Vehicle specific data
Please enter your vehicle's data on the previous page to keep it easily accessible. This information is available in the sections "Service and maintenance" and "Technical data" as well as on the identification plate.

Introduction
Your vehicle is a designed combination of advanced technology, safety, environmental friendliness and economy.

This Owner's Manual provides you with all the necessary information to enable you to drive your vehicle safely and efficiently.

Make sure your passengers are aware of the possible risk of accident and injury which may result from improper use of the vehicle.

You must always comply with the specific laws and regulations of the country that you are in. These laws may differ from the information in this Owner's Manual.

When this Owner's Manual refers to a workshop visit, we recommend your Opel Service Partner. For gas vehicles we recommend an Opel Repairer authorised for servicing gas vehicles.

All Opel Service Partners provide first-class service at reasonable prices. Experienced mechanics trained by Opel work according to specific Opel instructions.

The customer literature pack should always be kept ready to hand in the vehicle.

Using this manual
■ This manual describes all options and features available for this model. Certain descriptions, including those for display and menu functions, may not apply to your vehicle due to model variant, country specifications, special equipment or accessories.
■ The "In brief" section will give you an initial overview.

■ The table of contents at the beginning of this manual and within each section shows where the information is located.
■ The index will enable you to search for specific information.
■ This Owner's Manual depicts left-hand drive vehicles. Operation is similar for right-hand drive vehicles.
■ The Owner's Manual uses the factory engine designations. The corresponding sales designations can be found in the section "Technical data".
■ Directional data, e.g. left or right, or front or back, always relate to the direction of travel.
■ The vehicle display screens may not support your specific language.
■ Display messages and interior labelling are written in bold letters.

Adam Opel AG
Initial drive information

Vehicle unlocking

Press button \( \downarrow \) to unlock the doors and load compartment. Open the doors by pulling the handles. To open the tailgate, push the touchpad switch under the tailgate moulding.

Radio remote control \( \uparrow \) 20, Central locking system \( \uparrow \) 22, Load compartment \( \uparrow \) 26.

Seat adjustment

Seat positioning

Pull handle, slide seat, release handle.

Seat position \( \uparrow \) 37, Seat adjustment \( \uparrow \) 37.

\[\text{Danger}\]

Do not sit nearer than 25 cm from the steering wheel, to permit safe airbag deployment.
In brief

Seat backrests
Pull lever, adjust inclination and release lever. Allow the seat to engage audibly. 
Seat position 37, Seat adjustment 37.

Seat height
Lever pumping motion
up = seat higher
down = seat lower
Seat position 37, Seat adjustment 37.

Seat inclination
Lever pumping motion
up = front end higher
down = front end lower
Seat position 37, Seat adjustment 37.
**Head restraint adjustment**

Press release button, adjust height and engage.
To adjust horizontally, pull the head restraint forwards. It engages in several positions. To return to its rearmost position, pull fully forwards and release.
Head restraints  35.

**Seat belt**

Pull out the seat belt and engage in belt buckle. The seat belt must not be twisted and must fit close against the body. The backrest must not be tilted back too far (maximum approx. 25°).
To release belt, press red button on belt buckle.
Seat position  37, Seat belts  45, Airbag system  49.

**Mirror adjustment**

**Interior mirror**

To reduce dazzle, adjust the lever on the underside of the mirror housing.
Interior mirror  30, Automatic anti-dazzle interior mirror  30.
Exterior mirrors

Select the relevant exterior mirror and adjust it.
Convex exterior mirrors 29, Electric adjustment 29, Folding exterior mirrors 29, Heated exterior mirrors 30.

Steering wheel adjustment

Unlock the lever, adjust the steering wheel, then engage the lever and ensure it is fully locked.
Do not adjust the steering wheel unless the vehicle is stationary and the steering wheel lock has been released.
Airbag system 49, Ignition positions 129.

Exterior lighting

Press light switch

Auto = Automatic light control:
Exterior lighting is switched on and off automatically

= activation or deactivation of the automatic light control

= sidelights

= low beam

Vehicles without automatic light control:

= off

Headlight flash, high beam and low beam

headlight flash = pull lever
high beam = push lever
low beam = push or pull lever

Automatic light control 112, High beam 112, Headlight flash 112.
In brief

Turn and lane-change signals

lever up = right turn signal
lever down = left turn signal

Turn and lane-change signals 115, Parking lights 116.

Hazard warning flashers

Operated with the button. Hazard warning flashers 114.

Horn

Press .
Washer and wiper systems

Windscreen wiper

Pull lever.

Windscreen washer system

Rear window wiper and washer systems

Press the rocker switch to activate the rear window wiper:

upper position = short interval
lower position = long interval
middle position = off

2 = fast
1 = slow
= interval wiping or automatic wiping with rain sensor
= off

For a single wipe when the windscreen wiper is off, press the lever down.

Windscreen wiper 81, Wiper blade replacement 167.
Push lever. Washer fluid is sprayed on the rear window and the wiper wipes a few times.
Rear window wiper/washer /extensions.

**Climate control**

**Heated rear window, heated exterior mirrors**

The heating is operated by pressing the button. Heated rear window /extensions.

**Demisting and defrosting the windows**

Press button .
Set the temperature control to the highest level.
Cooling on.
Heated rear window on.
Climate control system /extensions.
Transmission

Manual transmission

Reverse: with the vehicle stationary, wait 3 seconds after depressing clutch pedal then press the release button on the selector lever and engage the gear.

If the gear does not engage, set the lever to neutral, release the clutch pedal and depress again; then repeat gear selection.

Automatic transmission

P = park
R = reverse
N = neutral
D = drive

Manual mode: move selector lever from D to the left.
  + = higher gear
  − = lower gear

The selector lever can only be moved out of P when the ignition is on and the brake pedal is applied. To engage P or R, press the release button.

Automatic transmission  135.

Starting off

Check before starting off

- Tyre pressure and condition  185,  218.
- Engine oil level and fluid levels  162.
- All windows, mirrors, exterior lighting and number plates are free from dirt, snow and ice and are operational.
- Proper position of mirrors, seats, and seat belts  29,  37,  46.
- Brake function at low speed, particularly if the brakes are wet.

Starting off

Check before starting off

- Tyre pressure and condition  185,  218.
- Engine oil level and fluid levels  162.
- All windows, mirrors, exterior lighting and number plates are free from dirt, snow and ice and are operational.
- Proper position of mirrors, seats, and seat belts  29,  37,  46.
- Brake function at low speed, particularly if the brakes are wet.

Starting off

Check before starting off

- Tyre pressure and condition  185,  218.
- Engine oil level and fluid levels  162.
- All windows, mirrors, exterior lighting and number plates are free from dirt, snow and ice and are operational.
- Proper position of mirrors, seats, and seat belts  29,  37,  46.
- Brake function at low speed, particularly if the brakes are wet.
Starting the engine

- Turn key to position 1
- move the steering wheel slightly to release the steering wheel lock
- operate clutch and brake
- automatic transmission in P or N
- do not operate accelerator pedal
- diesel engines: turn the key to position 2 for preheating and wait until control indicator "00" extinguishes
- turn key to position 3 and release

Starting the engine ◊ 129.

Stop-start system

If the vehicle is at a low speed or at a standstill and certain conditions are fulfilled, activate an Autostop as follows:

- Depress the clutch pedal
- set the lever in neutral
- release the clutch pedal

An Autostop is indicated by the needle at the AUTOSTOP position in the tachometer.

To restart the engine, depress the clutch pedal again.

Stop-start system ◊ 131.

Parking

- Always apply the parking brake. Pull switch ⚡ for approx. one second.
- Switch off the engine. Turn the ignition key to position 0 and remove it. Turn the steering wheel until the steering wheel lock is felt to engage.

For vehicles with automatic transmission, the key can only be removed when the selector lever is in the P position.

- If the vehicle is on a level surface or uphill slope, engage first gear or set the selector lever to P before switching off the ignition. On an uphill slope, turn the front wheels away from the kerb.

If the vehicle is on a downhill slope, engage reverse gear or set the selector lever to P before switching off the ignition. Turn the front wheels towards the kerb.
■ Lock the vehicle with button 🗝️ on the radio remote control.

■ Activate the anti-theft alarm system 🔄 28.

■ Do not park the vehicle on an easily ignitable surface. The high temperature of the exhaust system could ignite the surface.

■ Close the windows.

■ The engine cooling fans may run after the engine has been switched off 🔄 161.

■ After running at high engine speeds or with high engine loads, operate the engine briefly at a low load or run in neutral for approx. 30 seconds before switching off, in order to protect the turbocharger.

Keys, locks 🗝️ 20, Laying the vehicle up for a long period of time 🔄 160.

Keys, locks

Keys

Replacement keys
The key number is specified in the Car Pass or on a detachable tag. The key number must be quoted when ordering replacement keys as it is a component of the immobiliser system.

Locks ◇ 199.

Key with foldaway key section

Press button to extend. To fold the key, first press the button.

Car Pass
The Car Pass contains security related vehicle data and should therefore be kept in a safe place. When the vehicle is taken to a workshop, this data is required in order to perform certain operations.

Radio remote control
Used to operate:
- Central locking system
- Anti-theft locking system
- Anti-theft alarm system
- Power windows

The radio remote control has a range of approx. 5 metres. It can be restricted by external influences. The hazard warning flashers confirm operation.

Handle with care, protect from moisture and high temperatures and avoid unnecessary operation.

Fault
If the central locking system cannot be operated with the radio remote control, it may be due to the following:
- Range exceeded
- Battery voltage too low
- Frequent, repeated operation of the radio remote control while not in range, which will require re-synchronisation
- Overload of the central locking system by operating at frequent intervals, the power supply is interrupted for a short time
- Interference from higher-power radio waves from other sources

Unlocking  22.

Basic settings
Some settings can be changed in the menu Settings in the Info-Display.

Vehicle personalisation  107.

Radio remote control battery replacement
Replace the battery as soon as the range is reduced.

Batteries do not belong in household waste. They must be disposed of at an appropriate recycling collection point.

Key with foldaway key section
Extend the key and open the unit.
Replace the battery (battery type CR 2032), paying attention to the installation position. Close the unit and synchronise.

Key with fixed key section
Have the battery replaced by a workshop.
Radio remote control synchronisation
After replacing the battery, unlock the door with the key in the driver's door lock. The radio remote control will be synchronised when the ignition is switched on.

Memorised settings
Whenever the key is removed from the ignition switch, the following settings are automatically memorised by the key:
- Lighting
- Infotainment system (only CD 400)
- Central locking system
- Comfort settings
The saved settings are automatically used the next time the memorised key is inserted into the ignition switch and turned to position 1 129.

A precondition is that Personalization by driver is activated in the personal settings of the Graphic-Info-Display. This must be set for each key used. On vehicles equipped with Colour-Info-Display, the personalisation is permanently activated.
Vehicle personalisation 107.

Central locking system
Unlocks and locks doors, load compartment and fuel filler flap.
A pull on an interior door handle unlocks the respective door. Pulling the handle once more opens the door.

Note
In the event of an accident in which airbags or belt pretensioners are deployed, the vehicle is automatically unlocked.

Unlocking
Press button .
Two settings are selectable:
- To unlock only the driver's door and the fuel filler flap, press button once. To unlock all doors and the load compartment, press button twice,
or
- press button once to unlock all doors, load compartment and fuel filler flap.
The setting can be changed in the menu **Settings** in the Info-Display. Vehicle personalisation 107.
The setting can be saved for the key being used.
Memorised settings 22.

**Locking**
Close doors, load compartment and fuel filler flap.

Press button 🛠. If the driver’s door is not closed properly, the central locking system will not work.

**Unlocking and opening the tailgate**
Press button 🛠 when the ignition is off to unlock all doors. The tailgate is released and is unlocked and opened by pushing the touchpad switch under the tailgate moulding.

**Central locking button**
Locks or unlocks all doors, the load compartment and fuel filler flap from the passenger compartment.

Press central locking button: the doors are locked or unlocked. If the doors are locked, the LED in the button illuminates.
After locking with the radio remote control, the LED in the button illuminates for approx. 2 minutes.
Fault in radio remote control system

Unlocking

Manually unlock the driver's door by turning the key in the lock. Switch on the ignition and press the central locking button. The vehicle is locked. Close the passenger door.

Fault in central locking system

Unlocking

Manually unlock the driver's door by turning the key in the lock. The other doors can be opened by pulling the interior handle twice. The load compartment and fuel filler flap cannot be opened.

To deactivate the anti-theft locking system, switch on the ignition ▶ 28.

Locking

Close the driver's door, open the passenger door, press central locking button. The vehicle is locked. Close the passenger door.

Locking

Insert key into the opening above the lock on inside of the door and operate the lock by pressing until it clicks. Then close the door. The procedure must be carried out for each door. The driver's door can also be locked from the outside with the key. The fuel filler flap and the tailgate cannot be locked.
Automatic locking

Automatic locking after driving off

The vehicle is locked automatically when exceeding a speed of 4 km/h. Opening from outside is not possible. Additionally, opening of the rear doors from inside is not possible when the vehicle speed is above 4 km/h.

Green LEDs indicate that opening from inside is possible:

Hold the inner rear door handle to activate the proximity sensor and then pull the handle. When the vehicle speed is below 4 km/h, opening of the doors from outside is possible after:
- opening any door from inside
- pressing the central locking button

Caution

Automatic locking is only active with ignition on.

Fault in the automatic locking system

In case of a system fault, control indicator ‡ illuminates in the instrument cluster and a warning chime sounds to indicate that the rear doors are not secured against opening. Inform passengers to keep clear of the door handles.

Stop immediately and activate the child lock in both rear doors. If the child lock is already activated, first deactivate and then activate again. The green LEDs will extinguish and the warning chime will stop as soon as both child locks are activated. Pull the inner rear door handles to check if the doors are locked from inside. Consult a workshop.

Automatic relock after unlocking

A short time after unlocking with the remote control, all doors, load compartment and fuel filler flap are locked automatically, provided that no door has been opened.

Child locks
**Warning**

Use the child locks whenever children are occupying the rear seats.

Using a key or suitable screwdriver, turn the child lock in the rear door to the horizontal position. The green LED will extinguish. The door cannot be opened from the inside. For deactivation, turn the child lock to the vertical position.

**Doors**

**Rear doors**

**Warning**

Take care of other persons when getting in or out at the front and rear simultaneously.

Only use the grab handle provided.

The rear doors have an automatic locking feature 25.

**Load compartment**

**Tailgate**

**Opening**

After unlocking, push the touchpad switch under the tailgate moulding and open the tailgate.

Central locking system 22.
Closing

Use one of the interior handles. Do not push the touchpad switch under the moulding whilst closing as this will unlock the tailgate again.

Central locking system 22.

General hints for operating tailgate

Warning
Do not drive with the tailgate open or ajar, e.g. when transporting bulky objects, since toxic exhaust gases, which can not be seen or smelled, could enter the vehicle. This can cause unconsciousness and even death.

Caution
Before opening the tailgate check overhead obstructions, such as a garage door, to avoid damage to the tailgate. Always check the moving area above and behind the tailgate.

Note
The installation of certain heavy accessories onto the tailgate may affect its ability to remain open.

Vehicle security

Anti-theft locking system

Warning
Do not use the system if there are people in the vehicle! The doors cannot be unlocked from the inside.

The system deadlocks all the doors. All doors must be closed otherwise the system cannot be activated.

If the ignition was on, the driver's door must be opened and closed once so that the vehicle can be secured.

Unlocking the vehicle disables the mechanical anti-theft locking system. This is not possible with the central locking button.
Activating

Press $\Box$ on the radio remote control twice within 10 seconds.

**Anti-theft alarm system**

The anti-theft alarm system incorporates and is operated in conjunction with the anti-theft locking system.

- Doors, tailgate, bonnet
- Ignition

Unlocking the vehicle deactivates both systems simultaneously.

**Status LED**

Status LED is integrated in the central locking button.

Status during the first 10 seconds of anti-theft alarm system activation:

- LED illuminates = test, arming delay.
- LED flashes quickly = doors, tailgate or bonnet not completely closed, or system fault.

Status after system is armed:

- LED flashes slowly = system is armed.

Seek the assistance of a workshop in the event of faults.

**Alarm**

When triggered, the horn sounds, and the hazard warning lights flash simultaneously. The number and duration of alarm signals are stipulated by legislation.

The alarm can be silenced by pressing any button of the radio remote control or by switching on the ignition.

The anti-theft alarm system can be deactivated only by pressing button $\Box$ or by switching on the ignition.

A triggered alarm, which has not been interrupted by the driver, will be indicated by a warning message or a warning code in the Driver Information Centre after switching on the ignition.

Vehicle messages $\Diamond$ 101.
**Immobiliser**

The system is part of the ignition switch and checks whether the vehicle is allowed to be started with the key being used.

The immobiliser is activated automatically after the key has been removed from the ignition switch.

If control indicator ⚠️ flashes when the ignition is on, there is a fault in the system; the engine cannot be started. Switch off the ignition and then repeat the start attempt.

If control indicator ⚠️ continues flashing, attempt to start the engine using the spare key and seek the assistance of a workshop.

**Note**

The immobiliser does not lock the doors. You should always lock the vehicle after leaving it and switch on the anti-theft alarm system ⚠️ 22, ⚠️ 28.

Control indicator ⚠️ ⚠️ 96.

---

**Exterior mirrors**

**Convex shape**

The convex exterior mirror contains an aspherical area and reduces blind spots. The shape of the mirror makes objects appear smaller, which will affect the ability to estimate distances.

**Electric adjustment**

Select the relevant exterior mirror by turning the control to left (L) or right (R). Then swivel the control to adjust the mirror.

---

**Folding**

For pedestrian safety, the exterior mirrors will swing out of their normal mounting position if they are struck with sufficient force. Reposition the mirror by applying slight pressure to the mirror housing.
Heated mirrors

Heated mirrors are operated by pressing the button. Heating works with the engine running and is switched off automatically after a short time.

Interior mirrors

Manual anti-dazzle

To reduce dazzle, adjust the lever on the underside of the mirror housing.

Automatic anti-dazzle

Dazzle from following vehicles at night is automatically reduced.
Windows

Windscreen

Heat-reflecting windscreen
The heat-reflecting windscreen has a coating which reflects solar radiation. Also data signals, e.g. from toll stations, might be reflected.

The marked areas on the windscreen are not covered with the coating. Devices for electronic data recording and fee payment must be attached in these areas. Otherwise data recording malfunctions may occur.

Windscreen stickers
Do not attach stickers such as toll road stickers or similar on the windscreen in the area of the interior mirror. Otherwise the detection zone of the sensor and the view area of the camera in the mirror housing could be restricted.

Manual windows
The door windows can be opened or closed with the window winders.

Power windows

⚠ Warning
Take care when operating the power windows. Risk of injury, particularly to children.
If there are children on the rear seats, switch on the child safety system for the power windows.

Keep a close watch on the windows when closing them. Ensure that nothing becomes trapped in them as they move.

Power windows can be operated:
- with ignition on
- within 10 minutes of switching ignition off
- within 5 minutes of opening or closing a door

After switching off the ignition, window operation is disabled as soon as the vehicle is locked with the radio remote control.
Operate the switch for the respective window by pushing to open or pulling to close.

Pushing or pulling gently to the first detent: window moves up or down as long as switch is operated.

Pushing or pulling firmly to the second detent and then releasing: window moves up or down automatically with safety function enabled. To stop movement, operate the switch once more in the same direction.

**Safety function**
If the window glass encounters resistance above the middle of the window during automatic closing, it is immediately stopped and opened again.

**Override safety function**
In the event of closing difficulties due to frost or the like, switch on the ignition, then pull the switch to the first detent and hold. The window moves up without safety function enabled. To stop movement, release the switch.

**Child safety system for rear windows**

Press switch 🟢 to deactivate rear door power windows, the LED illuminates. To activate, press 🟢 again.

**Operating windows from outside**
The windows can be operated remotely from outside the vehicle.

Press and hold 🟢 button to open windows.
Press and hold 🟢 button to close windows.
Release button to stop window movement.

**Overload**
If the windows are repeatedly operated within short intervals, the window operation is disabled for some time.
Initialising the power windows
If the windows cannot be closed automatically (e.g. after disconnecting the vehicle battery), a warning message or a warning code is displayed in the Driver Information Centre.
Vehicle messages ◊ 101.
Activate the window electronics as follows:
1. Close doors.
2. Switch on ignition.
3. Pull switch until the window is closed and keep pulling for additional 2 seconds.
4. Repeat for each window.

Heated rear window
Operated by pressing the button.
Heating works with the engine running and is switched off automatically after a short time.
Depending on the engine type, the heated rear window comes on automatically when the diesel particle filter is being cleaned.

Sun visors
The sun visors can be folded down or swivelled to the side to prevent dazzling.

If the sun visors have integral mirrors, the mirror covers should be closed when driving.
A ticket holder is located on the back of the sun visor.
Roof

Moonroof
Do not affix any stickers to the roof. Do not cover the vehicle using a tarpaulin.

Sunblind
The sunblind is electrically operated.

Press button G or H gently to the first detent: the sunblind is opened or closed as long as the switch is operated.

Press button G or H firmly to the second detent and then release: the sunblind is opened or closed automatically. To stop movement, operate the switch once more.

Safety function
If the sunblind encounters resistance during automatic closing, it is immediately stopped and opened again.

Function standby
In ignition switch position 1 the sunblind is operable © 129.

Initialising after a power failure
After a power failure, it may only be possible to operate the sunblind to a limited extent. Have the system initialised by your workshop.
Seats, restraints

Head restraints ................................................................. 35
Front seats ................................................................. 37
Rear seats ................................................................. 42
Seat belts ................................................................. 45

Head restraints

**Position**

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Only drive with the head restraint set to the proper position.</td>
</tr>
</tbody>
</table>

The upper edge of the head restraint should be at upper head level. If this is not possible for extremely tall people, set to highest position, and set to lowest position for small people.

**Adjustment**

Head restraints on front seats

**Height adjustment**

Press release button, adjust height and engage.
Horizontal adjustment
To adjust horizontally, pull the head restraint forwards. It engages in several positions. To return to its rearmost position, pull fully forwards and release.

Head restraints on rear seats
Height adjustment
Pull the head restraint upwards or press both catches to release and push the head restraint downwards.

Active head restraints
In the event of a rear-end impact, the front parts of the active head restraints are moved slightly forwards. Thus the head is supported so that the risk of whiplash injury is reduced.

Note
Approved accessories may only be attached if the seat is not in use.
Front seats

Seat position

⚠️ Warning

Only drive with the seat correctly adjusted.

- Sit with buttocks as far back against the backrest as possible. Adjust the distance between the seat and the pedals so that legs are slightly angled when pressing the pedals. Slide the front passenger seat as far back as possible.

- Sit with shoulders as far back against the backrest as possible. Set the backrest rake so that it is possible to easily reach the steering wheel with arms slightly bent. Maintain contact between shoulders and the backrest when turning the steering wheel. Do not angle the backrest too far back. We recommend a maximum rake of approx. 25°.

- Adjust the steering wheel 79.

- Set seat height high enough to have a clear field of vision on all sides and of all display instruments. There should be at least one hand of clearance between head and the roof frame. Your thighs should rest lightly on the seat without pressing into it.

- Adjust the head restraint 35.

- Adjust the height of the seat belt 46.

- Adjust the thigh support so that there is a space approx. two fingers wide between the edge of the seat and the hollow of the knee.

- Adjust the lumbar support so that it supports the natural shape of the spine.

Seat adjustment

⚠️ Danger

Do not sit nearer than 25 cm from the steering wheel, to permit safe airbag deployment.

⚠️ Warning

Never adjust seats while driving as they could move uncontrollably.
Seat positioning
Pull handle, slide seat, release handle.

Seat backrests
Pull lever, adjust inclination and release lever. Allow the backrest to engage audibly.

Seat height
Lever pumping motion
up  = seat higher
down = seat lower
Seat inclination

Lever pumping motion
up  =  front end higher
down  =  front end lower

Lumbar support

Adjust lumbar support using the four-way switch to suit personal requirements.
Moving support up and down: push switch up or down.
Increasing and decreasing support: push switch forwards or backwards.

Adjustable thigh support

Pull the lever and slide the thigh support.

**Armrest**

**Detachable armrest**

The armrest contains a storage compartment.

Storage compartment 61.

**Installing armrest on the centre console**

Press the rear button and insert the rear guide pins into the upper guide rails. Release the button.

Lower the armrest at the front. Pull the front handle firmly and insert the front guide pins into the upper guide rails. Release the handle. Move the armrest until it engages audibly.

**Note**

Install the armrest in the direction shown in the illustration. Otherwise the armrest may not engage properly.
Moving armrest

Pull the front handle slightly and move the armrest to the desired position. Release the handle. Move the armrest until it engages audibly.

If a cupholder is installed in the lower guide rail, make sure that the frame of the cupholder is in the initial position.

**Note**
If too much weight is put on the armrest, it might unlatch. Ease of movement might be restricted. Lift the armrest slightly to latch again.

Armrest storage  61.
Cupholders  59.

Removing armrest

Pull the front handle firmly and raise the armrest at the front. Press the rear button and remove the armrest.

The armrest can also be installed on the folded centre rear seat  43.

Heating

Adjust heating to the desired setting by pressing the button for the respective seat one or more times. The control indicator in the button indicates the setting.

Prolonged use of the highest setting for people with sensitive skin is not recommended.

Seat heating is operational when engine is running and during an Autostop.

Stop-start system  131.
Rear seats

Seat adjustment

⚠️ Warning
Only drive with the outer seats engaged in the guide rails.

⚠️ Warning
Never adjust seats while driving as they could move uncontrollably.

The rear outboard seats can be individually moved forwards or backwards. The seats are movable in longitudinal and transversal directions. In longitudinal direction, the seats can be engaged in intermediate positions. Pull handle, slide seat, release handle and allow seat to engage.

Flexible Seat System (FlexSpace)

The rear seat row can be adjusted with two seats, providing maximum seating space in position 1, or with three seats in position 2. In position 1 the centre seat is lowered. The outboard seats can be moved forward into position 3.

Moving seats to position 1

Pull the strap and fold down the centre seat.
Pull handle and slide the seat transversely backward into position 1. The seat is automatically guided inward. Release handle and allow seat to engage in position.

Moving seats to position 2

Pull handle and slide the seat transversely forwards into position 2. The seat is automatically guided outwards. Release handle and allow seat to engage in position.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Detach the armrest before raising the rear centre backrest. Armrest 40.</td>
</tr>
</tbody>
</table>

Pull the strap and raise the centre seat.
The centre seat is not usable if the outer seats are moved forwards to position 3.

Armrest

An armrest adapter can be installed on the seatback of the centre seat. A detachable armrest can be attached to the adapter.

Installing the adapter

Pull the strap and fold down the centre seat 42.
Insert the hooks of the adapter into the recesses of the seatback and push the adapter forwards.

Lock the adapter by turning the ignition key clockwise in the lock. The adapter is locked properly when the green mark is visible.

Mount the armrest on the adapter.

Armrest 40.

**Attaching the armrest to the adapter**

Press the front button and insert the front guide pins into the guide rails. Move the armrest until it engages audibly. Release the button.

Lower the armrest at the rear. Pull the rear handle firmly and insert the rear guide pins into the guide rails. Release the handle.

**Note**
Install the armrest in the direction shown in the illustration. Otherwise the armrest may not engage properly.

**Removing the armrest**
Pull the rear handle firmly and raise the armrest at the rear. Press the front button and remove the armrest.
Removing the adapter
Unlock the adapter by turning the ignition key anticlockwise in the lock. The adapter is unlocked when the red mark is visible. Push the adapter rearward and remove.

Seat belts
The seat belts are locked during heavy acceleration or deceleration of the vehicle holding the occupants in the sitting position. Therefore the risk of injury is considerably reduced.

⚠️ Warning
Fasten seat belt before each trip. In the event of an accident, people not wearing seat belts endanger their fellow occupants and themselves.

Seat belts are designed to be used by only one person at a time. Child restraint system 53.
Periodically check all parts of the belt system for damage, pollution and proper functionality.
Have damaged components replaced. After an accident, have the belts and triggered belt pretensioners replaced by a workshop.

Note
Make sure that the belts are not damaged by shoes or sharp-edged objects or trapped. Prevent dirt from getting into the belt retractors.

Seat belt reminder 91.

Belt force limiters
Stress on the body is reduced by the gradual release of the belt during a collision.

Belt pretensioners
In the event of a head-on or rear-end collision of a certain severity, the front seat belts are tightened.
Incorrect handling (e.g. removal or fitting of belts) can trigger the belt pretensioners.

Deployment of the belt pretensioners is indicated by continuous illumination of control indicator \( \triangleright 91. \)

Triggered belt pretensioners must be replaced by a workshop. Belt pretensioners can only be triggered once.

**Note**
Do not affix or install accessories or other objects that may interfere with the operation of the belt pretensioners. Do not make any modifications to belt pretensioner components as this will invalidate the vehicle type approval.

---

**Three-point seat belt**

**Fastening seat belt**

Withdraw the belt from the retractor, guide it untwisted across the body and insert the latch plate into the buckle. Tighten the lap belt regularly whilst driving by pulling the shoulder belt.

Seat belt reminder \( \triangleright 91. \)

Loose or bulky clothing prevents the belt from fitting snugly. Do not place objects such as handbags or mobile phones between the belt and your body.

**Warning**

The belt must not rest against hard or fragile objects in the pockets of your clothing.
Height adjustment

1. Pull belt out slightly.
2. Press button.
3. Adjust height and engage.

Adjust the height so that the belt lies across the shoulder. It must not lie across the throat or upper arm. Do not adjust while driving.

Removing seat belt

To release belt, press red button on belt buckle.

Seat belts on the rear seats
The centre rear seat is equipped with a particular three-point seat belt. Pull latch plates out of belt retainer in roof.
Click bottom latch plate into right-hand buckle (1) at centre seat. Remove top latch plate from retainer, guide over shoulder and lap area with belt (do not twist) and click into left-hand buckle (2) at centre seat.

To remove the seat belt, first press the button on the left-hand buckle (2) and remove top latch plate. Then press the button on the right-hand buckle (1) and remove bottom latch plate. The seat belt retracts automatically.

Push the top latch plate into the retainer. Fold over locked together latch plates against the seat belt.

Insert in the seat belt holder in the roof with the lower latch plate pointing forward.

**Using the seat belt while pregnant**

**Warning**

The lap belt must be positioned as low as possible across the pelvis to prevent pressure on the abdomen.
Airbag system

The airbag system consists of a number of individual systems depending on the scope of equipment.

When triggered the airbags inflate within milliseconds. They also deflate so quickly that it is often unnoticeable during the collision.

⚠️ Warning

If handled improperly the airbag systems can be triggered in an explosive manner.

Note

The airbag systems and belt pretensioner control electronics are located in the centre console area. Do not put any magnetic objects in this area.

Do not stick anything on the airbag covers and do not cover them with other materials.

Each airbag is triggered only once. Have deployed airbags replaced by a workshop. Furthermore, it might be necessary to have the steering wheel, the instrument panel, parts of the panelling, the door seals, handles and the seats replaced.

Do not make any modifications to the airbag system as this will invalidate the vehicle type approval.

When the airbags inflate, escaping hot gases may cause burns. Control indicator 🟢 for airbag systems 🟢 91.

Front airbag system

The front airbag system consists of one airbag in the steering wheel and one in the instrument panel on the front passenger side. These can be identified by the word AIRBAG.

Additionally there is a warning label on the side of the instrument panel, visible when the front passenger door is open, or on the front passenger sun visor.

The front airbag system is triggered in the event of a front-end impact of a certain severity. The ignition must be switched on.
The inflated airbags cushion the impact, thereby reducing the risk of injury to the upper body and head of the front seat occupants considerably.

**Warning**

Optimum protection is only provided when the seat is in the proper position \( \Rightarrow \) 37.

Keep the area in which the airbag inflates clear of obstructions.

**Side airbag system**

Fit the seat belt correctly and engage securely. Only then the airbag is able to protect.

The side airbag system consists of an airbag in each front seat backrest. This can be identified by the word **AIRBAG**.

The side airbag system is triggered in the event of a side impact of a certain severity. The ignition must be switched on.

**Warning**

Keep the area in which the airbag inflates clear of obstructions.

**Note**

Only use protective seat covers that have been approved for the vehicle. Be careful not to cover the airbags.
Curtain airbag system

The curtain airbag system consists of an airbag in the roof frame on each side. This can be identified by the word **AIRBAG** on the roof pillars. The curtain airbag system is triggered in the event of a side-on impact of a certain severity. The ignition must be switched on.

The inflated airbags cushion the impact, thereby reducing the risk of injury to the head in the event of a side-on impact considerably.

**Warning**
Keep the area in which the airbag inflates clear of obstructions.
The hooks in the roof frame are only suitable for hanging up light articles of clothing, without coat hangers. Do not keep any items in these clothes.

**Airbag deactivation**

The front passenger airbag system must be deactivated if a child restraint system is to be fitted on this seat. The side airbag and curtain airbag systems, the belt pretensioners and all driver airbag systems will remain active.

The front passenger airbag system can be deactivated via a key-operated switch on the right side of the instrument panel.
Use the ignition key to choose the position:

\[ \text{=} \quad \text{front passenger airbag is deactivated and will not inflate in the event of a collision.} \]

Control indicator \( \text{=} \) illuminates continuously in the centre console. A child restraint system can be installed in accordance with the chart \textbf{Child restraint installation locations} \( \Rightarrow 55. \)

No adult person is allowed to occupy the front passenger seat.

\[ \text{=} \quad \text{front passenger airbag is active. A child restraint system must not be installed.} \]

\[ \textbf{Danger} \]

Risk of fatal injury for a child using a child restraint system on a seat with activated front passenger airbag.

Risk of fatal injury for an adult person on a seat with deactivated front passenger airbag.

If the control indicator \( \text{=} \) illuminates for approx. 60 seconds after the ignition is switched on, the front passenger airbag system will inflate in the event of a collision.

If both control indicators are illuminated at the same time, there is a system failure. The status of the system is not discernible, therefore no person is allowed to occupy the front passenger seat. Contact a workshop immediately.

Change status only when the vehicle is stationary with the ignition off.

Status remains until the next change.

Control indicator for airbag deactivation \( \Rightarrow 92. \)
Child restraints

Child restraint systems
We recommend the Opel child restraint system DUO which is tailored specifically to the vehicle.
When using the Opel child restraint system DUO, move the rear outboard seats into position 2 3 42. We recommend fastening the Opel child restraint system DUO by using the following securing systems in combination:

**ISOFIX**

When a child restraint system is being used, pay attention to the following usage and installation instructions and also those supplied with the child restraint system.
Always comply with local or national regulations. In some countries, the use of child restraint systems is forbidden on certain seats.

### Warning

When using a child restraint system on the front passenger seat, the airbag systems for the front passenger seat must be deactivated; if not, the triggering of the airbags poses a risk of fatal injury to the child.
This is especially the case if rear-facing child restraint systems are used on the front passenger seat.

**Airbag deactivation** 51.
Selecting the right system

The rear seats are the most convenient location to fasten a child restraint system.

Children should travel facing rearwards in the vehicle as long as possible. This makes sure that the child's backbone, which is still very weak, is under less strain in the event of an accident.

Suitable are restraint systems that comply with ECE 44-03 or ECE 44-04. Check local laws and regulations for mandatory use of child restraint systems.

Ensure that the child restraint system to be installed is compatible with the vehicle type.

Ensure that the mounting location of the child restraint system within the vehicle is correct.

Allow children to enter and exit the vehicle only on the side facing away from the traffic.

When the child restraint system is not in use, secure the seat with a seat belt or remove it from the vehicle.

Note

Do not stick anything on the child restraint systems and do not cover them with any other materials.

A child restraint system which has been subjected to stress in an accident must be replaced.
## Child restraint installation locations

### Permissible options for fitting a child restraint system

<table>

Only if front passenger seat airbag system is deactivated. If the child restraint system is being secured using a three-point seat belt, move seat height adjustment to uppermost position and ensure that vehicle seat belt runs forwards from the upper anchorage point. Adjust seat backrest inclination as far as necessary to a vertical position to ensure that the belt is tight on the buckle side.

Seat available with ISOFIX and Top-Tether mounting brackets.

Only if outboard seats are flush with the centre seat (position 2, \( \Phi \) 42).

Only if outboard seats are in position 1 or 2, \( \Phi \) 42.

Universal suitability in conjunction with three-point seat belt.

No child restraint system permitted in this weight and age class.

IL = Suitable for particular ISOFIX restraint systems of the 'specific-vehicle', 'restricted' or 'semi-universal' categories. The ISOFIX restraint system must be approved for the specific vehicle type.

IUF = Suitable for ISOFIX forward-facing child restraint systems of universal category approved for use in this weight class.

X = No ISOFIX child restraint system approved in this weight class.

1 = Only if outboard seats are in position 1 or 2, 42.

2 = Only Opel child restraint system DUO: If the seat is secured as recommended 53, the outboard seats must be in position 2 42.

**ISOFIX size class and seat device**

A – ISO/F3 = Forward-facing child restraint system for children of maximum size in the weight class 9 to 18 kg.

B – ISO/F2 = Forward-facing child restraint system for smaller children in the weight class 9 to 18 kg.

B1 – ISO/F2X = Forward-facing child restraint system for smaller children in the weight class 9 to 18 kg.

C – ISO/R3 = Rear-facing child restraint system for children of maximum size in the weight class up to 13 kg.

D – ISO/R2 = Rear-facing child restraint system for smaller children in the weight class up to 13 kg.

E – ISO/R1 = Rear-facing child restraint system for young children in the weight class up to 13 kg.
ISOFIX child restraint systems

Fasten vehicle-approved ISOFIX child restraint systems to the ISOFIX mounting brackets. Specific vehicle ISOFIX child restraint system positions are marked in the table by IL.

ISOFIX mounting brackets are indicated by a label on the backrest.

Top-tether fastening eyes

Top-Tether fastening eyes are marked with the symbol 🎁 for a child seat.

In addition to the ISOFIX mounting, fasten the Top-Tether strap to the Top-Tether fastening eyes. The strap must run between the two guide rods of the head restraint.

ISOFIX child restraint systems of universal category positions are marked in the table by IUF.
Storage

Storage compartments ................ 59
Load compartment ...................... 71
Roof rack system ....................... 77
Loading information .................... 77

Storage compartments

⚠️ Warning
Do not store heavy or sharp objects in the storage compartments. Otherwise, the storage compartment lid could open and vehicle occupants could be injured by objects being thrown around in the event of hard braking, a sudden change in direction or an accident.

Glovebox

The glovebox features a pen holder and a coin holder.
Inside the glovebox there is a compartment for the Owner's Manual. Pull the lug to open the compartment. The glovebox should be closed whilst driving.

Cupholders

A cupholder is located in the centre console.
**Detachable cupholder**
A cupholder can be attached either to the upper or lower guide rails in the front console.

Fold the frame out of initial position before using.

**Note**
If the cupholder is installed in the lower guide rail and the detachable armrest in the upper guide rail, make sure that the frame is folded back into the initial position before moving one of the parts. Otherwise the armrest and the cupholder might be damaged while moving them one above the other.

Armrest ◊ 40.

**Installing cupholder**
Press the buttons at the front and the rear and insert the guide pins into the upper or lower guide rails. The front button has to be pressed firmly. Release the buttons and move the cupholder until it engages audibly.

**Note**
Install the cupholder in the direction as shown in the illustration. Otherwise the cupholder may not engage properly.

**Moving cupholder**
Press the front button slightly and move the cupholder to the desired position. Release the button and move the cupholder until it engages audibly.

**Removing cupholder**
Press the buttons at the front and the rear and remove the cupholder. The front button has to be pressed firmly.
Cupholder on armrest adapter
A further cupholder is integrated to the armrest adapter of the rear centre seat.
Armrest adapter 43.

Front storage
A storage compartment is located next to the steering wheel.

Underseat storage
Lift drawer at recessed edge and pull out. Maximum load: 3 kg. To close, push the drawer in and engage.

Armrest storage
Storage in the detachable armrest
Push button and fold the armrest lid upwards. The armrest contains a storage compartment.
The armrest can also be installed on the folded centre rear seat 43.
Rear carrier system

The rear carrier system (Flex-Fix system) allows bicycles to be attached to a pull-out carrier integrated into the vehicle floor. The transportation of other objects is not permitted.

The maximum load of the rear carrier system is 40 kg. The maximum load per bicycle is 20 kg.

If not in use, the rear carrier system can be slid back into the vehicle floor.

There must not be any objects on the bicycles that could become loose during transportation.

Caution
Do not attach bicycles with carbon pedal cranks to bicycle carriers. The bicycles might get damaged.

Extending
Open the tailgate.

⚠️ Warning
No-one should be in the extension zone of the rear carrier system, risk of injury.

Pull release lever up. The system disengages and travels quickly out of the bumper.

Completely pull out the rear carrier system until you hear it engage.

Ensure that it is not possible to push in the rear carrier system without pulling the release lever again.

⚠️ Warning
It is only permissible to fit objects to the rear carrier system if the system has been correctly engaged. If the rear carrier system
will not engage correctly, do not fit objects to the system and slide the system back. Seek the assistance of a workshop.

**Install the tail lamps**

First remove the rear tail lamp (1), then the front (2) tail lamp from the recesses.

Open out the lamp support on the back of the tail lamp completely.

Push the clamping lever down and push the lamp support into the retainer until it engages. Perform this procedure for both tail lamps.

Check the cable and lamp position to make sure these are correctly installed and are securely located.
**Lock the rear carrier system**

Swivel the right clamping lever (1) first, followed by the left clamping lever (2), until a resistance is noticeable.

The rear carrier system is locked when the clamping levers are swivelled by approx. 50°. Otherwise safe functionality is not guaranteed.

**Note**

Close the tailgate.

**Unfold the number plate holder**

Unfold the holder for the number plate.

Affix the number plate before first usage of the rear carrier system.
Unfold pedal crank recesses

Fold one or both pedal crank recesses upwards until the diagonal support engages.

Adapting the rear carrier system to a bicycle

Remove the pedal crank mounts from the pedal crank recesses.

Press the release lever and withdraw the wheel recesses.
Push the release lever on the strap retainer and remove the strap retainer.

**Prepare the bicycle for attachment**

*Note*

The maximum width for the pedal crank is 38.3 mm and the maximum depth is 14.4 mm.

Rotate the left pedal (without a chain cog) vertically downwards. The pedal on the left pedal crank must be horizontal.

The front bicycle must have its front wheel facing left.

The rear bicycle must have its front wheel facing right.

**Attaching a bicycle to the rear carrier system**

With the rotary lever on the pedal crank recess, roughly adapt the adjustable pedal crank unit to the protrusion of the pedal crank.

If the bicycle has straight pedal cranks, unscrew the pedal crank unit completely (position 5).
If the bicycle has curved pedal cranks, screw in the pedal crank unit all the way (position 1).

Put on the bicycle. The pedal crank here must be placed in the pedal crank recess opening as shown in the illustration.

**Caution**

Make sure that the pedal does not touch the surface of the rear end carrier. Otherwise the crankset might be damaged during the transport.

Insert pedal crank mount into outer rail of each pedal crank recess from above and slide downwards until at least underneath the notching.

Attach the pedal crank by rotating the attachment screw on the pedal crank mount.
Place the wheel recesses so that the bicycle is roughly horizontal. Here, the distance between the pedals and the tailgate should be at least 5 cm. Both bicycle tyres must be in the wheel recesses.

Align the bicycle in the longitudinal direction of the vehicle: Slightly loosen the pedal mount.

Place the bicycle upright using the rotary lever on the pedal crank recess.

If the two bicycles obstruct one another, the relative positions of the bicycles can be adapted by adjusting the wheel recesses and the rotary lever on the pedal crank recess until the bicycles no longer touch one another. Make sure there is sufficient clearance from the vehicle.

Tighten the attachment screw for the pedal bearing mount to its maximum point by hand.

Secure both bicycle wheels to wheel recesses using strap retainers.

Check the bicycle to make sure it is secure.

---

**Caution**

Ensure gap between bicycle and vehicle is at least 5 cm. If necessary, loosen handlebar and swivel sideways.

The settings for the wheel recesses and on the rotary lever on the pedal crank recess should be noted and saved for each bicycle. Correct presetting will facilitate refitting of the bicycle.

**Note**

It is recommended to attach a warning sign at the rearmost bicycle to increase visibility.
Removing a bicycle from the rear carrier system

Undo strap retainers on both bicycle tyres.
Hold on to the bicycle, loosen the attachment screw for the pedal bearing mount, then lift the pedal bearing mount to remove it.

Retracting the rear carrier system

Push the pedal crank mounts into the pedal crank recess as shown in the illustration.

Insert the strap retainer and pull tightly downwards as far as possible.
Press release lever and slide in wheel recesses all the way as far as they will go.

Disengage the locking lever on the diagonal support and fold both pedal crank recesses down.

**Warning**

Risk of pinching.

Remove number plate and fold down the number plate holder.

Swivel first the left clamping lever (1), followed by the right clamping lever (2), until they stop.

Push the clamping lever down and pull both lamp supports out of the recesses.

Fold in the lamp supports on the backs of the tail lamps.
First place the front tail lamp (1), then the rear tail lamp (2) in the recesses and push down as far as possible. Push cables all the way into all guides in order to prevent damage.

Open the tailgate.
Push the release lever up and hold. Lift the system slightly and push it into the bumper until it engages. Release lever must return to original position.

### Load compartment

#### Folding down rear seat backrests

The rear seat backrest is divided into three parts. All parts can be folded down and lowered individually to increase the size of the load compartment.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
</table>

Do not stow objects under or behind the seats. The objects might be damaged and prevent the guide rails from locking properly.

A completely flat load bay is created if the rear seat backrests are folded down.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
</table>

If the system cannot be correctly engaged, please seek the assistance of a workshop.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
</table>

Do not fold the outer seatbacks while the seats are in the inner position. The seats could be damaged.

Remove the load compartment cover if necessary 72. Push head restraints down by pressing both catches.

Take the seat belt out of the retaining clip on the backrest.
Pull the handle on the front side of the backrest and fold down the backrest onto the seat cushion. The seat is lowered automatically. The backrests can also be folded from the load compartment.

Pull the handle on the back side of the backrest and fold down the backrest. To fold up, pull the handle and raise the backrests into an upright position until they engage audibly.

⚠️ Warning

When folding up, ensure that backrests are securely locked in position before driving. Failure to do so may result in personal injury or damage to load or vehicle in the event of heavy braking or collision.

Rear storage

On the left side of the load compartment there is a stowage compartment.

Turn the fastener anticlockwise and fold down the cover.

Load compartment cover

Do not place any objects on the cover.
Removing the cover
Unhook retaining straps from tailgate.
Lift cover at the rear and push it upwards at the front.
Remove the cover.

Stowing the cover
Unhook retaining straps from tailgate.
Lift cover at the rear and push it upwards out of the side guides at the front.
Stow the cover behind the rear seats.

Fitting the cover
Engage cover in side guides and fold downwards. Attach retaining straps to tailgate.

Rear floor storage cover
The rear floor cover can be raised.
Fold it up and lift the load compartment cover slightly.
Pull out the hook at the left sidewall of the load compartment to hold the rear floor cover upright.
Double load-bay floor
The double load-bay floor can be inserted in the load compartment in two positions:
■ directly above the cover for the spare wheel well or the rear floor cover,
■ in the upper openings in the load compartment.
To remove, lift the load-bay floor using the recess and pull backwards.
To insert, push the load-bay floor forwards into the corresponding guide, then lower.

If mounted in the upper position, the space between the load-bay floor and the spare wheel well cover can be used as a stowage compartment.
In this position, if the rear seat backrests are folded forwards, an almost completely flat load bay is created.
In the upper position, the double load-bay floor is able to withstand a maximum load of 100 kg. In the lower position, the double load-bay floor is able to withstand the maximum permissible load.
In models with a tyre repair kit, the spare wheel recess may be used as an additional stowage compartment. Tyre repair kit 187.

Lashing eyes
The lashing eyes are designed to secure items against slippage, e.g. using lashing straps or luggage net.

Safety net
The safety net can be installed behind the front seats.
Passengers must not be transported behind the safety net.
Installation

There are two installation openings in the roof frame: suspend rod of net at one side, push to the front and engage. Extend rod, suspend at other side, push to the front and engage.

Suspend hooks of net tensioning belts in lashing eyes in the floor behind the front seats. Tension the net by pulling the loose end of the belt. Suspend and tighten on both sides.

Removal
Tilt length adjuster of the net tensioning belts upwards and detach the belts on both sides. Disengage the upper rod on one side, disengage other side and remove from the openings.

Stowage

Place tensioning straps as shown in illustration and align with safety net.
Roll the upper net rod down to approximately over the middle. Place the upper net rod over the tensioning straps next to the lower net rod. The hooks on the upper net rod must point away from the lower net rod.

Fasten Velcro tape tightly about the net next to the length adjusters. The length adjusters and net rods must lie flat next to each other.

Stow safety net in the space between the double load-bay floor in the load compartment. Rear floor storage cover 8 73.

**Folding tray**
Located in the front seat backrests. Open by pulling upwards until it engages.
Fold away by pressing down past the resistance point.
Do not place any heavy objects on the folding tray.

**Warning triangle**
Stow the warning triangle in the space at the rear side of the load compartment.

**First aid kit**
Stow the first aid kit and the high visibility vest under the driver’s seat.

Use the straps.
Depending on the vehicle, a box is located under the driver's seat. Pull handle and fold down the cover. Maximum load: 1.5 kg.

---

**Roof rack system**

### Roof rack

For safety reasons and to avoid damage to the roof, the vehicle approved roof rack system is recommended. For further information contact your workshop. Follow the installation instructions and remove the roof rack when not in use.

Detach the cover from each mounting point.

---

**Loading information**

- Heavy objects in the load compartment should be placed against the seat backrests. Ensure that the backrests are securely engaged. If objects can be stacked, heavier objects should be placed at the bottom.

- Secure objects with lashing straps attached to the lashing eyes oundation 74.
■ Use the hook at the left sidewall of the load compartment for hanging up carrier bags. Pull out the hook. Maximum load: 3 kg.
■ Secure loose objects in the load compartment to prevent them from sliding.
■ When transporting objects in the load compartment, the backrests of the rear seats must not be angled forward.
■ Do not allow the load to protrude above the upper edge of the backrests.

■ Do not place any objects on the load compartment cover or the instrument panel, and do not cover the sensor on top of the instrument panel.
■ The load must not obstruct the operation of the pedals, parking brake and gear selector, or hinder the freedom of movement of the driver. Do not place any unsecured objects in the interior.
■ Do not drive with an open load compartment.

⚠️ Warning

Always make sure that the load in the vehicle is securely stowed. Otherwise objects can be thrown around inside the vehicle and cause personal injury or damage to the load or vehicle.

■ The payload is the difference between the permitted gross vehicle weight (see identification plate odiac 207) and the EC kerb weight.

To calculate the payload, enter the data for your vehicle in the Weights table at the front of this manual.
The EC kerb weight includes weights for the driver (68 kg), luggage (7 kg) and all fluids (tank 90 % full).
Optional equipment and accessories increase the kerb weight.

■ Driving with a roof load increases the sensitivity of the vehicle to cross-winds and has a detrimental effect on vehicle handling due to the vehicle’s higher centre of gravity. Distribute the load evenly and secure it properly with retaining straps. Adjust the tyre pressure and vehicle speed according to the load conditions. Check and retighten the straps frequently.

Do not drive faster than 120 km/h.
The permissible roof load is 60 kg.
The roof load is the combined weight of the roof rack and the load.
Instruments and controls

Controls.................................................................. 79

Controls

Steering wheel adjustment

Unlock lever, adjust steering wheel, then engage lever and ensure it is fully locked.

Do not adjust steering wheel unless vehicle is stationary and steering wheel lock has been released.

Steering wheel controls

The Infotainment system, the cruise control and a connected mobile phone can be operated via the controls on the steering wheel.

Further information is available in the Infotainment system manual.

Cruise control  143.
Heated steering wheel

Activate heating by pressing button. Activation is indicated by the LED in the button.

The recommended grip areas of the steering wheel are heated quicker and to a higher temperature than the other areas.

Heating is operational when the engine is running and during an Autostop.

Stop-start system 131.

Horn

Press €.
Windscreen wiper/washer

Windscreen wiper

2 = fast
1 = slow
P = interval wiping
O = off

For a single wipe when the windscreen wiper is off, press the lever down.
Do not use if the windscreen is frozen.
Switch off in car washes.

Adjustable wiper interval

Wiper lever in position P.
Turn the adjuster wheel to adjust the desired wipe interval:
short interval = turn adjuster wheel upwards
long interval = turn adjuster wheel downwards

Automatic wiping with rain sensor

P = automatic wiping with rain sensor

The rain sensor detects the amount of water on the windscreen and automatically regulates the frequency of the windscreen wiper.
Instruments and controls

Adjustable sensitivity of the rain sensor

Turn the adjuster wheel to adjust the sensitivity:
low sensitivity = turn adjuster wheel downwards
high sensitivity = turn adjuster wheel upwards

Keep the sensor free from dust, dirt and ice.

Windscreen washer

Pull lever. Washer fluid is sprayed onto the windscreen and the wiper wipes a few times.

Rear window wiper/washer

Press the rocker switch to activate the rear window wiper:
upper position = short interval
lower position = long interval
middle position = off
Push lever. Washer fluid is sprayed onto the rear window and the wiper wipes a few times.
Do not use if the windscreen is frozen.
Switch off in car washes.
The rear window wiper comes on automatically when the windscreen wiper is switched on and reverse gear is engaged.
Activation or deactivation of this function can be changed in the menu Settings in the Info-Display.
Vehicle personalisation 107.

Outside temperature

A drop in temperature is indicated immediately and a rise in temperature after a time delay.

If outside temperature drops to 3 °C, a warning message is displayed in the Driver Information Centre with Uplevel-Display.

⚠️ Warning

The road surface may already be icy even though the display indicates a few degrees above 0 °C.

Clock

Date and time are shown in the Info-Display.
Set date and time
Press the CONFIG button. The menu Settings is displayed.
Select Time & Date.

<table>
<thead>
<tr>
<th>Set date format: Changes indication of date between MM/DD/YYYY and DD.MM.YYYY.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Display digital clock: Switches on/off indication of time on the display.</td>
</tr>
<tr>
<td>RDS clock synchronization: The RDS signal of most VHF transmitters automatically sets the time. RDS time synchronisation can take a few minutes. Some transmitters do not send a correct time signal. In such cases, it is recommended to switch off automatic time synchronisation. Vehicle personalisation 107.</td>
</tr>
</tbody>
</table>

Selectable setting options:
- Set time: Changes the time shown on the display.
- Set date: Changes the date shown on the display.
- Set time format: Changes indication of hours between 12 hours and 24 hours.

Power outlets
A 12 volt power outlet is located in the front console.
A further 12 volt power outlet is located in the rear console. Do not exceed the maximum power consumption of 120 watts. With ignition off, the power outlets are deactivated. Additionally the power outlets are deactivated in the event of low battery voltage. Electrical accessories that are connected must comply with the electromagnetic compatibility requirements laid down in DIN VDE 40 839. Do not connect any current-delivering accessories, e.g. electrical charging devices or batteries. Do not damage the outlet by using unsuitable plugs. Stop-start system 131.

**Cigarette lighter**

The cigarette lighter is located in the front console. Press in cigarette lighter. It switches off automatically once the element is glowing. Pull out lighter.

**Ashtrays**

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>To be used only for ash and not for combustible rubbish.</td>
</tr>
</tbody>
</table>

The portable ashtray can be placed in the cupholders.
Warning lights, gauges and indicators

Instruments and controls

Instrument cluster
In some versions, the needles of the instruments briefly rotate to the end position when the ignition is switched on.

Speedometer
Indicates vehicle speed.

Odometer
The bottom line displays the recorded distance in km.

Trip odometer
The top line displays the recorded distance since the last reset.
To reset, press the SET/CLR button on the turn signal lever for a few seconds.
On vehicles with reset knob, hold the reset knob depressed for a few seconds with the ignition on.

Tachometer
Displays the engine speed.
Drive in a low engine speed range for each gear as much as possible.

Caution
If the needle is in the red warning zone, the maximum permitted engine speed is exceeded. Engine at risk.
**Fuel gauge**

Displays the fuel level or gas level in the tank depending on the operation mode.

Control indicator ‹illuminates if the level in the tank is low. Refuel immediately if it flashes.

During liquid gas operation, the system automatically switches over to petrol operation when gas tanks are empty ⦿ 87.

Never run the tank dry.

Because of the fuel remaining in the tank, the top-up quantity may be less than the specified tank capacity.

**Fuel selector**

Pressing button LPG switches between petrol and liquid gas operation. The LED ‹status shows the current operating mode.

- off = petrol operation
- ‹illuminates = liquid gas operation
- ‹flashes = no switching is possible, one type of fuel is empty

As soon as the liquid gas tanks are empty, petrol operation is automatically engaged until the ignition is switched off.

Fuel for liquid gas operation ⦿ 149.

**Engine coolant temperature gauge**

Displays the coolant temperature.

left area = engine operating temperature not yet reached
central = normal operating temperature
right area = temperature too high
Caution

If engine coolant temperature is too high, stop vehicle, switch off engine. Danger to engine. Check coolant level.

Service display

The engine oil life system lets you know when to change the engine oil and filter. Based on driving conditions, the interval at which an engine oil and filter change will be indicated can vary considerably.

In the Uplevel-Display the remaining oil life duration is displayed in the Vehicle Information Menu.

In the Midlevel-Display the remaining engine oil life duration is displayed by the control indicator 🔄. The ignition must be switched on, with the engine not running.

The menu and function can be selected via the buttons on the turn signal lever.

To display the remaining engine oil life duration:

Press the MENU button to select the Vehicle Information Menu.

Press the SET/CLR button to reset. The ignition must be switched on, with the engine not running.

When the system has calculated that engine oil life has been diminished, Change Engine Oil Soon or a warning code appears in the Driver Information Centre. Have engine oil and filter changed by a workshop within one week or 500 km (whichever occurs first).

Control indicators

The control indicators described are not present in all vehicles. The description applies to all instrument versions.
Depending on the equipment the position of the control indicators may vary.

When the ignition is switched on, most control indicators will illuminate briefly as a functionality test.

The control indicator colours mean:

- **red** = danger, important reminder
- **yellow** = warning, information, fault
- **green** = confirmation of activation
- **blue** = confirmation of activation
- **white** = confirmation of activation
Control indicators in the instrument cluster
Control indicators in the centre console

Bulb replacement 168, Fuses 178.
Turn signals 115.

Seat belt reminder

Seat belt reminder on front seats
e illuminates or flashes red.

Illuminates
After the ignition has been switched on until the seat belt has been fastened.

Flashes
After having started the engine for a maximum of 100 seconds until the seat belt has been fastened.
Fastening the seat belt 46.

Seat belt status on rear seats
f or g in the Driver Information Centre flashes or illuminates.

Illuminates
After the ignition has been switched on for a minimum of 35 seconds until the seat belt has been fastened.
If an unfastened seat belt is fastened whilst driving.

Flashes
After starting off when the seat belt is unfastened.
Fastening the seat belt 46.

Airbag and belt tensioners
f illuminates red.

When the ignition is switched on, the control indicator illuminates for approx. 4 seconds. If it does not illuminate, does not go out after 4 seconds or illuminates whilst driving, there is a fault in the airbag system. Seek the assistance of a workshop. The airbags and belt pretensioners may fail to trigger in the event of an accident.
Deployment of the belt pretensioners or airbags is indicated by continuous illumination of f.
### Warning

Have the cause of the fault remedied immediately by a workshop.

Belt pretensioners, airbag system 45, 49.

### Airbag deactivation

*: illuminates yellow.

Illuminates for approx. 60 seconds after the ignition is switched on. The front passenger airbag is activated. *: illuminates yellow.

The front passenger airbag is deactivated 51.

### Danger

Risk of fatal injury for a child using a child restraint system together with activated front passenger airbag.

Risk of fatal injury for an adult person with deactivated front passenger airbag.

### Charging system

*: illuminates red.

Illuminates when the ignition is switched on and extinguishes shortly after the engine starts.

**Illuminates when the engine is running**

Stop, switch off engine. Battery is not charging. Engine cooling may be interrupted. The brake servo unit may cease to be effective. Seek the assistance of a workshop.

### Malfunction indicator light

*: illuminates or flashes yellow.

Illuminates when the ignition is switched on and extinguishes shortly after the engine starts.

**Malfunction indicator light**

Illuminates when the engine is running

Fault in the emission control system. The permitted emission limits may be exceeded. Seek the assistance of a workshop immediately.

**Flashes when the engine is running**

Fault that could lead to catalytic converter damage. Ease up on the accelerator until the flashing stops. Seek the assistance of a workshop immediately.

**Service vehicle soon**

*: illuminates yellow.

Additionally a warning message or a warning code is displayed.

The vehicle needs a service. Seek the assistance of a workshop.

Vehicle messages 101.
Brake and clutch system

Brake and clutch fluid level

*illuminates red.

The brake and clutch fluid level is too low 164.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Stop. Do not continue your journey. Consult a workshop.</td>
</tr>
</tbody>
</table>

Operate pedal

*illuminates or flashes yellow.

Illuminates

Brake pedal needs to be operated to release the electrical parking brake 140.

Clutch pedal needs to be operated to start the engine. Stop-start system 131.

Flashes

Clutch pedal needs to be operated to start the engine 129.

Electrical parking brake

* illuminates or flashes red.

Illuminates

Electrical parking brake is applied 140.

Flashes

Electrical parking brake is not fully applied or released. Switch on ignition, depress brake pedal and attempt to reset the system by first releasing and then applying the electrical parking brake. If * remains flashing, do not drive and seek the assistance of a workshop.

Electrical parking brake fault

* illuminates or flashes yellow.

Illuminates

Electrical parking brake is operating with degraded performance 140.

Flashes

Electrical parking brake is in service mode. Stop vehicle, apply and release the electrical parking brake to reset.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Have the cause of the fault remedied immediately by a workshop.</td>
</tr>
</tbody>
</table>

Antilock brake system (ABS)

*illuminates yellow.

Illuminates for a few seconds after the ignition is switched on. The system is ready for operation when the control indicator extinguishes.

If the control indicator does not go out after a few seconds, or if it illuminates while driving, there is a fault in the ABS. The brake system remains operational but without ABS regulation.

Antilock brake system 139.
**Instruments and controls**

**Upshift**

اته illuminates green or is shown as a symbol in the Driver Information Centre with Uplevel-Display when upshifting is recommended for fuel saving reasons.

**Variable effort steering**

 ltd illuminates yellow.

Fault in variable effort steering system. This may lead to a higher or lower steering effort. Consult a workshop.

Stop-start system 131.

**Ultrasonic parking assist**

P ltd illuminates yellow.

Fault in system or Fault due to sensors that are dirty or covered by ice or snow or Interference due to external sources of ultrasound. Once the source of interference is removed, the system will operate normally.

Have the cause of the fault in the system remedied by a workshop.

Ultrasonic parking assist 144.

**Electronic Stability Control off**

 ltd illuminates yellow.

The system is deactivated.

**Electronic Stability Control and Traction Control system**

 ltd illuminates or flashes yellow.

**Illuminates**

A fault in the system is present. Continued driving is possible. Driving stability, however, may deteriorate depending on road surface conditions.

Have the cause of the fault remedied by a workshop.

**Flashes**

The system is actively engaged. Engine output may be reduced and the vehicle may be braked automatically to a small degree.

Electronic Stability Control 142, Traction Control system 141.

**Traction Control system off**

 ltd illuminates yellow.

The system is deactivated.

**Preheating**

 ltd illuminates yellow.

Preheating is activated. Only activates when outside temperature is low.

**Diesel particle filter**

 ltd illuminates or flashes yellow.

The diesel particle filter requires cleaning.
Instruments and controls

Continue driving until \(\Delta\) extinguishes. If possible do not allow engine speed to drop below 2000 rpm.

**Illuminates**
The diesel particle filter is full. Start cleaning process as soon as possible.

**Flashes**
The maximum filling level of the filter is reached. Start cleaning process immediately to avoid damage to the engine.

Diesel particle filter \(\Delta\) 133.
Stop-start system \(\Delta\) 131.

**Deflation detection system**
\(\Delta\) illuminates or flashes yellow.

**Illuminates**
Deflation detected. Stop immediately and check tyre pressure.

**Flashes**
Fault in system. Consult a workshop.

Deflation detection system \(\Delta\) 185.

**Engine oil pressure**
\(\text{\textbullet}\) illuminates red.
Illuminates when the ignition is switched on and extinguishes shortly after the engine starts.

**Illuminates when the engine is running**

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Engine lubrication may be interrupted. This may result in damage to the engine and/or locking of the drive wheels.</td>
</tr>
</tbody>
</table>

1. Depress clutch.
2. Select neutral gear, set selector lever to N.
3. Move out of the flow of traffic as quickly as possible without impeding other vehicles.
4. Switch off ignition.

**Warning**
When the engine is off, considerably more force is needed to brake and steer. During an Autostop the brake servo unit will still be operational.
Do not remove key until vehicle is stationary, otherwise the steering wheel lock could engage unexpectedly.

Check oil level before seeking assistance of a workshop \(\Delta\) 162.

**Low fuel**
\(\text{\textbullet}\) illuminates or flashes yellow.

**Illuminates**
Level in fuel tank is too low.
Additionally a warning message is displayed on vehicles with Uplevel-Display.

**Flashes**
Fuel used up. Refuel immediately. Never run the tank dry.
Additionally a warning message is displayed on vehicles with Midlevel- and Uplevel-Display.
Catalytic converter 134.
Bleeding the diesel fuel system 167.

**Immobiliser**

≠ flashes yellow.
Fault in the immobiliser system. The engine cannot be started.

**Reduced engine power**

≤ illuminates yellow.
The engine power is limited. Consult a workshop.

**Exterior light**

⇒≤ illuminates green.
The exterior lights are on 111.

**High beam**

⇒≤ illuminates blue.
Illuminated when high beam is on and during headlight flash 112.

**Adaptive forward lighting**

≤ illuminates or flashes yellow.

**Illuminates**
Fault in system.
Seek the assistance of a workshop.

**Flashes**
System switched to symmetrical low beam.
Control indicator ≤ flashes for approx. 4 seconds after the ignition is switched on as a reminder that the system has been activated 113.
Automatic light control 112.

**Fog light**

≤ illumines green.
The front fog lights are on 115.

**Rear fog light**

≤≤ illuminates yellow.
The rear fog light is on 115.

**Cruise control**

≤ illuminates white or green.

**Illuminates white**
The system is on.

**Illuminates green**
A certain speed is stored.
Cruise control 143.

**Door open**

≤ illuminates red.
A door or the tailgate is open.

**Automatic locking**

≤≤ illuminates amber.
Fault in the automatic locking system.
The rear doors are possibly not secured against opening.
Warning

Stop your journey immediately! Follow the instructions as described in paragraph "Fault in the automatic locking system" before continuing your journey 25.
Consult a workshop.

Information displays
Driver Information Centre

The Driver Information Centre (DIC) is located in the instrument cluster between speedometer and tachometer. It is available as Midlevel- or Uplevel-Display.

The following main menus, depending on the vehicle configuration, can be selected:
- Vehicle Information Menu
- Trip/Fuel Information Menu
Some of the displayed functions differ between vehicle driving and standstill and some functions are only active when the vehicle is driving.
Vehicle personalisation 107, Memorised settings 22.
Selecting menus and functions
The menus and functions can be selected via the buttons on the turn signal lever.

Press the MENU button to switch between the menus or to return from a submenu to the next higher menu level.

Turn the adjuster wheel to highlight a menu option or to set a numeric value.

Press the SET/CLR button to select a function or to confirm a message.

Vehicle Information Menu
Press the MENU button to select the Vehicle Information Menu.
Turn the adjuster wheel to select one of the submenus. Press the SET/CLR button to confirm.

Follow the instructions given in the submenus.
Possible submenus:
- **Unit**: Displayed units can be changed
  On vehicles with Midlevel-Display following settings can be selected:
- **Unit1**: Great Britain  
- **Unit2**: United States  
- **Unit3**: Europe  

- **Tire Pressure System**: 185  
- **Remaining Oil Life**: 88  
- **Speed Warning**: If exceeding the preset speed, a warning chime will be activated  
- **Language**: Displayed language can be changed if the vehicle is not equipped with a radio

Selection and indication can be different between Midlevel- and Uplevel-Display.

**Trip/Fuel Information Menu**
Press the **MENU** button to select the **Trip/Fuel Information Menu**.
Turn the adjuster wheel to select one of the submenus:

- **Trip odometer 1**  
- **Trip odometer 2**  
- **Digital speed**  

Trip odometer 2 and digital speed are only available on vehicles with Uplevel-Display.  
Selection and indication can be different between Midlevel- and Uplevel-Display.

On vehicles with trip computer more submenus are available.  
Trip/Fuel Information Menu, Trip Computer 105.

---

**Graphic-Info-Display, Colour-Info-Display**
Depending on the vehicle configuration the vehicle has a Graphic- or Colour-Info-Display. The Info-Display is located in the instrument panel above the Infotainment system.

**Graphic-Info-Display**
Depending on the Infotainment system, the Graphic-Info-Display is available in two versions.
Graphic-Info-Display indicates:

- time 83
- outside temperature 83
- date 83
- Infotainment system, see description for Infotainment system in the Infotainment system manual
- settings for vehicle personalisation 107

**Colour-Info-Display**

The Colour-Info-Display indicates in colour:

- time 83
- outside temperature 83
- date 83
- Infotainment system, see description for Infotainment system in the Infotainment system manual
- navigation, see description for Infotainment system in the Infotainment system manual
- system settings

The type of information and how it is displayed depends on the equipment of the vehicle and the settings made.

**Selecting menus and settings**

Menus and settings are accessed via the display.

Selections are made via:

- menus
- function buttons and multifunction knob of the Infotainment system
Selecting with the Infotainment system

Select a function via the Infotainment system buttons. The menu of the selected function is displayed. The multifunction knob is used to select an item and to confirm.

Multifunction knob
The multifunction knob is the central control element for the menus:

Turn
- To mark a menu option
- To set a numeric value or to display a menu option

Press (the outer ring)
- To select or activate the marked option
- To confirm a set value
- To switch a system function on/off

BACK button
Press button to:
- exit a menu without changing settings
- return from a submenu to a higher menu level
- delete the last character in a character sequence
Press and hold the button for a few seconds to delete the entire entry.
Vehicle personalisation 107, Memorised settings 22.

Vehicle messages
Messages are indicated mainly in the Driver Information Centre (DIC), in some cases together with a warning and signal buzzer.

Press the SET/CLR button, the MENU button or turn the adjuster wheel to confirm a message.
### Vehicle messages on the Midlevel-Display

The vehicle messages are displayed as code numbers.

**Vehicle messages on the Uplevel-Display**

- Low battery
- Park assist off

The vehicle messages are displayed as text. Follow the instructions given in the messages.

The system displays messages regarding the following topics:
- Fluid levels
- Anti-theft alarm system
■ Brakes
■ Drive systems
■ Ride control systems
■ Cruise control
■ Object detection systems
■ Lighting, bulb replacement
■ Wiper/washer system
■ Doors, windows
■ Radio remote control
■ Seat belts
■ Airbag systems
■ Engine and transmission
■ Tyre pressure
■ Diesel particle filter

Vehicle messages on the Colour-Info-Display
Some important messages appear additionally in the Colour-Info-Display. Press the multifunction knob to confirm a message. Some messages only pop up for a few seconds.

Warning chimes
Only one warning chime will sound at a time.
The warning chime regarding not fastened seat belts has priority over any other warning chime.

When starting the engine or whilst driving
■ If seat belt is not fastened.
■ If a door or the tailgate is not fully closed when starting-off.
■ If a certain speed is exceeded with parking brake applied.
■ If a programmed speed is exceeded.
■ If a warning message or a warning code appears in the Driver Information Centre.
■ If the parking assist detects an object.
■ If reverse gear is engaged and the rear end carrier is extended.

■ If a fault in the automatic locking system is detected.
■ If the diesel particle filter has reached the maximum filling level.

When the vehicle is parked and/or the driver's door is opened
■ When the key is in the ignition switch.
■ With exterior lights on.

During an Autostop
■ If the driver's door is opened.

Battery voltage
When the battery voltage is running low, a warning message or warning code 174 will appear in the Driver Information Centre.

1. Switch off immediately any electrical consumers which are not required for a safe ride, e.g. seat heating, heated rear window or other main consumers.

2. Charge the battery by driving continuously for a while or by using a charging device.
The warning message or warning code will disappear after the engine has been started two times running without voltage drop.
If the battery cannot be recharged, have the cause of the fault remedied by a workshop.

**Trip computer**

The menus and functions can be selected via the buttons on the turn signal lever.

Press the **MENU** button to select the **Trip/Fuel Information Menu**.

Turn the adjuster wheel to select one of the submenus:
- Trip odometer 1
- Trip odometer 2
- Range
- Average consumption
- Instantaneous consumption
- Average speed
- Digital speed

Trip odometer 2 and digital speed are only available on vehicles with Uplevel-Display.
Instruments and controls

The information of the two trip computers can be reset separately, making it possible to display different trip distances.

To reset, press the SET/CLR button for a few seconds.

On vehicles with reset knob, hold the reset knob depressed for a few seconds with the ignition on.

Range
Range is calculated from current fuel tank content and current consumption. The display shows average values.

After refuelling, the range is updated automatically after a brief delay.

When the fuel level in the tank is low, a message appears on vehicles with Uplevel-Display.

When the tank has to be refueled immediately, a warning code or warning message is displayed on vehicles with Midlevel- and Uplevel-Display.

Additionally the control indicator • in the fuel gauge illuminates or flashes ◇ 95.

Average consumption
Display of average consumption. The measurement can be reset at any time and starts with a default value.

To reset, press the SET/CLR button for a few seconds.

Instantaneous consumption
Display of the instantaneous consumption.

Average speed
Display of average speed. The measurement can be reset at any time.

To reset, press the SET/CLR button for a few seconds.

Digital speed
Digital display of the instantaneous speed.
Vehicle personalisation

The vehicle’s behaviour can be personalised by changing the settings in the Info-Display.

Some of the personal settings for different drivers can be memorised individually for each vehicle key. Memorised settings 22.

Depending on vehicle equipment and country-specific regulations, some of the functions described below might not be available.

Some functions are only displayed or active when the engine is running.

Personal settings in the Graphic-Info-Display

Press the CONFIG button. The menu Settings is displayed.

The following settings can be selected by turning and pressing the multifunction knob:

- Languages
- Time Date
- Radio settings
- Phone settings
- Vehicle settings

In the corresponding submenus the following settings can be changed:

Languages
Selection of the desired language.
Time Date
See Clock ◊ 83.

Radio settings
See description for Infotainment system in the Infotainment system manual.

Phone settings
See description for Infotainment system in the Infotainment system manual.

Vehicle settings

- Climate and air quality
  Auto fan speed: Modifies the fan regulation.
  Climate control mode: Activate or deactivate cooling.
  Auto rear demist: Automatic activation of rear heated window.

- Comfort settings
  Chime volume: Change the volume of warning chimes.
  Personalization by driver: Activate or deactivate the personalisation function.
  Rear auto wipe in reverse: Activate or deactivate automatic switching on of the rear window wiper when reverse gear is engaged.

- Park assist / Collision detection
  Park assist: Activate or deactivate the ultrasonic parking assist.

- Exterior ambient lighting
  Duration upon exit of vehicle: Activate or deactivate and change the duration of exit lighting.
  Exterior lighting by unlocking: Activate or deactivate the welcome (entry) lighting.

- Remote locking, unlocking, starting
  Remote door unlock: Change the configuration to unlock only the driver's door or the whole vehicle when unlocking.

- Restore factory settings
  Restore factory settings: Reset all settings to the default settings.
Personal settings in the Colour-Info-Display

Press the CONFIG button. The menu Settings is displayed.

The following settings can be selected by turning and pressing the multifunction knob:

- Languages
- Time & Date
- Radio settings
- Phone settings
- Navigation settings
- Vehicle settings
- Display settings

In the corresponding submenus the following settings can be changed:

Languages
Selection of the desired language.

Time & Date
See Clock 83.

Radio settings
See description for Infotainment system in the Infotainment system manual.

Phone settings
See description for Infotainment system in the Infotainment system manual.

Navigation settings
See description for Infotainment system in the Infotainment system manual.

Vehicle settings
- Climate and air quality
  - Auto fan speed: Modifies the fan regulation.
  - Climate control mode: Activate or deactivate cooling.
  - Auto rear demist: Automatic activation of rear heated window.
Instruments and controls

- **Comfort settings**
  - **Chime volume**: Change the volume of warning chimes.
  - **Rear auto wipe in reverse**: Activate or deactivate automatic switching on of the rear window wiper when reverse gear is engaged.

- **Park assist / Collision detection**
  - **Park assist**: Activate or deactivate the ultrasonic parking assist.

- **Exterior ambient lighting**
  - **Duration upon exit of vehicle**: Activate or deactivate and change the duration of exit lighting.

- **Exterior lighting by unlocking**:
  Activate or deactivate the welcome (entry) lighting.

- **Restore factory settings**
  - **Restore factory settings**: Reset all settings to the default settings.

- **Display settings**
  - Selectable display settings:
    - **Day mode**: Optimisation for daylight conditions.
    - **Night mode**: Optimisation for darkness.
    - **Automatic mode**: Vehicles without light sensor:
      The display changes the mode when the vehicle lights are switched on/off.
    - **Automatic mode**: Vehicles with light sensor:
      The display changes the mode due to the exterior lighting conditions independently from the vehicle lights.

- **Rear view camera**: Changes the settings for the rear view camera.

- **Picture frame**: See description for Infotainment system in the Infotainment system manual.
Lighting

Exterior lighting ................................ 111
Interior lighting ............................... 116
Lighting features ............................ 118

Exterior lighting

Light switch

Turn light switch:

**AUTO** = automatic light control: Exterior lighting is switched on and off automatically depending on external lighting conditions.

**○** = activation or deactivation of the automatic light control. Switch turns back to **AUTO**.

**EE** = sidelights
**LD** = low beam

Vehicles without automatic light control:

**O** = off

In the Driver Information Centre with Uplevel-Display, the current status of the automatic light control is displayed.

When switching on the ignition, automatic light control is active.

Control indicator **EE** 96.

Tail lights

Tail lights are illuminated together with low beam and sidelights.
When the automatic light control function is switched on and the engine is running, the system switches between daytime running light and low beam depending on the lighting conditions.

Daytime running light
Daytime running light increases visibility of the vehicle during daylight. While the daytime running light is active, the tail lights are switched on or off depending on country-specific variant.

Automatic light control
During poor lighting conditions the low beam is switched on.

Automatic low beam activation
When a tunnel is entered the low beam is switched on.
Adaptive forward lighting

Tunnel detection
To activate the headlight flash, pull lever.

Headlight flash

Headlight range adjustment

High beam
To switch from low to high beam, push lever.
To switch to low beam, push lever again or pull.

Manual headlight range adjustment
To adapt headlight range to the vehicle load to prevent dazzling: turn thumb wheel to required position.
0 = front seats occupied
1 = all seats occupied
2 = all seats occupied and load compartment laden
3 = driver's seat occupied and load compartment laden.

Headlights when driving abroad
The asymmetrical headlight beam extends visibility at the edge of the road on the front passenger side. However, when driving in countries where traffic drives on the opposite side of the road, adjust the headlights to prevent dazzling of oncoming traffic.

Vehicles without Adaptive Forward Lighting
Turn the adjusting screws clockwise using the screwdriver for half a turn. The adjusting screws are located at the headlights above the low beam caps 168.
For deactivation, turn the adjusting screws anticlockwise for half a turn.

Caution
Have the adjustment of the headlights checked after deactivation.
We recommend consulting a workshop.

Vehicles with Adaptive Forward Lighting
1. Key in ignition switch.
2. Pull turn signal lever and hold (headlight flash).
3. Switch on ignition.
4. After approx. 5 seconds the control indicator starts flashing and an acoustic signal sounds.

Control indicator 96.

Every time the ignition is switched on, control indicator flashes as a reminder for approx. 4 seconds.

For deactivation, operate the same procedure as described above. Control indicator will not flash when function is deactivated.

**Adaptive forward lighting**
Adaptive forward lighting ensures better illumination of bends, crossings and narrow bends.

**Dynamic curve lighting**
The light beam pivots based on steering wheel angle and speed, improving lighting in curves.

**Corner lighting**
On tight bends or when turning off, depending on the steering angle or the indicator light signal, an additional left or right reflector is switched on which illuminates the road in the direction of travel. It is activated up to a speed of 40 km/h.

**Reversing function**
If the low beam is on and reverse gear is engaged, both corner lights are switched on. They remain illuminated for 20 seconds after disengaging reverse gear or until driving faster than 17 km/h forward.

**Hazard warning flashers**
Operated with the button.

In the event of an accident with airbag deployment the hazard warning flashers are activated automatically.
Turn and lane-change signals

lever up = right turn signal
lever down = left turn signal

If the lever is moved past the resistance point, the turn signal is switched on constantly. When the steering wheel moves back, the turn signal is automatically deactivated.

For three flashes, e.g. when changing lanes, press the lever until resistance is felt and then release.

With a trailer connected, turn signal flashes six times when pressing the lever until resistance is felt and then releasing.

Move the lever to the resistance point and hold for longer indication.

Switch the turn signal off manually by moving the lever to its original position.

Front fog lights

Operated with the button.

Light switch in position AUTO: switching on front fog lights will switch the low beam on automatically.

Light switch in position OFF: rear fog light can only be switched on with front fog lights.

The vehicle rear fog light is deactivated when towing.

Rear fog lights

Operated with the button.

Light switch in position AUTO: switching on rear fog light will switch the low beam on automatically.
Parking lights

When the vehicle is parked, the parking lights on one side can be activated:
1. Switch off ignition.
2. Move turn signal lever all the way up (right parking lights) or down (left parking lights).

Confirmed by a signal and the corresponding turn signal control indicator.

Reversing lights

The reversing light comes on when the ignition is on and reverse gear is selected.

Misted light covers

The inside of the light housing may mist up briefly in poor, wet and cold weather conditions, in heavy rain or after washing. The mist disappears quickly by itself; to help switch on the exterior lights.

Interior lighting

Instrument panel illumination control

Brightness of the following lights can be adjusted when the exterior lights are on:
- Instrument panel illumination
- Info-Display
- Illuminated switches and operation elements

Turn thumb wheel $\circ$ until the required brightness is obtained.
On vehicles with light sensor the brightness can only be adjusted when the exterior lights are on and the light sensor detects night conditions.

**Interior lights**  
During entry and exit of the vehicle, the front and rear courtesy lights automatically switch on and then off after a delay.

**Note**  
In the event of an accident with airbag deployment the courtesy lights are turned on automatically.

**Front courtesy light**

Operate rocker switch:  

- 📦 = automatic switching on and off.  
- press 🕯 = on.  
- press ✒ = off.

**Rear courtesy lights**

Illuminate in conjunction with the front courtesy light depending on rocker switch position.

**Reading lights**

Operated with 📖 and ❇️ buttons in front and rear courtesy lights.

**Sunvisor lights**  
Illuminate when the cover is opened.
Lighting features

Centre console lighting
Spotlight incorporated in the interior lighting comes on when the low beam is switched on.

Entry lighting

Welcome lighting
The exterior lights, instrument panel light and interior lights are switched on for a short time by pressing the unlocking button on the radio remote control twice. This function works only in the dark and facilitates locating the vehicle.

The lighting switches off immediately when the ignition key is turned to position 1.

Activation or deactivation of this function can be changed in the menu Settings in the Info-Display. Vehicle personalisation.

The settings can be saved for the key being used.

Exit lighting
The following lights illuminate if the key is removed from the ignition switch:
- Interior lights
- Instrument panel light (only when it is dark)
They will switch off automatically after a delay. Both lights will be activated again if the driver's door is opened.

The puddle light illuminates when the relevant door is opened.
The exterior lights illuminate the surrounding area for an adjustable time after leaving the vehicle.

Switching on

1. Switch off ignition.
2. Remove ignition key.
3. Open driver's door.
4. Pull turn signal lever.
5. Close driver's door.

If the driver's door is not closed the lights switch off after 2 minutes.

Exit lighting is switched off immediately if the turn signal lever is pulled while the driver's door is open.
Activation, deactivation and duration of this function can be changed in the menu **Settings** in the Info-Display. Vehicle personalisation ◇ 107.

The settings can be saved for the key being used ◇ 22.

**Battery discharge protection**

**Switching off electric lights**
To prevent discharge of the battery when the ignition is switched off, some interior lights are switched off automatically after some time.
Climate control systems

Heating and ventilation system

Controls for:
- Temperature
- Air distribution
- Fan speed
- Demisting and defrosting

Heated rear window ³ 33.

Temperature
red = warm
blue = cold

Heating will not be fully effective until the engine has reached normal operating temperature.

Air distribution

\[\textit{\(\text{\(\uparrow\)}\)}\text{ = to windscreen and front door windows}\]

\[\textit{\(\text{\(\downarrow\)}\)}\text{ = to head area via adjustable air vents}\]

\[\textit{\(\text{\(\uparrow\)}\)}\text{ = to foot well}\]

All combinations are possible.

Fan speed
Adjust the air flow by switching the fan to the desired speed.

Demisting and defrosting
- Press button ³: fan automatically switches to higher speed, the air distribution is directed towards the windscreen.
- Set temperature control to warmest level.
- Switch on heated rear window ³.
- Open side air vents as required and direct them towards the door windows.
**Note**
If the settings for demisting and defrosting are selected, an Autostop will be inhibited.
If the settings for demisting and defrosting are selected while the engine is in an Autostop, the engine will restart automatically.

Stop-start system ◇ 131.

**Air conditioning system**

In addition to the heating and ventilation system, the air conditioning system has:

- **☀** = cooling
- **↻** = air recirculation

Heated seats ☼ 41, Heated steering wheel ❖ 80.

**Cooling ☀**
Operated with the ☀ button and is functional only when the engine and fan are running.

The air conditioning system cools and dehumidifies (dries) as soon as the outside temperature is slightly above the freezing point. Therefore condensation may form and drip from under the vehicle.

If no cooling or drying is required, switch the cooling system off to save fuel. When the cooling system is switched off, no engine restart will be requested by the climate control system during an Autostop.

**Air recirculation system ▲**
Operated with the ▲ button.

---

**⚠️ Warning**

The exchange of fresh air is reduced in air recirculation mode. In operation without cooling the air humidity increases, so the windows may mist up from inside. The quality of the passenger compartment air deteriorates, which may cause the vehicle occupants to feel drowsy.

In warm and very humid ambient air conditions, the windscreen might mist up from outside, when cold air is directed to it. If windscreen mists up from outside, activate windscreen wiper and deactivate ▲.

**Maximum cooling**
Briefly open the windows so that hot air can disperse quickly.
- Cooling ☀ on.
- Air circulation system ▲ on.
- Press air distribution switch M.
- Set temperature control to coldest level.
Climate control

- Set fan speed to highest level.
- Open all vents.

Demisting and defrosting the windows

- Press button  for demisting: fan automatically switches to higher speed, the air distribution is directed towards the windscreen.
- Switch cooling  on.
- Set temperature control to warmest level.

- Switch on heated rear window.
- Open side air vents as required and direct them towards the door windows.

**Note**
If the button is pressed while the engine is running, an Autostop will be inhibited until the button is pressed again.
If the button is pressed while the engine is in an Autostop, the engine will restart automatically.

Stop-start system  131.

Electronic climate control system

The dual zone climate control allows different climatisation temperatures for driver and front passenger side.

Controls for:
- Temperature on driver side
- Air distribution
- Fan speed
- Temperature on front passenger side

**AUTO** = automatic mode
= manual air recirculation
= demisting and defrosting

Heated rear window  33.
The preselected temperature is automatically regulated. In the automatic mode the fan speed and air distribution automatically regulate the air flow.

The system can be manually adapted via the use of air distribution and air flow controls.

Each change of settings is shown in the Info-Display for a few seconds.

The electronic climate control system is only fully operational when the engine is running.

**Automatic mode AUTO**

Basic setting for maximum comfort:

- Press **AUTO** button, the air distribution and fan speed are regulated automatically.
- Open all air vents.
- Press ⬇️ to switch on optimal cooling and demisting.
- Set the preselected temperatures for driver and front passenger using the left and right rotary knob to 22 °C.

The fan speed regulation in automatic mode can be changed in the menu **Settings**.

Vehicle personalisation ☮️ 107.

All air vents are actuated automatically in automatic mode. The air vents should therefore always be open.

**Temperature preselection**

Temperatures can be set to the desired value.
If the minimum temperature is set, the climate control system runs at maximum cooling, if cooling ° is switched on.

If the maximum temperature is set, the climate control system runs at maximum heating.

Note
If the temperature is set to Lo or Hi, an Autostop will be inhibited.

If the temperature is set to Lo or Hi while the engine is in an Autostop, the engine will restart automatically.

Stop-start system ◇ 131.

Demisting and defrosting the windows
- Press button ◻.
- Press cooling button ◼.
- Temperature and air distribution are set automatically and the fan runs at high speed.
- Switch on heated rear window ◄.
- To return to previous mode: press button ◻.

Setting of automatic rear window heating can be changed in the menu Settings in the Info-Display. Vehicle personalisation ◇ 107.

Note
If the ◻ button is pressed with fan switched on while the engine is running, an Autostop will be inhibited until the ◻ button is pressed again.

If the ◻ button is pressed with fan switched on while the engine is in an Autostop, the engine will restart automatically.

Stop-start system ◇ 131.

Manual settings
Climate control system settings can be changed by activating the buttons and rotary knobs as follows. Changing a setting will deactivate the automatic mode.

Press lower button ◼ to decrease or upper button ◼ to increase fan speed. The fan speed is indicated by the number of segments in the display.

Press and hold lower button: Fan and cooling are switched off.

Press and hold upper button: Fan runs at maximum speed.

To return to automatic mode: Press AUTO button.

Air distribution
Press ◼, ◼ or ◼ for desired adjustment. Activation is indicated by the LED in the button.
\( \mathcal{U} \) = to windscreen and front door windows
\( \mathcal{J} \) = to head area via adjustable air vents
\( \mathcal{F} \) = to foot well

All combinations are possible.

Return to automatic air distribution: Deactivate corresponding setting or press button AUTO.

**Cooling**

Activate or deactivate with the ♦ button.

The air conditioning system cools and dehumidifies (dries) when outside temperature is above a specific level. Therefore condensation may form and drip from under the vehicle.

If no cooling or drying is required, switch the cooling system off to save fuel. When the cooling system is switched off, no engine restart will be requested by the climate control system during an Autostop.

Stop-start system ♦ 131.

Depending on the vehicle equipment, the display will indicate **AC** when cooling is activated or **Eco** when the cooling is deactivated.

Activation or deactivation of cooling operation after engine start can be changed in the menu **Settings** in the Info-Display. Vehicle personalisation ♦ 107.

**Air recirculation mode**

The exchange of fresh air is reduced in air recirculation mode. In operation without cooling the air humidity increases, so the windows may mist up from inside. The quality of the passenger compartment air deteriorates, which may cause the vehicle occupants to feel drowsy.

In warm and very humid ambient air conditions, the windscreen might mist up from outside, when cold air is directed to it. If windscreen mists up from outside, activate windscreen wiper and deactivate \( \mathcal{U} \).

Press button ♦ once to activate the manual air recirculation mode. Activation is indicated by the LED in the button.

**Basic settings**

Some settings can be changed in the menu **Settings** in the Info-Display. Vehicle personalisation ♦ 107.
Auxiliary heater

Air heater
Quickheat is an electric auxiliary air heater which automatically warms up the passenger compartment more quickly.

Air vents

Adjustable air vents

To open the vent, turn the adjuster wheel to the right. Adjust the air amount at the vent outlet by turning the adjuster wheel.

Direct the flow of air by tilting and swivelling the slats.
To close the vent, turn the adjuster wheel to the left.

⚠️ Warning
Do not attach any objects to the slats of the air vents. Risk of damage and injury in case of an accident.

Fixed air vents
Additional air vents are located beneath the windscreen and door windows and in the foot wells.
Maintenance

Air intake

The air intake in front of the windscreen in the engine compartment must be kept clear to allow air intake. Remove any leaves, dirt or snow.

Pollen filter

Cabin air filtration
A particle filter cleans the cabin air from dust, soot, pollen and spores.

Active carbon filter
In addition to the particle filter the active carbon filter reduces odours.

Air conditioning regular operation
In order to ensure continuously efficient performance, cooling must be operated for a few minutes once a month, irrespective of the weather and time of year. Operation with cooling is not possible when the outside temperature is too low.

Service
For optimal cooling performance, it is recommended to annually check the climate control system, starting 3 years after initial vehicle registration, including:
- Functionality and pressure test
- Heating functionality
- Leakage check
- Check of drive belts
- Cleaning of condenser and evaporator drainage
- Performance check
Driving hints

Control of the vehicle

Never coast with engine not running (except during Autostop)

Many systems will not function in this situation (e.g. brake servo unit, power steering). Driving in this manner is a danger to yourself and others. All systems function during an Autostop, but there will be a controlled reduction in power steering assist and vehicle speed is reduced.

Stop-start system ◇ 131.

Idle boost

If charging of the battery is required due to battery condition, the power output of the generator has to be increased. This will be achieved by an idle boost which may be audible.

On vehicles with Uplevel-Display, a message appears in the Driver Information Centre.

Pedals

To ensure the pedal travel is uninhibited, there must be no mats in the area of the pedals.
Starting and operating

New vehicle running-in
Do not brake unnecessarily hard for the first few journeys.
During the first drive, smoke may occur because of wax and oil evaporating off the exhaust system. Park the vehicle in the open for a while after the first drive and avoid inhaling the fumes.
During the running-in period fuel and engine oil consumption may be higher and the cleaning process of the diesel particle filter may take place more often. Autostop may be inhibited to allow for charging the battery.
Diesel particle filter 133.

Ignition switch positions

- 0 = Ignition off
- 1 = Steering wheel lock released, ignition off
- 2 = Ignition on, for diesel engine: preheating
- 3 = Starting

Retained power off
The following electronic systems can work until the driver's door is opened or at the latest for 10 minutes after the ignition is switched off:

- Power windows
- Power outlets

Power to the Infotainment system will continue to operate for 30 minutes or until the key is removed from the ignition, regardless of whether any door will be opened.

Starting the engine

Automatic transmission: operate brake and move the selector lever to P or N.
Do not operate accelerator pedal.
Driving and operating

Diesel engine: turn the key to position 2 for preheating until control indicator ![image] extinguishes.

Turn the key briefly to position 3 and release: an automatic procedure operates the starter with a short delay as long as the engine is running, see Automatic Starter Control.

Before restarting or to switch off the engine, turn the key back to position 0.

During an Autostop, the engine can be started by depressing the clutch pedal.

Starting the vehicle at low temperatures
The start of the engine without additional heaters is possible down to -25 °C for diesel engines and -30 °C for petrol engines. Required is an engine oil with the correct viscosity, the correct fuel, performed services and a sufficiently charged battery. With temperatures below -30 °C the automatic transmission needs a warming phase of approx. 5 minutes. The selector lever must be in position P.

Automatic Starter Control
This function controls the engine starting procedure. The driver does not have to hold the key in position 3. Once applied, the system will go on starting automatically until the engine is running. Because of the checking procedure, the engine starts running after a short delay.

Possible reasons for a non-starting engine:
- Clutch pedal not operated (manual transmission)
- Brake pedal not operated or selector lever not in P or N (automatic transmission)
- Timeout occurred

Turbo engine warm-up
Upon start-up, engine available torque may be limited for a short time, especially when the engine temperature is cold. The limitation is to allow the lubrication system to fully protect the engine.

Overrun cut-off
The fuel supply is automatically cut off during overrun, i.e. when the vehicle is driven with a gear engaged but accelerator is released.
Stop-start system
The stop-start system helps to save fuel and to reduce the exhaust emissions. When conditions allow, it switches off the engine as soon as the vehicle is at a low speed or at a standstill, e.g. at a traffic light or in a traffic jam. It starts the engine automatically as soon as the clutch is depressed. A battery sensor ensures that an Autostop is only performed if the battery is sufficiently charged for a restart.

Activation
The stop-start system is available as soon as the engine is started, the vehicle starts-off and the conditions as stated below in this section are fulfilled.

Deactivation
Deactivate the stop-start system manually by pressing the eco button. The deactivation is indicated by the LED in the button going off.

Autostop
If the vehicle is at a low speed or at a standstill, activate an Autostop as follows:
- Depress the clutch pedal
- set the lever in neutral
- release the clutch pedal
The engine will be switched off while the ignition stays on.

Caution
The steering assist will be reduced during an Autostop.

Conditions for an Autostop
The stop-start system checks if each of the following conditions is fulfilled.
Driving and operating

- The stop-start system is not manually deactivated
- the bonnet is fully closed
- the driver’s door is closed or the driver’s seat belt is fastened
- the battery is sufficiently charged and in good condition
- the engine is warmed up
- the engine coolant temperature is not too high
- the engine exhaust temperature is not too high, e.g. after driving with high engine load
- the ambient temperature is not too low
- the defrost selection does not inhibit an Autostop
- the climate control system allows an Autostop
- the brake vacuum is sufficient
- the self-cleaning function of the diesel particle filter is not active
- the vehicle has moved since the last Autostop

Otherwise an Autostop will be inhibited.
An Autostop may become less available as the ambient temperature approaches the freezing point.
Certain settings of the climate control system may inhibit an Autostop. See Climate control chapter for more details.
Immediately after motorway driving an Autostop may be inhibited.

**Battery discharge protection**
To ensure reliable engine restarts, several battery discharge protection features are implemented as part of the stop-start system.

**Power saving measures**
During an Autostop, several electrical features such as auxiliary electric heater or rear window heating are disabled or switched into a power saving mode. The fan speed of the climate control system is reduced to save power.

**Restart of the engine by the driver**
Depress the clutch pedal to restart the engine.
The engine start is indicated by the needle at the idle speed position in the tachometer.
If the selector lever is shifted out of neutral before depressing the clutch first, control indicator illuminates or is shown as a symbol in the Driver Information Centre.

**Restart of the engine by the stop-start system**
The selector lever must be in neutral to enable an automatic restart.
If one of the following conditions occurs during an Autostop, the engine will be restarted automatically by the stop-start system.
- The stop-start system is manually deactivated
- the bonnet is opened
Driving and operating

- the driver's seat belt is unfastened and the driver's door is opened
- the engine temperature is too low
- the battery is discharged
- the brake vacuum is not sufficient
- the vehicle starts to move
- the climate control system requests an engine start
- the air conditioning is manually switched on

If the bonnet is not fully closed, a warning message is displayed in the Driver Information Centre.

If an electrical accessory, e.g. a portable CD player, is connected to the power outlet, a brief power drop during restart might be noticeable.

Parking

- Do not park the vehicle on an easily ignitable surface. The high temperature of the exhaust system could ignite the surface.
- Always apply parking brake. Pull switch (ə) for approx. one second.
- Switch off the engine and ignition. Turn the steering wheel until the steering wheel lock engages.
- If the vehicle is on a level surface or uphill slope, engage first gear or set the selector lever to P before switching off the ignition. On an uphill slope, turn the front wheels away from the kerb.
- If the vehicle is on a downhill slope, engage reverse gear or set the selector lever to P before switching off the ignition. Turn the front wheels towards the kerb.
- Lock the vehicle and activate the anti-theft alarm system.

Note

In the event of an accident with airbag deployment, the engine is turned off automatically if the vehicle comes to a standstill within a certain time.

Engine exhaust

 Danger

Engine exhaust gases contain poisonous carbon monoxide, which is colourless and odourless and could be fatal if inhaled.

If exhaust gases enter the interior of the vehicle, open the windows. Have the cause of the fault rectified by a workshop.

Avoid driving with an open load compartment, otherwise exhaust gases could enter the vehicle.

Diesel particle filter

The diesel particle filter system filters harmful soot particles out of the exhaust gases. The system includes a self-cleaning function that runs automatically during driving without any notification. The filter is cleaned by periodically burning off the soot particles at high temperature. This process takes place automatically under set driving conditions and may
Driving and operating

take up to 25 minutes. Typically it needs between 7 and 12 minutes. Autostop is not available and fuel consumption may be higher during this period. The emission of smells and smoke during this process is normal.

Under certain driving conditions, e.g. short distances, the system cannot clean itself automatically.

If the cleaning of the filter is required and if previous driving conditions did not enable automatic cleaning, it will be indicated by the control indicator \( \text{Diesel partic. filter} \). Simultaneously \textit{Diesel partic. filter} is full continue driving or warning code 55 appears in the Driver Information Centre.

\( \text{Diesel partic. filter} \) illuminates when diesel particle filter is full. Start cleaning process as soon as possible.

\( \text{Diesel partic. filter} \) flashes when diesel particle filter has reached the maximum filling level. Start cleaning process immediately to avoid damage to the engine.

Cleaning process

To activate cleaning process, continue driving, keeping engine speed above 2000 revolutions per minute. Shift down if necessary. Diesel particle filter cleaning is then started.

If \( \text{Diesel partic. filter} \) illuminates additionally, cleaning is not possible, seek the assistance of a workshop.

Cleaning takes place quickest at high engine speeds and loads. The control indicator \( \text{Diesel partic. filter} \) extinguishes as soon as the self-cleaning operation is complete.

Catalytic converter

The catalytic converter reduces the amount of harmful substances in the exhaust gases.

\begin{table}[h]
\centering
\begin{tabular}{|l|}
\hline
\textbf{Caution} \\
\hline
Fuel grades other than those listed on pages 148, 211 could damage the catalytic converter or electronic components. \\
Unburnt petrol will overheat and damage the catalytic converter. Therefore avoid excessive use of the starter, running the fuel tank dry and starting the engine by pushing or towing. \\
\hline
\end{tabular}
\end{table}

In the event of misfiring, uneven engine running, a reduction in engine performance or other unusual problems, have the cause of the fault
rectified by a workshop as soon as possible. In an emergency, driving can be continued for a short period, keeping vehicle speed and engine speed low.

**Automatic transmission**

The automatic transmission permits automatic gearshifting (automatic mode) or manual gearshifting (manual mode).

**Transmission display**

The mode or selected gear is shown in the transmission display.

**Selector lever**

P = park position, wheels are locked, engage only when the vehicle is stationary and the parking brake is applied

R = reverse gear, engage only when the vehicle is stationary

N = neutral

D = automatic mode with all gears

The selector lever is locked in P and can only be moved when the ignition is on and the brake pedal is applied.
Without brake pedal applied, the control indicator illuminates. If the selector lever is not in P when the ignition is switched off, the control indicator and P flash. To engage P or R, press the release button. The engine can only be started with the lever in position P or N. When position N is selected, press the brake pedal or apply the parking brake before starting.

Do not accelerate while engaging a gear. Never depress the accelerator pedal and brake pedal at the same time. When a gear is engaged, the vehicle slowly begins to creep when the brake is released.

**Engine braking**
To utilise the engine braking effect, select a lower gear in good time when driving downhill, see manual mode.

**Rocking the vehicle**
Rocking the vehicle is only permissible if the vehicle is stuck in sand, mud or snow. Move the selector lever between D and R in a repeat pattern. Do not race the engine and avoid sudden acceleration.

**Parking**
Apply the parking brake and engage P. The ignition key can only be removed when the selector lever is in position P.

---

**Manual mode**
Move selector lever out of position D towards the left and then forwards or backwards.

+ = Shift to a higher gear.

− = Shift to a lower gear.

If a higher gear is selected when vehicle speed is too low, or a lower gear when vehicle speed is too high, the shift is not executed. This can cause a message in the Driver Information Centre.
In manual mode no automatic shifting to a higher gear takes place at high engine revolutions.

**Electronic driving programmes**
- Following a cold start, the operating temperature programme increases engine speed to quickly bring the catalytic converter to the required temperature.
- The automatic neutral shift function automatically shifts to idling when the vehicle is stopped with a forward gear engaged and the brake pedal is pressed.
- Special programmes automatically adapt the shifting points when driving up inclines or down hills.

**Kickdown**
If the accelerator pedal is pressed down completely in automatic mode, the transmission shifts to a lower gear depending on engine speed.

**Fault**
In the event of a fault, ⚠ illuminates. Additionally a code number or a vehicle message is displayed in the Driver Information Centre. Vehicle messages 101.

The transmission no longer shifts automatically. Continued travel is possible with manual shifting.

Only the highest gear is available.
Depending on the fault, second gear may also be available in manual mode. Shift only when vehicle is at a standstill.

Have the cause of the fault remedied by a workshop.

** Interruption of power supply**
In the event of an interruption of power supply, the selector lever cannot be moved out of the P position. The ignition key cannot be removed from the ignition switch.

If the battery is discharged, start the vehicle using jump leads 196.

If the battery is not the cause of the fault, release the selector lever.

1. Apply the parking brake.

2. Hold the selector lever trim at the marked position and pull to unlatch at the back.

3. Fold the selector lever trim upwards. Pull to unlatch at the front.

4. Move the selector lever trim to the left. Take care that the plug and the wiring harness at the bottom are not damaged.
5. Insert a screwdriver into the opening as far as it will go and move the selector lever out of P or N. If P or N is engaged again, the selector lever will be locked in position again. Have the cause of the power supply interruption remedied by a workshop.

6. Mount the selector lever trim onto the centre console and refit.

Manual transmission

To engage reverse, with the vehicle stationary wait 3 seconds after depressing the clutch pedal and then press the release button on the selector lever and engage the gear. If the gear does not engage, set the lever to neutral, release the clutch pedal and depress again; then repeat gear selection. Do not grind the clutch unnecessarily. When operating, depress the clutch pedal completely. Do not use the pedal as a foot rest.

Caution

It is not advisable to drive with the hand resting on the selector lever.
Brakes

The brake system comprises two independent brake circuits.
If a brake circuit fails, the vehicle can still be braked using the other brake circuit. However, braking effect is achieved only when the brake pedal is depressed firmly. Considerably more force is needed for this. The braking distance is extended. Seek the assistance of a workshop before continuing your journey.
When the engine is not running, the support of the brake servo unit disappears once the brake pedal has been depressed once or twice. Braking effect is not reduced, but braking requires significantly greater force. It is especially important to bear this in mind when being towed.
Control indicator  R  93.

Antilock brake system

Antilock brake system (ABS) prevents the wheels from locking.

ABS starts to regulate brake pressure as soon as a wheel shows a tendency to lock. The vehicle remains steerable, even during hard braking.
ABS control is made apparent through a pulse in the brake pedal and the noise of the regulation process.
For optimum braking, keep the brake pedal fully depressed throughout the braking process, despite the fact that the pedal is pulsating. Do not reduce the pressure on the pedal.
After starting off, the system performs a self-test which may be audible.
Control indicator  u  93.

Adaptive brake light

During full braking, all three brake lights flash for the duration of ABS control.

Fault

⚠️ Warning

If there is a fault in the ABS, the wheels may be liable to lock due to braking that is heavier than normal. The advantages of ABS are no longer available. During hard braking, the vehicle can no longer be steered and may swerve.

Have the cause of the fault remedied by a workshop.
Driving and operating

Parking brake

Electrical parking brake

Applying when vehicle is stationary
Pull switch for approx. one second, the electrical parking brake operates automatically with an adequate force. For maximum force, e.g. parking with trailer or on inclines, pull switch twice.

The electrical parking brake is applied when control indicator illuminates.

The electrical parking brake can always be activated, even if the ignition is off.

Do not operate electrical parking brake system too often with engine not running as this will discharge the battery.

Before leaving the vehicle, check the electrical parking brake status.
Control indicator \( \text{Ⅲ} \) 93.

Releasing
Switch on ignition. Keep brake pedal depressed and then push switch.

Drive away function
Depressing clutch pedal (manual transmission) or engaging D (automatic transmission) and then depressing the accelerator pedal releases the electrical parking brake automatically. This is not possible when the switch is pulled at the same time.

This function also helps driving away on inclines.

Aggressive drive-away may reduce lifetime of wear parts.

Dynamic braking when vehicle is moving
When the vehicle is moving and switch is kept pulled, the electrical parking brake system will decelerate the vehicle, but will not apply statically.

As soon as switch is released, dynamic braking will be stopped.

Fault
Failure mode of electrical parking brake is indicated by control indicator \( \text{Ⅲ} \) and by a code number or a vehicle message which is displayed in the Driver Information Centre. Vehicle messages 101.

Apply electrical parking brake: pull and hold switch for more than 5 seconds. If control indicator illuminates, electrical parking brake is applied.

Release electrical parking brake: push and hold switch for more than 2 seconds. If control indicator extinguishes, electrical parking brake is released.
Driving and operating

Control indicator ⚠️ flashes: electrical parking brake is not fully applied or released. When continuously flashing, release electrical parking brake and retry applying.

**Brake assist**
If the brake pedal is depressed quickly and forcefully, maximum brake force is automatically applied (full braking).
Maintain steady pressure on the brake pedal for as long as full braking is required. Maximum brake force is automatically reduced when the brake pedal is released.

**Hill start assist**
The system helps prevent unintended movement when driving away on inclines.
When releasing the foot brake after stopping on an incline, the brakes remain on for a further two seconds. The brakes release automatically as soon as the vehicle begins to accelerate.

The hill start assist is not active during an Autostop.

Ride control systems

**Traction Control system**
The Traction Control system (TC) is a component of the Electronic Stability Control system.
TC improves driving stability when necessary, regardless of the type of road surface or tyre grip, by preventing the drive wheels from spinning.
As soon as the drive wheels starts to spin, engine output is reduced and the wheel spinning the most is braked individually. This considerably improves the driving stability of the vehicle on slippery road surfaces.
TC is operational as soon as the control indicator ⚠️ extinguishes.
When TC is active ⚠️ flashes.
**Driving and operating**

### Deactivation

**Warning**
Do not let this special safety feature tempt you into taking risks when driving. Adapt speed to the road conditions.

Control indicator ≥ 94.

**Deactivation**

TC can be switched off when spinning of drive wheels is required: press button ≥ briefly. Control indicator ≥ illuminates.

TC is reactivated by pressing the ≥ button again. TC is also reactivated the next time the ignition is switched on.

**Electronic Stability Control**

Electronic Stability Control (ESC) improves driving stability when necessary, regardless of the type of road surface or tyre grip. It also prevents the drive wheels from spinning.

As soon as the vehicle starts to swerve (understeer/oversteer), engine output is reduced and the wheels are braked individually. This considerably improves the driving stability of the vehicle on slippery road surfaces.

ESC is operational as soon as the control indicator ≥ extinguishes. When ESC is active ≥ flashes.

For very high-performance driving ESC can be deactivated: hold button ≥ depressed for approx. 5 seconds. Control indicator ≥ illuminates.

**Warning**
Do not let this special safety feature tempt you into taking risks when driving. Adapt speed to the road conditions.

Control indicator ≥ 94.

**Deactivation**
ESC is reactivated by pressing the button again. If the TC system was previously disabled, both TC and ESC are reactivated.
ESC is also reactivated the next time the ignition is switched on.

### Driver assistance systems

#### Cruise control

The cruise control can store and maintain speeds of approx. 30 to 200 km/h. Deviations from the stored speeds may occur when driving uphill or downhill.
For safety reasons the cruise control cannot be activated until the foot brake has been operated once. Activating in first gear is not possible.

Do not use the cruise control if it is not advisable to maintain a constant speed.
With automatic transmission, only activate cruise control in automatic mode.
Control indicator ⬈ ⬇ 96.

**Switching on**
Press rocker switch ⬈ at the upper end, control indicator ⬈ illuminates white.

**Activation**
Accelerate to the desired speed and turn thumb wheel to SET/-, the current speed is stored and maintained. Control indicator ⬈ illuminates green. Accelerator pedal can be released.
Vehicle speed can be increased by depressing the accelerator pedal. When the accelerator pedal is released, the previously stored speed is resumed.
Cruise control remains activated while gearshifting.
Increase speed
With cruise control active, hold thumb wheel turned to RES/+ or briefly turn to RES/+ repeatedly: speed increases continuously or in small increments.
Alternatively accelerate to the desired speed and store by turning to RES/+.

Reduce speed
With cruise control active, hold thumb wheel turned to SET/- or briefly turn to SET/- repeatedly: speed decreases continuously or in small increments.

Deactivation
Press button \( \text{y} \), control indicator \( \text{m} \) illuminates white. Cruise control is deactivated. The stored speed is memorised.
Automatic deactivation:
- vehicle speed below approx. 30 km/h,
- the brake pedal is depressed,
- the clutch pedal is depressed for a few seconds,
- selector lever in N,
- engine speed in a very low range,
- the Traction Control system or Electronic Stability Control is operating.

Resume stored speed
Turn thumb wheel to RES/+ at a speed above 30 km/h. The stored speed will be obtained.

Switching off
Press rocker switch \( \text{y} \) at the lower end, control indicator \( \text{m} \) extinguishes. The stored speed is deleted. Switching off the ignition also deletes the stored speed.

Parking assist
The parking assist makes parking easier by measuring the distance between the vehicle and obstacles, and giving acoustic signals. It is the driver, however, who bears full responsibility for the parking manoeuvre.
The system consists of four ultrasonic parking sensors in the rear bumper. If the vehicle is equipped with a front parking assist, the system consists of four additional ultrasonic parking sensors in the front bumper.
Control indicator \( \text{P} \) \( \text{A} \) 94.
Activation

When reverse gear is engaged, the system is activated automatically. The front parking assist can also be activated at a low speed by pressing the P\[\text{\textcopyright}\] button.

An illuminated LED in the parking assist button indicates that the system is ready to operate.

Indication

An obstacle is indicated by a buzzing sound. The interval between the sounds becomes shorter as the vehicle gets closer to the obstacle. When the distance is less than 30 cm, the buzzing is continuous.

Deactivation

Deactivate the system by pressing the P\[\text{\textcopyright}\] button.

The LED in the button extinguishes and Park Assist Off will be displayed in the Driver Information Centre.

The system is deactivated automatically when exceeding a certain speed.

If the P\[\text{\textcopyright}\] button is pressed once within an ignition cycle, the front parking assist is always reactivated when the vehicle speed goes below a certain value.

Fault

In the event of a fault in the system, P\[\text{\textcopyright}\] illuminates or a vehicle message is displayed in the Driver Information Centre.

Additionally, P\[\text{\textcopyright}\] illuminates or a vehicle message is displayed in the Driver Information Centre if a malfunction of the system due to temporary conditions like snow covered sensors is detected.

Vehicle messages ◊ 101.

Important hints for using the parking assist systems

\[\text{\textcopyright}\] Warning

Under certain circumstances, various reflective surfaces on objects or clothing as well as external noise sources may cause the system to fail to detect obstacles.

Special attention has to be paid to low obstacles which can damage the lower part of the bumper. If such obstacles leave the detection area of the sensors during approach of the vehicle, a continuous warning tone will sound.
**Caution**

Performance of the sensors can be reduced when sensors are covered, e.g. by ice or snow. Performance of the parking assist systems can be reduced due to heavy loading. Special conditions apply if there are taller vehicles involved (e.g. off-road vehicles, mini vans, vans). Object identification in the upper part of these vehicles cannot be guaranteed. Objects with a very small reflection cross-section, e.g. objects of narrow size or soft materials, may not be detected by the system. Parking assist will not avoid a collision with objects which are out of the detection range of the sensors.

**Note**
The parking assist system automatically detects factory-fitted towing equipment. It is deactivated when the connector is plugged in. The sensor may detect a non-existent object (echo disturbance) caused by external acoustic or mechanical disturbances.

**Note**
The parking assist is deactivated when the rear carrier system is extended.

**Rear view camera**
The rear view camera assists the driver when reversing by displaying a view of the area behind the vehicle. The view of the camera is displayed in the Colour-Info-Display.

**Warning**
The rear view camera does not replace driver vision. Note that objects that are outside the camera's field of view and the advanced parking assist sensors, e.g. below the bumper or underneath the vehicle, are not displayed.

Do not reverse the vehicle by only looking at the Info-Display and check the surrounding behind and around the vehicle before reversing.

**Activation**
Rear view camera is automatically activated when reverse gear is engaged.

**Functionality**
The camera is mounted in the tailgate handle and has a viewing angle of 130°.

Due to the high position of the camera the rear bumper can be seen on the display as a guide to position. The area displayed by the camera is limited. The distance of the image that appears on the display differs from the actual distance.

**Guiding lines**
Dynamic guiding lines are horizontal lines in 1 metre intervals projected on the picture to define the distance to shown objects.

**Display settings**
Brightness can be set with the up/down buttons of the multifunction knob.
Contrast can be set with left/right buttons of the multifunction knob.

**Deactivation**
The camera is deactivated when a certain forward speed is exceeded or if reverse gear is not engaged for approx. 10 seconds.

**Warning symbols**
Warning symbols are indicated as triangles △ on the picture which show obstacles detected by the rear sensors of the advanced parking assist.

Trajectory lane of the vehicle is shown in accordance with the steering angle.
The function can be deactivated in the menu **Settings** in the Info-Display. Vehicle personalisation 107.
Activation or deactivation of the rear view camera can be changed in the menu **Settings** in the Info-Display. Vehicle personalisation  107.

**Fault**
Fault messages are displayed with a  on the top line of the Info-Display. The rear view camera may not operate properly when:
- the surrounding is dark,
- the sun or the beam of headlights is shining directly into the camera lens,
- ice, snow, mud, or anything else covers the camera lens. Clean the lens, rinse it with water, and wipe it with a soft cloth,
- the tailgate is not closed correctly,
- the vehicle had a rear end accident,
- there are extreme temperature changes.

**Fuel**

**Fuel for petrol engines**
Only use unleaded fuel that complies with European standard EN 228 or E DIN 51626-1 or equivalent. Your engine is capable of running with E10 fuel that fulfills these standards. E10 fuel contains up to 10 % bioethanol. Use fuel with the recommended octane rating  211. Use of fuel with too low an octane rating can reduce engine power and torque and slightly increases fuel consumption.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use of fuel that does not comply to EN 228 or E DIN 51626-1 or equivalent can lead to deposits or engine damage and loss of warranty.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use of fuel with too low an octane rating could lead to uncontrolled combustion and engine damage.</td>
</tr>
</tbody>
</table>

**Fuel for diesel engines**
Only use diesel fuel that complies with EN 590.
In countries outside the European Union use Euro-Diesel fuel with a sulfur concentration below 50 ppm.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not use fuel or fuel additives that contain metallic compounds such as manganese-based additives. This may cause engine damage.</td>
</tr>
</tbody>
</table>

Caution
Use of fuel that does not comply to EN 590 or similar can lead to engine power loss, increased wear or engine damage and may affect your warranty.

Do not use marine diesel oils, heating oils, Aquazole and similar diesel-water emulsions. Diesel fuels must not be diluted with fuels for petrol engines.

Fuel for liquid gas operation
Liquid gas is known as LPG (Liquefied Petroleum Gas) or under its French name GPL (Gaz de Pétrole Liquéfié). LPG is also known as Autogas.

LPG consists mainly of propane and butane. The octane rating is between 105 and 115, depending on the butane proportion. LPG is stored liquid at around 5 - 10 bar pressure.

The boiling point depends on the pressure and mixing ratio. At ambient pressure, it is between -42 °C (pure propane) and -0.5 °C (pure butane).

Caution
The system works at an ambient temperature of approx. -8 °C to 100 °C.

Full function of the LPG system can only be guaranteed with liquid gas which complies with the minimum requirements of DIN EN 589.

Fuel selector
Pressing the LPG button switches between petrol and liquid gas operation as soon as the required parameters (coolant temperature, gas temperature and minimum engine speed) have been reached. The requirements are usually fulfilled after around 60 seconds (depending on exterior temperature) and the first firm press on the accelerator. The LED status shows the current operating mode.

- off = petrol operation
- illuminates = liquid gas operation
- flashes = no switching is possible, one type of fuel is empty

As soon as the liquid gas tanks are empty, petrol operation is automatically engaged until the ignition is switched off.

Every six months, run the petrol tank down until control indicator illuminates, then refuel. This helps maintain fuel quality and system function for petrol operation.
Fill the tank completely at regular intervals to prevent corrosion in the tank.

**Faults and remedies**
If gas mode is not possible, check the following:
- Is there enough liquid gas present?
- Is there enough petrol present for starting?

Due to extreme temperatures in combination with the gas composition, it may take slightly longer before the system switches from petrol to liquid gas mode.
In extreme situations, the system may also switch back to petrol mode if the minimum requirements are not fulfilled.
Seek the assistance of a workshop in the event of all other faults.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Repairs and adjustments may only be made by trained specialists in order to maintain the safety and warranty on the LPG system.</td>
</tr>
</tbody>
</table>

Liquid gas is given a particular odour (odorised) so that any leaks can be detected easily.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>If you smell gas in the vehicle or in the immediate vicinity, switch to petrol mode immediately. No smoking. No naked flames or ignition sources.</td>
</tr>
</tbody>
</table>

If possible, close the manual shut-off valve on the multivalve. The multivalve is located on the liquid gas tank in the load compartment, underneath the rear floor cover.

Turn the thumb wheel clockwise.
If no further gas odour is perceptible when the manual shut-off valve is closed, the vehicle can be used in petrol mode. If the gas odour persists, do not start the engine. Have the cause of the fault remedied by a workshop.

When using underground car parks, follow the instructions of the operator and local laws.

<table>
<thead>
<tr>
<th>Note</th>
</tr>
</thead>
<tbody>
<tr>
<td>In the event of an accident, switch off the ignition and lights. Close the manual shut-off valve on multivalve.</td>
</tr>
</tbody>
</table>
Refuelling

**Danger**

Before refuelling, switch off engine and any external heaters with combustion chambers. Switch off any mobile phones.

Follow the operating and safety instructions of the filling station when refuelling.

**Danger**

Fuel is flammable and explosive. No smoking. No naked flames or sparks.

If you can smell fuel in your vehicle, have the cause of this remedied immediately by a workshop.

**Caution**

In case of misfuelling, do not switch on ignition.

Fuel filler flap is located at right rear side of vehicle.

The fuel filler flap can only be opened if the vehicle is unlocked. Pull flap at the recess and open. To open, turn the cap slowly to the left.
Driving and operating

The fuel filler cap can be retained in the bracket on the fuel filler flap.
For refuelling, fully insert the pump nozzle and switch it on.
After automatic cut-off, it can be topped up with max. two doses of fuel.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wipe off any overflowing fuel immediately.</td>
</tr>
</tbody>
</table>

To close, turn the fuel filler cap to the right until it clicks.
Close the flap and let engage.

**Fuel filler cap**
Only use genuine fuel filler caps.
Diesel-engined vehicles have special fuel filler caps.

**Liquid gas refuelling**
Follow the operating and safety instructions of the filling station when refuelling.
The filling valve for the liquid gas is behind the fuel filler cap.

Unscrew protective cap from the filler neck.

Fit the required adapter.
ACME Adapter: Screw the nut of the filling nozzle onto the adapter. Press locking lever on filler nozzle down.

DISH (Italy) filler neck: Place the filler nozzle into the adapter. Press locking lever on filler nozzle down.

Bayonet filler neck: Place filler nozzle on the adapter and turn to the left or right through one quarter turn. Pull locking lever of filler nozzle fully.

EURO filler neck: Press the filler nozzle onto the adapter until it engages.

Press the button of the liquid gas supply point. The filling system stops or begins to run slowly when 80% of the tank volume is reached (maximum fill level).

Release button on filling system and the filling process stops. Release the locking lever and remove the filler nozzle. A small quantity of liquid gas can escape.

Remove adapter and stow in vehicle.

Fit protective cap to prevent the penetration of foreign bodies into the filler opening and the system.

⚠️ Warning

Due to the system design, an escape of liquid gas after releasing the locking lever is unavoidable. Avoid inhaling.

⚠️ Warning

The liquid gas tank may only be filled to 80% for safety reasons.

The multivalue on the liquid gas tank automatically limits the fill quantity. If a larger quantity is added, we recommend not exposing the vehicle to the sun until the excess amount has been used up.

Filling adapter
As filling systems are not standardised, different adapters are required which are available from Opel Distributors and from Opel Authorised Repairers.

ACME adapter: Belgium, Germany, Ireland, Luxembourg, Switzerland

Bayonet adapter: Netherlands, Norway, Spain, United Kingdom
Fuel consumption - CO\textsubscript{2}-
Emissions

The fuel consumption (combined) of the model Opel Meriva is within a range of 4.1 to 7.6 l/100 km.
The CO\textsubscript{2} emission is within a range of 109 to 169 g/km.
For the values specific for your vehicle, refer to the EEC Certificate of Conformity provided with your vehicle or other national registration documents.

General information

The official fuel consumption and specific CO\textsubscript{2} emission figures quoted relate to the EU base model with standard equipment.

Fuel consumption data and CO\textsubscript{2} emission data are determined according to regulation R (EC) No. 715/2007 (in the version respectively applicable), taking into consideration the vehicle weight in running order, as specified by the regulation.
The figures are provided only for the purpose of comparison between different vehicle variants and must not be taken as a guarantee for the actual fuel consumption of a particular vehicle. Additional equipment may result in slightly higher results than the stated consumption and CO\textsubscript{2} figures.
Furthermore, fuel consumption is dependent on personal driving style as well as road and traffic conditions.
Towing

General information

Only use towing equipment that has been approved for your vehicle. Entrust retrofitting of towing equipment to a workshop. It may be necessary to make changes that affect the cooling system, heat shields or other equipment.

Fitting of towing equipment could cover the opening of the towing eye. If this is the case use the coupling ball bar for towing. Always keep the coupling ball bar in the vehicle.

Driving characteristics and towing tips

Before attaching a trailer, lubricate the coupling ball. However, do not do so if a stabiliser, which acts on the coupling ball, is being used to reduce snaking movements.

For trailers with low driving stability and caravan trailers with a permitted gross vehicle weight of more than 1100 kg the use of a stabiliser is strongly recommended when driving above 80 km/h.

If the trailer starts snaking, drive more slowly, do not attempt to correct the steering and brake sharply if necessary.

When driving downhill, drive in the same gear as if driving uphill and drive at a similar speed.

Adjust tyre pressure to the value specified for full load 218.

Trailer towing

Trailer loads

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vehicles with engine A13DTE:</td>
</tr>
<tr>
<td>Use of towing equipment is permissible for attaching compatible bicycle carriers only. Do not use towing equipment for trailer towing.</td>
</tr>
</tbody>
</table>

The permissible trailer loads are vehicle and engine-dependent maximum values which must not be exceeded. The actual trailer load is the difference between the actual gross weight of the trailer and the actual coupling socket load with the trailer coupled.

The permissible trailer loads are specified in the vehicle documents. In general, they are valid for gradients up to max. 12 %.

The permitted trailer load applies up to the specified incline and up to an altitude of 1000 metres above sea level. Since engine power decreases as altitude increases due to the air becoming thinner, therefore reducing climbing ability, the permissible gross train weight also decreases by 10 % for every 1000 metres of additional altitude. The gross train weight does not have to be reduced when driving on roads with slight inclines (less than 8 %, e.g. motorways).
The permissible gross train weight must not be exceeded. This weight is specified on the identification plate 207.

**Vertical coupling load**
The vertical coupling load is the load exerted by the trailer on the coupling ball. It can be varied by changing the weight distribution when loading the trailer.

The maximum permissible vertical coupling load (75 kg) is specified on the towing equipment identification plate and in the vehicle documents. Always aim for the maximum load, especially in the case of heavy trailers. The vertical coupling load should never fall below 25 kg.

**Rear axle load**
When the trailer is coupled and the towing vehicle fully loaded, the permissible rear axle load (see identification plate or vehicle documents) may be exceeded by 80 kg (vehicles with LPG system: 110 kg), the gross vehicle weight rating may be exceeded by 70 kg (vehicles with LPG system: 95 kg). If the permissible rear axle load is exceeded, a maximum speed of 100 km/h applies.

**Towing equipment**

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>When operating without a trailer, remove the coupling ball bar.</td>
</tr>
</tbody>
</table>

**Stowage of the detachable coupling ball bar**

The bag with the coupling ball bar is stowed in the rear stowage compartment on the floor. Run the strap through the lashing eye and tighten the strap to secure the bag.
Fitting the detachable coupling ball bar

Disengage and fold down the socket. Remove the sealing plug from the opening for the coupling ball bar and stow it.

Checking the tensioning of the coupling ball bar

- Red marking on rotary knob must point towards green marking on coupling ball bar.
- The gap between the rotary knob and the coupling ball bar must be approx. 5 mm.

Otherwise, the coupling ball bar must be tensioned before being inserted:

Inserting the coupling ball bar

Pull out rotary knob and turn clockwise as far as it will go.
Insert the tensioned coupling ball bar in the opening and push firmly upwards until it audibly engages. The rotary handle snaps back into its original position resting against the coupling ball bar without a gap.

**Warning**

Do not touch rotary handle during insertion.

Lock the coupling ball bar by turning the key clockwise. Remove the key and close the protective flap.

**Eye for break-away stopping cable**

Attach breakaway stopping cable to eye.

**Check that the coupling ball bar is correctly installed**

- Green marking on rotary knob must point towards green marking on coupling ball bar.
- There must be no gap between the rotary handle and the coupling ball bar.

**Warning**

Towing a trailer is permitted only when a coupling ball bar is fitted correctly. If the coupling ball bar does not engage correctly, seek the assistance of a workshop.

**Dismounting the detachable coupling ball bar**
Open the protective flap and turn the key clockwise to unlock the coupling ball bar.
Pull out rotary handle and turn clockwise as far as it will go. Pull out coupling ball bar downwards.
Insert sealing plug in opening. Fold away socket.
Vehicle care

General Information

- Accessories and vehicle modifications
  - We recommend the use of genuine parts and accessories and factory approved parts specific for your vehicle type. We cannot assess or guarantee reliability of other products - even if they have a regulatory or otherwise granted approval.
  - Do not make any modifications to the electrical system, e.g. changes of electronic control units (chip tuning).

Caution

- When transporting the vehicle on a train or on a recovery vehicle, the mud flaps might be damaged.

Vehicle storage

Storage for a long period of time

- If the vehicle is to be stored for several months:
  - Wash and wax the vehicle.
  - Have the wax in the engine compartment and underbody checked.
  - Clean and preserve the rubber seals.
  - Fill up fuel tank completely.
  - Change the engine oil.
  - Drain the washer fluid reservoir.
  - Check the coolant antifreeze and corrosion protection.
  - Adjust tyre pressure to the value specified for full load.
  - Park the vehicle in a dry, well ventilated place. Engage first or reverse gear or set selector lever to P. Prevent the vehicle from rolling.
  - Do not apply the parking brake.
• Open the bonnet, close all doors and lock the vehicle.
• Disconnect the clamp from the negative terminal of the vehicle battery. Beware that all systems are not functional, e.g. anti-theft alarm system.

**Putting back into operation**
When the vehicle is to be put back into operation:
• Connect the clamp to the negative terminal of the vehicle battery. Activate the electronics of the power windows.
• Check tyre pressure.
• Fill up the washer fluid reservoir.
• Check the engine oil level.
• Check the coolant level.
• Fit the number plate if necessary.

**End-of-life vehicle recovery**
Information on end-of-life vehicle recovery centres and the recycling of end-of-life vehicles is available on our website. Only entrust this work to an authorised recycling centre.
Gas vehicles must be recycled by a service centre authorised for gas vehicles.

**Vehicle checks**

**Performing work**

*Warning*
Only perform engine compartment checks when the ignition is off.
The cooling fan may start operating even if the ignition is off.
The ignition system uses extremely high voltage. Do not touch.

Bonnet

Opening

Pull the release lever and return it to its original position.

Press the safety catch and open the bonnet.

Secure the bonnet support.

If the bonnet is opened during an Autostop, the engine will be restarted automatically for safety reasons.

Closing

Before closing the bonnet, press the support into the holder.

Lower the bonnet and allow it to drop into the catch. Check that the bonnet is engaged.

Engine oil

Check the engine oil level manually on a regular basis to prevent damage to the engine.

Ensure that the correct specification of oil is used. Recommended fluids and lubricants 204.

Check with the vehicle on a level surface. The engine must be at operating temperature and switched off for at least 5 minutes.

Pull out the dipstick, wipe it clean, insert it to the stop on the handle, pull out and read the engine oil level.

Insert dipstick to the stop on the handle and make half a turn.
Different dipsticks are used depending on engine variant.

When the engine oil level has dropped to the **MIN** mark, top up engine oil.

We recommend the use of the same grade of engine oil that was used at last change.

The engine oil level must not exceed the **MAX** mark on the dipstick.

**Caution**
Overfilled engine oil must be drained or suctioned out.

Capacities 217.

Fit the cap on straight and tighten it.

**Engine coolant**
The coolant provides freeze protection down to approx. -28 °C.

**Caution**
Only use approved antifreeze.

**Coolant level**

**Caution**
Too low a coolant level can cause engine damage.
If the cooling system is cold, the coolant level should be above the filling line mark. Top up if the level is low.

⚠️ **Warning**

Allow the engine to cool before opening the cap. Carefully open the cap, relieving the pressure slowly.

To top up use a 1:1 mixture of approved coolant concentrate mixed with clean tap water. If no coolant concentrate is available, use clean tap water. Install the cap tightly. Have the coolant concentration checked and have the cause of the coolant loss remedied by a workshop.

### Washer fluid

Fill with clean water mixed with a suitable quantity of washer fluid which contains antifreeze. For the correct mixing ratio refer to the washer fluid container.

**Caution**

Only washer fluid with a sufficient antifreeze concentration provides protection at low temperatures or a sudden drop in temperature.

### Brakes

In the event of minimum thickness of the brake lining, a squealing noise sounds during braking.

Continued driving is possible but have the brake lining replaced as soon as possible.

Once new brake linings are installed, do not brake unnecessarily hard for the first few journeys.

**Brake fluid**

⚠️ **Warning**

Brake fluid is poisonous and corrosive. Avoid contact with eyes, skin, fabrics and painted surfaces.
The brake fluid level must be between the MIN and the MAX marks.

When topping up, ensure maximum cleanliness as contamination of the brake fluid can lead to brake system malfunctions. Have the cause of the loss of brake fluid remedied by a workshop.

Only use high-performance brake fluid approved for the vehicle.

Brake and clutch fluid 204.

**Battery**

Vehicles without stop-start system will be equipped with a lead acid battery. Vehicles with stop-start system will be equipped with an AGM battery which is not a lead acid battery. The vehicle battery is maintenance-free provided that the driving profile allows sufficient charging of the battery. Short-distance-driving and frequent engine starts can discharge the battery. Avoid the use of unnecessary electrical consumers.

Batteries do not belong in household waste. They must be disposed of at an appropriate recycling collection point.

Laying up the vehicle for more than 4 weeks can lead to battery discharge. Disconnect the clamp from the negative terminal of the vehicle battery.

Ensure the ignition is switched off before connecting or disconnecting the vehicle battery.

Battery discharge protection 119.

**Replacing the battery**

**Note**
Any deviation from the instructions given in this paragraph may lead to a temporary deactivation of the stop-start system.

In vehicles with stop-start system, ensure to have the AGM (Absorptive Glass Mat) battery replaced with an AGM battery again.
An AGM battery can be identified by the label on the battery. We recommend the use of an original Opel battery.

**Note**
Using an AGM battery different from the original Opel battery might result in a lower performance of the stop-start system.

**Warning**
When fitting a battery with a length deviating from the original one, it is essential to ensure a proper fitting of the buffer element.

We recommend that you have the battery replaced by a workshop. Stop-start system 131.

**Charging the battery**

<table>
<thead>
<tr>
<th><strong>Warning</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>On vehicles with stop-start system, ensure that the charging potential does not exceed 14.6 volts when using a battery charger. Otherwise the battery might be damaged.</td>
</tr>
</tbody>
</table>

**Jump starting** 196.

**Warning label**
Meaning of symbols:
- No sparks, naked flames or smoking.
- Always shield eyes. Explosive gases can cause blindness or injury.
- Keep the battery out of reach of children.
- The battery contains sulfuric acid which could cause blindness or serious burn injuries.
- See the Owner’s Manual for further information.
- Explosive gas may be present in the vicinity of the battery.

Diesel fuel system bleeding
If the tank has been run dry, the diesel fuel system must be bled. Switch on the ignition three times for 15 seconds at a time. Then crank the engine for a maximum of 40 seconds. Repeat this process after no less than 5 seconds. If the engine fails to start, seek the assistance of a workshop.

Wiper blade replacement

Wiper blades on the windscreen
Lift the wiper arm, press button to disengage the wiper blade and remove.
Attach the wiper blade slightly angled to the wiper arm and push until it engages.
Lower wiper arm carefully.

Wiper blade on the rear window
Lift wiper arm. Disengage wiper blade as shown in illustration and remove.
Attach the wiper blade slightly angled to the wiper arm and push until it engages.
Lower wiper arm carefully.
Bulb replacement

Switch off the ignition and switch off the relevant switch or close the doors. Only hold a new bulb at the base! Do not touch the bulb glass with bare hands. Use only the same bulb type for replacement. Replace headlight bulbs from within the engine compartment.

Halogen headlights

Headlights have separate systems for low beam 1 (outer bulbs) and high beam 2 (inner bulbs).

Low beam

1. Rotate the cap 1 anticlockwise and remove it.
2. Push the bulb holder upwards and withdraw the bulb holder from the reflector.
3. Detach the bulb from the bulb holder and replace the bulb.
4. Insert the bulb holder into the reflector.
5. Fit the cap and rotate clockwise.

**High beam**

1. Rotate the cap 2 anticlockwise and remove it.
2. Detach the plug from the bulb.
3. Disengage the spring clip and then swivel it backwards.
4. Remove and replace the bulb.
5. Swivel the spring clip forwards and engage.
6. Attach the plug to the bulb.
7. Fit the cap and rotate clockwise.

**Sidelight/Daytime running light**

1. Rotate the bulb holder anticlockwise and remove it.
Vehicle care

2. Detach bulb from the bulb holder and replace it.
3. Insert the bulb holder into the reflector and rotate clockwise.

Front turn signal

1. Rotate the bulb holder anticlockwise and remove it.
2. Rotate bulb anticlockwise and remove from bulb holder.
3. Replace bulb.
4. Insert the bulb holder into the reflector and rotate clockwise.

Adaptive forward lighting

Headlights have separate systems for low beam and high beam 1 (outer bulbs) and additional high beam 2 (inner bulbs). The cornering light is also located behind the cover for the additional high beam.
Low beam/High beam

1. Rotate the cap 1 anticlockwise and remove it.
2. Push the bulb holder downwards and withdraw the bulb holder from the reflector.
3. Detach the bulb from the bulb holder and replace the bulb.
4. Insert the bulb holder into the reflector.
5. Fit the cap and rotate clockwise.

Additional high beam

1. Rotate protective cover 2 anticlockwise and remove.
2. Press catch and withdraw the bulb holder from the reflector.

3. Remove and replace the bulb.

4. Press catch and insert the bulb holder into the reflector.

5. Fit the cap and rotate clockwise.

Cornering light

1. Rotate protective cover 2 anticlockwise and remove.

2. Detach the plug from the bulb.

3. Disengage the spring clip and then swivel it backwards.

4. Remove and replace the bulb.

5. Swivel the spring clip forwards and engage.

6. Attach the plug to the bulb.

7. Fit the cap and rotate clockwise.

Fog lights

The bulbs are accessible from the underside of the vehicle.
1. Turn the bulb holder anticlockwise and remove it from the reflector.

2. Disengage the bulb holder from the plug connector by pressing the retaining lug.

3. Remove and replace the bulb holder with bulb.

4. Attach the plug connector.

5. Insert the bulb holder into the reflector.

6. Turn the bulb holder clockwise and engage.

**Tail lights**

1. Release the cover and remove it.

2. Unscrew the two plastic securing nuts from the inside by hand.
3. Carefully withdraw the light assembly from retaining pins and remove. Make sure that the cable duct remains in position.

4. Detach the wiring plug from the bulb carrier.

5. Unlatch the four retaining lugs and remove the bulb carrier.

6. Remove and replace the bulb.
   Tail light and brake light (1)
   Tail light (2)
   Turn signal light (3)

7. Insert the bulb carrier into the tail light assembly. Connect the wiring plug. Fit light assembly onto retaining pins and tighten the securing nuts. Close the cover and engage.

8. Switch on the ignition, operate and check all lights.

1. Open the tailgate and remove the cover with a screwdriver.
2. Press the retaining lug and remove the bulb carrier downwards.

3. To replace the reverse light bulb (1), remove and replace the bulb. To replace the tail light bulb (2), push the bulb slightly into the socket, rotate anticlockwise, remove and replace the bulb.

4. Insert the bulb carrier into the retainer.

5. Attach the cover.

6. Switch on the ignition, operate and check all lights.

For replacing the tail light bulb and rear fog light bulb on the right side of the tailgate frame, proceed in the same way.

**Side turn signal lights**

To replace bulb, remove lamp housing:

1. On left vehicle side, slide lamp to the front and remove it out of the front wing with the rear end. On right vehicle side, slide lamp to the rear and remove it out of the front wing with the front end.

2. Turn bulb holder anticlockwise and remove from housing.

3. Pull bulb from bulb holder and replace it.
4. Insert bulb holder and turn clockwise.
5. On left side: insert front end into front wing, slide forward and insert rear end.
   On right side: insert rear end into front wing, slide rearward and insert front end.

**Number plate light**

1. Insert screwdriver in recess of the cover, press to the side and release spring.
2. Remove lamp downwards, taking care not to pull on the cable.
3. Remove bulb holder from lamp housing by turning anticlockwise.

4. Pull bulb from bulb holder and replace it.
5. Insert bulb holder into lamp housing and turn clockwise.
6. Insert lamp into bumper and let engage.

**Interior lights**

**Courtesy light, reading lights**
Have bulbs replaced by a workshop.

**Load compartment light**
Have bulbs replaced by a workshop.
Puddle lights

1. Disengage the housing at the bottom and remove it.

2. Press the retaining lug and withdraw the connector.

3. Rotate the bulb holder clockwise and remove.

4. Pull the bulb out of the bulb holder and replace it.

5. Insert the bulb holder into the housing and turn it anticlockwise.

6. Plug in the connector.

7. Attach the housing.

Instrument panel illumination

Have bulbs replaced by a workshop.
Electrical system

Fuses
Data on the replacement fuse must match the data on the defective fuse.
There are three fuse boxes in the vehicle:
- in the front left of the engine compartment,
- In left-hand drive vehicles, in the interior behind the storage compartment, or, in right-hand drive vehicles, behind the glovebox,
- behind a cover on the left side of the load compartment.
Before replacing a fuse, turn off the respective switch and the ignition.
A blown fuse can be recognized by its melted wire. Do not replace the fuse until the cause of the fault has been remedied.
Some functions are protected by several fuses.
Fuses may also be inserted without existence of a function.

Fuse extractor
A fuse extractor may be located in the fuse box in the engine compartment.
Place the fuse extractor on the various types of fuse from the top or side, and withdraw fuse.

**Engine compartment fuse box**

The fuse box is in the front left of the engine compartment. Disengage the cover, lift it upwards and remove. After having changed defective fuses close the fuse box cover and press until it engages. If the fuse box cover is not closed correctly, malfunctions may occur.

### Vehicle tools

#### Tools

**Vehicles with spare wheel**

The jack and the vehicle tools are in the spare wheel well in the load compartment.
Vehicles with tyre repair kit

The vehicle tools are in the right-hand compartment in the load compartment, together with the tyre repair kit.

To open the compartment, disengage the cover and open it.

Wheels and tyres

Tyre condition, wheel condition

Drive over edges slowly and at right angles if possible. Driving over sharp edges can cause tyre and wheel damage. Do not trap tyres on the kerb when parking.

Regularly check the wheels for damage. Seek the assistance of a workshop in the event of damage or unusual wear.

Winter tyres

Winter tyres improve driving safety at temperatures below 7 °C and should therefore be fitted on all wheels.

In accordance with country-specific regulations, affix the speed sticker in the driver's field of view.
Tyre designations

E.g. 195/65 R 15 91 H

195 = Tyre width, mm
65 = Cross-section ratio (tyre height to tyre width), %
R = Belt type: Radial
RF = Type: RunFlat
15 = Wheel diameter, inches
91 = Load index e.g. 91 is equivalent to 615 kg
H = Speed code letter

Speed code letter:
Q = up to 160 km/h
S = up to 180 km/h
T = up to 190 km/h
H = up to 210 km/h
V = up to 240 km/h
W = up to 270 km/h

Warning

If the pressure is too low, this can result in considerable tyre warm-up and internal damage, leading to tread separation and even to tyre blow-out at high speeds.

Tyre pressure

Check the pressure of cold tyres at least every 14 days and before any long journey. Do not forget the spare wheel. This also applies to vehicles with tyre deflation detection system. Unscrew the valve cap.

Tyre pressure 218 and on the label at the front passenger door.
The tyre pressure data refers to cold tyres. It applies to summer and winter tyres.
Always inflate the spare tyre to the pressure specified for full load.
The ECO tyre pressure serves to achieve the smallest amount of fuel consumption possible.
Incorrect tyre pressures will impair safety, vehicle handling, comfort and fuel economy and will increase tyre wear.

Warning

If the pressure must be reduced or increased on a vehicle with tyre pressure monitoring system, switch off ignition.

Tyre deflation detection system

The tyre deflation detection system continually checks the rotation speed of all four tyres.

If a tyre loses pressure the control indicator w illuminates yellow and a warning message is displayed in the Driver Information Centre with Uplevel-Display. Stop immediately and check tyre pressure.

Control indicator w 95.
System initialisation
After tyre pressure correction or wheel change, the system must be initiated:
1. Apply electrical parking brake.
2. Press the MENU button to select the Vehicle Information Menu.
3. Turn the adjuster wheel to select Tire Pressure System.
4. Press the SET/CLR button to select the reset of the system.

On vehicles with Midlevel-Display, make a longer press on the SET/CLR button to start the initialisation of the system.

5. On vehicles with Uplevel-Display, the selection is confirmed by a pop-up indication. Confirm to start the initialisation of the system.

Selection and indication can be different between Midlevel-Display and Uplevel-Display.

If the system is ready again, a message is displayed in the Driver Information Centre with Uplevel-Display.

Tread depth
Check tread depth at regular intervals.

Tyres should be replaced for safety reasons at a tread depth of 2-3 mm (4 mm for winter tyres).

For safety reasons it is recommended that the tread depth of the tyres on one axle should not vary by more than 2 mm.

The legally permissible minimum tread depth (1.6 mm) has been reached when the tread has worn down as far as one of the tread wear indicators (TWI). Their position is indicated by markings on the sidewall.

If there is more wear at the front than the rear, swap round front wheels and rear wheels periodically. Ensure that the direction of rotation of the wheels remains the same.

Tyres age, even if they are not used. We recommend tyre replacement every 6 years.
Changing tyre and wheel size
If tyres of a different size than those fitted at the factory are used, it may be necessary to reprogramme the speedometer as well as the nominal tyre pressure and make other vehicle modifications. After converting to a different tyre size, have the label with tyre pressures replaced.

⚠️ Warning
Use of unsuitable tyres or wheels may lead to accidents and will invalidate the vehicle type approval.

Wheel covers
Wheel covers and tyres that are factory approved for the respective vehicle and comply with all of the relevant wheel and tyre combination requirements must be used.

If the wheel covers and tyres used are not factory approved, the tyres must not have a rim protection ridge. Wheel covers must not impair brake cooling.

⚠️ Warning
Use of unsuitable tyres or wheel covers could lead to sudden pressure loss and thereby accidents.

Tyre chains
Tyre chains are only permitted on the front wheels. Always use fine mesh chains that add no more than 10 mm to the tyre tread and the inboard sides (including chain lock).

⚠️ Warning
Damage may lead to tyre blowout.

Tyre chains are only permitted on tyres of size 195/65 R 15, 205/55 R 16 and 225/45 R 17. Tyre chains are not permitted on tyres of size 225/40 R 18. The use of tyre chains is not permitted on the temporary spare wheel.

Tyre repair kit
Minor damage to the tyre tread can be repaired with the tyre repair kit. Do not remove foreign bodies from the tyres.
Tyre damage exceeding 4 mm or that is at the tyre's sidewall near the rim cannot be repaired with the tyre repair kit.

⚠️ Warning

Do not drive faster than 80 km/h.
Do not use for a lengthy period.
Steering and handling may be affected.

If you have a flat tyre:
Apply the parking brake and engage first gear, reverse gear or P.
The tyre repair kit is in the stowage compartment in the load compartment.

To open the compartment, disengage the cover and open it.

1. Take the sealant bottle and bracket with air hose from the insert.

2. Detach air hose from bracket and screw onto sealant bottle connection.
3. Position the sealant bottle on the bracket. Make sure that the bottle does not fall.

4. Unscrew valve cap from defective tyre.
5. Screw tyre inflation hose to valve.
6. Screw air hose onto compressor connection.
7. Switch on ignition.
   To avoid discharging the battery, we recommend running the engine.

8. Press on/off switch on the compressor. The tyre is filled with sealant.

9. The compressor pressure gauge briefly indicates up to 6 bar whilst the sealant bottle is emptying (approx. 30 seconds). Then the pressure starts to drop.

10. All of the sealant is pumped into the tyre. Then the tyre is inflated.

11. The prescribed tyre pressure should be obtained within 10 minutes. Tyre pressure \( \geq 218 \). When the correct pressure is obtained, switch off the compressor by pressing the on/off switch again.

If the prescribed tyre pressure is not obtained within 10 minutes, remove the tyre repair kit. Move the vehicle one tyre rotation. Reattach the tyre repair kit and continue the filling procedure for 10 minutes. If the prescribed tyre pressure is still not obtained, the tyre is too badly damaged. Seek the assistance of a workshop.

Release excess tyre pressure using the \( \Rightarrow \) button.
Do not run the compressor longer than 10 minutes.
12. Push catch on bracket to remove sealant bottle from bracket. Screw the tyre inflation hose to the free connection of the sealant bottle. This prevents sealant from escaping. Stow tyre repair kit in load compartment.

13. Remove any excess sealant using a cloth.

14. Take the label indicating maximum permitted speed from the sealant bottle and affix in the driver's field of view.

15. Continue driving immediately so that sealant is evenly distributed in the tyre. After driving approx. 10 km (but no more than 10 minutes), stop and check tyre pressure. Screw compressor air hose directly onto tyre valve and compressor when doing this. If tyre pressure is more than 1.3 bar, set it to the correct value. Repeat the procedure until there is no more loss of pressure. If the tyre pressure has fallen below 1.3 bar, the vehicle must not be used. Seek the assistance of a workshop.

16. Stow away tyre repair kit in load compartment.

Note
The driving characteristics of the repaired tyre is severely affected, therefore have this tyre replaced. If unusual noise is heard or the compressor becomes hot, turn compressor off for at least 30 minutes. The built-in safety valve opens at a pressure of 7 bar. Note the expiry date of the kit. After this date its sealing capability is no longer guaranteed. Pay attention to storage information on sealant bottle. Replace the used sealant bottle. Dispose of the bottle as prescribed by applicable laws.

18. The compressor and sealant can be used from approx. -30 °C. The adapters supplied can be used to pump up other items e.g. footballs, air mattresses, inflatable dinghies etc. They are located on the underside of the compressor. To remove, screw on compressor air hose and withdraw adapter.

Wheel changing
Some vehicles are equipped with a tyre repair kit instead of a spare wheel ✇ 187.

Make the following preparations and observe the following information:
- Park the vehicle on a level, firm and non-skid surface. The front wheels must be in the straight-ahead position.
- Apply the parking brake and engage first gear, reverse gear or P.
- Remove the spare wheel ✇ 193.
- Never change more than one wheel at once.
- Use the jack only to change wheels in case of puncture, not for seasonal winter or summer tyre change.
- If the ground on which the vehicle is standing is soft, a solid board (max. 1 cm thick) should be placed under the jack.
- No people or animals may be in the vehicle when it is jacked-up.
- Never crawl under a jacked-up vehicle.
- Do not start the vehicle when it is raised on the jack.
- Before screwing in the wheel bolts, clean them and lightly coat the taper of each wheel bolt with commercially available grease.

1. Pull off the wheel cover with the hook. Vehicle tools  183.
For wheel covers with visible wheel bolts: The cover can remain on the wheel. Do not remove the retaining rings on the wheel bolts.
Alloy wheels: Disengage wheel bolt caps with a screwdriver and remove. To protect the wheel, place a soft cloth between the screwdriver and the alloy wheel.

2. Variant 1:
   - Install the wheel wrench ensuring that it locates securely and loosen each wheel bolt by half a turn.
   - Fold out the wheel wrench and install ensuring that it locates securely and loosen each wheel nut by half a turn.
3. Ensure the jack is positioned correctly with the vehicle jacking points.
   Lifting the vehicle onto a lifting platform:
   Position the rear arm of the lifting platform at the underbody.
   Position the front arm of the lifting platform at the underbody.

4. Variant 1:
   Set the jack to the necessary height. Position it directly below the jacking point in a manner that prevents it from slipping.
   Attach jack handle and with the jack correctly aligned rotate handle until wheel is clear of the ground.
   Variant 2:
Set the jack to the necessary height. Position it directly below the jacking point in a manner that prevents it from slipping.

Attach wheel wrench and with the jack correctly aligned rotate wheel wrench until wheel is clear of the ground.

5. Unscrew the wheel bolts.
6. Change the wheel.
7. Screw on the wheel bolts.
8. Lower vehicle.
9. Install the wheel wrench ensuring that it locates securely and tighten each bolt in a crosswise sequence. Tightening torque is 110 Nm.
10. Align the valve hole in the wheel cover with the tyre valve before installing.
    Install wheel bolt caps.
11. Stow the replaced wheel and the vehicle tools.
12. Check the tyre pressure of the installed tyre and also the wheel bolt torque as soon as possible.

Have the defective tyre renewed or repaired.

Spare wheel

Some vehicles are equipped with a tyre repair kit instead of a spare wheel.

The spare wheel can be classified as a temporary spare wheel depending on the size compared to the other mounted wheels and country regulations.

The spare wheel has a steel rim.

The use of a spare wheel that is smaller than the other wheels or in combination with winter tyres could affect driveability. Have the defective tyre replaced as soon as possible.
The spare wheel is located in the load compartment beneath the floor covering. It is secured with a wing nut. The spare wheel well is not designed for all permissible tyre sizes. If a wheel wider than the spare wheel has to be stowed in the load compartment, it needs to be secured with a strap or, depending on the version, with an extension bar.

**Storing a replaced wheel in the load compartment using a strap**

Use the strap placed in the tool box. Vehicle tools \( \infty \) 183.

- Position the wheel on the load compartment floor close to one sidewall of the load compartment.

- Place the loop end of the strap through the front lashing eye of the according side.

- Place the hook end of the strap through the loop and pull it until the strap is fastened securely to the lashing eye.

- Insert the strap through the spokes of the wheel as shown in the illustration.

- Mount the hook to the rear lashing eye.

- Tighten the strap and secure it using the buckle.

**Storing a replaced wheel in the spare wheel well using an extension bar**

Use the extension bar placed in the tool box. Vehicle tools \( \infty \) 183.

- Turn the wing nut anticlockwise and remove temporary spare wheel.
Take the extension bar from the tool box and screw it on the bolt.

Store the damaged wheel and secure it by turning the wing nut clockwise.

The floor cover can be placed on the projecting wheel.

Remove the extension bar before fitting the spare wheel in the well after renewing or repairing the defective wheel.

### Warning

Storing a jack, a wheel or other equipment in the load compartment could cause injury if they are not fixed properly. During a sudden stop or a collision, loose equipment could strike someone.

Store jack and tools always in the respective storage compartments and secure them by fixing.

Place the damaged wheel always in the load compartment secured by the strap or in the spare wheel well secured by the wing nut.

#### Temporary spare wheel

The use of the temporary spare wheel could affect driveability. Have the defective tyre renewed or repaired as soon as possible.

Only mount one temporary spare wheel. Do not drive faster than 80 km/h. Take curves slowly. Do not use for a long period of time.

If your vehicle gets a flat tyre in the rear while towing another vehicle, mount the temporary spare wheel in the front and the full tyre in the rear.

Tyre chains 187.

### Directional tyres

Fit directional tyres such that they roll in the direction of travel. The rolling direction is indicated by a symbol (e.g. an arrow) on the sidewall.

The following applies to tyres fitted opposing the rolling direction:

- Driveability may be affected. Have the defective tyre renewed or repaired as soon as possible.
- Drive particularly carefully on wet and snow-covered road surfaces.
Jump starting

Do not start with quick charger.
A vehicle with a discharged battery can be started using jump leads and the battery of another vehicle.

⚠ Warning

Be extremely careful when starting with jump leads. Any deviation from the following instructions can lead to injuries or damage caused by battery explosion or damage to the electrical systems of both vehicles.

⚠ Warning

Avoid contact of the battery with eyes, skin, fabrics and painted surfaces. The fluid contains sulphuric acid which can cause injuries and damage in the event of direct contact.

- Never expose the battery to naked flames or sparks.
- A discharged battery can already freeze at a temperature of 0 °C. Defrost the frozen battery before connecting jump leads.
- Wear eye protection and protective clothing when handling a battery.
- Use a booster battery with the same voltage (12 volts). Its capacity (Ah) must not be much less than that of the discharged battery.
- Use jump leads with insulated terminals and a cross section of at least 16 mm\(^2\) (25 mm\(^2\) for diesel engines).
- Do not disconnect the discharged battery from the vehicle.
- Switch off all unnecessary electrical consumers.
- Do not lean over the battery during jump starting.
- Do not allow the terminals of one lead to touch those of the other lead.

- The vehicles must not come into contact with each other during the jump starting process.
- Apply the parking brake, transmission in neutral, automatic transmission in P.

Lead connection order:
1. Connect the red lead to the positive terminal of the booster battery.
2. Connect the other end of the red lead to the positive terminal of the discharged battery.
3. Connect the black lead to the negative terminal of the booster battery.
4. Connect the other end of the black lead to a vehicle grounding point, such as the engine block or an engine mounting bolt. Connect as far away from the discharged battery as possible, however at least 60 cm.

Route the leads so that they cannot catch on rotating parts in the engine compartment.

To start the engine:
1. Start the engine of the vehicle providing the jump.
2. After 5 minutes, start the other engine. Start attempts should be made for no longer than 15 seconds at an interval of 1 minute.
3. Allow both engines to idle for approx. 3 minutes with the leads connected.
4. Switch on electrical consumers (e.g. headlights, heated rear window) of the vehicle receiving the jump start.
5. Reverse above sequence exactly when removing leads.

**Towing**

**Towing the vehicle**

Disengage cap at bottom and remove downwards.
The towing eye is stowed with the vehicle tools 183.
Screw in the towing eye as far as it will go until it stops in a horizontal position.

Attach a tow rope – or better still a tow rod – to the towing eye.

The towing eye must only be used for towing and not for recovering the vehicle.

**Caution**

- Activate the child lock in both rear doors if the rear seats are occupied. Child locks 25.

Switch on ignition to release steering wheel lock and to permit operation of brake lights, horn and windscreen wiper.

Transmission in neutral.

**Caution**

- Drive slowly. Do not drive jerkily. Excessive tractive force can damage the vehicle.

When the engine is not running, considerably more force is needed to brake and steer.

To prevent the entry of exhaust gases from the towing vehicle, switch on the air recirculation and close the windows.

Vehicles with automatic transmission: The vehicle must be towed facing forwards, not faster than 80 km/h nor further than 100 km. In all other cases and when the transmission is defective, the front axle must be raised off the ground.

Seek the assistance of a workshop.

After towing, unscrew the towing eye.

Insert cap at the bottom and close cap.

**Towing another vehicle**

Disengage the cap at the bottom and remove downwards.

The towing eye is stowed with the vehicle tools 183.
Vehicle care

Screw in the towing eye as far as it will go until it stops in a horizontal position.
The lashing eye at the rear underneath the vehicle must never be used as a towing eye.
Attach a tow rope – or even better a tow bar – to the towing eye.
The towing eye must only be used for towing and not for recovering a vehicle.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drive slowly. Do not drive jerkily. Excessive tractive force can damage the vehicle.</td>
</tr>
</tbody>
</table>

After towing, unscrew the towing eye. Insert cap at the bottom and engage cap.

Appearance care

Exterior care

Locks
The locks are lubricated at the factory using a high quality lock cylinder grease. Use de-icing agent only when absolutely necessary, as this has a degreasing effect and impairs lock function. After using de-icing agent, have the locks regreased by a workshop.

Washing
The paintwork of your vehicle is exposed to environmental influences. Wash and wax your vehicle regularly. When using automatic vehicle washes, select a programme that includes waxing.
Bird droppings, dead insects, resin, pollen and the like should be cleaned off immediately, as they contain aggressive constituents which can cause paint damage.
If using a vehicle wash, comply with the vehicle wash manufacturer's instructions. The windscreen wiper and rear window wiper must be switched off. Remove antenna and external accessories such as roof racks etc.

If you wash your vehicle by hand, make sure that the insides of the wheel housings are also thoroughly rinsed out.

Clean edges and folds on opened doors and the bonnet as well as the areas they cover.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Always use a cleaning agent with a pH value of 4 to 9.</td>
</tr>
<tr>
<td>Do not use cleaning agents on hot surfaces.</td>
</tr>
</tbody>
</table>

Have the door hinges of all doors greased by a workshop.

Do not clean the engine compartment with a steam-jet or high-pressure jet cleaner.

Thoroughly rinse and leather-off the vehicle. Rinse leather frequently. Use separate leathers for painted and glass surfaces: remnants of wax on the windows will impair vision.

Do not use hard objects to remove spots of tar. Use tar removal spray on painted surfaces.

**Exterior lights**

Headlight and other light covers are made of plastic. Do not use any abrasive or caustic agents, do not use an ice scraper, and do not clean them dry.

**Polishing and waxing**

Wax the vehicle regularly (at the latest when water no longer beads). Otherwise, the paintwork will dry out. Polishing is necessary only if the paint has become dull or if solid deposits have become attached to it.

Paintwork polish with silicone forms a protective film, making waxing unnecessary.

Plastic body parts must not be treated with wax or polishing agents.

**Windows and windscreen wiper blades**

Use a soft lint-free cloth or chamois leather together with window cleaner and insect remover.

When cleaning the rear window, make sure the heating element inside is not damaged.

For mechanical removal of ice, use a sharp-edged ice scraper. Press the scraper firmly against the glass so that no dirt can get under it and scratch the glass.

Clean smearing wiper blades with a soft cloth and window cleaner.

**Moonroof**

Never clean with solvents or abrasive agents, fuels, aggressive media (e.g. paint cleaner, acetone-containing solutions etc.), acidic or highly alkaline media or abrasive pads. Do not apply wax or polishing agents to the middle part of the moonroof.

**Wheels and tyres**

Do not use high-pressure jet cleaners.
Clean rims with a pH-neutral wheel cleaner.
Rims are painted and can be treated with the same agents as the body.

**Paintwork damage**
Rectify minor paintwork damage with a touch-up pen before rust forms. Have more extensive damage or rust areas repaired by a workshop.

**Underbody**
Some areas of the vehicle underbody have a PVC undercoating while other critical areas have a durable protective wax coating. After the underbody is washed, check the underbody and have it waxed if necessary. Bitumen/rubber materials could damage the PVC coating. Have underbody work carried out by a workshop. Before and after winter, wash the underbody and have the protective wax coating checked.

<table>
<thead>
<tr>
<th>Liquid gas system</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Danger</strong></td>
</tr>
<tr>
<td>Liquid gas is heavier than air and can collect in sink points. Take care when performing work at the underbody in a pit.</td>
</tr>
</tbody>
</table>

For painting work and when using a drying booth at a temperature above 60 °C, the liquid gas tank must be removed. Do not make any modifications to the liquid gas system.

**Towing equipment**
Do not clean the coupling ball bar with a steam-jet or high-pressure jet cleaner.

**Rear carrier system**
Clean the rear carrier system with a steam-jet or high-pressure jet cleaner at least once a year. Operate the rear carrier system periodically if not in regular use, in particular during winter.

**Interior care**

**Interior and upholstery**
Only clean the vehicle interior, including the instrument panel fascia and panelling, with a dry cloth or interior cleaner. Clean the leather upholstery with clear water and a soft cloth. In case of heavy soiling, use leather care. The instrument panel should only be cleaned using a soft damp cloth. Clean fabric upholstery with a vacuum cleaner and brush. Remove stains with an upholstery cleaner. Clothing fabrics may not be colourfast. This could cause visible discolourations, especially on light-coloured upholstery. Removable stains and discolourations should be cleaned as soon as possible. Clean seat belts with lukewarm water or interior cleaner.
### Caution

Close Velcro fasteners as open Velcro fasteners on clothing could damage seat upholstery.

The same applies to clothing with sharp-edged objects, like zips or belts or studded jeans.

### Plastic and rubber parts

Plastic and rubber parts can be cleaned with the same cleaner as used to clean the body. Use interior cleaner if necessary. Do not use any other agent. Avoid solvents and petrol in particular. Do not use high-pressure jet cleaners.
Service and maintenance

General information
Service information
In order to ensure economical and safe vehicle operation and to maintain the value of your vehicle, it is of vital importance that all maintenance work is carried out at the proper intervals as specified.
The detailed, up-to-date service schedule for your vehicle is available at the workshop.
Service display 88.

European service intervals
Maintenance of your vehicle is required every 30000 km or after 1 year, whichever occurs first, unless otherwise indicated in the service display.
The European service intervals are valid for the following countries:
Andorra, Austria, Belgium, Bosnia-Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Greenland, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Macedonia, Malta, Montenegro, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, United Kingdom.

International service intervals
Maintenance of your vehicle is required every 15000 km or after 1 year, whichever occurs first, unless otherwise indicated in the service display.
The international service intervals are valid for the countries which are not listed in the European service intervals.

Confirmations
Confirmation of service is recorded in the Service and Warranty Booklet. The date and mileage is completed with the stamp and signature of the servicing workshop.
Make sure that the Service and Warranty Booklet is completed correctly as continuous proof of service is essential if any warranty or goodwill claims are to be met, and is also a benefit when selling the vehicle.

**Service interval with remaining engine oil life duration**
The service interval is based on several parameters depending on usage.
The service display lets you know when to change the engine oil. Service display 88.

### Recommended fluids, lubricants and parts

#### Recommended fluids and lubricants

Only use products that meet the recommended specifications. Damage resulting from the use of products not compliant with these specifications will not be covered by the warranty.

#### Warning

**Warning**

Operating materials are hazardous and could be poisonous. Handle with care. Pay attention to information given on the containers.

#### Engine oil

Engine oil is identified by its quality and its viscosity. Quality is more important than viscosity when selecting which engine oil to use. The oil quality ensures e.g. engine cleanliness, wear protection and oil aging control, whereas viscosity grade gives information on the oil's thickness over a temperature range.

Dexos is the newest engine oil quality that provides optimum protection for gasoline and diesel engines. If it is unavailable, engine oils of other listed qualities have to be used. Recommendations for gasoline engines are also valid for Compressed Natural Gas (CNG), Liquified Petroleum Gas (LPG) and Ethanol (E85) fuelled engines.

Select the appropriate engine oil based on its quality and on the minimum ambient temperature 208.

#### Topping up engine oil

Engine oils of different manufacturers and brands can be mixed as long as they comply with the required engine oil quality and viscosity.

Use of engine oil with only ACEA A1/B1 or only A5/B5 quality is prohibited, since it can cause long-term engine damage under certain operating conditions.
Select the appropriate engine oil based on its quality and on the minimum ambient temperature \( \diamond \) 208.

**Additional engine oil additives**
The use of additional engine oil additives could cause damage and invalidate the warranty.

**Engine oil viscosity grades**
The SAE viscosity grade gives information of the thickness of the oil.

Multigrade oil is indicated by two figures, e.g. SAE 5W-30. The first figure, followed by a W, indicates the low temperature viscosity and the second figure the high temperature viscosity.

Select the appropriate viscosity grade depending on the minimum ambient temperature \( \diamond \) 208.

All of the recommended viscosity grades are suitable for high ambient temperatures.

---

**Coolant and antifreeze**
Use only silicate-free long life coolant (LLC) antifreeze.

The system is factory filled with coolant designed for excellent corrosion protection and frost protection down to approx. -28 °C. This concentration should be maintained all year round. The use of additional coolant additives that intend to give additional corrosion protection or seal against minor leaks can cause function problems. Liability for consequences resulting from the use of additional coolant additives will be rejected.

**Brake and clutch fluid**
Only use high-performance brake fluid approved for the vehicle, consult a workshop.

Over time, brake fluid absorbs moisture which will reduce braking effectiveness. The brake fluid should therefore be replaced at the specified interval.

Brake fluid should be stored in a sealed container to avoid water absorption.

Ensure brake fluid does not become contaminated.
Vehicle identification

Vehicle Identification Number

The Vehicle Identification Number is stamped on the identification plate and on the floor pan, under the floor covering, visible under a cover.

The Vehicle Identification Number may be embossed on the instrument panel visible through the windscreen.
Identification plate

The identification plate is located on the rear right-hand door frame.

Information on identification label:

1 = Manufacturer
2 = Type approval number
3 = Vehicle Identification Number
4 = Permissible gross vehicle weight rating in kg
5 = Permissible gross train weight in kg
6 = Maximum permissible front axle load in kg
7 = Maximum permissible rear axle load in kg
8 = Vehicle-specific or country-specific data

The combined total of front and rear axle loads must not exceed the permissible gross vehicle weight. For example, if the front axle is bearing its maximum permissible load, the rear axle can only bear a load that is equal to the gross vehicle weight minus the front axle load.

The technical data is determined in accordance with European Community standards. We reserve the right to make modifications.

Specifications in the vehicle documents always have priority over those given in this manual.

Vehicle data recording and privacy ........................................... 221

Vehicle data recording and privacy

Event data recorders

Data storage modules in the vehicle
A large number of electronic components of your vehicle contain data storage modules temporarily or permanently storing technical data about the condition of the vehicle, events and errors. In general, this technical information documents the condition of parts, modules, systems or the environment:

- Operating conditions of system components (e.g. filling levels)
- Status messages of the vehicle and its single components (e.g. number of wheel revolutions / rotational speed, deceleration, lateral acceleration)
- Dysfunctions and defects in important system components

- Vehicle reactions in particular driving situations (e.g. inflation of an airbag, activation of the stability regulation system)
- Environmental conditions (e.g. temperature)

These data are exclusively technical and help identifying and correcting errors as well as optimizing vehicle functions.

Motion profiles indicating travelled routes cannot be created with these data.

If services are used (e.g. repair works, service processes, warranty cases, quality assurance), employees of the service network (manufacturer included) are able to read out this technical information from the event and error data storage modules applying special diagnostic devices. If required, you will receive further information at these workshops. After an error has been corrected, the data are deleted from the error storage module or they are constantly overwritten.
When using the vehicle, situations may occur in which these technical data related to other information (accident report, damages on the vehicle, witness statements etc.) may be associated with a specific person - possibly, with the assistance of an expert.

Additional functions contractually agreed upon with the client (e.g. vehicle location in emergency cases) allow the transmission of particular vehicle data from the vehicle.

Radio Frequency Identification (RFID)

RFID technology is used in some vehicles for functions such as tyre deflation detection and ignition system security. It is also used in connection with conveniences such as radio remote controls for door locking/unlocking and starting, and in-vehicle transmitters for garage door openers. RFID technology in Opel vehicles does not use or record personal information or link with any other Opel system containing personal information.
