during an Autostop.

Stop-start system ⚠️ 139.

Horn

Press ⚭.

Pedestrian safety alert

The sound of the pedestrian safety alert is generated to indicate the vehicle presence to pedestrians when combustion engine is off. It is active up to 20 km/h.

Windscreen wiper and washer

Windscreen wiper with adjustable wiper interval

HI : fast
LO : slow
INT : interval wiping
OFF : off

For a single wipe when the windscreen wiper is off, press the lever down to position 1x.

Do not use if the windscreen is frozen.

Switch off in car washes.
To activate interval wiping mode the next time ignition is switched on, press the lever downwards to position **OFF** and back to **INT**.

### Adjustable wiper interval

- **Wiper lever in position INT.**
- Turn the adjuster wheel to adjust the desired wipe interval.

### Windscreen wiper with rain sensor

- **HI** : fast
- **LO** : slow
- **AUTO** : automatic wiping with rain sensor
- **OFF** : off

In **AUTO** position, the rain sensor detects the amount of water on the windscreen and automatically regulates the frequency of the windscreen wiper. If ignition is switched off, automatic wiping mode is deactivated. To activate automatic wiping mode the next time ignition is switched on, press the lever downwards to position **OFF** and back to **AUTO**.

For a single wipe when the windscreen wiper is off, press the lever downwards to position **1x**.

Do not use if the windscreen is frozen.

Switch off in car washes.

### Adjustable sensitivity of the rain sensor

- Turn the adjuster wheel to adjust the sensitivity.
- Make sure the sensor is not blocked 39, 10.
- Control indicator 81.
Windscreen washer

Pull lever. Washer fluid is sprayed onto the windscreen and the wiper wipes a few times.
Washer fluid 216.

Rear window wiper and washer

Rear window wiper

OFF : off
INT : intermittent operation
ON : continuous operation

Do not use if the rear window is frozen.
Switch off in car washes.
The rear window wiper comes on automatically when the windscreen wiper is switched on and reverse gear is engaged.

Activation or deactivation of this function can be changed in the Vehicle personalisation menu 108.

Rear window washer

Push lever.
Washer fluid is sprayed onto the rear window and the wiper wipes a few times.
The rear window washer system is deactivated when the fluid level is low.
Washer fluid 216.
**Outside temperature**

A drop in temperature is indicated immediately and a rise in temperature after a time delay.

Illustration shows an example. If outside temperature drops to 3 °C, a warning message is displayed in the Driver Information Centre.

**Warning**

The road surface may already be icy even though the display indicates a few degrees above 0 °C.

**Clock**

Date and time are shown in the Info Display.

Info Display ➔ 103.

**Graphic Info Display**

Press MENU to open the menu page.

**Set Time Format**

To select the desired time format, touch 12h or 24h.

**Set Date Format**

To select the desired date format, select Set Date Format and choose between the available options in the submenu.

**7” Colour Info Display**

Press 🔄 and then select Settings. Select Time and Date to display the respective submenu.
Auto Set
To choose whether time and date are to be set automatically or manually, select Auto Set.
For time and date to be set automatically, select On - RDS.
For time and date to be set manually, select Off - Manual. If Auto Set is set to Off - Manual, the submenu items Set Time and Set Date become available.

Set time and date
To adjust the time and date settings, select Set Time or Set Date.
Touch + or - to adjust the settings.

8" Colour Info Display
Press SET and then select OPTIONS.

Select Setting the time-date.
To change the time and date formats, select the respective tabs and then select the desired formats.
By default the displayed time and date are automatically adjusted by the system.
To manually adjust the displayed time and date:
Select the Time tab.
Set Synchronization with GPS (UTC) to Off and then select the Time field to set the desired time.
Select the Date tab and then select the Date: field to set the desired date.

Power outlets
A 12 V power outlet is located behind the storage cover. Press cover to open.
A 12 V power outlet is also located in the rear console.

At the left sidewall in the load compartment, another 12 V power outlet is located.

Do not exceed the maximum power consumption of 120 W.

A 230 V power outlet may also be located in the rear console.

Do not exceed the maximum power consumption of 150 W.

With ignition off, the power outlets are deactivated. Additionally, the power outlets are deactivated in the event of low vehicle battery voltage.

Electrical accessories that are connected must comply with the electromagnetic compatibility requirements laid down in DIN VDE 40 839.

Do not connect any current-delivering accessories, e.g. electrical charging devices or batteries.

Do not damage the outlet by using unsuitable plugs.

Stop-start system \(\rightarrow\) 139.

**USB ports**

A USB port is located behind the storage cover. Press cover to open.
A further USB port may be located in the rear console. The USB ports are prepared for charging external devices and provide a data connection to the Infotainment system. For further information, see Infotainment manual.

**Note**
The sockets must always be kept clean and dry.

### Inductive charging

**⚠️ Warning**
Inductive charging can affect the operation of implanted pacemakers or other medical devices. If applicable, seek medical advice before using the inductive charging device.

**⚠️ Warning**
Remove any metal objects from the charging device before charging a mobile device, as these objects could become very hot.

To charge a device, the ignition must be switched on.

To charge a mobile device:
1. Remove all objects from the charging device.
2. Place the mobile device with the display facing upwards on the charging device in the storage. Use the elastic band to secure the mobile device.

Charging status is indicated in the LED: illuminates green, when mobile device is charging.

PMA or Qi compatible mobile devices can be charged inductively.
On some mobile devices, a back cover with an integrated coil or a jacket may be required to use inductive charging.

Protective cover for the mobile device could have impact on the inductive charging.

In the event that the mobile device is not charging properly, rotate it 180° and place it on the charging device again.

**Cigarette lighter**

The cigarette lighter is located behind the storage cover. Press cover to open.

Press in cigarette lighter. It switches off automatically once the element is glowing. Pull out cigarette lighter.

**Ashtrays**

A portable ashtray can be placed in the cupholders.

**Warning lights, gauges and indicators**

**Instrument cluster**

The following instrument cluster is available:

- 🕗 Turn lights 🕗 93
- ⌚️ Seat belt reminder ⌚️ 94
- 🕗 Airbag and belt tensioners 🕗 94
- ⌚️ Airbag deactivation ⌚️ 95

**Speedometer**
Indicates vehicle speed.

**Odometer**
The total recorded distance is displayed in km.

**Driver Information Centre**
The recorded distance since the last reset is displayed in the Driver Information Centre.

**Trip odometer**
Trip odometer counts up to 9,999 km.
Press 000 for 2 seconds to reset trip odometer.
Two trip odometer pages are selectable in the trip / fuel information menu for different trips 101.

**Tachometer**
Displays the engine speed.
Drive in a low engine speed range for each gear as much as possible.
A red marker indicates the beginning of the warning zone of excessive revolutions. For Diesel engines, the warning zone starts at 5000 revolutions per minute. For petrol engines, the warning zone starts at 7000 revolutions per minute.

**Caution**

If the needle is in the red warning zone, the maximum permitted engine speed is exceeded. Engine at risk.

**Fuel gauge**

Displays the fuel level. Control indicator • illuminates if the fuel level is low.

Never run the fuel tank dry.

Because of the fuel remaining in the tank, the top-up quantity may be less than the specified fuel tank capacity.

**Battery gauge**

The battery gauge displays the high voltage battery state of charge.

**Power indicator gauge**

The power indicator gauge informs about the current energy situation of the vehicle.

**Charge** : Battery is being charged with energy resulting from braking or deceleration of the vehicle

**Eco** : An optimum in energy is accessible in all driving modes

**Power** : Vehicle is driven in a dynamic driving style with focus on performance
Engine coolant temperature gauge

Displays the coolant temperature.

50 : engine operating temperature not yet reached
90 : normal operating temperature
130 : temperature too high

Control indicator ● illuminates if coolant temperature is too high. Switch off engine immediately.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>If engine coolant temperature is too high, stop vehicle, switch off engine. Danger to engine. Check coolant level.</td>
</tr>
</tbody>
</table>

Engine oil level monitor

The state of the engine oil level is displayed in the Driver Information Centre for a few seconds following the service information after switching on the ignition.

A proper state of engine oil level is indicated by a message.

If engine oil level is low, 🧴 flashes and a message is indicated, accompanied by the ⚠ indicator. Confirm engine oil level by using the dipstick and top up engine oil respectively.

Engine oil Ⓕ 215.

A fault of measurement is indicated by a message. Check engine oil level manually by using the dipstick.

Service display

The service system informs when to change the engine oil and filter or a vehicle service is required. Based on driving conditions, the interval at which an engine oil and filter change is required can vary considerably.

Service information Ⓕ 251.

A required service due is displayed in the Driver Information Centre for 7 seconds after switching on the ignition.

If no service is required for the next 3000 km or more no service information appears in the display.

If service is required within the next 3000 km, the remaining distance or time duration is indicated for several seconds. Simultaneously ⚠ illuminates permanently as reminder.

If service is required in less than 1000 km, 🧴 flashes and then illuminates permanently. Remaining distance or time duration is indicated for several seconds.
Overdued service is indicated by a message in the Driver Information Centre which indicates the overdued distance. \( \text{\large \text{C}} \) flashes and then illuminates permanently until service is executed.

**Reset of service interval**

After each service, the service indicator must be reset to ensure proper functionality. It is recommended to seek the assistance of a workshop.

If service is executed by yourself, operate as following:

- switch off ignition
- press and hold button **CHECK**
- switch on ignition, the distance indication begins a countdown
- when the display indicates =0, release the button

The symbol \( \text{\large \text{C}} \) disappears.

**Retrieving service information**

To retrieve the status of the service information at any time press button **CHECK**. The service information is displayed for a few seconds.

Service information \( \text{\large \text{C}} \) 251.

**Control indicators**

The control indicators described are not present in all vehicles. The description applies to all instrument versions. Depending on the equipment, the position of the control indicators may vary. When the ignition is switched on, most control indicators will illuminate briefly as a functionality test.

The control indicator colours mean:

- red : danger, important reminder
- yellow : warning, information, fault
- green : confirmation of activation
- blue : confirmation of activation
- white : confirmation of activation

See all control indicators on different instrument clusters \( \text{\large \text{C}} \) 88.

**Turn lights**

\( \text{\large \text{C}} \) illuminates or flashes green.

**Illuminates briefly**

The parking lights are switched on.

**Flashes**

Turn lights or the hazard warning flashers are activated.

Rapid flashing: failure of a turn light or associated fuse, failure of turn light on trailer.

Bulb replacement \( \text{\large \text{C}} \) 220.

Turn lights \( \text{\large \text{C}} \) 118.
Seat belt reminder

Seat belt reminder on all seats

● When the ignition is switched on, the instrument cluster and the symbol for the respective seat in the roof console comes on, if the seat belt of any occupied seat has not been fastened.

● After driving off, the instrument cluster and the symbol for the respective seat in the roof console flashes for a certain time together with a chime. After a certain time of driving, the symbol illuminates constantly until the seat belt of the respective seat has been fastened or if any passenger has unfastened the seat belt.

Seat belts 52.

Airbag and belt tensioners

Depression of the belt pretensioners or airbags is indicated by continuous illumination of the symbol.

⚠️ Warning

Have the cause of the fault remedied immediately by a workshop.

Belt pretensioners 52.
Airbag system 55.
Airbag deactivation

\( \text{ON} \) illuminates yellow.
The front passenger airbag is activated.
\( \text{OFF} \) illuminates yellow.
The front passenger airbag is deactivated.
Airbag deactivation \( \bigcirc \) 60.

Charging system

\( \text{illuminates red.} \)
Illuminates when the ignition is switched on and extinguishes shortly after the engine starts.

Illuminates when the engine is running
Stop, switch off engine. Vehicle battery is not charging. Engine cooling may be interrupted. The brake servo unit may cease to be effective. Seek the assistance of a workshop.

Malfunction indicator light
\( \lrcorner \) illuminates or flashes yellow.
Illuminates when the ignition is switched on and extinguishes shortly after the engine starts.

Illuminates when the engine is running
Fault in the emission control system. The permitted emission limits may be exceeded. Seek the assistance of a workshop immediately.

Service vehicle soon
\( \text{illuminates yellow.} \)
Illuminates briefly when the ignition is switched on.
May illuminate together with other control indicators and a corresponding message in the Driver Information Centre.
Seek the assistance of a workshop immediately.

Stop engine
STOP illuminates red.
Illuminates briefly when the ignition is switched on.
Illuminates together with other control indicators, accompanied by a warning chime and a corresponding message in the Driver Information Centre.

Stop engine immediately and seek the assistance of a workshop.

**System check**

.student:illuminates yellow or red.

**Illuminates yellow**

A minor engine fault has been detected.

**Illuminates red**

A major engine fault has been detected.

Stop engine as soon as possible and seek the assistance of a workshop.

**Hybrid system active**

READY illuminates green. The hybrid system is active.

**Hybrid system fault**

illuminates red.

The hybrid system has a fault.

Switch off ignition and seek the assistance of a workshop.

**Brake and clutch system**

illuminates red.

The brake and clutch fluid level is too low.

**Warning**

Stop. Do not continue your journey. Consult a workshop.

Brake fluid 217.

**Electric parking brake**

illuminates or flashes red.

**Illuminates**

Electric parking brake is applied 154.

**Flashes**

Electric parking brake is not applied automatically. The application or the release are faulty.

**Warning**

Have the cause of the fault remedied immediately by a workshop.

illuminates yellow.

**Illuminates**

Automatic operation is deactivated or faulty. Activate automatic operation again or have the cause remedied by a workshop in the event of a fault.

Automatic operation 154.

**Electric parking brake fault**

illuminates yellow.

**Illuminates**

Electric parking brake has a fault 154.

**Warning**

Have the cause of the fault remedied immediately by a workshop.
Automatic operation of electric parking brake off icon: illuminates yellow.

Illuminates
Automatic operation is deactivated or faulty. In the event of a fault, icon: illuminates together with other control indicators or it is accompanied by a corresponding message in the Driver Information Centre.
Activate automatic operation again or have the cause remedied by a workshop in the event of a fault.
Automatic operation 154.

Antilock brake system (ABS) icon: illuminates yellow.
Illuminates for a few seconds after the ignition is switched on. The system is ready for operation when the control indicator extinguishes.
If the control indicator does not extinguish after a few seconds, or if it illuminates while driving, there is a fault in the ABS. The brake system remains operational but without ABS regulation.
Antilock brake system 153.

Gear shifting
▲ with the number of a higher gear is indicated, when upshifting is recommended for fuel saving reasons.

Lane departure warning icon: illuminates green or flashes yellow.
Illuminates green
System is switched on and ready to operate.

Flashes yellow
System recognises an unintended lane change.
Lane departure warning 191.

Lane keep assist icon: illuminates green or yellow, or flashes yellow.
Illuminates green
The system is switched on and ready to operate.

Illuminates yellow
The system approaches a detected lane marking without using the turn light in that direction.

Flashes yellow
The system recognizes that the lane is departed significantly.
Lane keep assist 192.

Electronic Stability Control and Traction Control system icon: illuminates or flashes yellow.
Illuminates
A fault in the system is present. Continued driving is possible. Driving stability, however, may deteriorate depending on road surface conditions.
Have the cause of the fault remedied by a workshop.
**Flashes**
The system is actively engaged. Engine output may be reduced and the vehicle may be braked automatically to a small degree. Electronic Stability Control and Traction Control system \(\Rightarrow\) 157. Selective ride control \(\Rightarrow\) 158.

**Electronic Stability Control and Traction Control system off**
\(\Rightarrow\) illuminates yellow. The system has been deactivated. Electronic Stability Control and Traction Control system \(\Rightarrow\) 157. Selective ride control \(\Rightarrow\) 158.

**Engine coolant temperature**
\(\Rightarrow\) illuminates red.

**Illuminates when the engine is running**
Stop, switch off engine.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Coolant temperature too high.</td>
</tr>
</tbody>
</table>

Check coolant level immediately \(\Rightarrow\) 216.
If there is sufficient coolant, consult a workshop.

**Preheating**
\(\Rightarrow\) illuminates yellow.
Preheating of diesel engine is activated. Only activates when outside temperature is low. Start the engine when control indicator extinguishes.
Starting the engine \(\Rightarrow\) 137.

**Exhaust filter**
\(\Rightarrow\) or \(\Rightarrow\) illuminates yellow.
The exhaust filter requires cleaning. Continue driving until the control indicator extinguishes.

**Illuminates temporarily**
Start of saturation of the exhaust filter. Start cleaning process as soon as possible by driving at a vehicle speed of at least 60 km/h.

**Illuminates constantly**
Indication of a low additive level. Seek the assistance of a workshop. Exhaust filter \(\Rightarrow\) 142.

**AdBlue**
\(\Rightarrow\) flashes or illuminates yellow.

**Illuminates yellow**
The remaining driving range is between 600 km and 2400 km.

**Flashes yellow**
The remaining driving range is between 0 and 600 km. AdBlue level is low. Refill AdBlue soon to avoid prevention of the engine start. Up to 10 l of AdBlue can be added. AdBlue \(\Rightarrow\) 143.
Deflation detection system

illumines or flashes yellow.

Illuminates
Tyre pressure loss in one or more wheels. Stop immediately and check tyre pressure.

Flashes
Fault in system. Consult a workshop.
Deflation detection system \( \Rightarrow \) 233.

Engine oil pressure

illuminates red.
Illuminates when the ignition is switched on and extinguishes shortly after the engine starts.

Illuminates when the engine is running

1. Select neutral gear.
2. Move out of the flow of traffic as quickly as possible without impeding other vehicles.
3. Switch off ignition.

\[\text{Warning}\]
When the engine is off, considerably more force is needed to brake and steer. During an Autostop the brake servo unit will still be operational.
Do not remove key until vehicle is stationary, otherwise the steering wheel lock could engage unexpectedly.

Keep engine turned off and let the vehicle be towed to a workshop.

Low fuel

illuminates yellow.
Level in fuel tank is too low.
Refuelling \( \Rightarrow \) 204.
Bleeding the diesel fuel system \( \Rightarrow \) 219.

Charge cord connected

illuminates red.
The vehicle plug of the charge cord is still connected to the charge port. The vehicle cannot be started.
Disconnect the vehicle plug from the charge port and close the charge port door.

Autostop

illuminates or flashes green.

Illuminates green
Engine is in an Autostop.

Flashes green
Autostop is temporarily unavailable, or Autostop mode is invoked automatically.
Stop-start system \( \Rightarrow \) 139.

Exterior light

illuminates green.
The exterior lights are on \( \Rightarrow \) 113.
**Low beam**
- D illuminates green.
  - Illuminated when low beam is on.

**High beam**
- D illuminates blue.
  - Illuminates when high beam is on, during headlight flash ⚫ 114.

**High beam assist**
- D illuminates green.
  - The high beam assist is activated ⚫ 115.

**LED headlights**
- D illuminates and a warning message is displayed in the Driver Information Centre.
  - Seek the assistance of a workshop.

**Front fog lights**
- D illuminates green.
  - The front fog lights are on ⚫ 119.

**Rear fog light**
- D illuminates yellow.
  - The rear fog light is on ⚫ 119.

**Rain sensor**
- D illuminates green.
  - Illuminated when rain sensor position on wiper lever is selected.
  - Windscreen wiper and washer ⚫ 81.

**Cruise control**
- D illuminates white or green.
  - Illuminates white
    - The system is on.
  - Illuminates green
    - Cruise control is active. Set speed is indicated in the Driver Information Centre.
    - Adaptive cruise control ⚫ 160.

**Adaptive cruise control**
- D illuminates white or green.
  - Illuminates green
    - The system is on.
  - Illuminates green
    - A vehicle ahead is detected in the same lane.
    - Adaptive cruise control ⚫ 165.
    - Forward collision alert ⚫ 171.

**Side blind spot alert**
- D illuminates green.
  - The system is active ⚫ 185.
Active emergency braking

▼ illuminates or flashes yellow.

Illuminates

The system has been deactivated or a fault has been detected.
Additionally, a warning message is displayed in the Driver Information Centre.
Check the reason of the deactivation △ 173 and in case of a system fault, seek the assistance of a workshop.

Note

▼ also illuminates if the seat belts of the front passengers are not fastened. In this case, active emergency braking is deactivated.

Flashes

The system is actively engaged.
Depending on the situation, the vehicle may automatically brake moderately or hard.
Forward collision alert △ 171.
Front pedestrian protection △ 176.

Speed limiter

سرعة المحدودة

▼ illuminates in the Driver Information Centre when speed limiter is active. Set speed is indicated alongside ▼ symbol.
Speed limiter △ 163.

Door open

● illuminates red.
A door or the tailgate is open.

Displays

Driver Information Centre

The Driver Information Centre is located in the instrument cluster.
Driver Information Centre indicates:
• overall and trip odometer
• digital speed indication
• trip / fuel information menu
• gear shift indication
• service information
• vehicle and warning messages
• driver assistance messages
• pop-up messages
• AdBlue information
• powerflow
• range autonomy

Selecting menus and functions

The menus and functions can be selected via the buttons on the indicator lever.
Turn the adjuster wheel to select a page in the trip / fuel information menu.
Press SET / CLR to confirm or reset a function.
Vehicle and service messages are popped up in the Driver Information Centre if required. Scroll messages by turning the adjuster wheel. Confirm messages by pressing SET / CLR.
Additionally, some menus can be selected via the CHECK button.

Press CHECK to switch between the respective menus.
Vehicle messages 107.

Trip / fuel information menu

Different pages with combined information can be selected.
Turn the adjuster wheel to select a page.

Information page: Fuel range
Range is calculated from current fuel level and current consumption. The display shows average values.
After refuelling, the range is updated automatically after a brief delay.
When the fuel level is low, a message appears on the display and the control indicator in the fuel gauge illuminates 99.

Instantaneous Fuel Consumption
Display of the instantaneous consumption.

Trip 1 page:
Average speed
Display of average speed. The measurement can be reset at any time.

Average fuel consumption
Display of average consumption. The measurement can be reset at any time and starts with a default value.

**Distance travelled**
Displays the current distance for trip 1 since the reset.
The values of trip 1 page can be reset by pressing SET / CLR for a few seconds.

**Trip 2 page:**
**Average speed**
Display of average speed. The measurement can be reset at any time.

**Average fuel consumption**
Display of average consumption. The measurement can be reset at any time and starts with a default value.

**Distance travelled**
Displays the current distance for trip 2 since a certain reset.
The values of trip 2 page can be reset by pressing SET / CLR for a few seconds.

**Digital speed page**
Digital display of the instantaneous speed.

**Autostop time counter**
A time counter calculates the time spent in Autostop during a journey. It resets to zero every time the ignition is switched on.

**Compass page**
Displays the geographic direction of driving.

**Blank page**
No trip / fuel information is displayed.

**AdBlue**
Press CHECK repeatedly until the AdBlue menu is shown.

**AdBlue range**
Indicates an estimate of the AdBlue level. A message indicates whether the level is sufficient or low.

**Powerflow**
Displays the current powerflow in the hybrid system, e.g., when the vehicle is operating in electric mode or when energy is regenerated.

**Range autonomy**
Displays the selected drive mode, the range of the high voltage battery and the combined range, i.e., the range of the high voltage battery and the fuel tank.

**Info Display**
The Info Display is located in the instrument panel near the instrument cluster.
Depending on the vehicle configuration the vehicle has a

- **Graphic Info Display**
- **7" Colour Info Display** with touchscreen functionality
- **8" Colour Info Display** with touchscreen functionality
The Info Displays can indicate:

- time 84
- outside temperature 84
- date 84
- Infotainment system, see description in the Infotainment manual
- indication of rear view camera 189
- indication of panoramic view system 186
- indication of parking assist instructions 177
- navigation, see description in the Infotainment manual
- vehicle and system messages 107
- settings for vehicle personalisation 108
- indication of the current powerflow within the hybrid system
- indication of the average fuel and power consumption

- settings for programmable charging 198
- settings for eSave function

**Graphic Info Display**

Press X to switch on the display.

Press MENU to select main menu page.

Press OK to confirm a selection.

Press BACK to exit a menu without changing a setting.

**7" Colour Info Display**

Selecting menus and settings

Menus and settings are accessed via the display.

Press X to switch on the display.

Press to display the homepage.

Touch required menu display icon with the finger.

Touch a respective icon to confirm a selection.

Touch to return to the next higher menu level.

Press to return to the homepage.
8" Colour Info Display

Selecting menus and settings
There are three options to operate the display:
- via buttons below the display
- by touching the touchscreen with the finger
- via speech recognition

Button and touch operation

Press \( \text{ SET } \) to select system settings (units, language, time and date).
Press \( \text{ Í } \) to select vehicle settings or driving functions.

Touch required menu display icon or a function with the finger.
Confirm a required function or selection by touching.
Touch \( \leftarrow \) on the display to exit a menu without changing a setting.

For further information, see Infotainment manual.

Speech recognition
Description see Infotainment manual.

Vehicle personalisation

Powerflow
This menu displays the current energy flow within the hybrid system. The components will be highlighted when they are active.

Average consumption
This menu displays the average power and fuel consumption during the current trip. The current trip is subdivided into time steps. For each
time step, the average consumption is displayed. The time steps can be modified.

1. Press ⚥.
2. Select Statistics.
3. Press + and - to modify the time steps.

**Power consumption**
The consumption of electrical power is displayed in kWh/100 km.

- The green bars show the electric energy consumed from the battery.
- The blue bars show the electric energy generated from the braking and deceleration phases of the vehicle. This energy is partially used to recharge the battery.

**Fuel consumption**
The orange bars show the average fuel consumption in litre per 100 kilometres.

**eSave function**
This function allows to provide electrical energy of the high voltage battery for a later use, e.g. for driving in areas restricted to electrical vehicles. It is possible to reserve the complete electrical energy of the battery or a part of it.

**Note**
If the energy requested exceeds the energy of the high voltage battery, the combustion engine charges the battery. This results in a loss of performance and a higher fuel consumption.

The function can be activated in the Colour Info Display.

1. Press ⚥.
2. Select eSave.
3. Select the distance for which electrical is to be reserved or reserve the whole capacity of the high voltage battery.
4. Press ON.
5. To use the reserved electrical energy change to electric mode. The setting of this function is not stored when the ignition is switched off.

**Smartphone app**

With the myOpel smartphone app, some vehicle functions can be operated / displayed.

To operate these functions, download the app from Apple App Store or Google Play Store.

**Vehicle messages**

Messages are indicated in the Driver Information Centre, in some cases together with a warning chime.

Press SET / CLR to confirm a message.

**Vehicle and service messages**

The vehicle messages are displayed as text. Follow the instructions given in the messages.

**Messages in the Colour Info Display**

Some important messages may appear additionally in the Info Display. Some messages only pop-up for a few seconds.

**Warning chimes**

The warning chime regarding not fastened seat belts has priority over any other warning chime.

**When starting the engine or whilst driving**

A warning chime will sound when

- a seat belt is not fastened
- a door or the tailgate is not fully closed
- a certain speed is exceeded with parking brake applied
- cruise control deactivates automatically
- a programmed speed or speed limit is exceeded
- a warning message appears in the Driver Information Centre
• the electronic key is not in the passenger compartment
• the parking assist detects an object
• an unintended lane change occurs
• the exhaust filter has reached the maximum filling level

If several warnings appear at the same time, only one warning chime will sound

When the vehicle is parked and/or the driver's door is opened
• With exterior lights on.

During an Autostop
• If the driver's door is opened.
• If any condition for a restart of the engine is not fulfilled.

Vehicle personalisation

The vehicle's behaviour can be personalised by changing the settings in the Info Display.
Depending on vehicle equipment and country-specific regulations some of the functions described below may not be available.
Some functions are only displayed or active when the engine is running.

Graphic Info Display

Press MENU to open the menu page.
Use four-way button to operate the display:

Select Personalisation-configuration → OK.

Unit settings
Select Display configuration → OK.
Select Choice of units → OK.
Select desired settings → OK.

Language settings
Select Display configuration → OK.
Select Choice of language → OK.
Select desired language → OK.

Vehicle settings
Select Define vehicle parameters → OK.

In the corresponding submenus the following settings can be changed:

• Lighting
  Follow me home headlamps:
  Activation and setting duration time.
  Welcome lighting: Activation and setting duration time.

• Comfort
  Ambient lighting: Activation / deactivation.
Rear wiper in reverse gear: Activation / deactivation.

- **Vehicle**
  - Unlocking boot only: Activation / deactivation.
  - Plip action: Driver / all doors.
- **Driving assistance**
  - Fatigue Detection system: Activation / deactivation.
  - Speed recommendation: Activation / deactivation.

### 7" Colour Info Display

**Unit settings**
Select Units.

**Language settings**
Select Language.
Change language by touching the respective entry.

**Vehicle settings**
Select Vehicle.
In the corresponding submenus the following settings can be changed:

- **Collision / Detection Systems**
  - Side Blind Spot Alert: Activates or deactivates side blind spot alert.
  - Drowsy Driver Alert: Activates or deactivates the driver drowsiness system.
  - Speed Limit Information: Activates or deactivates the speed limit information by traffic sign recognition.
  - Rear View Camera Guidelines: Activates or deactivates the rear view camera guidelines on the Info Display.

- **Remote Lock, Unlock, Start**
  - Remote Door Unlock: Changes the configuration to unlock the driver's door only or all doors when pressing  on the remote control.

**Forward Collision Alert:**
Activates or deactivates the forward collision alert auto brake, adjusts the sensitivity of the forward collision alert.

- **Comfort and Convenience**
  - Auto Wipe in Reverse Gear: Activates or deactivates automatic switching on of the rear window wiper when reverse gear is engaged.

- **Lighting**
  - Ambient Lighting: Activates or deactivates the ambient lighting and adjusts its brightness.
  - Welcome Lighting: Activates or deactivates and changes the duration of welcome lighting.
  - Exit Lighting: Activates or deactivates and changes the duration of exit lighting.
Unlock boot only: Activates or deactivates unlocking the tailgate only when pressing 📞 on the remote control.

8" Colour Info Display

Press SET to open settings menu. Use touch buttons to operate the display.

Unit settings
Select System settings.
Change units for Distance and fuel consumption and Temperature.
Confirm with ✅.

Language settings
Select Languages.
Change language by touching the respective entry.
Confirm with ✅.

Vehicle settings

Press 📞.
Select Vehicle settings.
In the corresponding submenus the following settings can be changed:

- Vehicle access
  Door unlock: Driver only:
  Changes the configuration to unlock the driver’s door only or all doors when pressing 🆕 on the remote control.

- Door unlock: Boot only: Activates or deactivates unlocking the tailgate only when pressing 📞 on the remote control.

- Motorised tailgate/door: Activates or deactivates the opening or closing of the power tailgate.

- Hands-Free opening: Activates or deactivates the function.

- Safety
  Recommended speed display: Activates or deactivates the speed limit information by traffic sign recognition.
  Active safety brake: Activates or deactivates active emergency braking and the forward collision alert, the alert sensitivity can be selected.
  Mirror adaptation in reverse: Adjusts the exterior mirrors if reverse gear is engaged to facilitate sidewalks visibility.
Driver’s attention warning: Activates or deactivates the driver drowsiness system.

Rear wiper in reverse: Activates or deactivates automatic switching on of the rear window wiper when reverse gear is engaged.

- Driving lighting
  Directional headlamps: Activates or deactivates the function.

- Comfort lighting
  Guide-me-home lighting: Activates or deactivates the function and adjusts its duration.
  Welcome lighting: Activates or deactivates the function and adjusts its duration.
  Mood lighting: Adjusts the brightness of the ambient lighting.

Press \(\text{Select \ Driving \ functions}\).

In the corresponding submenus the following settings can be changed:

- Park Assist: Activates advanced park assist, a parking maneuver can be selected.
- Blind spot sensors: Activates or deactivates side blind spot alert.
- Panoramic view system: Activation / deactivation of the function.

Telematics services

Opel Connect

Opel Connect comprises multiple connected services accessible via app, online or within the vehicle.

Note
Opel Connect is not available for all markets. For further information, contact your workshop.

Note
Full functionality of Opel Connect is subject to registration and proper activation.

Connected services may include live navigation such as online traffic information and vehicle status and information such as maintenance alerts.

Services accessible within the vehicle also include emergency call and breakdown call. These functions are automatically activated. Terms and conditions apply.
Emergency call function and breakdown call function are operated by the buttons in the overhead console.

**Status LED in the overhead console**

Illuminates green and red and extinguishes after a short time, when the ignition is switched on: the system works properly.

Illuminates red: fault in the system. Contact a workshop.

Flashes red: backup battery needs replacement. Contact a workshop.

**Emergency call**

The emergency call function will establish a connection to the nearest public safety answering point (PSAP). A minimum set of data including vehicle and location information will be sent to the PSAP.

**Note**

Establishing an emergency call may not be possible in areas without sufficient network availability or due to hardware damage during an accident.

In case of an emergency, press the red **SOS** button for more than 2 seconds. The LED flashes green to confirm that a connection to the nearest PSAP is being established. The LED illuminates steadily as long as the call is active.

Pressing the **SOS** button immediately a second time will terminate the call. The LED switches off.

**Automatic crash notification**

In case of an accident with airbag deployment, an automatic emergency call is established and an automatic crash notification will be transmitted to the next PSAP.

**Breakdown call**

Pressing the button for more than 2 seconds connects you to a roadside assistance service provider.

For information about coverage and scope of services of the roadside assistance, please refer to the Service and warranty booklet.

**Privacy settings**

Privacy settings of Opel Connect can be configured in your vehicle. This will impact the set of data being sent, e.g., in case a breakdown call is triggered. The emergency call function will not be impacted.

Change the privacy settings in the vehicle by simultaneously pressing the button and the **SOS** button.

Versions with navigation system: privacy settings can also be changed in the system settings menu.

Exterior lighting

Light switch

Turn light switch:
AUTO : automatic light control switches automatically between daytime running light and headlight
\(\Rightarrow\) : sidelights
\(\Rightarrow\Diamond\) : headlights

When switching on the ignition, automatic light control is active.
Control indicator \(\Rightarrow\Diamond\) 99.
Tail lights
Tail lights are illuminated together with low / high beam and sidelights.

Automatic light control

When the automatic light control function is switched on and the engine is running, the system switches between daytime running lights and headlights automatically depending on the external lighting conditions and information given by the wiper system.

Make sure the sensor is not blocked 10, 39.

Daytime running light 115.

Automatic headlight activation
During poor lighting conditions the headlights are switched on. Additionally, headlights are switched on if the windscreen wipers have been activated for several wipes.

Tunnel detection
When a tunnel is entered, headlights are switched on immediately.

High beam

Push to switch from low to high beam.

Pull to deactivate high beam.

Headlight flash

Pull to activate the headlight flash. Pull to deactivate high beam.
Headlight range adjustment

Manual headlight range adjustment

To adapt headlight range to the vehicle load to prevent dazzling, turn thumb wheel \( \theta \) to required position.

0 : front seats occupied
1 : all seats occupied
2 : all seats occupied and load compartment laden
3 : driver's seat occupied and load compartment laden

Headlights when driving abroad

When driving in countries where traffic drives on the opposite side of the road, the headlights have to be adjusted.

1. With the engine switched off, pull the indicator lever and hold.
2. Start the engine.
3. Hold the indicator lever for another 5 seconds.
4. Release the indicator lever.

If the headlights are adjusted, a message is displayed in the Driver Information Centre each time the engine is started.

To reverse the adjustment of the headlights, repeat the steps described above.

Daytime running lights

Daytime running lights increase visibility of the vehicle during daylight.

They are switched on automatically when the engine is running.

The system switches between daytime running lights and low beam automatically, depending on the lighting conditions.

LED headlights

LED headlight system contains a variety of particular LEDs in each headlight which enables the control of the adaptive forward lighting functions.

Light distribution and intensity of light are variably triggered depending on the lighting conditions, road type and driving situation. The vehicle adapts the headlights automatically to the situation to enable optimal light performance for the driver.

Some adaptive forward lighting functions of the LED headlights can be deactivated or activated in the vehicle personalisation menu. Select the relevant setting in **Settings** > **Vehicle** in the Info Display.

Vehicle personalisation \( \Rightarrow \) 108.

The lighting functions are only available with light switch in position **AUTO**.
116 Lighting

Country light

Activated automatically at a speed between 55 km/h and 115 km/h when driving in rural areas. The illumination of the current lane and the side of the road is improved. Oncoming and preceding vehicles are not dazzled.

Motorway light

Activated automatically at a speed above 115 km/h. Illumination is adapted to the higher speed driven on motorways. If there is no oncoming traffic, the visibility on the side of the vehicle is increased. The visibility range raises from 70 m to 140 m allowing distant objects to be recognised across the entire width of the road.

Town light

Activated automatically at a speed up to approx. 55 km/h and in situations with exterior ambient light. The light is wide and symmetrical. If the speed is below 30 km/h, the headlamps are slightly swiveled to the outside to allow an earlier recognition of pedestrians and objects on each side of the road. A special beam pattern is designed to avoid glare for other road users.

Corner light

Activated at a speed of up to 40 km/h when turning off. The light consists of particular LEDs which illuminate the direction of travel. These LEDs are triggered depending on the steering angle or the activation of the turn lights.

Adverse weather light

Controlled by wiper or rain sensor. The wide light distribution – slightly swiveled to the outside – enables improved orientation at the edge of the road. The intensity of the light in the far distance is increased in order
to recognise objects and markings on the front passenger road side and obstacles on the lane despite the weather condition. By lowering the reflection on wet roads the oncoming traffic is less dazzled. Adverse weather light is activated up to a speed to 70 km/h.

Curve light

Particular LEDs, based on steering angle and speed, are additionally triggered to improve lighting in curves. This function is activated at speeds from 40 km/h to 70 km/h.

High beam assist

This feature activates the high beam at night when the vehicle speed is faster than 25 km/h.

The camera in the windscreen detects the lights of oncoming or preceding vehicles. Each LED on right or left side can be triggered or faded out particularly according to the traffic situation. This gives the best light distribution without dazzling other road users. Once activated, high beam assist remains active and switches high beam on and off depending on surrounding conditions. The latest setting of the high beam assist will remain after the ignition is switched on again.

High beam assist includes a special motorway mode. When driving faster than 115 km/h on motorways, the light beam becomes smaller to avoid dazzling of oncoming traffic. When following vehicles ahead or passing, dazzling for these vehicles is reduced.

Activation

Activate the high beam assist by pressing 📺. The LED of the button illuminates if the high beam assist is activated. High beam is switched on automatically at a speed above 25 km/h. High beam is switched off at a speed below 15 km/h, but high beam assist remains active.

The green control indicator 📺 illuminates continuously when the high beam assist is activated, the blue 📺 illuminates when high beam is on.

Control indicator 📺 100, 📺 100.
Pushing left indicator lever once switches on manual high beam without high beam assist.
High beam assist switches automatically to low beam when:
- Driving in urban areas.
- Camera detects heavy fog.
- Front or rear fog lights are switched on.
If there are no restrictions detected, the system switches back to high beam.

Deactivation
Deactivate the high beam assist by pressing .
If a headlight flash is activated when the high beam assist is activated and low beam is on, the high beam assist will be deactivated. The system changes to high beam.
If a headlight flash is activated when the high beam assist is activated and high beam is on, the high beam assist will be deactivated. The system changes to low beam.
To reactivate the high beam assist, flash the headlights again.

Fault in LED headlight system
When the system detects a failure in the LED headlight system, it selects a preset position to avoid dazzling of oncoming traffic. A warning is displayed in the Driver Information Centre.

Hazard warning flashers
Operated by pressing .
When braking in an emergency, the hazard warning flashers are switched on automatically depending on the force of deceleration. They are switched off automatically the first time you accelerate.

Turn lights
up : right turn lights
down : left turn lights
A resistance point can be felt when moving the indicator lever.
Constant flashing is activated when the indicator lever is being moved beyond the resistance point. It is deactivated when the steering wheel...
is moved in the opposite direction or indicator lever is manually moved back to its neutral position.

Activate temporary flashing by holding the indicator lever just before the resistance point. Turn lights will flash until indicator lever is being released.

To activate three flashes, tap the indicator lever briefly without passing the resistance point.

If you forget to cancel the turn lights for more than 20 seconds, the volume of the audible signal will increase if the speed is above 60 km/h.

---

**Front fog lights**

Operated by pressing $\diamond$.

Light switch in position AUTO: switching on front fog lights will switch headlights on automatically.

---

**Rear fog light**

Operated by pressing $\circ$.

Light switch in position AUTO: switching on rear fog light will switch headlights on automatically.

Light switch in position $\Rightarrow$: rear fog light can only be switched on with front fog lights.

The vehicle rear fog light is deactivated when towing a trailer or a plug is connected with the socket, e.g. when a bicycle carrier is used.
Parking lights

When the vehicle is parked, the parking lights on one side can be activated:

1. Switch off ignition.
2. Move the lever all the way up (right parking lights) or down (left parking lights).

Confirmed by a signal and the corresponding turn lights control indicator.

Reversing lights

The reversing light comes on when the ignition is on and reverse gear is selected.

Misted light covers

The inside of the light housing may mist up briefly in poor, wet and cold weather conditions, in heavy rain or after washing. The mist disappears quickly by itself. To help, switch on the headlights.

Interior lighting

Instrument panel illumination control

Brightness of the following lights can be adjusted when the exterior lights are on:

- instrument panel illumination
- Info Display
- illuminated switches and operation elements

Turn thumb wheel $\odot$ and hold until the desired brightness is obtained.
Interior lights
During entry and exit of the vehicle, the front and rear courtesy lights automatically switch on and then off after a delay.

Note
In the event of an accident with airbag deployment the courtesy lights are turned on automatically.

Front courtesy light

Rear courtesy lights
Illuminate in conjunction with the front courtesy light.

Reading lights
Operated by pressing ☀ and ☁ in the courtesy lights.

Sunvisor lights
Illuminates when the cover is opened.
Lighting features

Centre console lighting
A spotlight integrated in the overhead console illuminates the centre console when headlights are switched on.

Entry lighting
Welcome lighting
Some or all of the following lights are switched on for a short time by unlocking the vehicle with the radio remote control:
- headlights
- puddle lights
- interior lights
The number of activated lights depends on the surrounding light conditions.
The lighting switches off immediately when the ignition is switched on.
Starting off 18.

Exit lighting
The following lights are switched on when the ignition is switched off:
- headlights
- interior lights
- centre console lighting
They will switch off automatically after a delay. This function works only in the dark.

Battery discharge protection
To prevent discharge of the vehicle battery when the ignition is switched off, some interior lights are switched off automatically after some time.

---

**Cooling A/C**

Press A/C to switch on cooling. The LED in the button illuminates to indicate activation. Cooling is only functional when the engine is running and fan is switched on.

Press A/C again to switch off cooling.

The air conditioning system cools and dehumidifies (dries) as soon as the outside temperature is slightly above the freezing point. Therefore, condensation may form and drip from under the vehicle.

If no cooling or drying is required, switch off the cooling system for fuel saving reasons.

---

**Activated cooling may inhibit Autostops.**

**Stop-start system 🔒 139.**

---

**Air recirculation system**

Press 🔧 to activate air recirculation mode. The LED in the button illuminates to indicate activation.

Press 🔧 again to deactivate air recirculation mode.

---

**Warning**

The exchange of fresh air is reduced in air recirculation mode. In operation without cooling the air
humidity increases, so the windows may mist up from inside. The quality of the passenger compartment air deteriorates, which may cause the vehicle occupants to feel drowsy.

In warm and very humid ambient air conditions, the windscreen may mist up from outside when cold air is directed towards it. If windscreen mists up from outside, activate windscreen wiper and deactivate 🔄.

**Maximum cooling**

- Switch on cooling A/C.
- Press 🌀 for air recirculation system on.
- Press 🔄 for air distribution.
- Set temperature control 🛖 to coldest level.
- Set fan speed 🌪 to highest level.
- Open all vents.

**Demisting and defrosting the windows**

Heated rear window, windscreen and exterior mirrors 🛖 📾 41.

Heated seats 🛖 📾 51.

Briefly open the windows so that hot air can disperse quickly.

- Press 📾: the air distribution is directed towards the windscreen.
- Set temperature controller 🛖 to warmest level.
- Switch on cooling A/C, if required.
- Set fan speed 🌪 to highest level.
- Switch on heated rear window 🛖.
- Switch on heated windscreen 🛖.
- Open side air vents as required and direct them towards the door windows.

**Note**

If 📾 is pressed while the engine is running, an Autostop will be inhibited until 📾 is pressed again.

If 📾 is pressed while the engine is in an Autostop, the engine will restart automatically.

Stop-start system 📾 139.
Electronic climate control system

The dual zone climate control allows different temperatures for driver side and front passenger side.

In automatic mode, temperature, fan speed and air distribution are regulated automatically.

Controls for:
- temperature on driver side  
- MENU enters the Climate setting menu in the Info Display
- fan speed
- automatic mode AUTO
- temperature on front passenger side  
- cooling A/C
- manual air recirculation
- demisting and defrosting
- heated rear window and exterior mirrors
- heated windscreen
- heated seats
- ventilated seats

Heated rear window 41.
Heated exterior mirrors 38.
Heated seats 51.
Ventilated seats 51.

Activated functions are indicated by the LED in the respective control.

The electronic climate control system is only fully operational when the engine is running.

Make sure the sun sensor used by the electronic climate control system is not covered 10.

Climate control settings menu

Press MENU to manually set the following climate control functions:
- air distribution
- fan speed
- temperature for driver and passenger side
- dual zone temperature synchronisation MONO
- cooling A/C
- automatic mode AUTO
Climate control

Climate setting menu can also be displayed:

- by selecting **Climate** on the 7" Colour Info Display or
- by pressing 🌡️ and then selecting **Climate** from the menu on the 8" Colour Info Display.

**Automatic mode AUTO**

![Automatic mode AUTO](image)

Basic setting for maximum comfort:

- Press **AUTO**, the air distribution and fan speed are regulated automatically.
- Open all air vents to allow optimised air distribution in automatic mode.

- Air conditioning must be activated for optimal cooling and demisting. Press **A/C** to switch on air conditioning. The LED in the button indicates activation.
- Set the preselected temperatures for driver and front passenger using the left and right rotary ring. Recommended temperature is 22 °C.

**Manual settings**

Climate control system settings can be changed by activating the following functions:

**Fan speed 🔄**

Adjust the air flow by turning rotary ring to the desired speed. Turn anticlockwise to decrease or turn clockwise to increase. Fan speed can also be changed in the climate settings menu. Press **MENU** to enter the menu.

Turn rotary ring anticlockwise as far as it will go: fan and cooling are switched off.

To return to automatic mode, press **AUTO**.

**Air distribution 🌡️, 🌡️, 🌡️**

Press **MENU** to enter the menu.
Touch in the Colour Info Display:

- to windscreen and front door windows
- to head area and rear seats via adjustable air vents
- to front and rear foot well and windscreen

To return to automatic air distribution, press AUTO.

Temperature preselection

Set the preselected temperatures separately for the driver and the front passenger to the desired value using the left and right rotary ring. The rotary ring on the passenger side changes the temperature of the passenger side. The rotary ring on the driver’s side changes the temperature of the driver’s side or of both sides, depending on activation of synchronisation MONO in the climate settings menu. Press MENU to enter the menu.

Recommended temperature is 22 °C. Temperature is indicated in displays beside the rotary rings and in the climate settings menu.

If the minimum temperature Lo is set, the climate control system runs at maximum cooling, if cooling A/C is switched on.

If the maximum temperature Hi is set, the climate control system runs at maximum heating.

Note
If A/C is switched on, reducing the set cabin temperature can cause the engine to restart from an Autostop or inhibit an Autostop.

Stop-start system 139.

Dual zone temperature synchronisation MONO or SYNC
Press MENU to enter the menu. Touch MONO or SYNC to link passenger side temperature setting to the driver side.

When passenger side control dial will be adjusted, synchronisation is deactivated.

Air conditioning A/C

Press A/C to switch on cooling. The LED in the button illuminates to indicate activation. Cooling is only functional when the engine is running and climate control fan is switched on.
Press A/C again to switch off cooling. The air conditioning system cools and dehumidifies (dries) when outside temperature is above a specific level. Therefore condensation may form and drip from under the vehicle.
If no cooling or drying is required, switch off the cooling system for fuel saving reasons.

**Manual air recirculation**

Press to activate the air recirculation mode. The LED in the button illuminates to indicate activation.

Press again to deactivate recirculation mode.

### Warning

The exchange of fresh air is reduced in air recirculation mode. In operation without cooling, the air humidity increases, so the windows may mist up from inside. The quality of the passenger compartment air deteriorates, which may cause the occupants to feel drowsy.

In warm and very humid ambient air conditions, the windscreen may mist up from outside, when cold air is directed towards it. If windscreen mists up from outside, activate windscreen wiper and deactivate.

**Demisting and defrosting the windows**

- Press . The LED in the button illuminates to indicate activation.
- Temperature and air distribution are set automatically and the fan runs at high speed.
- Switch on air conditioning by pressing A/C, if required.
- Switch on heated rear window .
- Switch on heated windscreen .
- To return to previous mode, press again. To return to automatic mode, press AUTO.
Note
If ☺ is pressed while the engine is running, an Autostop will be inhibited until ☺ is pressed again.

If ☺ is pressed while the engine is in an Autostop, the engine will restart automatically.

Stop-start system ◂ 139.

Deactivation of electronic climate control system
Cooling, fan and automatic mode can be switched off by turning the rotary ring around the AUTO button anticlockwise.

Activation by switching on the fan or pressing AUTO.
Heated rear window, windscreen and exterior mirrors ☺ ◂ 41.
Heated seats ☺ ◂ 51.

Auxiliary heater

Air heater
Quickheat is an electric auxiliary air heater which automatically warms up the passenger compartment more quickly.

Parking heater
The parking heater allows to heat the vehicle's interior and to ventilate the vehicle's interior with ambient air.

The operating status of the parking heater is shown by an indicator with a LED.

- LED illuminates: A timer has been set.
- LED flashes: The system is operating.

The LED is extinguished at the end of the heating operation or when the parking heater is stopped using the remote control.

The parking heater can be programmed using the Graphic Info Display / Colour Info Display. Additionally, the parking heater can be switched on and off using a remote control.

Note
The programmed heating / ventilation is only activated if the ignition is off and the vehicle is locked.

If the charging level of the high voltage battery is below 50%, the programmed heating / ventilation is not activated.

If a recurrent heating / ventilation is programmed and two heating / ventilation procedures are carried out without operating the vehicle, the programmation is deactivated.
Press **MENU** to enter the menu.
Select **Temperature conditioning**.
Select heating or ventilation.
Define a timer.
Save the timer settings.
Activate the timer.

### Air vents

#### Adjustable air vents

**Air vents in the instrument panel**

Direct the flow of air by tilting and swivelling the slats.
To close the vent, swivel the slats inwards.

### Outer air vents in the instrument panel

Direct the flow of air by tilting and swivelling the slats.
To close the vent, swivel the slats outwards.
At least two air vents must be open while cooling is on.

⚠️ **Warning**

Do not attach any objects to the slats of the air vents. Risk of damage and injury in case of an accident.
Fixed air vents
Additional air vents are located beneath the windscreen and door windows and in the foot wells.

Glovebox cooler
The air conditioning system draws cooled air into the glovebox through a nozzle.

Move the slider back or forth in order to enable or disable glovebox cooling.

Maintenance
Air intake
The air intake in front of the windscreen in the engine compartment must be kept clear to allow air intake. Remove any leaves, dirt or snow.

Air cooling regular operation
In order to ensure continuously efficient performance, cooling must be operated for a few minutes once a month, irrespective of the weather and time of year. Operation with cooling is not possible when the outside temperature is too low.

Service
For optimal cooling performance, it is recommended to annually check the climate control system, starting three years after initial vehicle registration, including:

- functionality and pressure test
- heating functionality
- leakage check
- check of drive belts
- cleaning of condenser and evaporator drainage
- performance check

Driving hints

Control of the vehicle

Never coast with engine not running

Many systems will not function in this situation (e.g. brake servo unit, power steering). Driving in this manner is a danger to yourself and others.

All systems function during an Autostop.

Stop-start system  139.

Pedals

To ensure the pedal travel is uninhibited, there must be no mats in the area of the pedals.

Use only floor mats, which fit properly and are fixed by the retainers on the driver side.

Steering

If power steering assist is lost because the engine stops or due to a system malfunction, the vehicle can be steered but may require increased effort.

Starting and operating

New vehicle running-in

Do not brake unnecessarily hard for the first few journeys.

During the first drive, smoke may occur because of wax and engine oil evaporating off the exhaust system. Park the vehicle in the open for a while after the first drive and avoid inhaling the fumes.

During the running-in period, fuel and engine oil consumption may be higher.

Additionally, the cleaning process of the exhaust filter may take place more often.

Exhaust filter  142.

Ignition switch positions

Turn key:
0 : ignition off: some functions remain active until key is removed or driver's door is opened, provided the ignition was on previously

1 : ignition on power mode: ignition is on, diesel engine is preheating, control indicators illuminate and most electrical functions are operable

2 : engine start: release key after engine has been started

**Steering wheel lock**

Remove key from ignition switch and turn steering wheel until it engages.

---

**Danger**

Never remove the key from ignition switch during driving as this will cause steering wheel lock.

**Power button**

The electronic key must be inside the vehicle.

**Engine start**

Operate the clutch pedal (manual transmission), the brake pedal and press Start/Stop.

**Ignition on power mode without starting the engine**

Press Start/Stop without operating clutch or brake pedal. Control indicators illuminate and most electrical functions are operable.

**Engine and ignition off**

Press Start/Stop briefly in each mode or when engine is running and vehicle is stationary. Some functions remain active until driver's door is opened, provided the ignition was on previously.

**Emergency shut off during driving**

Press Start/Stop for 5 seconds

137. Steering wheel locks as soon as vehicle is stationary.

**Steering wheel lock**

The steering wheel lock activates automatically when:

- The vehicle is stationary.
- The ignition has been switched off.

To release steering wheel lock, open and close driver's door and switch the ignition on power mode or start the engine directly.
**Warning**

If the vehicle battery is discharged, the vehicle must not be towed, tow-started or jump-started as the steering wheel lock cannot be disengaged.

**Operation on vehicles with electronic key system in case of failure**

If either the electronic key fails or the battery of the electronic key is weak, a message may be displayed in the Driver Information Centre.

Hold the electronic key with buttons outside at the marking on the steering column cover as shown in the illustration.

Operate the clutch pedal (manual transmission), the brake pedal and press **Start/Stop**.

This option is intended for emergencies only. Replace the electronic key battery as soon as possible 23.

For unlocking or locking the doors, see fault in radio remote control unit or electronic key system 24.

**Starting the engine**

**Vehicles with ignition switch**

Turn key to position 1 to release the steering wheel lock.

Manual transmission: operate clutch and brake pedal.

Automatic transmission: operate brake pedal and move selector lever to P or N.

Do not operate accelerator pedal.

Diesel engines: wait until control indicator ! extinguishes.
Turn key briefly to position 2 and release after engine has been started.

Manual transmission: during an Autostop, the engine can be started by depressing the clutch pedal ◇ 139.

Automatic transmission: during an Autostop, the engine can be started by releasing the brake pedal ◇ 139.

**Vehicles with power button**

- Automatic transmission: operate brake pedal and move selector lever to P or N.
- Do not operate accelerator pedal.
- Press Start/Stop button.
- Release button after starting procedure begins. Diesel engine starts after control indicator ◇ for preheating extinguishes.
- Before restarting or to switch off the engine when vehicle is stationary, press Start/Stop once more briefly.

To start the engine during an Autostop:

- Manual transmission: during an Autostop, the engine can be started by depressing the clutch pedal ◇ 139.
- Automatic transmission: during an Autostop, the engine can be started by releasing the brake pedal ◇ 139.

**Hybrid vehicles**

- Press Start/Stop button.
- Depress brake pedal.
- Press Start/Stop button.
- Keep the brake pedal depressed until the activation of the hybrid system is confirmed by the illumination of READY in the instrument cluster and an acoustical signal.

**Emergency shut off during driving**

If the engine needs to be switched off during driving in case of emergency, press Start/Stop for 5 seconds.

---

**Danger**

Switching off the engine during driving may cause loss of power support for brake and steering systems. Assistance systems and airbag systems are disabled. Lighting and brake lights will extinguish. Therefore power down the engine and ignition while driving only when required in case of emergency.
Starting the vehicle at low temperatures

Starting the engine without additional heaters is possible down to -25 °C for diesel engines and -30 °C for petrol engines. Required is an engine oil with the correct viscosity, the correct fuel, performed services and a sufficiently charged vehicle battery. With temperatures below -30 °C the automatic transmission requires a warming phase of approx. 5 minutes. The selector lever must be in position P.

Turbo engine warm-up

Upon start-up, engine available torque may be limited for a short time, especially when the engine temperature is cold. The limitation is to allow the lubrication system to fully protect the engine.

Overrun cut-off

The fuel supply is automatically cut off during overrun, i.e. when the vehicle is driven with a gear engaged but accelerator pedal is released.

Depending on driving conditions, the overrun cut-off may be deactivated.

Stop-start system

The stop-start system helps to save fuel and to reduce the exhaust emissions. When conditions allow, it switches off the engine as soon as the vehicle is at a low speed or at a standstill, e.g. at a traffic light or in a traffic jam.

Activation

The stop-start system is available as soon as the engine is started, the vehicle starts-off and the conditions as stated below in this section are fulfilled.

The system is ready to operate when the LED in the button is not illuminated. To activate the system when the system is deactivated, press .

If the stop-start system is temporarily not available and the button is pressed, the LED in the button flashes.

Deactivation

Deactivate the stop-start system manually by pressing . The deactivation is indicated when the LED in the button illuminates.

Autostop

Vehicles with manual transmission

An Autostop can be activated at a standstill.

Activate an Autostop as follows:

- Depress the clutch pedal.
- Set the selector lever to neutral.
- Release the clutch pedal.
The engine will be switched off while the ignition stays on.

**Vehicles with automatic transmission**
If the vehicle is at a standstill with depressed brake pedal, Autostop is activated automatically.
The engine will be switched off while the ignition stays on.
The stop-start system will be disabled on inclines of 12% or more.

**Indication**
An Autostop is indicated by control indicator (A).
During an Autostop, the heating and brake performance will be maintained.

**Conditions for an Autostop**
The stop-start system checks if each of the following conditions is fulfilled.

- The stop-start system is not manually deactivated.
- The driver's door is closed or the driver's seat belt is fastened.
- The vehicle battery is sufficiently charged and in good condition.
- The engine is warmed up.
- The engine coolant temperature is not too high.
- The engine exhaust temperature is not too high, e.g. after driving with high engine load.
- The ambient temperature is not too low or too high.
- The climate control system allows an Autostop.
- The brake vacuum is sufficient.
- The self-cleaning function of the exhaust filter is not active.
- The vehicle was driven at least at walking speed since the last Autostop.

Otherwise an Autostop will be inhibited.

**Note**
The Autostop may be inhibited for several hours after a battery replacement or reconnection.

Certain settings of the climate control system may inhibit an Autostop.
Climate control 124.
Immediately after higher speed driving an Autostop may be inhibited.
New vehicle running-in 135.

**Vehicle battery discharge protection**
To ensure reliable engine restarts, several vehicle battery discharge protection features are implemented as part of the stop-start system.

**Power saving measures**
During an Autostop, several electrical features such as auxiliary electric heater or rear window heating are disabled or switched to a power saving mode. The fan speed of the climate control system is reduced to save power.
Restart of the engine by the driver

Vehicles with manual transmission
Depress the clutch pedal without depressing the brake pedal to restart the engine.

Vehicles with automatic transmission
The engine is restarted in the following cases:
- brake pedal released while the selector lever is in position D or M
- brake pedal released or selector lever in position N when selector lever is moved to position D or M
- selector lever moved to position R

Restart of the engine by the stop-start system
The selector lever must be in neutral to enable an automatic restart.
If one of the following conditions occurs during an Autostop, the engine will be restarted automatically by the stop-start system:
- stop-start system manually deactivated
- driver's seat belt unfastened and driver's door opened
- engine temperature too low
- charging level of vehicle battery below a defined level
- brake vacuum not sufficient
- vehicle driven at least at walking speed
- climate control system requests engine start
- air conditioning manually switched on

If an electrical accessory, e.g. a portable CD player, is connected to the power outlet, a brief power drop during the restart might be noticeable.

Parking

⚠️ Warning
- Do not park the vehicle on an easily ignitable surface. The high temperature of the exhaust system could ignite the surface.
- Apply the parking brake.
- If the vehicle is on a level surface or uphill slope, engage first gear or set the selector lever to position P. On an uphill slope, turn the front wheels away from the kerb.
  If the vehicle is on a downhill slope, engage reverse gear or set the selector lever to position P. Turn the front wheels towards the kerb.
- Close the windows.
- Switch off the engine.
- Remove the ignition key from the ignition switch or switch off ignition on vehicles with power

⚠️ Warning
button. Turn the steering wheel until the steering wheel lock is felt to engage.

- For hybrid vehicles, make sure READY is not illuminated in the instrument cluster.
- Lock the vehicle.
- Activate the anti-theft alarm system.
- The engine cooling fans may run after the engine has been switched off 214.

**Caution**

After running at high engine speeds or with high engine loads, operate the engine briefly at a low load or run in neutral for approx. 30 seconds before switching off, in order to protect the turbocharger.

**Note**

In the event of an accident with airbag deployment, the engine is switched off automatically if the vehicle comes to a standstill within a certain time.

In countries with extreme low temperatures it may be necessary to park the vehicle without applied parking brake. Make sure to park the vehicle on a level surface.

**Engine exhaust**

**Danger**

Engine exhaust gases contain poisonous carbon monoxide, which is colourless and odourless and could be fatal if inhaled.

If exhaust gases enter the interior of the vehicle, open the windows. Have the cause of the fault rectified by a workshop. Avoid driving with an open load compartment, otherwise exhaust gases could enter the vehicle.

**Exhaust filter**

**Automatic cleaning process**

The exhaust filter system filters soot particles out of the exhaust gases. The start of saturation of the exhaust filter is indicated by the temporary illumination of or , accompanied by a message in the Driver Information Centre.
As soon as the traffic conditions permit, regenerate the filter by driving at a vehicle speed of at least 60 km/h until the control indicator extinguishes.

**Note**
On a new vehicle, the first exhaust filter regeneration operations may be accompanied by a burning smell, which is normal. Following prolonged operation of the vehicle at very low speed or at idle, water vapour can be emitted at the exhaust on acceleration. This does not affect the behaviour of the vehicle or the environment.

**Cleaning process not possible**
If ⚠ or ⚠ stays on, accompanied by an audible signal and a message, this indicates that the exhaust filter additive level is too low.

The reservoir must be topped-up without delay. Seek the assistance of a workshop.

---

**Catalytic converter**

The catalytic converter reduces the amount of harmful substances in the exhaust gases.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fuel grades other than those listed on pages ⚠ 202, ⚠ 261 could damage the catalytic converter or electronic components.</td>
</tr>
<tr>
<td>Unburnt petrol will overheat and damage the catalytic converter. Therefore avoid excessive use of the starter, running the fuel tank dry and starting the engine by pushing or towing.</td>
</tr>
</tbody>
</table>

In the event of misfiring, uneven engine running, a reduction in engine performance or other unusual problems, have the cause of the fault rectified by a workshop as soon as possible. In an emergency, driving can be continued for a short period, keeping vehicle speed and engine speed low.

---

**AdBlue**

**General information**

The selective catalytic reduction (BlueInjection) is a method to substantially reduce the nitrogen oxides in the exhaust emission. This is achieved by injecting a Diesel Exhaust Fluid (DEF) into the exhaust system. The ammonia released by the fluid reacts with nitrous gases ($\text{NO}_x$) from the exhaust and turns it into nitrogen and water.

The designation of this fluid is AdBlue®. It is a non-toxic, non-flammable, colourless and odourless fluid which consists of 32% urea and 68% water.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Avoid contact of your eyes or skin with AdBlue.</td>
</tr>
<tr>
<td>In case of eye or skin contact, rinse off with water.</td>
</tr>
</tbody>
</table>
Caution

Avoid contact of the paintwork with AdBlue.
In case of contact, rinse off with water.

AdBlue freezes at a temperature of approx. -11 °C. As the vehicle is equipped with an AdBlue preheater, the emissions reduction at low temperatures is ensured. The AdBlue preheater works automatically.

Note

Frozen and again liquefied AdBlue is usable without quality loss.

The typical AdBlue consumption is approx. 0.85 l per 1000 km, but can also be higher depending on driving behaviour (e.g. high load or towing).

Level warnings

Depending on the calculated range of AdBlue, different messages are displayed in the Driver Information Centre. The messages and the restrictions are a legal requirement.

1. The first possible warning is Top up emissions additive: Starting prevented in 2400 km.
   When switching on the ignition, this warning will show up once briefly with the calculated range. Additionally, control indicator will illuminate and a chime will sound. Driving is possible without any restrictions.
   When driving, the message is displayed every 300 km until the additive tank has been topped-up.

2. The next warning level is entered with a range below 600 km. The message with the current range will always be displayed when ignition is switched on. Additionally, control indicator will flash and a chime will sound. Driving is possible without any restrictions.
   When driving, the message is displayed every 30 seconds until the additive tank has been topped-up.

3. The last warning level is entered when the AdBlue tank is empty. Restart of the engine is not possible. The following warning message will be displayed:
   Top up emissions additive: Starting prevented
   Additionally, control indicator will flash and a chime will sound.
   Refill the tank to a level of at least 5 l of AdBlue, otherwise restarting of the engine is not possible.

High emission warnings

In the event of a fault with the emissions control system, different messages are displayed in the Driver Information Centre. The messages and the restrictions are a legal requirement.

1. If a fault is detected for the first time, the warning Emissions fault is displayed.
   Additionally, control indicators and will illuminate and a chime will sound. Driving is possible without any restrictions.
   If it is a temporary fault, the alert disappears during the next
journey, after self-diagnosis of the emissions control system.

2. If the fault is confirmed by the emission control system, the following message will be displayed:

   **Emissions fault: Starting prevented in 1100 km.**

   Additionally, control indicators 🚭, ⚠️ and 🚨 will illuminate and a chime will sound.

   When driving, the message is displayed every 30 seconds while the fault persists.

3. If the last warning level is entered, the following warning message will be displayed:

   **Emissions fault: Starting prevented**

   Additionally, control indicators 🚭, ⚠️ and 🚨 will illuminate and a chime will sound.

   Consult a workshop for assistance.

---

### Refilling AdBlue

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Only use AdBlue that complies with European standards DIN 70 070 and ISO 22241-1. Do not use additives. Do not dilute AdBlue. Otherwise the selective catalytic reduction system could be damaged.</td>
</tr>
</tbody>
</table>

**Note**

Whenever a filling pump with a nozzle for passenger cars is not available at a filling station, use only AdBlue bottles or canisters with a sealed refill adapter for refilling, to prevent splashback and overspill, and in order to ensure that the fumes from the tank are captured and do not emerge. AdBlue in bottles or canisters is available in many filling stations and can be purchased e.g. at Opel dealers and other retail outlets.

Since AdBlue has a limited durability, check the date of expiry before refilling.

**Note**

Refill the tank to a level of at least 5 l to ensure that the new AdBlue level is being detected.

In case AdBlue refill is not successfully detected:

1. Continuously drive the vehicle for 10 min making sure that vehicle speed is always higher than 20 km/h.

2. If AdBlue refill is detected successfully, AdBlue supply-driven warnings or limitations will disappear.

If AdBlue refill is still not detected, seek the assistance of a workshop.

If AdBlue must be refilled at temperatures below -11 °C, the refilling of AdBlue may not be detected by the system. In this event, park the vehicle in a space with a higher ambient temperature until AdBlue is liquified.
When unscrewing the protective cap from the filler neck, ammonia fumes may emerge. Do not inhale as the fumes have a pungent smell. The fumes are not harmful by inhalation.

The AdBlue tank should be filled completely. This must be done if the warning message regarding prevention of an engine restart is already displayed.

The vehicle must be parked on a level surface.

The filler neck for AdBlue is located behind the fuel filler flap, which is located at right rear side of the vehicle.

The fuel filler flap can only be opened if the vehicle is unlocked.

1. Remove key from ignition switch.
2. Close all doors to avoid ammonia fumes entering the interior of the vehicle.
3. Release the fuel filler flap by pushing the flap 204.
4. Unscrew protective cap from the filler neck.
5. Open AdBlue canister.
6. Mount one end of the hose on the canister and screw the other end on the filler neck.
7. Lift the canister until it is empty, or until the flow from the canister has stopped. This can take up to 5 minutes.
8. Place the canister on the ground to empty the hose, wait 15 seconds.
9. Unscrew the hose from the filler neck.
10. Mount the protective cap and turn clockwise until it engages.

Dispose of AdBlue canister according to environmental requirements. Hose can be reused after flushing with clear water before AdBlue dries out.
Automatic transmission electrified

This vehicle is a plug-in hybrid vehicle. It has a combustion engine and an automatic transmission with integrated electrical engine which enables electrical driving and charging of the battery during the deceleration and the braking of the vehicle. Additionally, the battery can be charged using a cable, e.g., at domestic electric outlets or public charging stations. The all-wheel drive version has a second electrical engine for the rear axle.

Gear selection

P : park position, front wheels are locked, engage only when the vehicle is stationary and the parking brake is applied
R : reverse gear, engage only when the vehicle is stationary
N/P : neutral
D/B : automatic mode / automatic mode with one-pedal driving

Do not accelerate while engaging a gear. Never depress the accelerator pedal and brake pedal at the same time.

When a gear is engaged, the vehicle slowly begins to creep when the brake is released.

Shifting in / out of P
To shift into P, press P on the selector lever.
To shift out of P:
1. Depress brake pedal and press the release button.
2. To shift into R, push the selector forwards beyond the point of resistance.
   To shift into D, push the selector backwards beyond the point of resistance.
   To shift into N, push the selector forwards or backwards without passing the point of resistance.

Shifting into R
1. Depress the brake pedal and press the release button.
2. Shift into R using the gear selector.

Shifting into / out of B
B can only be activated if D is selected.
To shift into **B**:
1. Shift into **D**.
2. Push the selector backwards without passing the point of resistance.

To shift from **B** to **D**, push the selector backwards without passing the point of resistance.

**One-pedal driving**

With one-pedal driving, the accelerator pedal can be used to control the deceleration of the vehicle down to a complete stop.

Quick releasing of the accelerator pedal will result in aggressive deceleration. Slow releasing of the accelerator pedal will allow the deceleration of the vehicle to be adjusted as desired.

To use one-pedal driving, shift into **B**. **B** is only selectable when the vehicle is in **D**. Press the accelerator pedal to achieve the desired speed. The deceleration provided by one-pedal driving provides full regenerative braking by charging the high voltage battery.

**Automatic transmission**

The automatic transmission permits automatic gearshifting (automatic mode) or manual gearshifting (manual mode).

Manual shifting is possible in manual mode by tapping the selector lever to + or - 149.

**Transmission display**

The mode or selected gear is shown in the Driver Information Centre.

In automatic mode, the driving programme is indicated by **D**.

In manual mode, **M** and the number of the selected gear is indicated.

**R** indicates reverse gear.

**N** indicates neutral position.

**P** indicates park position.

**Gear selection**

Move the selector lever in the shifting gate as shown in the illustration above.

P : park position, front wheels are locked, engage only when the vehicle is stationary and the parking brake is applied
R : reverse gear, engage only when the vehicle is stationary
N : neutral
D : automatic mode
M : manual mode
+ : upshift in manual mode
- : downshift in manual mode

The selector lever is locked in P and can only be moved when the ignition is on and the brake pedal is applied.
The engine can only be started with the selector lever in position P or N. When position N is selected, press the brake pedal or apply the parking brake before starting.
Do not accelerate while engaging a gear. Never depress the accelerator pedal and brake pedal at the same time.
When a gear is engaged, the vehicle slowly begins to creep when the brake is released.

**Engine braking**
To utilise the engine braking effect, select a lower gear in good time when driving downhill, see manual mode.

**Rocking the vehicle**
Rocking the vehicle is only permissible if the vehicle is stuck in sand, mud or snow. Move the selector lever between D and R in a repeat pattern. Do not race the engine and avoid sudden acceleration.

**Parking**
Apply the parking brake and engage P.

**Manual mode**
Move selector lever out of position D towards the left in position M.
Tap the selector lever to the front + to shift to a higher gear.
Tap the selector lever to the rear - to shift to a lower gear.
If a higher gear is selected when vehicle speed is too low, or a lower gear when vehicle speed is too high, the shift is not executed. This can cause a message in the Driver Information Centre.
In manual mode, no automatic shifting to a higher gear takes place at high engine revolutions.

**Gear shift indication**

The symbol ▲ or ▼ with a number beside it is indicated when gearshifting is recommended for fuel saving reasons.

Shift indication appears only in manual mode.

**Electronic driving programmes**

- Following a cold start, the operating temperature programme increases engine speed to quickly bring the catalytic converter to the required temperature.
- Special programmes automatically adapt the shifting points when driving up inclines or down hills.
- In snowy or icy conditions or on other slippery surfaces, the electronic transmission control enables the driver to select manually first, second or third gear for starting off.

**Kickdown**

Pressing down the accelerator pedal beyond the kickdown detent will lead to maximum acceleration independent of selected driving mode. The transmission shifts to a lower gear depending on engine speed.

**Fault**

In the event of a fault a message is displayed in the Driver Information Centre.

Vehicle messages ◊ 107.

Electronic transmission control enables only third gear. The transmission no longer shifts automatically.

Do not drive faster than 100 km/h.

Have the cause of the fault remedied by a workshop.

**Interruption of power supply**

In the event of an interruption of power supply, the selector lever cannot be moved out of the P position.

If the vehicle battery is discharged, start the vehicle using jump leads ◊ 244.

If the vehicle battery is not the cause of the fault, release the selector lever.

1. Apply the parking brake.
2. Release the selector lever trim from the centre console. Poke with a finger into the leather socket below the selector lever and push the trim upwards.
3. Push down the button and move the selector lever out of P. Have the cause of the power supply interruption remedied by a workshop.

4. Mount the selector lever trim onto the centre console and refit.

---

**Manual transmission**

To engage reverse on 6-speed transmission, depress the clutch pedal, pull the ring under the selector lever and move the selector lever quite to the left and front.

If the gear does not engage, set the selector lever to neutral, release the clutch pedal and depress again. Then repeat gear selection.

Do not slip the clutch unnecessarily.

When operating, depress the clutch pedal completely. Do not use the pedal as a foot rest.

---

When clutch slip is detected for a specific time, the engine power will be reduced. A warning is displayed in the Driver Information Centre. Release the clutch.

**Caution**

It is not advisable to drive with the hand resting on the selector lever.

Gear shift indication 97.

Stop-start system 139.
Drive systems

Drive modes

The plug-in hybrid vehicle provides several drive modes.

The drive modes can be selected via the drive mode selector. The selected drive mode is indicated in the Driver Information Centre and in the Driver Info Display. Selecting a drive mode is only possible if READY is displayed in the instrument cluster.

Hybrid system active ⊗ 96.

AWD

The all-wheel drive mode improves the grip of the vehicle. The vehicle is driven by front and rear axle. Depending on the driving situation and the charge level of the high voltage battery, the vehicle can be driven 100% electrically.

All-wheel drive ⊗ 152

Sport

This mode combines the power of the combustion engine and the electrical engine for a dynamic driving style.

Hybrid

Hybrid mode focuses on optimising the vehicle's fuel consumption. Combustion engine and electrical engine operate together or in alternation depending on driving conditions and driving style.

Electric

In this mode, the vehicle is driven by the electric engine only. Electric mode is the default mode.

Electric propulsion is available for speeds below 135 km/h.

All-wheel drive

The all-wheel drive system enhances driving characteristics and stability, and helps to achieve the best possible driveability.

In all-wheel drive mode, the front axle is driven by the combustion engine or the electrical engine, the rear axle is driven by a second electrical engine.
All-wheel drive mode can be activated using the driving mode switch. Activation is shown in the Driver Information Centre and the Info Display.

Driver Information Centre 101
Info Display 103

All-wheel drive is available for speeds below 135 km/h.

**Brakes**

The brake system comprises two independent brake circuits.

If a brake circuit fails, the vehicle can still be braked using the other brake circuit. However, braking effect is achieved only when the brake pedal is depressed firmly. Considerably more force is needed for this. The braking distance is extended. Seek the assistance of a workshop before continuing the journey.

When the engine is not running, the support of the brake servo unit disappears once the brake pedal has been depressed once or twice. Braking effect is not reduced, but braking requires significantly greater force. It is especially important to bear this in mind when being towed.

Control indicator 96.

**Antilock brake system**

Antilock brake system (ABS) prevents the wheels from locking.

ABS starts to regulate brake pressure as soon as a wheel shows a tendency to lock. The vehicle remains steerable, even during hard braking.

ABS control is made apparent through a pulse in the brake pedal and the noise of the regulation process.

For optimum braking, keep the brake pedal fully depressed throughout the braking process, despite the fact that the pedal is pulsating. Do not reduce the pressure on the pedal.

When braking in an emergency, the hazard warning flashers are switched on automatically depending on the force of deceleration. They are switched off automatically the first time you accelerate.

After starting off, the system performs a self-test which may be audible.

Control indicator 97.
Fault

⚠️ Warning
If there is a fault in the ABS, the wheels may be liable to lock due to braking that is heavier than normal. The advantages of ABS are no longer available. During hard braking, the vehicle can no longer be steered and may swerve.

Have the cause of the fault remedied by a workshop.

Parking brake

⚠️ Warning
Before leaving the vehicle, check parking brake status. Control indicator ⚠️ illuminate constantly when electric parking brake is applied.

Electric parking brake

⚠️ Warning
Pull switch ⬜ for a minimum of 1 second until control indicator ⬜ illuminate constantly and electric parking brake is applied ⚠️ 96. The electric parking brake operates automatically with adequate force.

Before leaving the vehicle, check the electric parking brake status. Control indicator ⬜ ⚠️ 96.

The electric parking brake can always be activated, even if the ignition is off. Do not operate electric parking brake system too often without engine running as this will discharge the vehicle battery.

Releasing
Switch on ignition. Keep foot brake pedal depressed and then push switch ⚪.

Drive away function
Vehicles with manual transmission: Depressing the clutch pedal and then slightly releasing the clutch pedal and slightly depressing the accelerator pedal releases the electric parking brake automatically. This is only possible if the automatic operation of the electric parking brake is activated. It is not possible when switch ⬜ is pulled at the same time.

Vehicles with automatic transmission: Engaging D and then depressing the accelerator pedal releases the electric parking brake automatically. This is only possible if the automatic
operation of the electric parking brake is activated. It is not possible when switch (P) is pulled at the same time.

Braking when vehicle is moving
When the vehicle is moving and the switch (P) is kept pulled, the electric parking brake system will decelerate the vehicle. As soon as the switch (P) is released, braking will be stopped.

The antilock brake system and the Electronic Stability Control stabilise the vehicle while the switch (P) is kept pulled. If an error of the electric parking brake occurs, a warning message is displayed in the driver information centre. If the antilock brake system and the Electronic Stability Control fail, one or both indicators (i) and (j) illuminate in the instrument cluster. In this case, stability can only be provided by repeatedly pulling and pushing the switch (P) until the vehicle is immobilised.

Automatic operation
Automatic operation includes automatic application and automatic release of the electric parking brake. The electric parking brake can also be applied or released manually by using the switch (P).

Automatic application:
- The electric parking brake is automatically applied when the vehicle is stationary and the ignition is switched off.
- (P) illuminates in the instrument cluster and a display message pops up to confirm the application.

Automatic release:
- Parking brake releases automatically after moving off.
- (P) extinguishes in the instrument cluster and a display message pops up to confirm the release.

If the vehicle is equipped with an automatic transmission and the brake is not released automatically, make sure the front doors are correctly closed.

Deactivation of automatic operation
1. Start the engine.
2. If the parking brake is released, apply the parking brake pulling the switch (P).
3. Take your foot off the brake pedal.
4. Press the switch (P) for at least 10 seconds and maximum 15 seconds.
5. Release the switch (P).
6. Press and hold the brake pedal.
7. Pull the switch (P) for 2 seconds.

The deactivation of the automatic operation of the electric parking brake is confirmed by (P) illuminating in the instrument cluster 96. The electric parking brake can only be applied and released manually.

To reactivate the automatic operation, repeat the steps described above.
Functionality check
When the vehicle is not moving, the electric parking brake might be applied automatically. This is done to check the system.

Fault
Failure mode of electric parking brake is indicated by a control indicator and by a vehicle message which is displayed in the Driver Information Centre.
Vehicle messages 107.
Control indicator flashes: electric parking brake is not fully applied or released. When continuously flashing, release electric parking brake and retry applying.

Brake assist
If brake pedal is depressed quickly and forcefully, maximum brake force is automatically applied.
Operation of brake assist might become apparent by a pulse in the brake pedal and a greater resistance when depressing the brake pedal.

Maintain steady pressure on the brake pedal as long as full braking is required. Maximum brake force is automatically reduced when brake pedal is released.

Hill start assist
The system helps prevent unintended movement when driving away on inclines.
When releasing the brake pedal after stopping on an incline, brakes remain on for further 2 seconds. The brakes release automatically as soon as the vehicle begins to accelerate.

Regenerative braking
Regenerative braking generates electrical energy resulting from braking to charge the high voltage battery. Regenerative power may be limited when the high voltage battery is fully charged.
If the selector lever is in D, energy is recuperated when the brake pedal is depressed.
If the selector lever is in B, energy is recuperated when the accelerator pedal is lifted.
Automatic transmission electrified 147
Ride control systems

Electronic Stability Control and Traction Control system

Electronic Stability Control (ESC) improves driving stability when necessary, regardless of the type of road surface or tyre grip. As soon as the vehicle starts to swerve (understeer / oversteer), engine output is reduced and the wheels are braked individually. ESC operates in combination with the traction control system. It prevents the driven wheels from spinning. The traction control system is a component of the ESC.

The traction control system improves driving stability when necessary, regardless of the type of road surface or tyre grip, by preventing the driven wheels from spinning. As soon as the driven wheels starts to spin, engine output is reduced and the wheel spinning the most is braked individually. This considerably improves the driving stability of the vehicle on slippery road surfaces.

ESC and traction control system are operational after each engine start as soon as the control indicator \( \mathbf{\circ} \) extinguishes. When ESC and traction control system operate, \( \mathbf{\circ} \) flashes.

\[ \text{\textbf{\textcolor{red}{Warning}}} \]

Do not let this special safety feature tempt you into taking risks when driving. Adapt speed to the road conditions.

Control indicator \( \mathbf{\circ} \). 97.

Deactivation

ESC and traction control system can be deactivated, everytime it is required: press \( \mathbf{\circ} \). The LED in the button \( \mathbf{\circ} \) illuminates. A status message appears in the Driver Information Centre when ESC and traction control system are deactivated. ESC and traction control system are reactivated by pressing the \( \mathbf{\circ} \) button again, by applying the brake or in the case that the vehicle is driven faster than 50 km/h.
Driving and operating

The LED in the button \( \) extinguishes when ESC and traction control system are reactivated.
ESC and traction control system are also reactivated the next time the ignition is switched on.

Fault

If there is a fault in the system, the control indicator \( \) illuminates continuously and a message appears in the Driver Information Centre. The system is not operational.
Have the cause of the fault remedied by a workshop.

Selective ride control

Caution

The vehicle is designed to drive principally on-road, but it also enables driving off-road occasionally.
However, do not drive on terrain where the vehicle could be damaged due to obstacles, such as stones among others and on terrain with steep inclines and poor grip.
Do not cross waters.

Caution

When driving off-road, sudden motion and manoeuvres can cause a collision or losing control.

Selective ride control is designed to optimise traction in low-grip conditions (snow, mud and sand).
It adapts to the terrain by acting on the front wheels, in doing so this saves the weight normally associated with a more conventional four wheel drive system.

Selective ride control allows to choose between five driving modes:

- ESC off mode \( \)
- standard mode \( \)
- snow mode \( \)
- mud mode \( \)
- sand mode \( \)

The several modes can be activated by turning the control.
A LED illuminates and a status message appears in the Driver Information Centre to confirm the chosen mode.
ESC off mode

The ESC and Traction Control are deactivated in this mode.
A LED in the button illuminates.
ESC and Traction Control are reactivated automatically from 50 km/h or everytime the ignition is switched on.

Standard mode

This mode is calibrated for a low level of wheel spin, based on the different types of grip generally encountered in normal day to day driving.
Everytime the ignition is switched off, the system is automatically reset to this mode.

Snow mode

This mode adapts to the grip conditions encountered by each wheel when starting.
When advancing, the system optimises wheel spin to guarantee the best acceleration based on the available traction. Recommended in cases of deep snow and steep inclines.
This mode is active up to a speed of 50 km/h.

Mud mode

This mode allows considerable wheel spin at start-up for the wheel with the least grip, this removes mud and re-establishes traction.
Simultaneously, the wheel with the most grip is provided with the most torque possible.
This mode is active up to a speed of 80 km/h.

Sand mode

This mode allows a small amount of simultaneous wheel spin on the two drive wheels, enabling the vehicle to advance and reduce the risk of sinking.
This mode is active up to a speed of 120 km/h.

Caution

Do not use the other modes on sand as the vehicle may become stuck.

Sport mode

Sport mode adapts the settings of some vehicle systems to a sportier driving style.

Activation

Press SPORT when engine is running.
Driving and operating

LED in the button illuminates when sport mode is active and a status message appears in the Driver Information Centre.

Deactivation

Briefly press SPORT. Sport mode is deactivated the next time the ignition is switched on.

Driver assistance systems

⚠️ Warning

Driver assistance systems are developed to support the driver and not to replace the driver’s attention.

The driver accepts full responsibility when driving the vehicle.

When using driver assistance systems, always take care regarding the current traffic situation.

Cruise control

The cruise control can store and maintain speeds above 25 mph. Additionally at least the third gear must be engaged on manual transmission, on automatic transmission position D or the second or a higher gear in position M must be selected.

Deviations from the stored speeds may occur when driving uphill or downhill.

The system maintains the vehicle speed at the preset speed by the driver, without any action on the accelerator pedal.

The preset speed can be exceeded temporarily by pressing the accelerator pedal firmly.

The status and preset speed is displayed in the Driver Information Centre.

Do not use the cruise control if it is not advisable to maintain a constant speed.

Control indicator mdi 100.
Switching on the system

Press \( \mathcal{M} \), symbol \( \mathcal{M} \) and a message are displayed in the Driver Information Centre. The system is still not active.

Activation of the functionality

Setting speed by the driver

Accelerate to the desired speed and move thumb wheel once briefly to SET/-. The current speed is stored and maintained. Accelerator pedal can be released.

The preset speed can then be changed by moving thumb wheel to RES/+ to increase or SET/- to decrease the speed. Move thumb wheel repeatedly to change speed in small steps, move and hold to change speed in large steps.

Speed value is indicated in the Driver Information Centre.
Adopting speed by the speed limit recognition
The intelligent speed adaptation informs the driver when a speed limit is detected by the speed limit recognition. The detected speed limit can be used as new value for the cruise control.

Using the camera at the top of the windscreen, this system detects and reads speed limit and end of speed limit signs.

If the cruise control is active, the recognised speed limit will be displayed in the Driver Information Centre and MEM illuminates.

Press MEM on the steering wheel to request saving of the suggested speed.

Press MEM on the steering wheel once more to confirm and save the new speed setting.

This speed is the new value for the cruise control.

The function can be deactivated or activated in the personalisation menu 108.

Exceeding the set speed
Vehicle speed can be increased by depressing the accelerator pedal. When the accelerator pedal is released, the previously stored speed is resumed.

Deactivation of the functionality
Press , cruise control is in pause mode and a message is displayed. The vehicle is driven without cruise control.
Cruise control is deactivated, but not switched off. Last stored speed remains in memory for later speed resume.
Cruise control is deactivated automatically:
- The brake pedal is depressed.
- Vehicle speed is below 40 km/h.
- The Traction Control system or Electronic Stability Control is operating.
- The selector lever is in N (automatic transmission), first or second gear (manual transmission).

Resume stored speed
Move thumb wheel to RES/+ at a speed above 40 km/h. The stored speed will be obtained.

Switching off the system
Press , the cruise control mode is deselected and the cruise control indication extinguishes in the Driver Information Centre.
Pressing to activate the speed limiter deactivates cruise control.
Switching off the ignition cancels any programmed speed value.

Fault
In the event of a cruise control fault, the speed is cleared resulting in flashing of the dashes.

The speed limit recognition may not operate correctly if traffic signs do not comply with the Vienna Convention on Road Signs and Signals.
Speed limiter

The speed limiter prevents the vehicle from exceeding a preset maximum speed. The maximum speed can be set at speeds above 30 km/h. The driver can accelerate the vehicle up to the preset speed. Deviations from the limited speed may occur when driving downhill. The preset speed can be exceeded temporarily by pressing the accelerator pedal fully.

The status and preset speed limit are displayed in the Driver Information Centre.

Switching on the system

Press °, symbol ° and a message are displayed in the Driver Information Centre. The system is still not active.

Activation of the functionality

Setting speed by the driver
Accelerate to the desired speed and move thumb wheel once briefly to SET/-. The current speed is stored as maximum speed.

The preset maximum speed can be set by pressing thumb wheel to RES/+ to increase or SET/- to decrease the desired maximum speed. Move thumb wheel repeatedly to change speed in small steps, move and hold to change speed in large steps.

Press to activate speed limiter.

Adopting speed by the speed limit recognition
The intelligent speed adaptation informs the driver when a speed limit is detected by the speed limit recognition. The detected speed limit can be used as new value for the speed limiter.

Using the camera at the top of the windscreen, this system detects and reads speed limit and end of speed limit signs.

If the speed limiter is active, the recognised speed limit will be displayed in the Driver Information Centre and MEM illuminates.

Press MEM on the steering wheel to request saving of the suggested speed limit.

Press MEM on the steering wheel once more to confirm and save the new speed setting.

This speed is the new value for the speed limiter.

The function can be activated or deactivated in the personalisation menu 108.

Exceeding the speed limit
In the event of an emergency, it is possible to exceed the speed limit by depressing the accelerator pedal fully. In this case the preset speed value flashes.

Release the accelerator pedal and the speed limiter function is reactivated once a speed lower than the limit speed is obtained.

Speed value is indicated in the Driver Information Centre.
Deactivation of the functionality

Press ⏹️, speed limiter is in pause mode and a message is displayed. The vehicle is driven without speed limiter.

Speed limiter is deactivated, but not switched off. Last stored speed remains in memory for later speed resume.

Resume limit speed

Press ⏹️, the stored speed limit will be obtained.

Switching off the system

Press ⏹️, the speed limiter mode is deselected and the speed limit indication extinguishes in the Driver Information Centre.

Pressing ⚡️ to activate cruise control deactivates speed limiter.

The preset speed remains in the memory when the ignition is switched off.

Fault

In the event of a speed limiter fault, the speed is cleared resulting in flashing of the dashes.

The speed limit recognition may not operate correctly if traffic signs do not comply with the Vienna Convention on Road Signs and Signals.

Adaptive cruise control

The adaptive cruise control is an enhancement to the conventional cruise control with the additional feature of maintaining a certain following distance to the vehicle ahead. It uses radar and camera sensors to detect the vehicles ahead. If no vehicle is detected in the driving path, the adaptive cruise control will behave like a conventional cruise control.

The adaptive cruise control automatically decelerates the vehicle when approaching a slower moving vehicle. It then adjusts the vehicle speed to follow the vehicle ahead at the selected following distance. The vehicle speed increases or decreases to follow the vehicle ahead, but will not exceed the set speed. It may apply limited braking with activated brake lights.

If the vehicle ahead accelerates or changes lane, the adaptive cruise control progressively accelerates the vehicle to return to the stored set speed. If the driver operates a the turn lights to overtake a slower vehicle, the adaptive cruise control allows the vehicle to temporarily approach the vehicle ahead to help passing it. However, the set speed will never be exceeded.

The adaptive cruise control can store set speeds over 30 km/h for manual transmission. If the vehicle ahead is moving too slowly and the selected following distance cannot be maintained anymore, a warning chime is given and a message is displayed in the Driver Information Centre. The message prompts the driver to take back control of the vehicle. On vehicles with automatic transmission, the system can brake the vehicle until a full stop.
**Warning**

The complete driver attention is always required while driving with adaptive cruise control. The driver stays fully in control of the vehicle because the brake pedal, the accelerator pedal and the button have priority over any adaptive cruise control operation.

### Switching on the system

Press the symbol in the Driver Information Centre. The system is still not active.

### Activation of the functionality

**Setting speed by the driver**

The adaptive cruise control has to be switched on manually at a speed between 30 km/h and 180 km/h. For vehicles with automatic transmission, the automatic selector lever must be in position D or M.

Accelerate to the desired speed and move the thumb wheel to SET/-. The current speed is stored and maintained.

The speed value is indicated in the Driver Information Centre.

The preset speed can then be changed by moving thumb wheel to RES/+ to increase or SET/- to decrease the speed. Move thumb wheel repeatedly to change speed in small steps, move and hold to change speed in large steps.

When the adaptive cruise control is operating, the stop-start system is automatically deactivated.
Adopting speed by the speed limit recognition
The intelligent speed adaptation informs the driver when a speed limit is detected by the speed limit recognition. The detected speed limit can be taken over as new set speed for the adaptive cruise control.
Using the camera at the top of the windscreen, this system detects and reads speed limit and end of speed limit signs.
If the adaptive cruise control is active, the recognised speed limit will be displayed in the Driver Information Centre and MEM illuminates.
Press MEM on the steering wheel to request saving of the suggested speed.
Press MEM on the steering wheel once more to confirm and save the new speed setting.
This speed limit is now the new set speed of the adaptive cruise control.
The function can be activated or deactivated in the personalisation menu 108.

Overriding set speed
It is always possible to drive faster than the selected set speed by depressing the accelerator pedal.
When the accelerator pedal is released, the vehicle returns to the stored speed. If a slower moving vehicle is ahead, the following distance selected by the driver is restored.
If the set speed is exceeded, the indicated speed setting flashes in the Driver Information Centre and a warning message appears.

⚠️ Warning
Accelerating by the driver deactivates automatic braking by the system. This is indicated as a pop-up warning in the Driver Information Centre.

Resuming stored speed
Move the thumb wheel to RES/+ at a speed above 30 km/h. The adaptive cruise control is activated with the stored set speed.

Adaptive cruise control on vehicles with automatic transmission
For vehicles with automatic transmission, adaptive cruise control allows to maintain the selected distance behind a stopping vehicle until a complete stop is reached.
If the system has stopped your vehicle behind another vehicle, then the set speed is replaced by a green control indicator . This symbol notifies, that the vehicle is hold automatically in stop position.
If the stopped vehicle ahead was stopped for a longer time and then begins to move forward, the green illuminated vehicle ahead control indicator will flash and a warning chime will sound as a reminder to check traffic before resuming.
When the vehicle ahead drives away, press the accelerator pedal until 30 km/h and then move the thumb wheel to SET- or RES+ to resume adaptive cruise control. If the vehicle stays stopped for more than 5 minutes or if the driver's door is
open and the driver’s seat belt is unfastened, then the electric parking brake is applied automatically to hold the vehicle. Control indicator will illuminate. To release electric parking brake, press the accelerator pedal.

**Electric parking brake [154]**

### Warning

When the system is deactivated or cancelled, the vehicle will no longer be held at a stop and can start moving. Be always prepared to manually apply the brake to hold the vehicle stationary.

Do not leave the vehicle while it is being held at a stop by adaptive cruise control. Always move selector lever to park position P and switch off the ignition before leaving the vehicle.

### Setting the following distance

When adaptive cruise control detects a slower moving vehicle in the driving path, it will adjust the vehicle speed to maintain the following distance selected by the driver.

The following distance can be set to close (1 bar), normal (2 bars) or far (3 bars).

If the engine is running and the adaptive cruise control is enabled (grey), you can modify the following distance setting:

Press , the current setting is shown in the Driver Information Centre.

Press again to change the following distance: The new setting is displayed in the Driver Information Centre.

The selected following distance is indicated by full bars in the adaptive cruise control page.

### Warning

The driver accepts full responsibility for the appropriate following distance based on traffic, weather and visibility conditions. Following distance must be adjusted or the system switched off when required by the prevailing conditions.

### Detecting the vehicle ahead

If the system detects a vehicle in the driving path, the adaptive cruise control symbol displayed in the Driver Information Centre changes: is changed to .

### Deactivation of the functionality

Press , the adaptive cruise control is in pause mode and a message is displayed. The vehicle is driven without adaptive cruise control.

The adaptive cruise control is deactivated, but not disabled. The last stored set speed remains in memory for later usage.
The adaptive cruise control is deactivated automatically when:

- The brake pedal is depressed.
- The vehicle accelerates above 180 km/h or slows down below 30 km/h.
- The electric parking brake is applied.
- The Traction Control system or Electronic Stability Control is deactivated or operating.
- The selector lever of automatic transmissions is neither in D nor in M.
- A fault is detected in the Electronic Stability Control or the radar system.

Switching off the system

Press \( C \), the adaptive cruise control mode is disabled and the adaptive cruise control indication extinguishes in the Driver Information Centre. Pressing \( \beta \) to activate the speed limiter deactivates adaptive cruise control.

Switching off the ignition deletes the stored set speed.

Driver's attention

- Use the adaptive cruise control carefully on bends or mountain roads, as it can lose the vehicle ahead and needs time to detect it again.
- Do not use the system on slippery roads as it can create rapid changes in tyre traction (wheel spinning), so that you could lose control of the vehicle.
- Do not use the adaptive cruise control during rain, snow or heavy dirt, as the radar sensor can be covered by a water film, dust, ice or snow. This reduces or suppresses completely the visibility. In case of sensor blockage, clean the sensor cover.
- Do not use the system when the spare wheel is in use.

System limits

⚠️ Warning

The system’s automatic brake force does not permit hard braking and the braking level may not be sufficient to avoid a collision.

- After a sudden lane change, the system needs a certain time to detect the next preceding vehicle. So if a new vehicle is detected, the system may accelerate instead of braking.
- The adaptive cruise control does not consider the oncoming traffic.
- The adaptive cruise control does not consider pedestrians and animals for braking and driving off.
- The adaptive cruise control considers stopped vehicles only at low speed.
Driving and operating

- Do not use the adaptive cruise control when towing a trailer.
- Do not use the adaptive cruise control on roads with an incline of more than 10%.

As the radar's field of detection is quite narrow, it is possible that the system may not detect:
- vehicles of reduced width, e.g. motorcycles, scooters
- vehicles not running in the middle of the lane
- vehicles entering a corner
- vehicles suddenly pulling out

Bends

The adaptive cruise control calculates a predicted path based on the centrifugal force. This predicted path considers the current bend characteristic, but cannot consider a future bend change. The system may lose the current vehicle ahead or consider a vehicle which is not in the actual lane. This can happen when entering or exiting a bend or if the bend gets stronger or weaker. If it no longer detects any vehicle ahead, then control indicator 🚗 will extinguish.

If the centrifugal force is too high in a bend, the system slows down the vehicle slightly. This braking level is not designed to avoid spinning-off the bend. The driver is responsible for reducing the selected speed before entering a bend and in general to adapt the speed to the road type and to existing speed limits.

Motorways

On motorways, adapt the set speed to the situation and the weather. Always consider that adaptive cruise control has a limited visibility range, a limited braking level and a certain reaction time to verify if a vehicle is on the driving path or not. Adaptive cruise control may not be able to brake the vehicle in time to avoid a collision with a much slower vehicle or after a lane change. This is particularly true while driving fast or if the visibility is reduced due to weather conditions.

While entering or exiting a motorway, adaptive cruise control may lose the vehicle ahead and accelerate up to the set speed. For this reason, decrease the set speed before the exit or before the entry.

Vehicle path changes

If another vehicle enters your driving path, adaptive cruise control will first consider the vehicle when it is completely in your path. Be ready to...
Driving and operating

Hill considerations

The radar unit is located in the middle of the front bumper.

**Warning**

Do not use the adaptive cruise control on steep hill roads.

System performance on hills depends on vehicle speed, vehicle load, traffic conditions and the road incline. It may not detect a vehicle in your path while driving on hills. On steep hills, you may have to use the accelerator pedal to maintain your vehicle speed. When going downhill you may have to brake to maintain or reduce your speed. Note that applying the brake deactivates the system.

**Warning**

The radar unit was aligned carefully during manufacture. Therefore, in the event of a front-end impact, do not use the system. The front bumper may appear to be intact, however the sensor behind may be affected and react incorrectly. After an accident, consult a workshop to verify and adjust the radar unit position.

**Fault**

In the event of a fault with the adaptive cruise control, you are alerted by the illumination of a warning light and the display of a message in the instrument panel, accompanied by an audible signal.

The adaptive cruise control may not operate correctly if traffic signs do not comply with the Vienna Convention on Road Signs and Signals. Have the system checked by a dealer or a qualified workshop.

As a safety measure, do not use the system if the brake lights are faulty. Do not use the system if the front bumper is damaged.

**Forward collision alert**

The forward collision alert may help to avoid or reduce the harm caused by front-end crashes.

The forward collision alert uses the front camera in the windscreen and a radar unit located behind the front bumper of the vehicle to detect a vehicle directly ahead, in your path.
Driving and operating

If a vehicle directly ahead is approached too quickly, a warning chime and alert in the Driver Information Centre is provided.

**Warning**
Forward collision alert is just a warning system and does not apply the brakes. When approaching a vehicle ahead too rapidly, it may not provide you enough time to avoid a collision.

The driver accepts full responsibility for the appropriate following distance based on traffic, weather and visibility conditions.

The complete attention of the driver is always required while driving. The driver must always be ready to take action and apply the brakes.

**Activation**
If equipped only with front camera the forward collision alert detects vehicles in forward gear in the range between walking speed and 85 km/h.

With radar sensor and front camera forward collision alert detects vehicles in forward gear in the range between walking speed and 140 km/h.

**Alerting the driver**
The driver is warned by following alerts:

- Symbol \( \Delta \) illuminates and a warning message is displayed in the Driver Information Center, when the distance to the vehicle ahead gets to small.
- Symbol \( \Delta \) illuminates, a warning message is displayed in the Driver Information Center and a warning chime sounds, when a collision is imminent and immediate driver's action is required.

**Caution**
The colour lighting of this control indicator does not correspond to local traffic laws on following distance. The driver bears full responsibility for maintaining safe following distance according to applicable traffic rules, weather and road conditions etc. at all times.

approaching a vehicle ahead too rapidly, it may not provide you enough time to avoid a collision. The driver accepts full responsibility for the appropriate following distance based on traffic, weather and visibility conditions. The complete attention of the driver is always required while driving. The driver must always be ready to take action and apply the brakes.
Selecting the alert sensitivity

7" Colour Info Display: Adjust the alert sensitivity in the vehicle personalisation 108.
8" Colour Info Display: Adjust the alert sensitivity in the settings of the active safety brake in the vehicle personalisation 108.

The chosen setting will remain until it is changed. The alert timing will vary based on vehicle speed. The faster the vehicle speed, the farther away the alert will occur. Consider traffic and weather conditions when selecting the alert timing.

Deactivation

The system can only be deactivated by deactivating the active emergency braking in the vehicle personalisation 108.

System limitations

Forward collision alert is designed to warn on vehicles only, but may react also to other objects.

In the following cases, forward collision alert may not detect a vehicle ahead or sensor performance is limited:
- driving on winding or hilly roads
- driving during nighttime
- weather limits visibility, such as fog, rain, or snow
- the sensor in the windscreen or the radar unit behind the front bumper are blocked by snow, ice, slush, mud, dirt etc.
- the windscreen is damaged or affected by foreign objects, e.g. stickers

Active emergency braking

Active emergency braking can help to reduce the damage and injury from crashes with vehicles, pedestrians and obstacles directly ahead, when a collision can no longer be avoided either by manual braking or by steering. Before the active emergency braking applies, the driver is warned by the forward collision alert or the front pedestrian protection alert.

Forward collision alert 171
Front pedestrian protection 176

Active emergency braking can be deactivated in the personalisation menu 108. If deactivated, ı illuminates in the instrument cluster and a warning message is displayed in the Driver Information Centre.

The feature uses various inputs (e.g. camera sensor, radar sensor, brake pressure, vehicle speed) to calculate the probability of a frontal collision.

⚠️ Warning

This system is not intended to replace the driver responsibility for driving the vehicle and looking ahead. Its function is limited to supplemental use only to reduce the vehicle speed before a collision.

The system may not react to animals. After a sudden lane change, the system needs a certain time to detect the next preceding vehicle.
The driver must always be ready to take action and apply the brakes and steer to avoid collisions.

**Functionality**

If equipped only with front camera the active emergency braking operates in forward gear in the range between 5 km/h and 85 km/h. With radar sensor and front camera active emergency braking operates in forward gear in the range between 5 km/h and 140 km/h.

A precondition is that forward collision alert with front camera system is not deactivated in the vehicle personalisation menu and the seat belts of the front passengers are fastened.

The system includes:
- brake preparation system
- emergency automatic braking
- forward looking brake assist
- intelligent brake assist (only with radar sensor)
- forward collision alert
- front pedestrian protection

**Brake preparation system**

When approaching a vehicle ahead or a pedestrian so quickly that a collision is likely, the brake preparation system slightly pressurises the brakes. This reduces the response time, when braking is requested.

**Emergency automatic braking**

After activation of brake preparation system and just before the imminent collision, this function automatically applies limited braking to reduce the impact speed of the collision or prohibit a crash. If active emergency braking is applied, \(\square\) flashes in the instrument cluster. Depending on the situation, the vehicle may automatically brake moderately or hard. Front automatic braking can only occur if a vehicle ahead is detected. On vehicles with front pedestrian protection, front automatic braking can also occur when a pedestrian ahead is detected.

Forward collision alert \(\square\) 171

Front pedestrian protection \(\square\) 176

Emergency automatic braking may slow the vehicle to a complete stop to try to avoid a potential crash. If this happens, emergency automatic braking may engage the electric parking brake to hold the vehicle at a stop. To release press the electric parking brake button or firmly press the accelerator pedal.

**Warning**

Emergency automatic braking is an emergency crash preparation feature and is not designed to avoid crashes. Do not rely on the system to brake the vehicle. Emergency automatic braking will not brake outside of its operating speed range and only responds to detected vehicles and pedestrians.

**Forward looking brake assist**

In addition to the brake preparation system and emergency automatic braking, the forward looking brake assist function makes the brake assist more sensitive. Therefore, pressing
the brake pedal less strongly results in immediate hard braking. This function helps the driver brake quicker and harder before the imminent collision.

### Warning

Active emergency braking is not designed to apply hard autonomous braking or to automatically avoid a collision. It is designed to reduce the vehicle speed before a collision. It may not react to animals. After a sudden lane change, the system needs a certain time to detect the next preceding vehicle.

The complete attention of the driver is always required while driving. The driver must always be ready to take action and apply the brakes and steer to avoid collisions.

The system is designed to work with all occupants wearing their seat belts.

### Intelligent brake assist

If the vehicle is equipped with radar sensor, intelligent brake assist may be available. Intelligent brake assist provides a boost to braking when the brake pedal is quickly applied. The braking is based on the speed of approach and distance to a vehicle ahead.

Minor brake pedal pulsations or pedal movement during this time is normal and the brake pedal should continue to be applied as needed. Intelligent brake assist will automatically disengage only when the brake pedal is released.

### Warning

Intelligent brake assist may increase vehicle braking in situations when it may not be necessary. You could block the flow of traffic. If this occurs, take your foot off the brake pedal and then apply the brakes as needed.

Forward collision alert 171.
Front pedestrian protection 176.

### System limitations

In some cases, the active emergency braking system may provide an automatic braking in situations that seem to be unnecessary, for instance in parking garages, due to traffic signs in a curve or due to vehicles in another lane. This is normal operation, the vehicle does not need service. Firmly apply the accelerator pedal to override the automatic braking if the situation and the surroundings permit.

In the following cases, active emergency braking performance is limited:

- driving on winding or hilly roads
- detecting all vehicles, especially vehicles with a trailer, tractors, muddy vehicles, etc.
- weather limits visibility, such as fog, rain, or snow
- driving during nighttime
Driving and operating

- the sensor in the windscreen or the radar unit behind the front bumper are blocked by snow, ice, slush, mud, dirt etc.
- the windscreen is damaged or affected by foreign objects, e.g. stickers

Complete attention is always required while driving, and you should be ready to take action and apply the brakes and / or steer the vehicle to avoid crashes.

We recommend to deactivate the system in the vehicle personalisation in the following cases:

- when towing a trailer or caravan
- when carrying long objects on roof bars or a roof rack
- when the vehicle is being towed with the engine running
- when a spare wheel is fitted that is smaller than the other wheels
- before using an automatic car wash with the engine running
- before placing the vehicle on a rolling road in a workshop

- if the windscreen has been damaged close to the camera
- if the front bumper has been damaged
- if the brake lights are not working

Fault

In case the system requires a service, a message is displayed in the Driver Information Centre.

If the system does not work as it should do, vehicle messages are displayed in the Driver Information Centre.

Vehicle messages 107.

Front pedestrian protection

Front pedestrian protection may help to avoid or reduce the harm caused by front-end crashes with pedestrians when driving forward.

The system uses the front camera in the windscreen and a radar unit in the front bumper to detect a pedestrian directly ahead in your path.

Front pedestrian protection can detect and alert to pedestrians in a forward gear at speeds between 5 km/h and 60 km/h. Additionally front pedestrian protection can provide a boost to braking or automatically brake the vehicle.

During nighttime driving, system performance is limited.

⚠️ Danger

Front pedestrian braking does not provide an alert or automatically brake the vehicle, unless it detects a pedestrian.

The system may not detect pedestrians, including children, when the pedestrian is not directly ahead, not fully visible, not standing upright, or when part of a group.

Front pedestrian protection includes:

- detecting front pedestrian ahead
- front pedestrian alert

Front pedestrian protection is activated together with forward collision alert.
Forward collision alert 171.

Detecting front pedestrian ahead
A pedestrian ahead up to a distance of approx. 40 m is indicated by a symbol in the instrument cluster.

Front pedestrian alert
When approaching a detected pedestrian too quickly, a warning message is displayed in the Driver Information Centre. A warning chime is provided.

Cruise control or adaptive cruise control may be disengaged when the front pedestrian alert occurs.

System limitations
In the following cases, front pedestrian protection may not detect a pedestrian ahead or sensor performance is limited:
- vehicle speed is out of range from 5 km/h to 60 km/h in forward gear
- the distance to an pedestrian ahead is more than 40 m
- driving on winding or hilly roads
- driving during nighttime
- weather limits visibility, such as fog, rain, or snow
- the sensor in the windscreen or the radar unit behind the front bumper are blocked by snow, ice, slush, mud, dirt etc.
- the windscreen is damaged or affected by foreign objects, e.g. stickers

Parking assist
General information
When attaching a trailer or bicycle carrier to the trailer hitch, the parking assist is deactivated.

⚠️ Warning
The driver bears full responsibility for the parking manoeuvre.
Always check the surrounding area when driving backwards or forwards while using parking assist system.

Rear parking assist
The system warns the driver with acoustic signals and display indication against potentially hazardous obstacles behind the vehicle in a distance range up to 50 cm while reverse gear is engaged.

Activation
Rear parking assist is activated when reverse gear is engaged and ignition is switched on.
Driving and operating

The system is ready to operate when the LED in the parking assist button is not illuminated.

**Indication**
Depending on which side of the vehicle is closer to an obstacle, you will hear acoustic warning signals in the vehicle on the respective side. The interval between the sounds becomes shorter as the vehicle gets closer to that obstacle. When the distance is less than approx. 30 cm, the sound is continuous.

Additionally, the distance to rear obstacles is displayed by changing distance lines in the Info Display 103. When the obstacle is very close, △ for danger is displayed.

**Deactivation**

The system is switched off when reverse gear is disengaged. Press to deactivate the system manually. The LED in the button illuminates when the system is deactivated. If the system has been deactivated manually, it is not reactivated automatically the next time the ignition is switched on.

**Front-rear parking assist**

The front-rear parking assist measures the distance between the vehicle and obstacles in front and behind the vehicle. It informs and warns the driver by giving acoustic signals and display indication. It uses two different acoustic warning signals for the front and rear monitoring areas, each with a different tone frequency.

The system operates with ultrasonic parking sensors in the rear and front bumper.

**Activation**
In addition to the rear parking assist, the front parking assist is triggered when an obstacle is detected in front and the speed of the vehicle is below 10 km/h.

The system is ready to operate when the LED in the parking assist button is not illuminated.

When the system is deactivated, the LED in the button illuminates.

**Indication**
The system warns the driver with acoustic signals against potentially hazardous obstacles in front of the vehicle and behind the vehicle.

Depending on which side of the vehicle is closer to an obstacle, you will hear acoustic warning signals in the vehicle on the respective side. The interval between the sounds becomes shorter as the vehicle gets closer to that obstacle. When the distance is less than approx. 30 cm, the sound is continuous.

Additionally, the distance to rear and front obstacles is displayed by changing distance lines in the Info Display.

If the vehicle stops for more than 3 seconds in a forward gear, if automatic transmission is in P or if no further obstacles are detected, no acoustic warning signals are given.

**Deactivation**
The system is deactivated automatically when vehicle speed exceeds 10 km/h, by applying the electric parking brake or by pressing the parking assist button.

When the system is deactivated manually, the LED in the button illuminates.

If the system has been deactivated manually, it is not reactivated automatically the next time the ignition is switched on.

**System limitations**
In the event of a fault or if the system does not work temporarily, e.g. because of high external noise level or other interference factors, illuminates in the instrument cluster. A message is displayed in the Driver Information Centre.

**Warning**

Under certain circumstances, various reflective surfaces on objects or clothing as well as external noise sources may cause the system to fail to detect obstacles.

Special attention must be paid to low obstacles which can damage the lower part of the bumper.

**Caution**

Performance of the system can be reduced when sensors are covered, e.g. by ice or snow.

Performance of the parking assist system can be reduced due to heavy loading.

Special conditions apply if there are taller vehicles in the vicinity (e.g. off-road vehicles, mini vans, vans). Object identification and correct distance indication in the upper part of these vehicles cannot be guaranteed.

Objects with a very small reflection cross-section, e.g. objects of narrow size or soft materials, may not be detected by the system.

Parking assist systems do not detect objects outside the detection range.

**Advanced parking assist**

**Warning**

The driver bears full responsibility for accepting the parking slot suggested by the system and the parking manoeuvre.

Always check the surrounding area in all directions when using the advanced parking assist.

The advanced parking assist measures a suitable parking slot while passing, calculates the trajectory and automatically steers the vehicle while parking.

Advanced parking assist provides assistance for the following manoeuvres:

- entry into a parallel parking slot
- entry into a perpendicular parking slot
- exit from a parallel parking slot

The driver must control acceleration, braking and gear shifting, while steering is done automatically. The driver can take control at any time by gripping the steering wheel.

It may be necessary to move forwards and backwards more than once.

Instructions are given in the Info Display 103.

Advanced parking assist can only be activated when driving forwards.
Advanced parking assist is always combined with front-rear parking assist.

The system has six ultrasonic parking sensors each in both the rear and front bumper.

**Entry into a parallel parking slot**

**Activation**

Slow down the vehicle speed below 20 km/h.

7" Colour Info Display: to search for a parking slot, activate the system by selecting Parking assist on the Info Display. Then select Enter parallel parking space.

Select the parking side by switching on the turn light on the respective side.

The allowed parallel distance between the vehicle and a row of parked cars is between 0.5 m and 1.5 m.

The system will not identify slots that are clearly smaller or larger than the vehicle.

When a free slot is detected, a visual feedback on the Info Display and a first acoustic signal are given. Drive slowly forwards. When the second acoustic signal is given, stop the vehicle, select reverse gear, release the steering wheel and start moving slowly. A visual feedback is given on the Info Display.

Move forwards and backwards while observing the warnings of the Parking assist until the end of manoeuvre is indicated.
Entry into a perpendicular parking slot

Activation

7" Colour Info Display: to search for a parking slot, activate the system by selecting Park Assist on the Info Display. Then select Enter perpendicular parking space.

8" Colour Info Display: when search for a parking slot, activate the system by pressing 🗝️. Select Driving functions on the Info Display and then Park Assist. Select Enter bay parking space.

Slow down the vehicle speed below 20 km/h.

Select parking side by switching on the turn light on the respective side.

The allowed parallel distance between the vehicle and a row of parked cars is between 0.5 m and 1.5 m.

When several successive slots are found, the vehicle will be directed towards the last one.

When a free slot is detected, a visual feedback on the Info Display and an acoustic signal are given. Stop the vehicle, select reverse gear, release the steering wheel and start moving without exceeding 7 km/h.

Move forwards and backwards as instructed by observing the warnings of the parking assist and paying attention to the acoustic signals until the end of manoeuvre is indicated. When finished, 🚫 extinguishes in the instrument cluster.

During the parking manoeuvre, the system is automatically deactivated once the rear of the vehicle is within 50 cm of an obstacle.
Exiting a parallel parking slot

Activation

7” Colour Info Display: when exiting a parallel parking slot, activate the system by selecting Park Assist on the Info Display. Then select Exit parallel parking space.

8” Colour Info Display: when exiting a parallel parking slot, activate the system by pressing 🆙. Select Driving functions on the Info Display and then Park Assist. Select Exit parallel parking space.

Select exit side by switching on the respective turn light.

Engage reverse or forward gear, release the steering wheel and start moving without exceeding 5 km/h.

Move forwards and backwards while observing the warnings of the Parking assist until the end of manoeuvre is indicated. The manoeuvre is complete when the vehicle's front wheels are out of the parking slot.

After deactivation check control over the vehicle.

Display indication

The instructions on the display show:

- general hints and warning messages
- the demand to stop the vehicle, when a parking slot is detected
- the direction of driving during the parking manoeuvre
- the demand to shift into reverse or first gear
- the demand to stop or to drive slowly
- the successful completion of the parking manoeuvre indicated by a pop-up symbol and a chime
- the cancelling of a parking manoeuvre

Deactivation

The current park assist manoeuvre is cancelled via the button to return to the previous screen in the Info Display. To deactivate the system completely, press 🆕 in the centre console.

The system is deactivated automatically:

- if the ignition is switched off
- if stalling the engine
- if no manoeuvre is started within 5 minutes of selection of the type of manoeuvre
Driving and operating

- after a prolonged stop of the vehicle during a manoeuvre
- if the Electronic Stability Control is triggered
- if the speed of the vehicle exceeds the stated limit
- when the driver interrupts movement of the steering wheel
- after four manoeuvre cycles (a manoeuvre cycle consists of one rear move and one forward move)
- on opening the driver’s door
- if one of the front wheels encounters an obstacle
- parking manoeuvre successfully ended

Deactivation by the driver or by the system during manoeuvring will be indicated on the display. Additionally, an acoustic signal sounds.

The system is switched off automatically when towing an electrically connected trailer, bicycle carrier, etc.

Contact your dealer to switch off the system for a prolonged period.

**Fault**

In the event of a fault, a message is displayed in the Colour Info Display, accompanied by an acoustic signal.

In the event of a fault in the power steering, ⚠️ illuminates and a message is displayed in the Driver Information Centre.

**Warning**

Under certain circumstances, various reflective surfaces on objects or clothing as well as external noise sources may cause the system to fail to detect obstacles.

Special attention must be paid to low obstacles which can damage the lower part of the bumper.

**Caution**

Performance of the system can be reduced when sensors are covered, e.g. by ice or snow.

Performance of the parking assist system can be reduced due to heavy loading.

Special conditions apply if there are taller vehicles in the vicinity (e.g. off-road vehicles, mini vans, vans). Object identification and correct distance indication in the upper part of these vehicles cannot be guaranteed.

Objects with a very small reflection cross-section, e.g. objects of narrow size or soft materials, may not be detected by the system.

Parking assist systems do not detect objects outside the detection range.

**Note**

It is possible that the sensor detects a non-existing object caused by echo disturbance from external
acoustic noise or mechanical misalignments (sporadic false warnings may occur).

Make sure that the front number plate is properly mounted (not bent and no gaps to the bumper on the left or right side) and the sensors are firmly in place.

Advanced parking assist system may not respond to changes in the available parking space after initiating a parking manoeuvre. The system may recognize an entry, a gateway, a courtyard or even a crossing as a parking slot. After selecting reverse gear the system will start a parking manoeuvre. Take care regarding the availability of the suggested parking slot.

Surface irregularities, e.g. on construction zones, are not detected by the system. The driver accepts responsibility.

Side blind spot alert

The side blind spot alert system detects and reports objects on either side of the vehicle, within a specified blind spot zone. The system displays a visual alert in each exterior mirror, when detecting objects that may not be visible in the interior and exterior mirrors.

Side blind spot alert uses some of the advanced parking assist sensors which are located in the front and rear bumper on both sides of the vehicle.

⚠️ Warning

Side blind spot alert does not replace driver vision.

The system does not detect:
- vehicles outside the side blind zones which may be rapidly approaching
- pedestrians, cyclists or animals

Before changing a lane, always check all mirrors, look over the shoulder and use the turn light.

Activation

7" Colour Info Display: select Blind spot monitoring on the Info Display and activate the function.

 brightness illuminates continously green in the instrument cluster to confirm the function.

Functionality

When the system detects a vehicle in the side blind zone while driving forwards, an LED will illuminate in the relevant exterior mirror.

The LED comes on immediately when being passed.
The LED comes on after a delay when passing another vehicle slowly.

**Operation conditions**

The following conditions must be fulfilled for proper operation:

- all vehicles are moving in the same direction and in adjacent lanes
- the speed of your vehicle is between 12 and 140 km/h
- passing a vehicle with a speed difference of less than 10 km/h
- another vehicle is passing with a speed difference of less than 25 km/h
- the traffic flow is normal
- driving on a straight or slightly curved road
- the vehicle is not pulling a trailer

No alert will be given in the following situations:

- in the presence of non-moving objects, e.g. parked vehicles, barriers, street lights, road signs
- with vehicles moving in the opposite direction

**Deactivation**

The system is deactivated in the vehicle personalisation $\Rightarrow$ 108. $\Rightarrow$ extinguishes in the instrument cluster. Additionally, an acoustic signal sounds.

The state of the system is stored when switching off the ignition.

The system is automatically deactivated when towing an electrically connected trailer.

Due to adverse weather conditions such as heavy rain, false detections may occur.

**Fault**

In the event of a fault, $\Rightarrow$ flashes for a few moments in the instrument panel, accompanied by $\Rightarrow$ and a display message. Contact a dealer or a qualified workshop to have the system checked.

**Panoramic view system**

This system allows views of the vehicle's surroundings to be displayed as a nearly 360° picture in the Info Display, like a bird's eye view.

The system uses:

- rear camera, installed in the tailgate
- ultrasonic parking sensors in the rear bumper
- front camera, installed in the front grill below the emblem
- ultrasonic parking sensors in the front bumper
The screen in the Info Display is divided into two parts. On the right there is a view from above the vehicle and on the left there is the view from the rear or the front displayed. The parking sensors complete the information on the view from above the vehicle.

**Activation**

The panoramic view system is activated by:
- engaging a gear or gearbox in a neutral position (front view)
- engaging reverse gear (rear view)
- manual activation in the Info Display when driving not more than 20 km/h

**Functionality**

Different views can be selected in the left part of the display. Change the type of view at any time during a manoeuvre by pressing the touch field in the left lower zone of the display and selecting a view from the view selection menu:
- Standard view
- Auto mode
- Zoom view
- 180° view

The display is immediately updated with the type of view selected.

Auto mode is activated by default. In this mode, the system selects the best view, standard, or zoom, to display according to the information from the parking sensors.

The state of the system is not kept in memory when the ignition is switched off.

**Standard view**

The standard view consists of a rear view and a front view.

**Rear view**

The area behind the vehicle is displayed in the screen. The vertical lines represent the width of the...
vehicle with mirrors unfolded. The direction of the lines changes with the position of the steering wheel. The first horizontal line represents a distance of about 30 cm beyond the edge of vehicle's rear bumper. The upper horizontal lines represent distances of about 1 m and 2 m. This view is available in auto mode or in the view selection menu.

**Front view**
The area in front the vehicle is displayed in the screen. The vertical lines represent the width of the vehicle with mirrors unfolded. The direction of the lines changes with the position of the steering wheel. The first horizontal line represents a distance of about 30 cm beyond the edge of vehicle's front bumper. The upper horizontal lines represent distances of about 1 m and 2 m. This view is available in auto mode or in the view selection menu.

**Auto mode**
This mode is activated by default. Using sensors in the rear or in the front bumper, the automatic view changes from rear view or front view to a view from above, as an obstacle is approached during a manoeuvre.

**Zoom view**
The camera records the vehicle's surroundings during the manoeuvre in order to reconstruct a view from above the rear or the front of the vehicle in its near surroundings. Thus, the vehicle can be manoeuvred around obstacles nearby. This view is available with auto mode or in the view selection menu.

**180° view**
The 180° view facilitates reversing out of a parking bay, making it possible to see the approach of vehicles, pedestrians and cyclists. This view is not recommended for carrying out a complete manoeuvre. It is made up of three areas: left 1, centre 2 and right 3. This view is available from the view selection menu only.
Deactivation
Panoramic view system is deactivated when:
- driving faster than 20 km/h
- 7 seconds after disengaging reverse gear
- by pressing the icon ☰ in the left upper corner of the touch screen
- opening the tailgate

General information

⚠️ Warning
The panoramic view system does not replace driver vision. It will not display children, pedestrians, cyclists, crossing traffic, animals, or any other objects outside of the camera view area, e.g. below the bumper, or underneath the vehicle.

Do not drive or park the vehicle using only the panoramic view system.

Always check the surrounding of the vehicle before driving.

Displayed images may be further or closer than they appear. The area displayed is limited and objects that are close to either edge of the bumper or under the bumper are not displayed on the screen.

System limitations

Caution
For optimal operation of the system, it is important to keep the lense of the camera in the tailgate between the number plate lights and the lense in the front grill below the emblem always clean. Rinse the lenses with water and wipe with a soft cloth.

Do not clean the lenses with a steam-jet or high-pressure jet cleaner.

The panoramic view system may not operate properly when:
- The surrounding is dark.
- The sun or the beam of headlights is shining directly into the camera lenses.
- Weather limits visibility, such as fog, rain, or snow.
- The camera lenses are blocked by snow, ice, slush, mud, dirt.
- The vehicle is towing a trailer.
- The vehicle had an accident.
- There are extreme temperature changes.

Rear view camera

The rear view camera assists the driver when reversing by displaying a view of the area behind the vehicle.

The view of the camera is displayed in the Info Display.
Driving and operating

**Warning**
The rear view camera does not replace driver vision. Note that objects that are outside the camera's field of view and the parking assist sensors, e.g. below the bumper or underneath the vehicle, are not displayed.

Do not reverse or park the vehicle using only the rear view camera. Always check the surrounding of the vehicle before driving.

**Switching on**
Rear view camera is automatically activated when reverse gear is engaged.

**Functionality**

The camera is mounted in the tailgate.

The area displayed by the camera is limited. The distance of the image that appears on the display differs from the actual distance.

**Guidelines**
Dynamic guidelines are horizontal lines at 1 m intervals projected onto the picture to define the distance to displayed objects.

Trajectory lane of the vehicle is shown in accordance with the steering angle.

**Deactivation of guidelines**
Guidelines can be deactivated in the Info Display. Select Settings ➤ Vehicle ➤ Collision / Detection Systems ➤ Rear View Camera Guidelines ➤ O.

Info Display ➤ 103.

Vehicle personalisation ➤ 108.

**Switching off**
The camera is switched off when a forward gear is engaged.
System limitations
The rear view camera may not operate properly when:
- the surrounding is dark
- the beam of headlights is shining directly into the camera lenses
- weather limits visibility, such as fog, rain, or snow
- the camera lenses are blocked by snow, ice, slush, mud, dirt. Clean the lens, rinse with water, and wipe with a soft cloth
- the tailgate will be opened
- the vehicle is towing an electrically connected trailer, bicycle carrier, etc.
- the vehicle had a rear end accident
- there are extreme temperature changes

Lane departure warning
The lane departure warning system observes the lane markings between which the vehicle is driving via a front camera located at the top of the windscreen. The system warns the driver in the event of an unintended lane departure via visual and acoustic signals.
There is no lane departure warning when the turn lights are operated and during 20 seconds after turn lights have been switched off.

⚠️ Warning
This system is a driving aid that cannot, in any circumstances, replace the need for vigilance on the part of the driver.

Activation
After ignition is switched on, the lane departure warning system is activated. If the system is activated, the LED in the button is not illuminated. To activate the system when the system is deactivated, press ⚪.
The system is only operable at vehicle speeds above 60 km/h and if lane markings are available.
When the system recognises an unintended lane departure, the control indicator ⚪ flashes yellow. Simultaneously a chime sound is activated.

Deactivation
To deactivate the system, press and hold ⚪. The LED in the button is illuminated and ⚪ illuminates yellow in the instrument cluster.
Driving and operating

At speeds below 60 km/h the system is inoperative.

Fault

In the event of a fault, appears in the instrument panel, accompanied by a display message and a warning chime. Contact a dealer or a qualified workshop to have the system checked.

System limitations

The system performance may not operate properly when:

- Vehicle speed is below 60 km/h.
- Windscreen is not clean or affected by foreign objects, e.g. stickers.
- Driving on winding or hilly roads.
- During nighttime driving.
- Adverse environmental conditions like heavy rain, snow, direct sunlight or shadows.
- The sensor in the windscreen is blocked by snow, ice, slush, mud, dirt, windscreen damage or affected by foreign objects, e.g. stickers.
- The sun is shining directly into the camera lens.
- Close vehicles ahead.
- Driving on banked roads.
- Driving on road edges.
- Driving on roads with poor lane markings.
- Sudden lighting changes.

The system can not operate when no lane marking is detected.

Lane keep assist

Lane keep assist helps to avoid crashes due to unintentional lane departures. The front camera observes the lane markings between which the vehicle is driving. If the vehicle approaches a lane marking, the steering wheel is gently turned to position the vehicle back into the lane. The driver will then notice a turning movement of the steering wheel. Turn steering wheel in same direction, if system steers not sufficient. Turn steering wheel gently into opposite direction, if lane change is intended.

When the system steers to correct the trajectory of the vehicle, flashes yellow in the instrument cluster. A warning message in the Driver Information Centre accompanied by a warning chime alerts the driver when immediate driver’s action is required.

Unintended lane departure is not assumed by the system when the turn lights are operated and during 20 seconds after turn lights have been switched off.

Note

The system may be switched off if it detects lanes which are too narrow, too wide or too curved.

Following preconditions have to be fulfilled:

- vehicle speed must be between 65 km/h and 180 km/h
- the driver must hold the steering wheel with both hands
- the change of trajectory is not accompanied by operation of the turn lights
- the Electronic Stability Control is activated and not in operation
Driving and operating

- the vehicle is not connected to a trailer or an electric bicycle carrier
- normal driving behaviour (system detects dynamic driving style, i.e. pressure on the brake or accelerator pedal)
- roads with poor lane markings
- no spare wheel is used
- the driver needs to be active during the correction
- the vehicle is not driven in a tight corner

**Activation**

If the system is activated, the LED in the button is not illuminated. To activate the system when the system is deactivated, press .

The system is operational at vehicle speeds between 65 km/h and 180 km/h and if lane markings are detectable. The driver must hold the steering wheel with both hands. The Electronic Stability Control system must be activated.

The control indicator flashes yellow during trajectory correction.

If the driver wishes to maintain the trajectory of the vehicle, he can prevent the correction by keeping a firm grip on the steering wheel, e.g. during an avoiding manoeuvre. The correction is interrupted if the turn lights are operated.

There is no correction triggered when the turn lights are operated and during 20 seconds after turn lights have been switched off.

If the system detects that the driver is not holding the steering wheel firmly enough during an automatic correction of trajectory, it interrupts the correction. A warning message in the Driver Information Centre accompanied by a warning chime alerts the driver when immediate driver’s action is required.

**Deactivation**

To deactivate the system, press and hold . Deactivation of the system is confirmed by the illuminated LED in the button. In the Driver Information Centre solid grey lines are displayed.

**Fault**

In the event of a fault, and appear in the instrument panel, accompanied by a display message and a warning chime. Contact a dealer or a qualified workshop to have the system checked.

**System limitations**

The system performance may be affected by:

- windscreen not clean or affected by foreign objects, e.g. stickers
- close vehicles ahead
- banked roads
Driving and operating

- winding or hilly roads
- road edges
- sudden lighting changes
- adverse environmental conditions, e.g. heavy rain or snow
- vehicle modifications, e.g. tyres

Switch off the system if the system is disturbed by tar marks, shadows, road cracks, temporary or construction lane markings, or other road imperfections.

⚠️ Warning

Always keep your attention on the road and maintain proper vehicle position within the lane, otherwise vehicle damage, injury or death could occur.

Lane keep assist does not continuously steer the vehicle. The steering of the lane keep assist may not be sufficient to avoid a lane departure.

The system may not detect hands-off driving due to external influences like road condition and surface and weather. The driver has full responsibility to control the vehicle and is always required to keep the hands on the steering wheel while driving.

Using the system while towing a trailer or on slippery roads could cause loss of control of the vehicle and a crash. Switch the system off.

Warning

The system cannot replace the need for vigilance on the part of the driver. Taking a break is recommended as soon as feeling tired or at least every two hours. Do not take the steering wheel when feeling tired.

Activation or Deactivation

The system can be activated or deactivated in the vehicle personalisation.

The state of the system stays in memory when the ignition is switched off.

Driving time alert

The driver gets notified by a pop-up reminder symbol in the Driver Information Centre simultaneously with an acoustic alert if the driver has not taken a break after 2 hours of driving at a speed above 65 km/h. The alert is repeated hourly until the vehicle is stopped, no matter how vehicle speed evolves.
The counting of driving time alert is reset when the ignition has been switched off for a few minutes.

**Driver drowsiness detection**

The system monitors the driver's level of vigilance. A camera at the top of the windscreen detects variations in trajectory compared to the lane markings. This system is particularly suited to fast roads (speed higher than 65 km/h).

If the trajectory of the vehicle suggests a certain level of drowsiness or inattention by the driver, the system triggers the first level of alert. The driver is notified by a message and an audible signal is given.

After three first level alerts, the system triggers a new alert with a message, accompanied by a more pronounced audible signal.

In certain driving conditions (poor road surface or strong winds), the system may give alerts independent of the driver's level of vigilance.

The driver drowsiness detection is reinitialised when the ignition has been switched off for a few minutes or the speed remains below 65 km/h for a few minutes.

**System limitations**

In the following situations, the system may not operate properly or even not operate at all:

- poor visibility caused by inadequate lighting of the roadway, falling snow, heavy rain, dense fog etc.
- dazzle caused by headlamps of an oncoming vehicles, low sun, reflections on damp roads, leaving a tunnel, alternating shade and light etc.
- windscreen area in front of the camera covered by dirt, snow, stickers etc.
- no lane markings detected or multiple lane markings due to roadworks
- close vehicles ahead
- winding roads or narrow roads

---

**Charging**

⚠️ **Warning**

Persons with a pacemaker should consult a doctor for possible precautions.

This section explains the process of charging the vehicle's high voltage battery.

While the charge cord is plugged into the vehicle, the vehicle cannot be driven.
Charging at domestic electrical outlets

Start charging

⚠️ Warning

Only use a domestic electrical outlet which is properly grounded and protected by a 30 mA differential switch.

Only use a domestic electrical outlet protected by a circuit breaker adapted to the amperage of the electrical circuit.

Have a qualified electrician check the electrical installation to be used. The installation has to be in compliance with national standards and compatible with the vehicle.

When using a dedicated domestic electrical outlet, have it installed by a qualified electrician.

Make sure that the electrical outlet, the plug and the cable do not support the weight of the control box.

⚠️ Warning

Do not carry out any works in the engine compartment during charging.

The vehicle can be charged at domestic electrical outlets. Charging an empty high voltage battery at a domestic electrical outlet takes approx. 7 hours.

A portable charge cord used to charge the vehicle high voltage battery is stored under the rear floor storage cover in the load compartment.

1. Shift into P and switch off the vehicle.

2. Push the rearward edge of the charge port door in and release to open the door.
3. Open the tailgate. Lift the rear floor storage cover and remove the charge cord.

4. Plug the charge cord into the domestic electrical outlet. Verify the charge cord status.
   Charge cord 199.

5. Plug in the vehicle plug of the charge cord into the charge port on the vehicle.
   Charging status 199.

Once charging, the vehicle plug will be locked to the charge port and cannot be disconnected while charging is active.  indicator illuminates.

Stop charging

**Warning**

After the end of the charging progress:
- Make sure the charge port door is closed.
- Always disconnect the charge cord from the domestic electrical outlet.
- Avoid any entry of water into the charge port of the vehicle, the vehicle plug of the charge cord and the domestic electrical outlet.

The battery is fully charged if the status indicator on the charge port illuminates green.

1. Unlock the vehicle before removing the vehicle plug from the charge port.
If the vehicle is already unlocked, lock the vehicle and unlock it again.

2. Disconnect the vehicle plug from the charge port within 30 seconds.

3. Close the charge port door by pressing firmly in the centre to latch properly.

4. Disconnect the charging cord from the domestic electrical outlet.

Charging at wallboxes and public charging stations

When charging at a wallbox / public charging station, follow the instructions for the use of the wallbox / public charging station.

Programmable charging

By default, charging starts as soon as the vehicle plug of the charge cord is plugged into the charge port of the vehicle. It is also possible to schedule charging using the Colour Info Display.

1. Press \(\text{m}\).

2. Select Charge.

3. Press \(/\).

4. Enter a start time for loading.

5. Press OK.

6. Plug in the vehicle.

   Charging \(\diamond\) 195.

7. Within 1 minute, press \(\text{b}\) to activate programmable charging.
The status indicator illuminates blue indicating that programmable charging is active.

Charging status

If the vehicle is plugged in and the ignition is switched off, the charging status indicator indicates the following:

- Illuminates white: welcome lighting when charge port door is opened
- Illuminates green: charging complete
- Flashes green: high voltage battery charging
- Illuminates red: charging fault
- Illuminates blue: programmable charging active

A charging fault has occurred if the vehicle is plugged in and the charging status indicator is off. Further charging status indicators are located on the control box of the charge cord.

Charge cord

⚠️ Danger

There is a risk of electric shock that may cause personal injury or death.

Do not use the charge cord if any part of the charge cord is damaged.

Do not open or remove the charge cord cover.

Service by qualified personnel only. Connect the charge cord to a properly grounded outlet with cords that are not damaged.
A portable charge cord used to charge the vehicle high voltage battery is stored under the rear floor storage cover in the load compartment 195. The charge cord is compatible with the domestic electrical outlet of the respective country. It includes a control box with charging status indicators.

If the vehicle is to be used abroad, check whether the wall plug of the charge cord is compatible with the local electrical outlets. If a different charge cord is needed, consult a workshop.

### Important information about portable electric vehicle charging
- Charging an electric vehicle can stress a building's electrical system more than a typical household appliance.
- Before you plug in to any electrical outlet, have a qualified electrician inspect and verify the electrical system (electrical outlet, wiring, junctions and protection devices) for heavy-duty service at a 10 A continuous load.
- Electrical outlets may wear out with normal usage or be damaged over time, making them unsuitable for electric vehicle charging.
- Check the electrical outlet / plug while charging and discontinue use if the electrical outlet / plug is hot, then have the electrical outlet serviced by a qualified electrician.
- When outdoors, plug into an electrical outlet that is weather-proof while in use.
- Mount the charging cord to reduce strain on the electrical outlet / plug.

### Warning

Improper use of portable electric vehicle charge cords may cause a fire, electrical shock, or burns, and may result in damage to property, serious injury, or death.
- Do not use extension cords, multi-outlet power strips, splitters, grounding adaptors, surge protectors, or similar devices.
- Do not use an electrical socket that is worn or damaged, or one that will not hold the plug firmly in place.
- Do not immerse the charging chord into any liquid.
Warning

Read all the safety warnings and instructions before using this product. Failure to follow the warnings and the instructions may result in electric shock, fire, and/or serious injury.

Never leave children unattended near the vehicle while the vehicle is charging and never allow children to play with the charge cord.

If the plug provided does not fit the electrical outlet, do not modify the plug. Arrange for a qualified electrician to inspect the electrical outlet.

Do not put fingers into the electric vehicle connector.

Charge cord status indicators

After plugging in the charge cord, it will perform a quick self test and all status indicators come on for a moment. Verify the status:

- **Power**
  - Illuminates yellow: Connection has been established. The charge cord is ready to charge the vehicle.

- **Charge**
  - Illuminates green: Charging is complete.
  - Flashes green: High voltage battery is not fully charged. Charging process is going on or programmable charging is active.

- **Fault**
  - Illuminates red: Fault.
  - Check whether the connections to the charge port and to the electrical outlet are correct. Make sure that the electrical installation and the charge cord are not damaged.

If no status indicator comes on, verify the circuit breaker of the electrical outlet:

- If the circuit breaker has broken, contact a qualified electrician to verify the compatibility of the electrical installation and repair it.
- If the circuit breaker has not broken, the charge chord may be defective. Do not use the charge chord and contact a workshop.

- Do not use an electrical socket that is not properly grounded.
- Do not use an electrical socket that is on a circuit with other electrical loads.
Grounding instructions

This product must be grounded. If this product should malfunction or break down, grounding provides a path of least resistance for electric current to reduce the risk of electric shock. This product is equipped with a cord that has a grounding conductor. The plug must be plugged into an appropriate outlet that is properly installed and grounded in accordance with all local codes and ordinances.

⚠️ Warning

Improper connection of the charge cord ground may cause electrical shock. Check with a qualified electrician if there is doubt as to whether the charge circuit is properly grounded. Do not modify the plug provided with the product. If it will not fit the electrical outlet, have a proper electrical outlet installed by a qualified electrician.

Fuel

Fuel for petrol engines

Only use unleaded fuel that complies with European standard EN 228 or E DIN 51626-1 or equivalent. The engine is capable of running with fuel that contains up to 10% ethanol (e.g. named E10). Use fuel with the recommended octane rating. A lower octane rating can reduce engine power and torque and slightly increases fuel consumption.

Caution

Do not use fuel or fuel additives that contain metallic compounds such as manganese-based additives. This may cause engine damage.

Caution

Use of fuel with a lower octane rating than the lowest possible rating could lead to uncontrolled combustion and engine damage.

The engine specific requirements regarding octane rating are given in the engine data overview 261. A country-specific label at the fuel filler flap can supersede the requirement. In certain countries, the use of a particular fuel, e.g. a specific octane rating, may be required to ensure proper engine operation.
Fuel for diesel engines

The Diesel engines are compatible with bio-fuels that conform to current and future European standards and can be obtained from filling stations:

- Diesel fuel that meets standard EN590 mixed with a biofuel that meets standard EN14214 (possibly containing up to 7% Fatty Acid Methyl Ester).
- Diesel fuel that meets standard EN16734 mixed with a biofuel that meets standard EN14214 (possibly containing up to 10% Fatty Acid Methyl Ester).
- Paraffinic Diesel fuel that meets standard EN15940 mixed with a biofuel that meets standard EN14214 (possibly containing up to 7% Fatty Acid Methyl Ester).
- The use of B20 or B30 fuel meeting standard EN16709 is possible in your Diesel engines. However, this use, even occasional, requires strict application of the special servicing conditions referred to as "Arduous conditions".

For more information, contact a dealer or a qualified workshop.

Caution

The use of any other type of (bio) fuel (vegetable or animal oils, pure or diluted, domestic fuel etc.) is strictly prohibited (risk of damage to the engine and fuel system).

Note

The only Diesel additives authorised for use are those that meet the B715000 standard.

Low temperature operation

At temperatures below 0 °C, some diesel products with biodiesel blends may clog, freeze or gel, which may affect the fuel supply system. Starting and engine operation may not work properly. Make sure to fill winter grade diesel fuel at ambient temperatures below 0 °C.
Arctic grade diesel fuel can be used in extreme cold temperatures below -20 °C. Using this fuel grade in warm or hot climates is not recommended and may cause engine stalling, poor starting or damage on the fuel injection system.

Refuelling

Follow the operating and safety instructions of the filling station when refuelling.

⚠️ Danger

Fuel is flammable and explosive. No smoking. No naked flames or sparks.
If you can smell fuel in your vehicle, have the cause of this remedied immediately by a workshop.

A label with symbols at the fuel filler flap is indicating the allowed fuel types. In Europe the pump nozzles of the filling stations are marked with these symbols. Refuel only the allowed fuel type.

⚠️ Caution

In case of misfuelling, do not switch on ignition.

The fuel filler flap can only be opened if the vehicle is unlocked. Open the fuel filler flap by pushing the flap.
To open the fuel filler flap of a hybrid vehicle, a depressurisation phase is required to avoid the emission of fuel vapour.

Fuel filler flap is located at right rear side of vehicle.
Press 🛥️. After depressurisation the fuel filler flap is unlocked. This can take up to one minute.
Open the fuel filler flap by pushing the flap.

**Petrol and diesel refuelling**
To open, turn the cap slowly anticlockwise.

The fuel filler cap can be attached to the hook on the fuel filler flap.
Place the nozzle in straight position to the filler neck and press with slight force to insert.
To refuel, switch on pump nozzle.
After the automatic cut-off, the tank can be topped up by operating the pump nozzle a maximum of two more times.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wipe off any overflowing fuel immediately.</td>
</tr>
</tbody>
</table>

**Fuel filler cap**
Only use genuine fuel filler caps.
Diesel-engined vehicles have special fuel filler caps.

To close, turn the fuel filler cap clockwise until it clicks.
Close the flap and allow it to engage.
**Trailer hitch**

**General information**

Only use towing equipment that has been approved for your vehicle. If using non-factory fitted towing equipment, deactivation of the hands-free tailgate operation may be required.

Entrust retrofitting of towing equipment to a workshop. It may be necessary to make changes that affect the cooling system, heat shields or other equipment.

The bulb outage detection function for trailer brake light cannot detect a partial bulb outage. E.g. in case of four bulbs with a power of 5 W each, the function only detects light outage when only a single 5 W light remains or none remain.

Trailers equipped with LED lights are not suitable for the wiring harness of this trailer hitch.

Fitting of towing equipment could cover the opening of the towing eye. If this is the case use the coupling ball bar for towing. Always keep the coupling ball bar in the vehicle to have it on hand if needed.

**Driving characteristics and towing tips**

Before attaching a trailer, lubricate the coupling ball. However, do not do so if a stabiliser, which acts on the coupling ball, is being used to reduce snaking movements.

During trailer towing do not exceed a speed of 80 km/h. A maximum speed of 100 km/h is only appropriate if an oscillation damper is used and the permissible gross trailer weight does not exceed the vehicle’s curb weight.

For trailers with low driving stability and caravan trailers, the use of an oscillation damper is strongly recommended.

If the trailer starts snaking, drive more slowly, do not attempt to correct the steering and brake sharply if necessary.

When driving downhill, drive in the same gear as if driving uphill and drive at a similar speed.

Adjust tyre pressure to the value specified for full load.

**Trailer towing**

**Trailer loads**

The permissible trailer loads are vehicle and engine-dependent maximum values which must not be exceeded. The actual trailer load is the difference between the actual gross weight of the trailer and the actual coupling socket load with the trailer coupled.

The permissible trailer loads are specified in the vehicle documents. In general, they are valid for inclines up to 12%.

The permissible trailer load applies up to the specified incline and at sea level. Since engine power decreases as altitude increases due to the air becoming thinner, therefore reducing climbing ability, the permissible gross train weight also decreases by 10% for every 1000 m of altitude. The gross train weight does not have to be
Driving and operating

reduced when driving on roads with slight inclines (less than 8%, e.g. motorways).

The permissible gross train weight must not be exceeded. This weight is specified on the identification plate 257.

**Vertical coupling load**

The vertical coupling load is the load exerted by the trailer on the coupling ball. It can be varied by changing the weight distribution when loading the trailer.

The maximum permissible vertical coupling load (70 kg) is specified on the towing equipment identification plate and in the vehicle documents.

Always aim for the maximum vertical coupling load, especially in the case of heavy trailers. The vertical coupling load should never fall below 25 kg.

**Rear axle load**

When the trailer is coupled and the towing vehicle fully loaded, the permissible rear axle load (see identification plate or vehicle documents) may be exceeded by 60 kg, the gross vehicle weight rating must not be exceeded. If the permissible rear axle load is exceeded, a maximum speed of 100 km/h applies.

**Towing equipment**

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>When operating without a trailer, remove the coupling ball bar.</td>
</tr>
</tbody>
</table>

**Fitting the coupling ball bar**

Disengage and fold down the socket. Remove the sealing plug from the opening for the coupling ball bar and stow it.
Checking the tensioning of the coupling ball bar

- Red marking on rotary knob must point towards green marking on coupling ball bar.
- The gap between the rotary knob and the coupling ball bar must be approx. 6 mm.

- Remove the cover from the lock of the rotary knob and verify whether the rotary knob is locked. If the rotary knob cannot be turned, it is locked.

Otherwise, the coupling ball bar must be tensioned before being inserted:
  - Unlock coupling ball bar by turning key to position 3.

- Pull out rotary knob and turn clockwise as far as it will go.

Inserting the coupling ball bar
Insert the tensioned coupling ball bar in the opening and push firmly upwards until it audibly engages. The rotary handle snaps back into its original position resting against the coupling ball bar without a gap.

**Warning**

Do not touch rotary handle during insertion.

Lock the coupling ball bar by turning the key to position 9. Remove the key and close the protective flap.

**Eye for break-away stopping cable**

Attach breakaway stopping cable to eye.

**Check that the coupling ball bar is correctly installed**

- Green marking on rotary knob must point towards green marking on coupling ball bar.
- There must be no gap between the rotary handle and the coupling ball bar.
- The coupling ball bar must be firmly engaged in the opening.
- The coupling ball bar must be locked and the key removed.

**Warning**

Towing a trailer is permitted only when a coupling ball bar is fitted correctly. If the coupling ball bar does not engage correctly, seek the assistance of a workshop.

**Dismounting the coupling ball bar**

Open the protective flap and turn the key to position 9 to unlock the coupling ball bar. Pull out rotary handle and turn clockwise as far as it will go. Pull out coupling ball bar downwards. Insert sealing plug in opening. Fold away socket.

**Trailer stability assist**

If the system detects snaking movements, engine power is reduced and the vehicle / trailer combination is...
selectively braked until the snaking ceases. While system is working keep steering wheel as still as possible. Trailer stability assist is a function of the Electronic Stability Control \( \Diamond \) 157.
General Information

Accessories and vehicle modifications
We recommend the use of genuine parts and accessories and factory approved parts specific for your vehicle type. We cannot assess or guarantee reliability of other products - even if they have a regulatory or otherwise granted approval.

Any modification, conversion or other changes made to standard vehicle specifications (including, without limitation, software modifications, modifications of the electronic control units) may invalidate the warranty offered by Opel. Furthermore, such changes may affect driver assistance systems, may impact fuel consumption, CO₂ emissions and other emissions of the vehicle and cause the vehicle to no longer conform to the operating permit, impacting the validity of your vehicle registration.
Caution
When transporting the vehicle on a train or on a recovery vehicle, the mud flaps might be damaged.

Cold protection covers
It is recommended to have the protection covers installed by a workshop.

Caution
The protection covers must be removed when one of the following conditions occurs:
- The ambient temperature is above 10 °C.
- When the vehicle is towed.
- The vehicle is driven at speeds above 120 km/h.

Installation
1. Install the protection cover as shown.

2. Press the lower part of the protection cover against the slat of the grille. Ensure that the protection cover is fixed securely.
3. Repeat the procedure for the other protection covers.

Deinstallation
1. With your hand behind the grille, push the brackets of the protection cover upwards to release the protection cover.
2. Pull the protection cover upwards and remove it.
3. Repeat the procedure for the other protection covers.
Vehicle care

Vehicle storage

Storage for a long period of time

If the vehicle is to be stored for several months:

- Wash and wax the vehicle.
- Have the wax in the engine compartment and underbody checked.
- Clean and preserve the rubber seals.
- Fill up fuel tank completely.
- Change the engine oil.
- Drain the washer fluid reservoir.
- Check the coolant antifreeze and corrosion protection.
- Adjust tyre pressure to the value specified for full load.
- Park the vehicle in a dry, well ventilated place. Engage first or reverse gear or set selector lever to P. Prevent the vehicle from rolling.
- Do not apply the parking brake.

- Open the bonnet, close all doors and lock the vehicle.
- Disconnect the clamp from the negative terminal of the vehicle battery. Note that all systems are not functional, e.g. anti-theft alarm system.

Putting back into operation

When the vehicle is to be put back into operation:

- Connect the clamp to the negative terminal of the vehicle battery. Initialize the power windows 340.
- Check tyre pressure.
- Fill up the washer fluid reservoir.
- Check the engine oil level.
- Check the coolant level.
- Fit the number plate if necessary.

End-of-life vehicle recovery

Information on end-of-life vehicle recovery centres and the recycling of end-of-life vehicles is available on our website, where legally required. Only entrust this work to an authorised recycling centre.
Vehicle checks

Performing work

**Warning**
Only perform engine compartment checks when the ignition is off. The cooling fan may start operating even if the ignition is off.

<table>
<thead>
<tr>
<th>▶️ Danger</th>
</tr>
</thead>
<tbody>
<tr>
<td>The ignition system uses extremely high voltage. Do not touch.</td>
</tr>
</tbody>
</table>

**Bonnet**

**Opening**
Open the driver's door.

Pull the release lever and return it to its original position.

Push the safety catch upwards and open the bonnet.

Secure the bonnet support.
Closing

Before closing the bonnet, press the support into the holder.
Lower the bonnet and let it fall into the latch from a low height (20-25 cm).
Check that the bonnet is engaged.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not press the bonnet into the latch to avoid dents.</td>
</tr>
</tbody>
</table>

Engine oil

Check the engine oil level manually on a regular basis to prevent damage to the engine. Ensure that the correct specification of engine oil is used.

Recommended fluids and lubricants 255.

The maximum engine oil consumption is 0.6 l per 1000 km.

Check with the vehicle on a level surface. The engine must be at operating temperature and switched off for at least 5 min.

Pull out the dipstick, wipe it clean, reinsert it fully, pull out and read the engine oil level.
When the engine oil level has dropped to the MIN mark, top up the engine oil.
Different dipsticks are used depending on engine variant.
We recommend the use of the same grade of engine oil that was used at last change.

The engine oil level must not exceed the MAX mark on the dipstick.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Overfilled engine oil must be drained or suctioned out. If the engine oil exceeds the maximum level, do not start the vehicle and contact a workshop.</td>
</tr>
</tbody>
</table>

Capacities 266.

Fit the cap on straight and tighten it.
Engine coolant
The factory filled coolant provides freeze protection down to approx. -37 °C.

Caution
Only use approved antifreeze.

Coolant and antifreeze 255.

Coolant level

Caution
Too low a coolant level can cause engine damage.

Warning
Allow the engine to cool before opening the cap. Carefully open the cap, relieving the pressure slowly.

If the cooling system is cold, the coolant level should be above the MIN mark. Top up if the level is low.

To top up, use a 1:1 mixture of released coolant concentrate mixed with clean tap water. If no coolant concentrate is available, use clean tap water. Install the cap tightly. Have the coolant concentration checked and have the cause of the coolant loss remedied by a workshop.

Washer fluid

Fill with clean water mixed with a suitable quantity of approved windscreen washer fluid which contains antifreeze.
Caution

Only washer fluid with a sufficient antifreeze concentration provides protection at low temperatures or a sudden drop in temperature.

Washer fluid 255.

Brakes

In the event of minimum thickness of the brake lining, a squealing noise sounds during braking.
Continued driving is possible but have the brake lining replaced as soon as possible.
Once new brake linings are installed, do not brake unnecessarily hard for the first few journeys.

Brake fluid

⚠️ Warning

Brake fluid is poisonous and corrosive. Avoid contact with eyes, skin, fabrics and painted surfaces.

The brake fluid level must be between the DANGER and MAX marks.
If fluid level is below DANGER seek the assistance of a workshop.
Brake and clutch fluid 255.

Vehicle battery

The vehicle battery is maintenance-free provided that the driving profile allows sufficient charging of the battery. Short-distance-driving and frequent engine starts can discharge the battery. Avoid the use of unnecessary electrical consumers.

Batteries do not belong in household waste. They must be disposed of at an appropriate recycling collection point.
Laying up the vehicle for more than four weeks can lead to battery discharge. Disconnect the clamp from the negative terminal of the vehicle battery.
Ensure the ignition is switched off before connecting or disconnecting the vehicle battery.
Battery discharge protection 122.

Replacing the vehicle battery

Note
Any deviation from the instructions given in this section may lead to temporary deactivation or disturbance of the stop-start system.
When the vehicle battery is being replaced, please ensure that there are no open ventilation holes in the vicinity of the positive terminal. If a ventilation hole is open in this area, it must be closed off with a dummy cap, and the ventilation in the vicinity of the negative terminal must be opened.

Ensure that the battery is always replaced by the same type of battery. The vehicle battery has to be replaced by a workshop.

**Stop-start system**  
139.

**Charging the vehicle battery**

<table>
<thead>
<tr>
<th><strong>Warning</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>On vehicles with stop-start system, ensure that the charging potential does not exceed 14.6 V when using a battery charger. Otherwise the vehicle battery may be damaged.</td>
</tr>
</tbody>
</table>

Jump starting  244.

**Discharge protection**

**Battery voltage**

When the vehicle battery voltage is running low, a warning message will appear in the Driver Information Centre.

When the vehicle is being driven, the load reduction function temporarily deactivates certain functions, such as the air conditioning, the heated rear window, heated steering wheel, etc. The deactivated functions are reactivated automatically as soon as conditions permit.

**Idle boost**

If charging of the vehicle battery is required due to battery condition, the power output of the generator must be increased. This will be achieved by an idle boost which may be audible. A message appears in the Driver Information Centre.

**Power outlet**

The power outlets are deactivated in the event of low vehicle battery voltage.

**Warning label**

Meaning of symbols:
- No sparks, naked flames or smoking.
- Always shield eyes. Explosive gases can cause blindness or injury.
- The vehicle battery contains sulphuric acid which could cause blindness or serious burn injuries.
- Keep the vehicle battery out of reach of children.
Power saving mode

This mode deactivates electrical consumers to avoid excessive discharging of the vehicle battery. These consumers, such as the Infotainment system, windscreen wipers, low beam headlights, courtesy light, etc. can be used for a total maximum time of about 40 minutes after ignition is switched off.

Changing into power saving mode

When power saving mode is activated, a message appears in the Driver Information Centre. An active telephone call using the hands-free option will be maintained for around 10 minutes longer.

Deactivating power saving mode

Power saving mode is deactivated automatically when the engine is restarted. Run the engine for a sufficient charge:

- for less than 10 minutes to use the consumers for approx. 5 minutes
- for more than 10 minutes to use the consumers for up to approx. 30 minutes

Heating functionalities

Note

Individual heating functionalities, such as heated seats or heated steering wheel, may be temporarily unavailable in the event of electrical loading constraints. Functions will be resumed after some minutes.

Diesel fuel system bleeding

If the tank has been run dry, the diesel fuel system must be bled. Switch on the ignition three times for 15 seconds at a time. Then crank the engine for a maximum of 40 seconds. Repeat this process after no less than 5 seconds. If the engine fails to start, seek the assistance of a workshop.

Wiper blade replacement

Windscreen

Switch off ignition.
Within one minute after switching off ignition, operate the wiper lever to position the wiper blades vertically on the windscreen.
Lift the wiper arm until it stays in the raised position, press button to disengage the wiper blade and remove.
Attach the wiper blade slightly angled to the wiper arm and push until it engages.
Lower wiper arm carefully.

Rear window

Lift wiper arm. Disengage wiper blade as shown in illustration and remove.

Attach the wiper blade slightly angled to the wiper arm and push until it engages.
Lower wiper arm carefully.

Bulb replacement

Switch off the ignition and switch off the relevant switch or close the doors.
Only hold a new bulb at the base. Do not touch the bulb glass with bare hands.
Use only the same bulb type for replacement.
Replace headlight bulbs from within the engine compartment.

Bulb check

After a bulb replacement switch on the ignition, operate and check the lights.

Halogen headlights

Halogen headlights with separate bulbs for low beam and high beam.
High beam (1) inner bulb.
Low beam (2) outer bulb.

**High beam (1)**

1. Remove the protective cover by pulling.
2. Press retaining clip downwards and pull the bulb socket toward the rear.
3. Detach the bulb from the bulb socket and replace the bulb.
4. Insert the bulb socket into the reflector housing.
5. Fit the protective cover on.

**Low beam (2)**

1. Remove the protective cover by pulling.
2. Press retaining clip upwards and pull the bulb socket toward the rear.

3. Detach the bulb from the bulb socket and replace the bulb.

4. Insert the bulb socket into the reflector housing.

5. Fit the protective cover on.

**Front turn lights**
In case of defective LEDs, have them replaced by a workshop.

**Side light**
In case of defective LEDs, have them replaced by a workshop.

**Daytime running light**
In case of defective LEDs, have them replaced by a workshop.

**LED headlights**
Headlights for low and high beam, sidelights, daytime running lights and turn lights are designed as LEDs and cannot be changed.
Have lights repaired by a workshop in case of failure.

**Front fog lights**
Have bulbs replaced by a workshop.

---

**Tail lights**
Tail lights, daytime running lights and 3rd-brake light are designed as LEDs. In case of failure, have LEDs replaced by a workshop.

**Light assembly in the body**

1. Open the tailgate then unclip the access cover on the relevant side.
2. Slacken the light fixing nut using a box spanner or socket. To avoid losing the nut if it drops into the wing trim, first place a cloth below it.

3. Manually unscrew and remove the light fixing nut.

4. Disengage the retaining clip, while pushing the light out slightly.

5. From the outside, carefully withdraw the light assembly from recess and remove. Take care that the cable duct remains in position.

6. Turn the bulb socket anticlockwise and remove it from the light assembly.

7. Detach the bulb from the bulb socket and replace the bulb.

Brake light(1)
8. Insert the bulb socket into the light assembly. Fit the light assembly in the recess and tighten the light fixing nut from the inside. Attach the cover.

1. Open the tailgate and remove the cover.

2. Slacken the light fixing nut using a box spanner or socket.

3. Manually unscrew and remove the light fixing nut.

4. Disengage the retaining clip, while pushing the light assembly out slightly.

5. From the outside, carefully withdraw light assembly from recess and remove. Take care that the cable duct remains in position.

6. Turn the bulb socket anticlockwise and remove it from the light assembly.
7. Detach the bulb from the bulb socket and replace the bulb:

Reverse light (1)

8. Insert the bulb socket into the light assembly. Fit the light assembly in the recess and tighten the light fixing nut from the inside. Attach the cover.

Rear fog light (2)

3rd-brake light
The 3rd-brake light is designed as LED and cannot be changed. Have lights repaired by a workshop in case of failure.

Bulb check
Switch on the ignition, operate and check all lights.

Side turn lights
To replace bulb, remove light assembly:

1. Slide the light assembly forward and remove it at the back.
2. Turn bulb socket clockwise and remove from light assembly.

3. Detach the bulb from the bulb socket and replace the bulb.

4. Insert bulb socket and turn anticlockwise.

5. Insert left end of the light assembly, slide to the left and insert right end.

**Number plate light**
Number plate lights are designed as LEDs and cannot be changed. Have lights repaired by a workshop in case of failure.

**Interior lights**
Have the following bulbs replaced by a workshop:
- courtesy light, reading lights
- load compartment light
- instrument panel illumination

**Electrical system**

**Fuses**
Data on the replacement fuse must match the data on the defective fuse. There are two fuse boxes in the vehicle:
- engine compartment
- instrument panel

Before replacing a fuse, turn off the respective switch and the ignition. A blown fuse can be recognised by its melted wire.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not replace the fuse until the cause of the fault has been remedied.</td>
</tr>
</tbody>
</table>

Some functions are protected by several fuses. Fuses may also be inserted without existence of a function.
Fuse extractor

A fuse extractor may be located in the fuse box in the engine compartment. The extractor has two sides, each side is designed for a different type of fuses.

Grab the fuse with the fuse extractor and withdraw the fuse.

Engine compartment fuse box

The fuse box is in the front left of the engine compartment. Disengage the cover and remove it. Depending on the version, different engine compartment fuse boxes are available:

<table>
<thead>
<tr>
<th>No.</th>
<th>Circuit</th>
</tr>
</thead>
<tbody>
<tr>
<td>9</td>
<td>Anti-theft alarm system</td>
</tr>
<tr>
<td>10</td>
<td>Stop-start system</td>

<tr>
<td>15</td>
<td>Electric power steering / Radar</td>
</tr>
<tr>
<td>22</td>
<td>Horn</td>
</tr>
<tr>
<td>29</td>
<td>Starter</td>
</tr>
</tbody>
</table>
After having changed defective fuses, close the fuse box cover and lock it. If the fuse box cover is not closed correctly, malfunction may occur.

**Instrument panel fuse box**

In left-hand drive vehicles, the fuse box is behind a cover in the instrument panel at the left side. Open the cover and remove it by pressing the lock.

In right-hand drive vehicles, the fuse box is located behind a cover in the glovebox. Open the glovebox and remove the cover.

Depending on the version, different instrument panel fuse boxes are available:

### Vehicle tools

#### Tools

**Vehicles with spare wheel**

Open the floor cover of the load compartment $\Phi$ 73.

Remove the cover of the tool box.

The jack, the towing eye, chocks and the tools are located in the tool box.
Vehicles without spare wheel

The towing eye and the chocks are located in a box below the floor cover in the load compartment. Tyre repair kit 236.

Vehicles with audio speaker system

The towing eye and the chocks are located in a box below the floor cover in the load compartment. Tyre repair kit 236.

Wheels and tyres

Tyre condition, wheel condition

Drive over edges slowly and at right angles if possible. Driving over sharp edges can cause tyre and wheel damage. Do not trap tyres on the kerb when parking.

Regularly check the wheels for damage. Seek the assistance of a workshop in the event of damage or unusual wear.

Winter tyres

Winter tyres improve driving safety at temperatures below 7 °C and should therefore be fitted on all wheels.

In accordance with country-specific regulations, affix the speed sticker in the driver's field of view.

All tyre sizes are permitted as winter tyres 267.
Tyre designations

E.g. 225/55 R 18 98 V

- 225: tyre width, mm
- 55: cross-section ratio (tyre height to tyre width), %
- R: belt type: Radial
- RF: type: RunFlat
- 18: wheel diameter, inches
- 98: load index e.g. 98 is equivalent to 750 kg
- V: speed code letter

Speed code letter:
- Q: up to 160 km/h
- S: up to 180 km/h
- T: up to 190 km/h
- H: up to 210 km/h
- V: up to 240 km/h
- W: up to 270 km/h

Choose a tyre appropriate for the maximum speed of your vehicle.

The maximum speed is achievable at kerb weight with driver (75 kg) plus 125 kg payload. Optional equipment could reduce the maximum speed of the vehicle.

Performance ⬇️ 264.

Directional tyres

Directional tyres should be mounted so that they rotate in the correct direction. The proper rotation direction is indicated by a symbol (e.g. an arrow) on the sidewall.

Tyre pressure

Check the pressure of cold tyres at least every 14 days and before any long journey. Do not forget the spare wheel. This also applies to vehicles with tyre pressure monitoring system.

The tyre pressure information label on the left door frame indicates the original equipment tyres and the correspondent tyre pressures.

Always inflate the spare tyre to the pressure specified for full load.

Incorrect tyre pressures will impair safety, vehicle handling, comfort and fuel economy and will increase tyre wear.

Tyre pressures differ depending on various options. For the correct tyre pressure value, follow the procedure below:

1. Identify the engine identifier code. Engine data ⬇️ 261.
2. Identify the respective tyre.

The tyre pressure data refers to cold tyres. It applies to summer and winter tyres.

The tyre pressure tables show all possible tyre combinations ⬇️ 267.

For the tyres approved for your vehicle, refer to the EEC Certificate of Conformity provided with your vehicle or other national registration documents.
The driver is responsible for correct adjustment of tyre pressure.

**Warning**

If the pressure is too low, this can result in considerable tyre warm-up and internal damage, leading to tread separation and even to tyre blow-out at high speeds.

**Warning**

For specific tyres the recommended tyre pressure as shown in the tyre pressure table may exceed the maximum tyre pressure as indicated on the tyre. Never exceed the maximum tyre pressure as indicated on the tyre.

**Temperature dependency**

The tyre pressure depends on the temperature of the tyre. During driving, tyre temperature and pressure increase. Tyre pressure values provided on the tyre information label and tyre pressure chart are valid for cold tyres, which means at 20 °C.

The pressure increases by nearly 10 kPa for a 10 °C temperature increase. This must be considered when warm tyres are checked.

**Tyre deflation detection system**

The tyre deflation detection system continually checks the rotation speed of all four wheels and warns on low tyre pressure condition once vehicle is driving. This is achieved by comparing tyre rolling circumference with reference values and further signals.

If a tyre loses pressure the control indicator ⚠ illuminates and a warning message is displayed in the Driver Information Centre.

In this case reduce speed, avoid sharp cornering and strong braking. Stop at next safe opportunity and check tyre pressure.

Control indicator ⚠ 99.

After adjusting tyre pressure initialise system to extinguish the control indicator and restart system.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
</table>

Deflation detection system warns just about low tyre pressure condition and does not replace regular tyre maintenance by the driver.

In case of a system malfunction a message is displayed in the Driver Information Centre. Set correct tyre pressure and reinitialise system. If the failure continues to be displayed, contact a workshop. The system is inoperable when ABS or ESC has a malfunction or a temporary spare wheel is used. Once the road tyre has been refitted, check the tyre pressure with cold tyres and initialise the system.
System initialisation

After tyre pressure correction or wheel change, the system must be initialised to learn new circumference reference values:

1. Always ensure that all four tyres have correct tyre pressure.

2. Apply parking brake.

3. Press the button to reset deflation detection system.

4. Reset is confirmed by pop-up indication.

After initialisation system automatically calibrates to new tyre pressures during driving. After longer drive the system will adopt and monitor new pressures.

Always check tyre pressure with cold tyres.

System has to be reinitialised when:

- Tyre pressure has been changed
- Load condition has been changed
- Wheels have been swapped or exchanged

The system will not warn instantaneously on a tyre blow out or a rapid deflation. This is due to required calculation time.

Tread depth

Check tread depth at regular intervals.

Tyres should be replaced for safety reasons at a tread depth of 2-3 mm (4 mm for winter tyres).

For safety reasons, it is recommended that the tread depth of the tyres on one axle should not vary by more than 2 mm.

The legally permissible minimum tread depth (1.6 mm) has been reached when the tread has worn down as far as one of the tread wear indicators (TWI). Their position is indicated by markings on the sidewall.

If there is more wear at the front than the rear, swap round front wheels and rear wheels periodically. Ensure that the direction of rotation of the wheels remains the same.
Tyres age, even if they are not used. We recommend tyre replacement every 6 years.

Changing tyre and wheel size
If tyres of a different size than those fitted at the factory are used, it may be necessary to reprogramme the tyre deflation detection system and make other vehicle modifications.
Tyre deflation detection system ☞ 233.
Have the label with tyre pressures replaced.

⚠️ Warning
The use of unsuitable tyres or wheels may lead to accidents and will invalidate the vehicle operating permit.

Wheel covers
Wheel covers and tyres that are factory approved for the respective vehicle and comply with all of the relevant wheel and tyre combination requirements must be used.
If the wheel covers and tyres used are not factory approved, the tyres must not have a rim protection ridge.
Wheel covers must not impair brake cooling.

⚠️ Warning
Use of unsuitable tyres or wheel covers could lead to sudden pressure loss and thereby accidents.
Vehicles with steel wheels: When using locking wheel nuts, do not attach wheel covers.

Tyre chains
Tyre chains are only permitted on the front wheels.
Always use fine mesh chains that add no more than 9 mm to the tyre tread and the inboard sides (including chain lock).

⚠️ Warning
Damage may lead to tyre blowout.

Tyre chains are permitted on tyres of size 215/70R16, 215/65 R17, 225/55 R18 and 205/55 R19.
Vehicle care

Temporary spare wheel
The use of tyre chains is not permitted on the temporary spare wheel.

Tyre repair kit
Minor damage to the tyre tread can be repaired with the tyre repair kit.
Do not remove foreign bodies from the tyres.
Tyre damage exceeding 4 mm or that is at tyre's sidewall cannot be repaired with the tyre repair kit.

⚠️ Warning
Do not drive faster than 80 km/h.
Do not use for a lengthy period.
Steering and handling may be affected.

In the case of a flat tyre:
Apply the parking brake and engage first gear, reverse gear or P.

The tyre repair kit is in the load compartment below the floor cover.
1. Remove the sealant bottle and the compressor.
2. Pull speed limit label from sealant bottle and place it in driver's visible area.
3. Remove the electrical connection cable and air hose from the storage compartments on the underside of the compressor.
4. Screw the compressor air hose to the connection on the sealant bottle.

5. Fit the sealant bottle into the bracket on the compressor. Set the compressor near the tyre in such a way that the sealant bottle is upright.

6. Unscrew valve cap from defective tyre.

7. Screw the filler hose to the tyre valve.

8. The switch on the compressor must be set to O.

9. Connect the compressor plug to the power outlet or cigarette lighter socket. The tyre repair kit may only be plugged in to the front 12 V power outlet, in order to work properly. To avoid discharging the battery, we recommend running the engine.

10. Set the rocker switch on the compressor to I. The tyre is filled with sealant.

11. The compressor pressure gauge briefly indicates up to 600 kPa (6 bar) whilst the sealant bottle is emptying (approx. 30 seconds). Then the pressure starts to drop.

12. All of the sealant is pumped into the tyre. Then the tyre is being inflated.

13. The prescribed tyre pressure should be obtained within 10 minutes. Tyre pressure 267. When the correct pressure is obtained, switch off the compressor. If the prescribed tyre pressure is not obtained within 10 minutes, remove the tyre repair kit. Move the vehicle one tyre rotation. Reattach the tyre repair kit and continue the filling procedure for 10 minutes. If the prescribed tyre pressure is still not obtained, the tyre is too badly damaged. Seek the assistance of a workshop.
Drain excess tyre pressure with the button on the air hose.
Do not run the compressor longer than 10 minutes.

14. Detach the tyre repair kit. Remove sealant bottle from bracket. Screw the filler hose to the free connection of the sealant bottle. This prevents sealant from escaping. Stow tyre repair kit in load compartment.

15. Remove any excess sealant using a cloth.

16. Continue driving immediately so that sealant is evenly distributed in the tyre. After driving approx. 5 km but no more than 10 minutes, stop and check tyre pressure. Screw compressor air hose directly onto tyre valve when doing this. Fill tyre as described before. Drain excess tyre pressure with the button on the air hose.

If tyre pressure hasn't decreased under 150 kPa (1.5 bar), set it to the correct value. Otherwise the vehicle must not be used. Seek assistance of a workshop 267.

Repeat the checking procedure once more after driving further 10 km but no more than 10 minutes to check that there is no more loss of pressure.

If the tyre pressure has fallen below 150 kPa (1.5 bar), the vehicle must not be used. Seek the assistance of a workshop.

17. Stow away tyre repair kit in load compartment.

**Note**
The driving characteristics of the repaired tyre are severely affected, therefore have this tyre replaced.

If unusual noise is heard or the compressor becomes hot, turn compressor off for at least 30 min. The built-in safety valve opens at a pressure of 700 kPa (7 bar).

Note the expiry date of the kit. After this date its sealing capability is no longer guaranteed. Pay attention to storage information on sealant bottle.
Replace the used sealant bottle. Dispose of the bottle as prescribed by applicable laws. The compressor and sealant can be used from approx. -30 °C.

**Wheel changing**

Make the following preparations and observe the following information:

- Park the vehicle on a level, firm and non-skid surface. The front wheels must be in the straight-ahead position.
- If necessary, place a chock under the wheel diagonally opposite the wheel to be changed.
- Apply the parking brake and engage first gear, reverse gear or P.
- If the ground on which the vehicle is standing is soft, a solid board (max. 1 cm thick) should be placed under the jack.
- Take heavy objects out of the vehicle before jacking up.
- No people or animals may be in the vehicle when it is jacked-up.

- Never crawl under a jacked-up vehicle.
- Do not start the vehicle when it is raised on the jack.
- Before screwing in the wheel bolts, clean them.

### Warning

Do not grease wheel bolts.

### Tightening torques

**Caution**

If the vehicle is equipped with alloy wheels, tighten the wheel bolts manually at least for the first five turns.

There are two different types of wheels with two different bolts and tightening torques.

- Tightening torque for alloy wheels is 100 Nm.
- Tightening torque for steel wheels is 115 Nm.

Use the correct wheel bolts for the respective wheels.

**Jacking positions**

The jacking positions shown refer to the use of lifting arms and accessory jacks used for changing winter / summer tyres.
Front arm position of the lifting platform centrically under the relevant vehicle jacking point.

Spare wheel

The spare wheel can be classified as a temporary spare wheel depending on the size compared to the other mounted wheels and country regulations. In this case a permissible maximum speed applies, even though no label at the spare wheel indicates this.

Only mount one temporary spare wheel. Do not drive faster than 80 km/h. Take curves slowly. Do not use for a long period of time.

**Caution**

The use of a spare wheel that is smaller than the other wheels or in combination with winter tyres could affect driveability. Have the defective tyre replaced as soon as possible.

To remove:

1. Open the floor cover 73.
2. Remove the tool box.
3. The temporary spare wheel is secured with a wing nut. Unscrew nut and take out the spare wheel.

Rear arm position of the lifting platform centrically under the relevant vehicle jacking point.

The spare wheel is located in the load compartment beneath the floor covering.
4. When, after a wheel change, no wheel is placed in the spare wheel well, secure the tool box by tightening the wing nut as far as it will go and close floor cover.

5. After wheel change back to full size wheel, place the temporary spare wheel outside up in the well and secure with the wing nut.

Only mount one temporary spare wheel. The permissible maximum speed on the label on the temporary spare wheel is only valid for the factory-fitted tyre size.

**Fitting the spare wheel**

Make the following preparations and observe the following information:

- Park the vehicle on a level, firm and non-skid surface. The front wheels must be in the straight-ahead position.
- If necessary, place a chock under the wheel diagonally opposite the wheel to be changed.
- Apply the parking brake and engage first gear, reverse gear or P.
- Remove the spare wheel.
- Never change more than one wheel at once.
- Use the jack only to change wheels in case of puncture, not for seasonal winter or summer tyre change.
- The jack is maintenance-free.
- If the ground on which the vehicle is standing is soft, a solid board (max. 1 cm thick) should be placed under the jack.
- Take heavy objects out of the vehicle before jacking up.
- No people or animals may be in the vehicle when it is jacked-up.
- Never crawl under a jacked-up vehicle.
- Do not start the vehicle when it is raised on the jack.
- Before screwing in the wheel bolts, clean them.

**Warning**

- Do not grease wheel bolts.

**Note**

- Note that the spare wheel is secured by the conical contact of each bolt if the wheel bolts for the alloy wheels are used. In this case, the washers do not come into contact with the spare wheel.

1. Disengage wheel bolt caps with the wheel bolt cover remover.
Vehicle tools \( \Rightarrow \) 230.

Steel wheels with cover: Pull off the wheel cover.

Alloy wheels: Disengage wheel bolt caps with the wheel bolt cover remover.

2. Attach the wheel wrench and loosen each wheel bolt by half a turn.

The wheels might be protected by locking wheel nuts. To loosen these specific nuts first attach the adapter onto the head of the nut before installing the wheel wrench. The adapter is located in the tool box \( \Rightarrow \) 230.

3. Ensure the jack is correctly positioned under the relevant vehicle jacking point.

Ensure that the edge of the body fits into the notch of the jack.

4. Set the jack to the necessary height. Position it directly below the jacking point in a manner that prevents it from slipping.
With the jack correctly aligned rotate wheel wrench until wheel is clear of the ground.

5. Unscrew the wheel nuts.

6. Change the wheel.

7. Screw on the wheel nuts.

8. Lower the vehicle and remove jack.

9. Install the wheel wrench ensuring that it is located securely and tighten each bolt in a crosswise sequence. Tightening torque is 115 Nm.

If the vehicle is equipped with alloy wheels, note that the wheel bolts can also be used for the steel spare wheel. In this case, the spare wheel is secured by the conical contact of each bolt.

10. Align the valve hole in the wheel cover with the tyre valve before installing.

Install wheel nut caps.

11. Stow the replaced wheel, the vehicle tools Ø 230 and the adapter for the locking wheel nuts.

12. Check the tyre pressure of the installed tyre and the wheel nut torque as soon as possible.

**Stowing a damaged full size wheel in the load compartment**

All permitted wheel sizes can be stowed in the spare wheel well. To secure the wheel:

1. Remove centre cap with the brand emblem by pushing from the inside.

2. Position the wheel outside down in the wheel well.

3. Secure the defective wheel with the wing nut.

4. Depending on the tyre size, the floor cover can be placed on the projecting wheel.
Jump starting

Do not start with quick charger. A vehicle with a discharged vehicle battery can be started using jump leads and the vehicle battery of another vehicle.

Caution

Never jump start another vehicle with a hybrid vehicle.

⚠️ Warning

Be extremely careful when starting with jump leads. Any deviation from the following instructions can lead to injuries or damage caused by battery explosion or damage to the electrical systems of both vehicles.

- Never expose the vehicle battery to naked flames or sparks.
- A discharged vehicle battery can already freeze at a temperature of 0 °C. Defrost the frozen battery before connecting jump leads.
- Wear eye protection and protective clothing when handling a battery.
- Use a booster battery with the same voltage (12 V). Its capacity (Ah) must not be much less than that of the discharged vehicle battery.
- Use jump leads with insulated terminals and a cross section of at least 16 mm² (25 mm² for diesel engines).

- Do not disconnect the discharged vehicle battery from the vehicle.
- Switch off all unnecessary electrical consumers.
- Do not lean over the vehicle battery during jump starting.
- Do not allow the terminals of one lead to touch those of the other lead.
- The vehicles must not come into contact with each other during the jump starting process.
- Apply the parking brake, transmission in neutral, automatic transmission in P.
Open the positive terminal protection caps of both vehicle batteries.

Lead connection order:
1. Connect the red lead to the positive terminal of the booster battery.
2. Connect the other end of the red lead to the positive terminal of the discharged battery.
3. Connect the black lead to the negative terminal of the booster battery.
4. Connect the other end of the black lead to the vehicle grounding point of your vehicle in the engine compartment.

Route the leads so that they cannot catch on rotating parts in the engine compartment.

To start the engine:
1. Start the engine of the vehicle providing the jump.
2. After 5 minutes, start the other engine. Start attempts should be made for no longer than 15 seconds at an interval of 1 minute.
3. Allow both engines to idle for approx. 3 minutes with the leads connected.
4. Switch on electrical consumers e.g. headlights, heated rear window of the vehicle receiving the jump start.
5. Reverse above sequence exactly when removing leads.

Towing

Towing the vehicle

Remove the cap.
The towing eye is stowed with the vehicle tools \(\blacktriangleright \) 230.
Screw in the towing eye as far as it will go until it stops in a horizontal position.

Attach a tow rope – or better still a tow rod – to the towing eye.

The towing eye must only be used for towing and not for recovering the vehicle.

Switch on ignition to release steering wheel lock and to permit operation of brake lights, horn and windscreen wiper.

Caution

Deactivate the driver assistance systems like active emergency braking \( \Diamond \) 173, otherwise the vehicle may automatically brake during towing.

Switch the selector lever to neutral. Release the parking brake.

Caution

Drive slowly. Do not drive jerkily. Excessive tractive force can damage the vehicle.

When the engine is not running, considerably more force is needed to brake and steer.

To prevent the entry of exhaust gases from the towing vehicle, switch on the air recirculation and close the windows.

Vehicles with automatic transmission: The vehicle must be towed facing forwards, not faster than 80 km/h nor further than 100 km. In all other cases and when the transmission is defective, the front axle must be raised off the ground.

Seek the assistance of a workshop.

After towing, unscrew the towing eye.

Insert cap with the flange into the recess and fix cap by pushing.

Towing a hybrid vehicle

Warning

Always tow the vehicle on a platform. Avoid towing the vehicle with two or four wheels on the ground.

If necessary, the vehicle can be moved a few metres at a speed below 10 km/h.

Before moving the car: Switch on ignition, depress the brake pedal, shift to N and switch off ignition.

Ensure the vehicle is only towed by well trained technicians.
**Towing another vehicle**

Remove the cap.  
The towing eye is stowed with the vehicle tools 230.

Screw in the towing eye as far as it will go until it stops in a horizontal position.

The lashing eye at the rear underneath the vehicle must never be used as a towing eye.

Attach a tow rope – or better still a tow rod – to the towing eye.

The towing eye must only be used for towing and not for recovering a vehicle.

**Caution**

*Drive slowly. Do not drive jerkily. Excessive tractive force can damage the vehicle.*

After towing, unscrew the towing eye.

Insert cap with the upper flange into the recess and fix cap by pushing.

---

**Appearance care**

**Exterior care**

**Locks**

The locks are lubricated at the factory using a high quality lock cylinder grease. Use a de-icing agent only when absolutely necessary, as this has a degreasing effect and impairs lock function. After using a de-icing agent, have the locks regreased by a workshop.

**Washing**

The paintwork of your vehicle is exposed to environmental influences. Wash and wax your vehicle regularly. When using automatic vehicle washes, select a programme that includes waxing.

Bird droppings, dead insects, resin, pollen and the like should be cleaned off immediately, as they contain aggressive constituents which can cause paint damage.
Vehicle care

If using a vehicle wash, comply with the vehicle wash manufacturer's instructions. The windscreen wiper and rear window wiper must be switched off. Remove antenna and external accessories such as roof racks etc.

If you wash your vehicle by hand, make sure that the insides of the wheel housings are also thoroughly rinsed out.

Wax painted parts of the vehicle regularly.

Clean edges and folds on opened doors and the bonnet as well as the areas they cover.

Clean bright metal mouldings with a cleaning solution approved for aluminium to avoid damages.

---

**Caution**

Always use a cleaning agent with a pH value of 4 to 9.

Do not use cleaning agents on hot surfaces.

---

Do not clean the engine compartment with a steam-jet or high-pressure jet cleaner.

Thoroughly rinse and leather-off the vehicle. Rinse leather frequently. Use separate leathers for painted and glass surfaces: remnants of wax on the windows will impair vision.

Have the door hinges of all doors greased by a workshop.

Do not use hard objects to remove spots of tar. Use tar removal spray on painted surfaces.

**Exterior lights**

Headlight and other light covers are made of plastic. Do not use any abrasive or caustic agents, do not use an ice scraper, and do not clean them dry.

**Polishing and waxing**

Wax the vehicle regularly at the latest when water no longer beads. Otherwise, the paintwork will dry out.

Polishing is necessary only if the paint has become dull or if solid deposits have become attached to it.

Paintwork polish with silicone forms a protective film, making waxing unnecessary.

Plastic body parts must not be treated with wax or polishing agents.

**Windows and wiper blades**

Switch off wipers before handling in their areas.

Use a soft lint-free cloth or chamois leather together with window cleaner and insect remover.

When cleaning the rear window from inside, always wipe in parallel to the heating element to prevent damage.

For mechanical removal of ice, use a sharp-edged ice scraper. Press the scraper firmly against the glass so that no dirt can get under it and scratch the glass.

Clean smearing wiper blades with a soft cloth and window cleaner. Also make sure to remove any residues such as wax, insect residues and similar from the window.

Ice residues, pollution and continuous wiping on dry windows will damage or even destroy the wiper blades.
Glass panel
Use a soft lint-free cloth or chamois leather together with window cleaner to clean the glass panel.

Wheels and tyres
Do not use high-pressure jet cleaners.
Clean rims with a pH-neutral wheel cleaner.
Rims are painted and can be treated with the same agents as the body.

Paintwork damage
Rectify minor paintwork damage with a touch-up pen before rust forms.
Have more extensive damage or rust areas repaired by a workshop.

Underbody
Some areas of the vehicle underbody have a PVC undercoating while other critical areas have a durable protective wax coating.
After the underbody is washed, check the underbody and have it waxed if necessary.

Bitumen / rubber materials could damage the PVC coating. Have underbody work carried out by a workshop.
Before and after winter, wash the underbody and have the protective wax coating checked.

Liquid gas system
Liquid gas is heavier than air and can collect in sink points.
Take care when performing work at the underbody in a pit.
For painting work and when using a drying booth at a temperature above 60 °C, the liquid gas tank must be removed.
Do not make any modifications to the liquid gas system.

Towing equipment
Do not clean the coupling ball bar with a steam-jet or high-pressure jet cleaner.

Interior care

Interior and upholstery
Only clean the vehicle interior, including the instrument panel fascia and panelling, with a dry cloth or interior cleaner.
Clean the leather upholstery with clear water and a soft cloth. In case of heavy soiling, use leather care.
The instrument cluster and the displays should only be cleaned using a soft damp cloth. If necessary use a weak soap solution.
Clean fabric upholstery with a vacuum cleaner and brush. Remove stains with an upholstery cleaner.
Clothing fabrics may not be colourfast. This could cause visible discoulorations, especially on light-coloured upholstery. Removable stains and discoulorations should be cleaned as soon as possible.
Clean seat belts with lukewarm water or interior cleaner.
Caution

Close Velcro fasteners and open Velcro fasteners on clothing could damage seat upholstery. The same applies to clothing with sharp-edged objects, e.g. zips, belts or studded jeans.

Plastic and rubber parts

Plastic and rubber parts can be cleaned with the same cleaner as used to clean the body. Use interior cleaner if necessary. Do not use any other agent. Avoid solvents and petrol in particular. Do not use high-pressure jet cleaners.

Floor mats

Warning

If a floor mat has the wrong size or is not properly installed, it can interfere with the accelerator pedal and/or brake pedal, what can cause unintended acceleration and/or increased stopping distance which can cause a crash and injury.

Use the following guidelines for proper floor mat usage.

- The original equipped floor mats were designed for your vehicle. Have damaged floor mats only replaced by certified floor mats. Always check that the floor mats do not interfere with the pedals.
- Use the floor mat with the correct side up. Do not turn it over.
- Do not place anything on top of the driver's side floor mat.
- Use only a single floor mat on the driver's side.

Installing and removing the floor mats

The driver's side floor mat and the passenger's side floor mat are each held in place by two retainers.

To install the floor mat:
1. Move the seat backwards as far as possible.
2. Align slots in the mat with the retainers, as shown.
3. Push the mat to the floor.

To remove the floor mat:
1. Move the seat backwards as far as possible.
2. Pull the floor mat upwards to remove.
General information

In order to ensure economical and safe vehicle operation and to maintain the value of your vehicle, it is of vital importance that all maintenance work is carried out at the proper intervals as specified. The detailed, up-to-date service schedule for your vehicle is available at the workshop.

Severe operating conditions exist if one or more of the following circumstances occur frequently: Cold starting, stop and go operation, e.g. for taxis and police vehicles, trailer operation, mountain driving, driving on poor and sandy road surfaces, increased air pollution, presence of airborne sand and high dust content, driving at high altitude and large variations of temperature.

Under these severe operating conditions, certain service work may be required more frequently than the regular service interval indicated in the service display. Contact a workshop for customised service schedules.

Service display ◇ 92.

Confirmations

Confirmation of service is recorded in the Service and warranty booklet. The date and mileage is completed with the stamp and signature of the servicing workshop.

Make sure that the Service and warranty booklet is completed correctly as continuous proof of service is essential if any warranty or goodwill claims are to be met, and is also a benefit when selling the vehicle.

Confirmations
Confirmation of service is recorded in the Service and warranty booklet. The date and mileage is completed with the stamp and signature of the servicing workshop.

Make sure that the Service and warranty booklet is completed correctly as continuous proof of service is essential if any warranty or goodwill claims are to be met, and is also a benefit when selling the vehicle.
Recommended fluids, lubricants and parts

Recommended fluids and lubricants

Only use products that meet the recommended specifications.

⚠️ Warning

Operating materials are hazardous and could be poisonous. Handle with care. Pay attention to information given on the containers.

Engine oil

Engine oil is identified by its quality and its viscosity. Quality is more important than viscosity when selecting which engine oil to use. The engine oil quality ensures e.g. engine cleanliness, wear protection and engine oil aging control, whereas viscosity grade gives information on the engine oil's thickness over a temperature range.

Select the appropriate engine oil based on its quality and on the minimum ambient temperature ⬇️ 259.

Topping up engine oil

Caution

In case of any spilled engine oil, wipe it up and dispose of it properly.

Engine oils of different manufacturers and brands can be mixed as long as they comply with the required engine oil quality and viscosity.

Use of engine oils for all petrol engines with only ACEA quality is prohibited, since it can cause engine damage under certain operating conditions.

Select the appropriate engine oil based on its quality and on the minimum ambient temperature ⬇️ 259.

Additional engine oil additives

The use of additional engine oil additives could cause damage and invalidate the warranty.

Engine oil viscosity grades

The SAE viscosity grade gives information of the thickness of the engine oil.

Multigrade engine oil is indicated by two figures, e.g. SAE 5W-30. The first figure, followed by a W, indicates the low temperature viscosity and the second figure the high temperature viscosity.

Select the appropriate viscosity grade depending on the minimum ambient temperature ⬇️ 259.

All of the recommended viscosity grades are suitable for high ambient temperatures.

Coolant and antifreeze

Use only organic acid type-long life coolant (LLC) antifreeze approved for the vehicle. Consult a workshop.
The system is factory filled with coolant designed for excellent corrosion protection and frost protection down to approx. -28 °C. In cold regions with very low temperatures the factory filled coolant provides frost protection down to approx. -37 °C. This concentration should be maintained all year round. The use of additional coolant additives that intend to give additional corrosion protection or seal against minor leaks can cause function problems. Liability for consequences resulting from the use of additional coolant additives will be rejected.

**Washer fluid**
Use only washer fluid approved for the vehicle to prevent damage of wiper blades, paintwork, plastic and rubber parts. Consult a workshop.

**Brake and clutch fluid**
Over time, brake fluid absorbs moisture which will reduce braking effectiveness. The brake fluid should therefore be replaced at the specified interval.

**AdBlue**
Only use AdBlue to reduce the nitrogen oxides in the exhaust emission ① 143.

Vehicle identification

Vehicle identification number

The Vehicle Identification Number may be embossed on the instrument panel, visible through the windscreen, or in the engine compartment on the right body panel.

Identification plate

The identification plate is located on the front left or right door frame.
Information on identification label:
1: manufacturer
2: type approval number
3: vehicle identification number
4: permissible gross vehicle weight rating in kg
5: permissible gross train weight in kg
6: maximum permissible front axle load in kg
7: maximum permissible rear axle load in kg
8: vehicle-specific or country-specific data

The combined total of front and rear axle loads must not exceed the permissible gross vehicle weight.

Vehicle's kerb weight depends on the specification of the vehicle, e.g. optional equipment and accessories. Refer to the EEC Certificate of Conformity provided with your vehicle or other national registration documents.

Specifications in the vehicle documents always have priority over those given in this manual.

Engine identification
The technical data tables show the engine identifier code.
Engine data 261.
To identify the respective engine, refer to the engine power in the EEC Certificate of Conformity provided with your vehicle or other national registration documents.

The technical data is determined in accordance with European Community standards. We reserve the right to make modifications.

### Customer information

#### Declaration of conformity

**Radio transmission systems**

This vehicle has systems that transmit and/or receive radio waves subject to Directive 2014/53/EU. The manufacturers of the systems listed below declare conformity with Directive 2014/53/EU. The full text of the EU declaration of conformity for each system is available at the following internet address: www.opel.com/conformity.

**Importer is**

Opel / Vauxhall, Bahnhofsplatz, 65423 Ruesselsheim am Main, Germany.

**Infotainment system R 4.0 IntelliLink**

LG Electronics

European Shared Service center B.V.

Krijgsman 1, 1186 DM Amstelveen, The Netherlands

Operation frequency: 2400.0 - 2483.5 MHz

Maximum output: 4 dBm

**Infotainment system R 4.0 Clarion**

244 rue du Pré à Varois, 54670 Custines, France

Operation frequency: 2400 - 2480 MHz

Maximum output: 4 dBm

  - Operation frequency: 433.92 MHz
  - Maximum output: 10 dBm

#### Radio remote control receiver
- **Delphi European, Middle Eastern & African Regional Offices Customer Technology**
  - Center Avenue de Luxembourg, L-4940 Bascharage, G.D. of Luxembourg
  - Operation frequency: 119 - 128.6
  - Maximum output: 16 dBμA/m @ 10m

#### Electronic key transmitter
- **Valeo**
  - 43 Rue Bayen, 75017 Paris, France
  - Operation frequency: 433.92 MHz
  - Maximum output: 10 dBm

#### Immobiliser
- **KOSTAL of America, Inc.**
  - 350 Stephenson Hwy, Troy MI 48083, USA
  - Operation frequency: 125 kHz
  - Maximum output: 5 dBμA/m at 10m

#### Radar unit
- **ZF TRW Autocruise SAS**
  - Secteur de la Pointe du Diable, Avenue du technopôle, 29280 Plouzane, France
  - Operation frequency: 24.15 - 24.25 GHz
  - Maximum output: 20 dBm

#### ICASA type approval numbers
List of all Independent Communications Authority of South Africa (ICASA) type approval numbers:
REACH
Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) is a European Union regulation adopted to improve the protection of human health and the environment from the risks that can be posed by chemicals. Visit www.opel.com for further information and for access to the Article 33 communication.

Collision damage repair
Paint thickness
Due to production techniques, the thickness of the paint can vary between 50 and 400 µm. Therefore, different paint thickness is no indicator for a collision damage repair.

Software update
The Infotainment system can download and install selected software updates over a wireless connection.

Note
The availability of these over-the-air vehicle software updates varies by vehicle and country. Find more information on our home page.

Internet connection
Downloading over-the-air vehicle software updates requires internet connectivity, which can be accessed through a password-protected Wi-Fi hotspot, e.g. provided by a mobile phone.
To connect the Infotainment system to a hotspot, refer to the Infotainment Manual.

Updates
The system will prompt for certain updates to be downloaded and installed. There is also an option to check for updates manually.
To manually check for updates, select Settings on the home screen, Software Information and then System Update. Follow the on-screen prompts.

Note
Steps for downloading and installing updates may vary by vehicle.

Note
During the installation process, the vehicle may not be operational.

Vehicle data recording and privacy

Event data recorders
Electronic control units are installed in your vehicle. Control units process data which they receive, e.g. by vehicle sensors or which they generate themselves or exchange amongst themselves. Some control units are necessary for the safe functioning of your vehicle, others assist you while you drive (driver assistance systems), while others provide comfort or infotainment functions.

The following contains general information about data processing in the vehicle. You will find additional information as to which specific data is uploaded, stored and passed on to third parties and for what purpose in your vehicle under the key word Data Protection closely linked to the references for the affected functional characteristics in the relevant Owner's Manual or in the general terms of sale. These are also available online.

Operating data in the vehicle
Control units process data for operation of the vehicle. This data includes:

- vehicle status information (e.g. speed, movement delay, lateral acceleration, wheel rotation rate, "seat belts fastened" display)
- ambient conditions (e.g. temperature, rain sensor, distance sensor)

As a rule such data is transient and is not stored for longer than an operational cycle, and only processed on board the vehicle itself. Often control units include data storage (including the vehicle key). This is used to allow information to be documented temporarily or permanently on vehicle condition, component stress, maintenance requirements and technical events and errors.
Depending on technical equipment levels, the data stored is as follows:

- system component operating states (e.g. fill level, tyre pressure, battery status)
- faults and defects in important system components (e.g. lights, brakes)
- system reactions in special driving situations (e.g. triggering of an airbag, actuation of the stability control systems)
- information on events damaging the vehicle
- for electric vehicles the amount of charge in the high-voltage battery, estimated range

In special cases (e.g. if the vehicle has detected a malfunction), it may be necessary to save data that would otherwise just be volatile.

When you use services (e.g. repairs, maintenance), the operating data saved can be read together with the vehicle identification number and used where necessary. Staff working for the service network (e.g. garages, manufacturers) or third parties (e.g. breakdown services) can read the data from the vehicle. The same applies to warranty work and quality assurance measures.

Data is generally read via the OBD (On-Board Diagnostics) port prescribed by law in the vehicle. The operating data read documents the technical condition of the vehicle or individual components and assists with fault diagnosis, compliance with warranty obligations and quality improvement. This data, in particular information on component stress, technical events, operator errors and other faults, is transmitted to the manufacturer where appropriate, together with the vehicle identification number. The manufacturer is also subject to product liability. The manufacturer potentially also uses operating data from vehicles for product recalls. This data can also be used to check customer warranty and guarantee claims.

Fault memories in the vehicle can be reset by a service company when carrying out servicing or repairs or at your request.

### Comfort and infotainment functions

Comfort settings and custom settings can be stored in the vehicle and changed or reset at any time.

Depending on the equipment level in question, these include:

- seat and steering wheel position settings
- chassis and air conditioning settings
- custom settings such as interior lighting

You can input your own data in the infotainment functions for your vehicle as part of the selected features.

Depending on the equipment level in question, these include:

- multimedia data such as music, videos or photos for playback in an integrated multimedia system
- address book data for use with an integrated hands-free system or an integrated navigation system
Customer information

- input destinations
- data on the use of online services

This data for comfort and infotainment functions can be stored locally in the vehicle or be kept on a device that you have connected to the vehicle (e.g. a smartphone, USB stick or MP3 player). Data that you have input yourself can be deleted at any time.

This data can only be transmitted out of the vehicle at your request, particularly when using online services in accordance with the settings selected by you.

Smartphone integration, e.g. Android Auto or Apple CarPlay

If your vehicle is equipped accordingly, you can connect your smartphone or another mobile device to the vehicle so that you can control it via the controls integrated in the vehicle. The smartphone image and sound can be output via the multimedia system in this case. At the same time, specific information is transmitted to your smartphone. Depending on the type of integration, this includes data such as position data, day / night mode and other general vehicle information. For more information, please see the operating instructions for the vehicle / infotainment system.

Integration allows selected smartphone apps to be used, such as navigation or music playback. No further integration is possible between smartphone and vehicle, in particular active access to vehicle data. The nature of further data processing is determined by the provider of the app used. Whether you can define settings, and if so which ones, is dependent on the app in question and your smartphone's operating system.

Online services

If your vehicle has a radio network connection, this allows data to be exchanged between your vehicle and other systems. The radio network connection is made possible by means of a transmitter device in your vehicle or a mobile device provided by you (e.g. a smartphone). Online functions can be used via this radio network connection. These include online services and applications / apps provided to you by the manufacturer or other providers.

Proprietary services

In the case of the manufacturer's online services, the relevant functions are described by the manufacturer in an appropriate location (e.g. Owner's Manual, the manufacturer's website) and the associated data protection information is provided. Personal data may be used to provide online services. Data exchange for this purpose takes place via a protected connection, e.g. using the manufacturer's IT systems provided for the purpose. Collection,
processing and use of personal data for the purposes of preparation of services take place solely on the basis of legal permission, e.g. in the case of a legally prescribed emergency communication system or a contractual agreement, or by virtue of consent.

You can activate or deactivate the services and functions (which are subject to charges to some extent) and, in some cases, the vehicle's entire radio network connection. This does not include statutory functions and services such as an emergency communication system.

**Third party services**

If you make use of online services from other providers (third parties), these services are subject to the liability and data protection and usage conditions of the provider in question. The manufacturer frequently has no influence over the content exchanged in this regard.

Therefore, please note the nature, scope and purpose of the collection and use of personal data within the scope of third party services provided by the service provider in question.

**Radio Frequency Identification (RFID)**

RFID technology is used in some vehicles for functions such as tyre pressure monitoring and immobiliser. It is also used in connection with conveniences such as radio remote controls for door locking / unlocking and starting. RFID technology in Opel vehicles does not use or record personal information or link with any other Opel system containing personal information.
