General information

The Infotainment system provides you with state-of-the-art in-car infotainment. The radio can easily be used by registering a large number of FM, AM and DAB (Digital Audio Broadcasting) radio stations with the 1...6 preset buttons. You can connect external data storage devices, e.g. iPod, USB devices, or other auxiliary devices to the Infotainment system as further audio sources; either via cable or via Bluetooth.

In addition, the Infotainment system is equipped with a phone application that allows for comfortable and safe use of your mobile phone in the vehicle. Optionally, the Infotainment system can be operated using the instrument panel controls, the controls on the steering wheel or the speech recognition function.

The well-thought-out design of the control elements and the clear displays enable you to control the system easily and intuitively. Information on operation details and news on software updates can be obtained on our website.

Note

This manual describes all options and features available for the various Infotainment systems. Certain descriptions, including those for display and menu functions, may not apply to your vehicle due to model variant, country specifications, special equipment or accessories.

Important information on operation and traffic safety

⚠️ Warning

The Infotainment system must be used so that the vehicle can be driven safely at all times. If in
doubt, stop the vehicle and operate the Infotainment system while the vehicle is stationary.

⚠️ Warning

The usage of the navigation system does not release the driver from the responsibility for a correct, vigilant attitude in road traffic. The related traffic regulations must always be followed.

Only make entries (e.g. addresses) with the vehicle stationary.

If a navigation instruction contradicts traffic regulations, the traffic regulations always apply.

⚠️ Warning

Areas such as one-way streets and pedestrian zones are not marked on the navigation system map. In such areas, the system may issue a warning that must be accepted. Therefore, pay particular attention to one-way streets and other roads and entrances that must not be driven into.

Radio reception

Radio reception may be disrupted by static, noise, distortion or loss of reception due to:

- changes in distance from the transmitter,
- multi-path reception due to reflection,
- shadowing.

Theft-deterrent feature

The Infotainment system is equipped with an electronic security system for the purpose of theft deterrence. The Infotainment system therefore functions only in your vehicle and is worthless to a thief.

Usage

Control elements
The Infotainment system is operated via function buttons, a multifunction knob and menus that are shown on the display.

Inputs are made optionally via:
- the central control unit on the instrument panel 8
- controls on the steering wheel 8
- the speech recognition system 55.

Note
Only the most direct ways for menu operation are described in the subsequent chapters. In some cases, there may be other options.

Switching the Infotainment system on or off
Press the knob briefly. After switching on, the last selected Infotainment source becomes active.

Automatic switch-off
If the Infotainment system is switched on using the knob while the ignition is switched off, it switches off again automatically after 10 minutes.

Setting the volume
Turn the knob. The current setting is shown in a pop-up at the bottom of the screen.

When the Infotainment system is switched on, the last selected volume is set, provided that the volume is lower than the maximum start-up volume.

The following volume settings can be set separately:
- the maximum start-up volume 20
- the volume of the traffic announcements 20
- the volume of the navigation messages 38.
Auto volume
When auto volume is activated  
20, the volume is adapted automatically to compensate for the road and wind noise as you drive.

Mute
Press the button (if Phone portal is available: press for a few seconds) to mute the audio sources.
To cancel mute again: turn the VOL knob or press the button again (if Phone portal is available: press for a few seconds).

Volume limitation at high temperatures
At very high temperatures inside the vehicle, the Infotainment system limits the maximum adjustable volume. If necessary, the volume is decreased automatically.

Modes of operation
Audio players
Repeatedly press the SRCE button to toggle between the AM, FM, CD, USB, AUX, Bluetooth or DAB main menus.
For detailed descriptions of:
- CD/MP3 player  
- USB port
- AUX input
- Bluetooth audio
- AM radio
- FM radio
- DAB radio.

Navigation
Press the NAV button to display the map of the navigation application.
Press the multifunction knob to open a submenu with options for the input of destinations and the structuring of a route.
For a detailed description of the navigation functions  

Phone
Press the button to display the phone main menu with options for the input or selection of numbers.
For a detailed description of the mobile phone functions  

Note
Brief information on the audio sources and the current navigation session may be displayed via the Quick Info application.
Basic operation

Multifunction knob
The multifunction knob is the central control element for the menus.

Turn the multifunction knob:
- To mark a menu option.
- To set an alphanumeric value.

Press the multifunction knob (Navi 950: press the outer ring):
- To select or activate the marked option.
- To confirm a set value.
- To switch a system function on/off.
- To open the audio or navigation menu within the respective application.

Press the button to access the Home Page.

Using the multifunction knob, you may then access the different applications.

Turn the multifunction knob to select the More screen button at the bottom of the screen.
Press the multifunction knob (Navi 950: press the outer ring) to display the second Home Page with further applications.

Using the multifunction knob, you may then access the different applications.

Note
Most of the applications or application menus may also be directly accessed via the buttons on the instrument panel.

**BACK button**
Press the BACK button to:
- Exit a menu or screen.
- Return from a submenu to the next higher menu level.
- Delete the last character in a character sequence.

Press and hold the BACK button for a few seconds to delete the entire entry.

**Examples of menu operation**

**Selecting a screen element**
Turn the multifunction knob to move the cursor (= coloured background) to the desired option.

Press the multifunction knob to select the marked icon, screen button or menu item.

Note
In subsequent chapters the operating steps for selecting and activating a screen button or menu item will be described as "...select the...screen button..." or "...select the...menu item...".

**Scrolling lists**

If there are more menu items available in a list than presentable on the screen, a scroll bar is displayed.

Turn the multifunction button clockwise to scroll downwards and anticlockwise to scroll upwards.

Note
In subsequent chapters the operating steps for scrolling a list will be described as "...scroll to...menu item...".
Basic operation

Adjusting a setting

Turn the multifunction knob to change the current value of the setting.

Press the multifunction knob to confirm the set value.

Note
In subsequent chapters the operating steps for adjusting a setting will be described as "...adjust the...setting...".

Activating a menu item

Turn the multifunction knob to move the cursor (= coloured background) to the desired option.

Note
In subsequent chapters the operating steps for activating a menu item will be described as "...activate the...menu item...".

Entering a character sequence

Turn the multifunction knob to select the desired character.

Press the multifunction knob to enter the respective character in the entry field at the top of the screen.

The last character in the character sequence can be deleted using the Del screen button or the BACK button. Pressing and holding the BACK button deletes the entire entry.

Press the multifunction knob to confirm the selected character.

Note
In subsequent chapters the operating steps for entering characters will be described as "...enter the desired characters...".

Messages

Before a system function is executed, you are sometimes prompted with a message. If requested, select one of the options.
The selection and activation of a screen button in a message function are the same as described for selecting an option in a menu.

**Tone settings**
Press the \( \text{More} \) button and then select the \text{More} screen button at the bottom of the screen. On the second \text{Home Page}, select the \text{Tone} icon. The tone settings menu is displayed.

**Bass**
Use this setting to enhance or attenuate the deep frequencies of the audio sources. Adjust the setting as desired.

**Mid**
Use this setting to enhance or attenuate the midrange frequencies of the audio source. Adjust the setting as desired.

**Treble**
Use this setting to enhance or attenuate the high frequencies of the audio sources.

**EQ mode**
(EQ: Equaliser)
Use this setting to optimise the tone for a specific style of music, e.g. \text{Rock} or \text{Classical}.
Select the \text{EQ} menu item. A submenu with predefined sound styles is displayed.
Select the desired sound style.
If one of the predefined sound styles is selected, \text{Bass}, \text{Mid} and \text{Treble} are preadjusted by the system.
If you manually adjust one of the settings described above, \text{EQ} is set to \text{Manual}.

**Fade and Balance**
When \text{Fade} or \text{Balance} are selected, an illustration is displayed on the right side of the screen.
Basic operation

To adjust the volume distribution between the front and rear speakers in the vehicle, select the **Fade** menu item. Adjust the setting as desired.

To adjust the volume distribution between the left and right speakers in the vehicle, select the **Balance** menu item. Adjust the setting as desired.

**Volume settings**

**Adjusting the Auto Volume**
Press the **CONFIG** button and then select the **Radio Settings** option.

Select **Auto Volume** to display the respective menu.

To adjust the degree of volume adaptation, set **Auto Volume** to **Off**, **Low**, **Medium** or **High**.

- **Off**: no enhancement of volume with increasing vehicle speed.
- **High**: maximum enhancement of volume with increasing vehicle speed.

**Adjusting the Startup Volume**
Press the **CONFIG** button and then select the **Radio Settings** menu item.
Select **Startup Volume** to display the respective menu.
Adjust the setting as desired.

**Adjusting the volume of traffic announcements**
The volume of traffic announcements can be preset to a level independent of the "normal" volume level.
Press the **CONFIG** button and then select the **Radio Settings** menu item.

Select **RDS Options** and then **Traffic Volume** to display the respective menu.
Adjust the setting as desired.

**Note**
While an announcement is given out, the volume may simply be adjusted using the knob.

**Adjusting the Chime Volume**
When operating the controls in the vehicle, beeping sounds confirm your actions. The volume of the beeping sounds may be adjusted.
Press the **CONFIG** button and then select the **Vehicle Settings** menu item.
Select **Comfort and Convenience** and then **Chime Volume** to display the respective submenu. Select **Low** or **High**.

**Adjusting the Navigation Volume**
Press the **CONFIG** button and then select the **Navigation Settings** menu item.
Select the **Voice Prompt** menu item and then **Navigation Volume**. The respective submenu is displayed.

To adjust the volume of the announcements, select **Announcement** and then adjust the setting as desired.

To adjust the volume of the audio source possibly playing in the background, select **Background** and then adjust the setting as desired.

Select **Volume Test** to get an audio example of the settings.

**Note**
While an announcement is given out, the volume may simply be adjusted using the ◙ knob.

**System settings**
Various Infotainment system settings may be adjusted via the **Config** application.

**Language settings**
Press the **CONFIG** button and then select the **Languages** menu item. A list of all languages available is displayed.

Select the desired language.

**Time and date settings**
Press the **CONFIG** button and then select the **Time and Date** menu item to display the respective submenu.

**Note**
If **RDS Auto Time Adjust** is activated ◙ 27, time and date are automatically set by the system.

**Set time**
To adjust the time settings, select the **Set Time** menu item. Adjust the settings as desired.

**Set date**
To adjust the date settings, select the **Set Date** menu item. Adjust the settings as desired.
**Basic operation**

**Time format**
To choose the desired time format, select the **12 hr / 24 hr Format** menu item. A submenu is displayed. Activate **12 Hour** or **24 Hour**.

**Software information**
Press the **CONFIG** button and then select the **Radio Settings** menu item. Scroll through the list and select **Software Versions Menu** to display the respective submenu.

**Software version information**
To display a list of all software versions installed, select **Software Version Information**.
By default, all versions are activated.

**Software update**
To update your system software, contact your Opel Service Partner.

**Log file**
To generate a log file of your current software version, select the **Create Log File** menu item.

**Licensing information**
To display information on the manufacturer of the Infotainment system, select **Licensing Information**.

**Factory defaults**
To reset all Infotainment settings to their factory defaults, select **Clear and Reset Radio**.

**Display settings**
Press the **CONFIG** button and then select the **Display Settings** menu item to display the respective submenu.

**Home Page**
Select **Home Page Menu** to display the home page settings menu.
To access the menu from the **Home Page**, select the **Menu** screen button at the bottom of the screen.
The **Home Page** may be adjusted according to your personal preferences.

**Customise**
The application icons displayed on the first home page may be chosen as desired.

Select the **Customise** menu item to display a list of all applications installed in the system. Activate the menu items of those applications you wish to be displayed on the first home page.
The other applications are then arranged on the following pages.

**Sort**
Up to eight application icons may be arranged on each home page.
The positions of the icons can be changed as desired.
Select the **Sort** menu item to display the home pages in edit mode.
Select the icon you wish to move.
Scroll to the position on the home page where you wish the icon to be located. Press the multifunction knob to confirm.
The icon is moved to the new location. The icon that was located in that position before is now displayed in the position of the moved icon.
Home page defaults
To reset the **Home Page** to its factory defaults, select **Restore Home Page Defaults**.

Display Off
To turn the display off, select **Display Off**.
To turn the display back on, press any button on the instrument panel (except the VOL knob).
Radio

Usage ........................................ 24
Station search .............................. 24
Autostore lists ............................. 25
Favourite lists ............................. 26
Radio data system (RDS) ............... 27
Digital audio broadcasting .......... 29

Usage

Activating radio
Press the  button and then select the AM, FM or DAB icon.
The station last selected is played.

Note
When an audio source is already active, you may toggle between the
different audio sources by repeatedly pressing the SRCE
button.

Station search

Automatic station search
Briefly press the or buttons to
play the next station in the station
memory.

Manual station search
Press and hold the or buttons.
Release the button when the required
frequency has almost been reached
on the frequency display.

Manual station tuning

In the FM and DAB waveband, press
the multifunction knob to open the
respective menu and then select
Manual tuning. The frequency
currently active is displayed at the
bottom of the screen.
Turn the multifunction knob to reach
the desired frequency.
In the AM waveband, turn the
multifunction knob to adjust the
frequency.

Station lists

In the FM and DAB waveband, turn
the multifunction knob to display the
station list.
In the AM waveband, press the
multifunction knob to display the
respective waveband menu.
Select AM Station List.
A list of all receivable stations of the
relevant waveband and in the current
reception area is displayed.
Radio

Note
If no station list has been created beforehand, the Infotainment system performs an automatic station search.

Select the desired station.

Note
The currently received station is marked by i.

Category list
Numerous RDS ◇ 27 and DAB ◇ 29 stations broadcast a PTY code, which specifies the type of programme transmitted (e.g. news).

Some stations also change the PTY code depending on the content which is currently transmitted.

The Infotainment system stores these stations in the corresponding category list sorted by programme type.

Note
The category list submenu item is only available for the FM and the DAB wavebands.

To search for a programme type determined by the stations, select the waveband specific category list option.

A list of programme types currently available is displayed.

Select the desired programme type. A list of stations is displayed transmitting a programme of the selected type.

Select the desired station.

Note
The currently received station is marked by i.

Updating the station lists
If the stations stored in the waveband-specific station list can no longer be received, the AM and the DAB station lists must be updated.

Note
The FM station list is updated automatically.

Select the corresponding list item in the waveband-specific menu to update a station list.

A station search is started. Once the search is finished, the station previously selected is played.

To cancel the station search, press the multifunction knob.

Note
If a waveband-specific station list is updated, the corresponding category list is also updated.

Autostore lists
The stations best received in a waveband can be stored in and selected from the autostore lists.
Each waveband has 2 autostore lists (AS 1, AS 2), in each of which 6 stations can be stored.

**Note**  
The currently received station is highlighted.

**Automatic station storing**  
Keep the AS button pressed until an autostore message is displayed. The 12 strongest stations in the current waveband are stored in the two autostore lists.

To cancel the autostore procedure, select the **Cancel** screen button.

---

**Storing stations manually**  
Stations can also be stored manually in the autostore lists.

Set the station to be stored.

Press the **AS** button to open the autostore list or to switch to another autostore list.

To store the station in a list position: press the corresponding station button 1...6 until a confirmation message is displayed.

**Note**  
Manually stored stations are overwritten in an automatic station storing process.

**Retrieving a station**  
If required, press the **AS** button to open an autostore list or to switch to another autostore list.

Press one of the station buttons 1...6 to activate the station at the corresponding list position.

---

**Favourite lists**  
Stations of all wavebands can be stored manually in the favourite lists.

6 stations can be stored in each favourite list. The number of available favourite lists can be set (see below).

**Note**  
The currently received station is highlighted.

**Storing a station**  
Set the station to be stored.

Briefly press the **FAV** button to open a favourite list or to switch to another favourite list.

To store the station in a list position: press the corresponding station button 1...6 until a confirmation message is displayed.
Retrieving a station
If required, briefly press the FAV button to open a favourite list or to switch to another favourite list. Press one of the station buttons 1…6 to activate the station stored in the respective location.

Defining the number of favourite lists
Press the CONFIG button and then select the Radio Settings menu item. Select Number of Favourite Pages to display the respective submenu. Select the number of favourite pages you wish to be displayed.

Radio data system (RDS)
RDS is a service of FM stations that considerably facilitates the finding of the desired station and its fault-free reception.

Advantages of RDS
- On the display the programme name of the set station appears instead of its frequency.
- During station search the Infotainment system tunes in to RDS stations only.
- The Infotainment system always tunes in to the best receivable broadcasting frequency of the set station by means of AF (Alternative Frequency).
- Depending on the station that is received the Infotainment system displays radio text that can contain, for example, information on the current programme.

RDS Options menu
To open the menu for the RDS configuration, press the CONFIG button and then select the Radio Settings menu item. Select RDS Options to display the respective submenu.

Activating the RDS function
Activate the RDS menu item.

Note
If RDS is deactivated, not all menu items of the RDS Options menu are displayed.

Regional
RDS stations sometimes broadcast regionally different programmes on different frequencies.

If Regional is activated, only alternative frequencies (AF) with the same regional programmes are selected.
If **Regional** is deactivated, alternative frequencies of the stations are selected without regard to regional programmes.

**Text Scroll Freeze**
Some RDS stations do not only show the programme service name on the display, but also additional information on the current programme. If additional information is displayed, the programme name is hidden.

To prevent additional information from being displayed, activate the **Text Scroll Freeze** menu item.

**Radio Text**
If RDS and the reception of an RDS station are activated, information on the radio programme currently active or the music track currently playing are displayed below the programme name.

To show or hide the information, activate or deactivate the **Radio Text** menu item.

**Radio traffic service**
**TP = Traffic Programme**
Radio traffic service stations are RDS stations that broadcast traffic news.

If the radio traffic service is switched on, radio or media playback is interrupted for the duration of the traffic announcement.

**Switching the radio traffic service on and off**
To switch the traffic announcement standby facility of the Infotainment system on and off, press the **TP** button.

- If the radio traffic service is switched on, [ ] is indicated on the display.
- If the current station is not a radio traffic service station, a search is started automatically for the next radio traffic service station.
- If a radio traffic service station has been found, [TP] is indicated on the display.

**Traffic Volume**
To adjust the volume of traffic announcements, select the **Traffic Volume** menu item. The respective submenu is displayed. Adjust the setting as desired.

**Listening to traffic announcements only**
Switch on the radio traffic service and completely turn down the volume of the Infotainment system.

**Blocking out traffic announcements**
To block out a traffic announcement, e.g. during CD/MP3 playback:
Press the **TP** button or select the **Cancel** screen button in the TP message.

The traffic announcement is cancelled, but the radio traffic service remains switched on.

**Auto Time Adjust**
The system constantly receives information on the current time and date.
If you wish the time and date settings to be updated automatically, activate the RDS Auto Time Adjust menu item. If you wish to set time and date manually, deactivate the RDS Auto Time Adjust menu item.

Digital audio broadcasting
Digital audio broadcasting (DAB) is an innovative and universal broadcast system.

General information
■ DAB stations are indicated by the programme name instead of the broadcasting frequency.
■ With DAB, several radio programmes (services) can be broadcasted on a single frequency (ensemble).
■ Besides high-quality digital audio services, DAB is also able to transmit programme-associated data and a multitude of other data services including travel and traffic information.

- As long as a given DAB receiver can pick up the signal sent out by a broadcasting station (even if the signal is very weak), sound reproduction is ensured.
- There is no fading (weakening of the sound) that is typical of AM or FM reception. The DAB signal is reproduced at a constant volume.
- Interference caused by stations that are on nearby frequencies (a phenomenon that is typical of AM and FM reception) does not occur with DAB.
- If the DAB signal is too weak to be picked up by the receiver, the system switches over to the same programme on another DAB or FM station.
- If the DAB signal is reflected by natural obstacles or buildings, the reception quality of DAB is improved, whereas AM or FM reception is considerably impaired in such cases.
- When DAB reception is enabled, the FM tuner of the Infotainment system remains active in the background and continually searches for the best receivable FM stations. If TP $27$ is activated, traffic announcements of the FM station which is currently best received are issued. Deactivate TP, if DAB reception should not be interrupted by FM traffic announcements.

DAB announcements
Besides their music programmes, lots of DAB stations also broadcast announcements of various categories.

While being in the DAB main menu, press the multifunction knob to open the DAB menu and then select Announcements.

If you activate some or all categories, the currently received DAB service is interrupted when an announcement of these categories is made. Activate the desired categories.
General information

Important information about audio CDs and MP3/WMA CDs
The Infotainment system's CD player can play audio CDs and MP3/WMA CDs.

Caution
Under no circumstances place DVDs, single-CDs with a diameter of 8 cm or shaped CDs in the audio player.
You must not put any stickers on CDs. These discs can get jammed in the CD drive and ruin the player. Replacement of the device will then be necessary.

File formats

Audio CDs
The following CD formats can be used: CD-ROM Mode 1 and Mode 2; CD-ROM XA Mode 2, Form 1 and Form 2.

MP3 CDs
The following file formats can be used: ISO9660 Level 1, Level 2, (Romeo, Joliet).
MP3 and WMA files written in any format other than listed above may not play correctly, and their file names and folder names may not be displayed correctly.
The following restrictions apply for the data stored on an MP3/WMA CD:
Number of tracks: max. 999.
Number of folders: max. 255.
Folder structure depth: max. 64 levels (recommended: max. 8 levels).
Number of playlists: max. 15.
Number of songs per playlist: max. 255.
Applicable playlist extensions: .m3u, .pls, .asx, .wpl.
Usage

Starting CD playback
Push the CD with the labelled side facing upwards into the CD slot until it is pulled in.

CD playback starts automatically and the CD or MP3 CD main menu is displayed.

If there is already a CD inserted, but the CD or MP3 CD main menu is not active, press the CD button and then select the CD icon.

The CD or MP3 CD main menu is displayed and CD playback is started.

Depending on the data stored on the audio CD or MP3 CD, more or less detailed information on the CD and the current music track are shown on the display.

Note
When an audio source is already active, you may toggle between the different audio sources by repeatedly pressing the SRCE button.

Removing a CD
Press the CD button.
The CD is pushed out of the CD slot.

If the CD is not removed after ejection, it will be drawn back in again automatically after a few seconds.

Track List
Turn the multifunction knob to display a list of all tracks on the CD.

Note
The currently playing track is marked by ♫.

Select the desired track.

Function buttons

Skipping to previous or next track
Press the ◄ or ► buttons once or several times to skip to the previous or next track.

Fast forwarding or rewinding
Press and hold the ◄ or ► buttons to fast forward or rewind the current track.

Pausing playback
Press the ■ button to pause playback.

Audio menu
Press the multifunction knob to display the CD or MP3 menu.

Note
For a description of the functions in the MP3 menu 34.

Shuffle function
To play the tracks on the CD in random order, activate the Shuffle menu item.
To return to the normal playing order, deactivate the Shuffle menu item.
External devices

General information
Sockets for the connection of external devices are located in the centre console hidden behind a cover.

Note
The sockets must always be kept clean and dry.

AUX input
It is possible to connect e.g. an iPod, Smartphone or another auxiliary device to the AUX input. The Infotainment system can play music files contained in auxiliary devices. When connected to the AUX input, the audio signal of the auxiliary device is transmitted via the speakers of the Infotainment system. The volume can be adjusted via the Infotainment system. All other control functions must be operated via the auxiliary device.

Connecting a device
To connect the auxiliary device to the AUX input socket of the Infotainment system, use the following cable: 3-pole for audio source.

To disconnect the AUX device, select another function and then remove the AUX device.

USB port
An MP3 player, USB device, iPod or Smartphone can be connected to the USB port. The Infotainment system can play music files or display pictures contained in auxiliary devices.

When connected to the USB port, the devices mentioned above can be operated via the controls and menus of the Infotainment system.

Note
Not all MP3 players, USB drives, iPod models or Smartphones are supported by the Infotainment system.

Connecting/disconnecting a device
Connect the device to the USB port. For the iPod, use the appropriate connection cable.

Note
If a non-readable USB device or iPod is connected, a corresponding error message will appear and the

Infotainment system will automatically switch to the previous function.

To disconnect the USB device or iPod, select another function and then remove the USB storage device.

Caution
Avoid disconnecting the device during playback. This may damage the device or the Infotainment system.

Bluetooth
Bluetooth enabled audio sources (e.g. music mobile phones, MP3 players featuring Bluetooth, etc.), which support the Bluetooth music profiles A2DP and AVRCP can be connected wirelessly to the Infotainment system.

The Infotainment system can play music files contained in Bluetooth devices, e.g. iPod or Smartphone.

Connecting a device
For a detailed description of the Bluetooth connection ⇩ 65.

File formats
Audio files
Only devices formatted in the FAT32, NTFS and HFS+ file systems are supported.

Note
Some files may not be played properly. This might be due to a different recording format or the condition of the file.

Files from online shops to which Digital Rights Management (DRM) has been applied cannot be played.

The playable audio file formats are .mp3, .wma, .aac and .m4a.

When playing a file with ID3 tag information, the Infotainment system can display information, e.g. on the track title and artist.

Picture files
The displayable picture file formats are .jpg, .jpeg, .bmp, .png and .gif.

The files must have a maximum size of 2048 pixels in width and 2048 pixels in height (4MP).

Gracenote
The Gracenote database contains information on media data currently available on the market.

When connecting external devices, the tracks or files are recognised by the Gracenote function.

If the Gracenote normalisation function is activated, spelling mistakes in MP3 tag data are automatically corrected. Due to this, media search results may be improved.

Press the CONFIG button and then select the Radio Settings menu item.

Select Gracenote Options to display the respective submenu.

Activate the Gracenote normalisation function.
Playing audio

Starting playback
If not connected, connect the device \( \Rightarrow \) 32.
Press the button and then select the USB, AUX or Bluetooth icon. Example: USB main menu

Function buttons
The media files on the USB and Bluetooth devices may be operated using the buttons on the instrument panel.

</tbody>
</table>

Shuffle function
Press the multifunction knob to display the USB or Bluetooth menu. To play the tracks on the respective device in random order, activate the Shuffle menu item. To return to the normal playing order, deactivate the Shuffle menu item.

Browsing
(only available in USB menus)
To search for a track within the structure, select one of the menu items, e.g. Folders, Play Lists or Albums.
Browse through the structure until you find the desired track.
Select the track to start playback.

**Individual playlists**
The system allows new playlists to be created via the Gracenote function. Similar tracks are put together on a list automatically generated by the system.
Select the track around which you wish to create a new playlist.
Select the **Play More Like This...** menu item in the respective audio menu. A new playlist is created and stored in the **Play Lists** menu.
To delete a playlist generated by the system, select the **Delete automatic playlist** menu item. A list of all generated playlists is displayed. Select the playlist you wish to delete. The playlist is deleted.

**Displaying pictures**

**Viewing pictures**
Connect a USB device 32.

Press the ➤ button and then select the **Pictures** icon to open the **Picture Viewer USB** menu.
A list of all pictures and picture folders found on the USB device is displayed. Browse through the pictures and folders until you find the desired picture and select it. The picture is displayed.

**Function buttons**

**Info button**
Select the **Info** screen button at the bottom of the screen to display information on the picture stored on the USB device, e.g. a name or number. The respective information is displayed above the picture.

**Skipping to the previous or next picture**
Select the < or > screen buttons at the bottom of the screen to display the previous or next picture.

**Slide show**
To start a slideshow of all pictures stored in the respective picture folder, select the ▶ screen button at the bottom of the screen. The slideshow is started.
When the slideshow is started, the ▶ screen button changes to ■. Select the ■ screen button to pause the slideshow.

**Rotating the picture**
Select the ◀ screen button at the bottom of the screen to rotate the picture.
Picture menu
To display the picture menu, select
the Menu screen button at the bottom
of the screen.

Picture Viewer Main
Select the Picture Viewer Main menu
item to display a list of all picture
folders, see above.

Slideshow Timer
To adjust the time sequence in which
one picture is shown during a slide
show, select the Slideshow Timer
menu item. The respective submenu
is displayed. Select the desired
option.

Shuffle Images
To display the pictures of a slide show
in random order, activate the Shuffle
Images screen button.
General information

The navigation application will reliably guide you to your destination without the need to read maps. The current traffic situation is taken into account in the route calculation. For this reason, the Infotainment system receives traffic announcements in the current reception area via RDS-TMC. The navigation application cannot, however, take into account traffic incidents, traffic regulations changed at short notice and hazards or problems that arise suddenly (e.g. road works).

Caution

The usage of the navigation system does not release the driver from the responsibility for a correct, vigilant attitude in road traffic. The relevant traffic regulations must always be followed. If a navigation instruction contradicts traffic regulations, the traffic regulations always apply.

Functioning of the navigation application

The position and movement of the vehicle are detected by the navigation application using sensors. The travelled distance is determined by the vehicle’s speedometer signal and turning movements on bends by a gyro sensor. The position is determined by the GPS satellites (Global Positioning System).

By comparing the sensor signals with the digital maps, it is possible to determine the position with an accuracy of approx. 10 metres. The system will also work with poor GPS reception, however, the accuracy of the determination of the position will be reduced.

After the entry of the destination address or point of interest (nearest petrol station, hotel, etc.) the route is calculated from the current location to the destination selected.
Route guidance is provided by voice commands and a direction arrow, as well as with the aid of a multi-colour map display.

Usage

Information on the map display
To display the map around the current location, you may optionally:
- Press the NAV button.
- Press the button and then select the Navigation icon.

Route guidance not active

If route guidance is not active, the following information is displayed:
- In the top line: information on the audio source currently active and the time.
- Below the top line: GPS symbol.
- In the upper left corner: a compass that indicates the north direction.
- Map display of the area around the current position.
- Current position: indicated by a red triangle within a grey circle.
- Points of interest (POI), e.g. petrol stations, parking areas or restaurants: indicated by corresponding symbols (if activated).
- In the bottom line: street name of the current position.

Route guidance active

If route guidance is active, the following information is displayed:
- In the top line: information on the audio source currently active and the time.
- Below the top line: GPS symbol.
- Below the top line: name of the street to follow after the next intersection.
- In the upper left corner: a compass symbol that indicates the north direction.
- Map display of the area around the current position.
- Current position: indicated by a red triangle within a grey circle.
- Route: indicated by a blue line.
- Final destination: indicated by a black chequered flag.
- Waypoint (intermediate destination): indicated by a red diamond.
- Points of interest (POI), e.g. petrol stations, parking areas, or restaurants: indicated by corresponding symbols (if activated).
- Traffic incidents, e.g. traffic jam: indicated by corresponding symbols (if activated).
- On the left side: direction arrow and distance to the next manoeuvre.
- On the left side: remaining distance to the final destination or to the next waypoint.
- On the left side: estimated arrival time or remaining travel time.
- In the bottom line: street name of the current position.

### Map manipulation

**Moving the visible map section**
The visible map section on the map display can be moved freely in all directions using the Eight-way switch. The Eight-way switch in the middle of the multifunction knob may be tilted in all directions. Tilt the switch to one side. The visible map section moves in the respective direction.

To redisplay the map around the current location, press the BACK button.

**Changing the map scale**
When the map is displayed, turn the multifunction knob to display a scale bar at the bottom of the screen. Turn the multifunction knob again to adjust the scale as desired.

### Changing the map mode
The map may be displayed in three (route guidance not active), respectively five (route guidance active) different modes, see "Map setup" below.

Repeatedly press the NAV button to toggle between the different map modes.

### Map setup

**Heading indicator**
Press the multifunction knob to display the Navigation Menu. Select the Heading Indicator menu item to display the respective submenu. The following options are available:

- **2D North Up**: 2D view, north facing upwards.
- **2D Heading Up**: 2D view, driving direction facing upwards.
- **3D Heading Up**: 3D view, driving direction facing upwards.

Select the desired option.
Map modes
Press the multifunction knob to display the Navigation Menu. Select the Map Modes menu item to display the respective submenu.

The following options are available:

- **Full Map** ("Normal" view described above): Full screen map view, all function and indication screen buttons displayed.
- **Full Glory**: Full screen map view, most functions and indication screen buttons hidden.
- **Split with Turn List**: Divided screen with map on the left and turn list on the right side.
- **Split with Turn Arrow**: Divided screen with map on the left side and turn arrow for the next turning manoeuvre on the right side.
- **Split with Media**: Divided screen with map on the left side and audio source currently active on the right side.

Select the desired option.

Map display
Press the multifunction knob to display the Navigation Menu. Select the Map Settings menu item and then Map Display to display the respective submenu.

Depending on the external lighting conditions, activate the Day or Night menu item.

For an automatic adaption by the system, activate Automatic.

Displaying POIs
Press the multifunction knob to display the Navigation Menu.

Select the Show POIs menu item to display the respective submenu.

If you wish all POIs available in the system to be displayed on the map, activate Show all POIs.

If you do not wish POIs to be displayed on the map, activate Hide all POIs.

To only display specific POIs, activate the User Defined menu item and then activate the POI categories you wish to be displayed.

Changing screen information
The route information displayed on the screen during active route guidance may be customised.

Press the multifunction knob to display the Navigation Menu. Scroll through the list and select the Switch Route Time/Destination menu item.

Time information
If you wish to change the time information displayed, select Switch Arrival/Travel Time to display the respective submenu.

Activate the information setting you wish to be displayed.

Destination information
If you are in a waypoint trip, you may want to display the route information for a waypoint instead of those for the final destination.

To change the setting, select Switch Waypoint/Destination. A list of all destinations in the waypoint trip currently active is displayed.

Activate the information setting you wish to be displayed.
Position information

Current position
Press the multifunction knob to display the Navigation Menu. Select the Current Position Info menu item. On the right side of the screen, the current position is displayed on the map. On the left side, the GPS coordinates of the current position are shown.

Destination position
If route guidance is active, you may display information on the destination entered.

Press the multifunction knob to display the Navigation Menu. Select the Destination Position Info menu item. On the right side of the screen, the destination is displayed on the map. On the left side, the address and the GPS coordinates of the destination are shown.

Saving a position
The current position or a destination position may be saved in the address book.

Select the Save screen button. Find a detailed description on saving addresses in the address book 42.

Route simulation
The Infotainment system features a route simulation mode for test purposes.

To start the simulation mode, press the CONFIG button and then select the Navigation Settings menu item. Scroll through the list and select Route Simulation to display the respective submenu.

Starting position
Since the simulation mode does not draw on the GPS signal providing the current position of the vehicle, a start position must be set manually.

Use Last Known Position
To set the last position provided by a GPS signal as starting point, select the Use Last Known Position menu item.

Use Previous Destination
To use one of the last destinations entered as starting point, select the Use Previous Destination menu item. The previous destinations list is displayed. Select the desired address.

Use Specified Location
To use a specific location as starting point, select the Use Specified Location menu item. Enter an address. Find a detailed description 42. Simulation mode is started.

Cancelling simulation mode
To leave the simulation mode, press the CONFIG button and then select the Navigation Settings menu item. Scroll through the list and select Route Simulation to display the respective submenu.
Select the **Cancel Route Simulation** menu item.

**Additional route simulation menu**
When route guidance is active in the simulation mode, an additional menu is displayed in the **Navigation Menu**. Press the multifunction knob to display the **Navigation Menu**. Scroll through the list and select the **Route Simulation** menu item to display the respective submenu.

To stop the simulated route guidance, select the **Stop Simulation** menu item. The guidance process is stopped, the route guidance mode remains active.

To display the next simulated turning manoeuvre on the map, select the **Next Manoeuvre** menu item.

**Destination input**
The **Destination** application provides different options to set a destination for route guidance.

Press the **DEST / NAV** button (when route guidance is not active) to display the **Destination Entry** menu.

---

**Manual address entry**

**Address Entry menu**
Press the **DEST / NAV** button to display the **Destination Entry** menu and then select the **Address Entry** icon to display a mask for address entry.

Select the **Country** entry field. A list is displayed. Select the desired country.

Select the **City/Postal** entry field to display a keyboard. Enter the desired city name or postal code (see below).

Select the **Street** entry field to redisplay the keyboard. Enter the desired street name (see below).

You may then enter a house number or junction.

Select the **House number or Junction** entry field. The keyboard is redisplayed. Enter the desired number or street name (see below).
Note
If a house number is not stored in the system database, the house number closest to the destination entered is used for route calculation.

If required, confirm your input. A confirmation menu is displayed. Select the Start Guidance menu item to start route guidance.

Keyboard
Depending on the function selected, the keyboards may be displayed differently.

To change the letter arrangement on the letter keyboard, select the ABC screen button on the left side of the keyboard. The letters are now arranged in alphabetical order.

To enter a character sequence, successively select the desired characters.

Note
When entering an address, the keyboard uses an intelligent spelling function which automatically blocks out characters that cannot occur next in the respective character sequence.

To enter special characters not available on the letter keyboard, select the ÄÖ screen button at the right side of the letter keyboard. The special characters keyboard is displayed. Select the desired character.

To enter numbers or symbols, select the Sym screen button at the right side of the special characters keyboard. The symbols keyboard is displayed. Select the desired character.

To redisplay the letter keyboard, select the ABC screen button at the right side of the symbol keyboard. This way you may toggle between the three keyboards.

To delete characters already entered, select the Delete screen button at the right side of the respective keyboard or press the BACK button.

When entering an address, a list of matching entries is automatically displayed as soon as the number of matching entries found in the address memory is equal to or less than six.

To manually display a list of matching entries for the current input, select the respective List screen button at the bottom of the keyboard.

To display the last five entries made, select the Last 5 screen button at the bottom of the keyboard.

Select the desired entry from the list. If required, select the confirmation button displayed at the bottom of the keyboard.
Points of Interest

A point of interest is a specific location that might be of general interest, e.g. a petrol station, parking area or restaurant.

The data stored within the Infotainment system contain a great number of predefined POIs which are indicated by symbols on the map. These POIs may be selected as destinations for route guidance.

Search menu

A POI may be selected using different search masks.

Press the DEST / NAV button to display the Destination Entry menu and then select the Points of Interest icon to display the POI List menu.

Select Category:, Name: or Telephone number. The respective search mask is displayed.

Fill out the entry fields in the respective search mask.

**Category search mask**

Select the Location entry field to display a list. Select the desired option.

Select the Category entry field to display a POI category list. Select the desired category and then a subcategory from the list.

Select the Sort Method entry field to display the respective submenu. Select By Distance or By Name.

Select the Search screen button at the bottom of the screen. A list of POIs or POI categories is displayed corresponding to the criteria entered. Select the desired menu item.

**Name search mask**

Select the Country entry field to display a list of all available countries. Select the desired country.

To specify the location, select the entry field for the city or postal code. A keyboard is displayed. Enter the desired name or number.

Select the Sort Method entry field to display the respective submenu. Select By Distance or By Name.

Select the Search screen button at the bottom of the screen. The keyboard is redisplayed. Enter the name of the desired POI.

**Telephone number search mask**

Select the Country entry field to display a list of all available countries. Select the desired country.

Select the Sort Method entry field to display the respective submenu. Select By Distance or By Name.
Select the Number entry field to display a keypad. Enter the desired number.

When the respective search mask is filled out, a confirmation menu is displayed.

Select the Start Guidance menu item to start route guidance.

**Category lists**
Press the NAV button and then the multifunction knob to display the **Navigation Menu**. Select Nearby POIs or POIs Along Route. A POI category list is displayed.

Select the desired category, subcategories and then POI.

A confirmation menu is displayed. Select the Start Guidance menu item to start route guidance.

**Previous Destinations**
The last destinations selected or entered for route guidance are stored within the system.

Press the DEST / NAV button to display the **Destination Entry** menu and then select the Previous Destinations icon.

A list of the last destinations is displayed sorted in reverse chronological order.

Select the desired address from the list.

A confirmation menu is displayed. Select the Start Guidance menu item to start route guidance.

**Address Book**
The **Address Book** provides local storage space for addresses entered in the navigation application.

**Storing addresses in the address book**
To store an address in the address book, press the DEST / NAV button to display the **Destination Entry** menu. Enter or select the desired address. The confirmation menu is displayed.

Select the **Save** screen button. The **Address Book Entry** mask is displayed.
Depending on the information available, the different entry fields are already filled.

To enter or modify the name of the respective location, select the Name entry field. A keyboard is displayed. Enter the desired name and confirm your input.

To modify the address, select the Address entry field. The address entry mask is displayed. Make your changes and confirm your input.

To enter or modify the phone number, select the Number entry field. A keypad is displayed. Enter the desired number.

If activated, the address book entries are indicated on the map by POI icons. To change the icon indicating an address entry, select the Icon entry field. A list of all POI icons available within the system is displayed.

Scroll through the list and select the desired icon.

Select the Done screen button at the bottom of the entry mask. The address is stored.

**Selecting addresses from the address book**
Press the DEST / NAV button to display the Destination Entry menu and then select the Address Book icon. A list of all address book entries is displayed.

Select the desired entry.
A confirmation menu is displayed. Select the Start Guidance menu item to start route guidance.

**Editing addresses in the address book**
Press the DEST / NAV button to display the Destination Entry menu and then select the Address Book icon. A list of all address book entries is displayed.

Select the desired entry.
A confirmation menu is displayed. Select the Edit menu item to display the Address Book Entry mask. Make your changes and confirm your input. The changes are stored in the address book.

**Phone Book**
Addresses stored in the phone book of the mobile phone connected may be selected as destinations.

Press the DEST / NAV button to display the Destination Entry menu and then select the Phone Book icon. The Phone Book Search menu is displayed.

Select the desired first letter range to display a preselection of the telephone book entries you wish to be
displayed. The phone book jumps to the position of the letter range selected.

Select the desired entry in the telephone book to display the address saved under this entry. Select the address.

**Note**
When the Infotainment system cannot find a valid address, you are prompted with a message.

A confirmation menu is displayed. Select the **Start Guidance** menu item to start route guidance.

**Destination selection from the map**
Destinations (addresses or POIs) may also be set via the map.

Press the **NAV** button to display the map.

Use the Eight-way switch to centre the map around the desired destination. A red ○ symbol is indicated on the map and the corresponding address is displayed on a label.

Press the multifunction knob to activate the **Go** screen button.

A confirmation menu is displayed. Select the **Start Guidance** menu item to start route guidance.

**Note**
If there is more than one POI located at the map position selected, this is indicated on the label. Activating the **Go** screen button then opens a list for selection.

**My Home**
You can permanently store your home address in the system.

**Storing the home address**
Press the **DEST / NAV** button to display the **Destination Entry** menu.

Enter your home address.

A confirmation menu is displayed. Select the **Save as Home** menu item.

You are prompted with a message. Confirm the message to save your home address.

**Note**
The home address is also stored in the address book.
Selecting the home address
Press the DEST / NAV button to display the Destination Entry menu and then select the My Home icon.
Route guidance to the home address is started immediately.

Waypoint routes
When a destination has been entered and route guidance is active, intermediate destinations (waypoints) may be added to the route.

To set up a waypoint route during active route guidance, press the DEST / NAV button to open the Route Menu and then select the Destination List menu item. A submenu is displayed.

Adding waypoints
To add an intermediate destination, select the Add Waypoint menu item. The waypoint list is displayed.

Select the Add screen button at the position where you wish to add a waypoint. The Destination Entry menu is displayed. Enter or select the desired destination. The confirmation menu is displayed.

Select the Add menu item. The route is recalculated and the waypoint list is redisplayed with the intermediate destination at the position selected.

Note
Up to four destinations may be stored in a waypoint list.

Deleting waypoints
To delete a waypoint, select the Delete Waypoint menu item. The waypoint list is displayed.
Select the Delete screen button next to the waypoint you wish to delete. The waypoint is deleted and the waypoint list is redisplayed.

To delete the whole list and end route guidance, select the Delete All Destinations screen button.
Moving waypoints
To change the order of the waypoints in the route, select the Sort Waypoints screen button.
Select the Move screen button next to the waypoint you wish to move. The Add Waypoint menu is displayed.
Select the Add screen button at the position where you wish to drop the respective waypoint.
The route is recalculated and the order of the waypoints in the waypoint list is changed.

Favourite Routes
Storing waypoint routes
A waypoint route created (see above) may be saved as favourite route.
During an active waypoint route, press the DEST / NAV button to open the Route Menu and then select the Destination List menu item. A submenu is displayed.
Select Save as favourite route. A keyboard is displayed.
Enter a name for the favourite route and confirm your input.
The waypoint route is saved.

Creating new favourite routes
Press the DEST / NAV button to display the Destination Entry menu and then select the Favourite Routes icon to display the Favourite Route menu.
Select the New Favourite Route menu item. A keyboard is displayed.
Enter a name for the favourite route and confirm your input. The Favourite Route menu is redisplayed.
Select the desired favourite route. A menu is displayed.
Create a waypoint route (see above).
To change the name of the respective favourite route, select the Edit Name menu item. The keyboard for name entry is displayed. Enter the desired name and confirm your input
To delete the respective favourite route, select the Delete Favourite menu item. The favourite route is deleted and the Favourite Route menu is redisplayed.
Selecting a favourite route
Press the DEST / NAV button to display the Destination Entry menu and then select the Favourite Routes icon to display a list of the favourite routes saved.

Select the desired route from the list. The route confirmation menu is displayed.

To start route guidance, select the Start Guidance menu item.

Latitude / Longitude
The GPS coordinates of a desired location may be used to set a destination.

Press the DEST / NAV button to display the Destination Entry menu and then select the Latitude menu item.

Select the Latitude entry field to display the Geolocation Entry menu.

Repeatedly press the multifunction knob to adjust the first setting as desired.

Turn the multifunction knob to move to the next value to be set.

Proceed like this to set all values.

Select the BACK button to return to the next higher menu level.

Adjust the longitude values as described above.

When all GPS coordinates are entered, select the Search screen button at the bottom of the screen. A confirmation menu is displayed.

To start route guidance, select the Start Guidance menu item.

Deleting saved destinations
To delete destinations stored in the system, press the CONFIG button, select the Navigation Settings menu item and then Delete Saved Destinations. A submenu is displayed.

Activate the menu items of the storage location you wish to be cleared.

Select the Delete screen button. The selected storage locations are cleared.

Guidance
Starting and cancelling route guidance
Starting route guidance
Enter or select the desired address.

A confirmation menu is displayed.

Select the Start Guidance menu item to start route guidance.
Cancelling route guidance
When route guidance is active, press the DEST / NAV button to display the Route Menu.
Select the Cancel Route menu item to cancel the current navigation session.

Guidance instructions
Route guidance is provided by voice prompts and visual instructions on the map (if activated).

Voice prompts
Navigation voice prompts announce which direction to follow, when approaching an intersection at which you need to turn.
Press the CONFIG button and then select the Navigation Settings menu item.
Select the Voice Prompt menu item to display the respective submenu.
If you wish the system to audibly indicate the next turning manoeuvre, activate Navigation Voice Prompts.
If you wish traffic alerts to be read out, activate Traffic Alert Prompts.
To adjust the volume during voice prompts, select the Navigation Volume menu item. The respective submenu is displayed.
To adjust the volume of the audio source possibly playing in the background, select Background and then adjust the setting as desired.

Select Volume Test to get an audio example of the settings.

Guidance alerts
Guidance alerts show in a close-up view of the respective map section which direction to follow when approaching an intersection at which you need to turn.
Press the CONFIG button and then select the Navigation Settings menu item.
Select the Guidance Alert menu item to display the respective submenu.
If you wish the display to automatically show the map when approaching the next turning manoeuvre, activate Guidance Alert in Primary.
If you wish turning manoeuvres to be displayed in a close-up view, activate Guidance Alert in Map.
Traffic incidents
The TMC traffic information system receives all current traffic information from TMC radio stations. This information is included in the calculation of a route.

Traffic settings
Press the CONFIG button and then select the Navigation Settings menu item.
Select the Traffic Settings menu item to display the respective submenu.
To use the TMC traffic information system, activate the Traffic Events menu item.

Recalculation of an active route
If a traffic problem occurs during active route guidance, the route may be changed.
Select Alert if better route is available to display the respective submenu.
If you wish the route to be constantly adapted to the current traffic situation, activate Route Based on Traffic Conditions.

Traffic incidents on the map
Traffic incidents may be indicated on the map by corresponding symbols.
Select Show Traffic Events on Map to display the respective submenu.

Select the desired option.
If User Defined is activated, scroll through the list and activate the traffic incidents categories you wish to be displayed.

TMC stations
The TMC stations broadcasting traffic information, may be set automatically or manually.
Select the Traffic Stations menu item to display a selection mask.
Select the Mode entry field to display the respective submenu. Select the desired option.
If Manual Station Selection is chosen, a TMC station needs to be set.
Select the Station entry field to display the Traffic Station List.
Select the desired station.

Traffic incidents lists
When route guidance is active, press the NAV button and then press the multifunction knob to display the Navigation Menu. Scroll through the list and select the Traffic menu item.
To display a list of all traffic events known for the area around the current vehicle location, select the All Traffic Events menu item.
To display a list of the traffic events concerning the current route, select the **Traffic Events on Route** menu item.

The traffic incidents lists may be sorted in different ways. Select the **Traffic Settings** menu item in the **Traffic** menu and then **Sort Method**. The respective submenu is displayed. Activate the desired option.

**Route tracking**
The bread crumbs function allows tracking of the roads already taken in a route.

Press the **CONFIG** button and then select the **Navigation Settings** menu item. Select the **Bread Crumbs** menu item to display the respective menu. To start a tracking session, activate the **Record** menu item. The route taken is recorded and displayed as dotted line on the map.

To delete the bread crumbs already dropped in an active tracking session, select the **Delete** screen button. You are prompted with a message. Confirm the message to delete all bread crumbs.

To end the tracking session, deactivate the **Record** menu item. A keyboard is displayed. Enter a name for the respective tracking session and select the **Done** screen button. The session is stored in the **Saved** list.

To display a list of all tracking sessions, select the **Saved** screen button. Select the desired tracking session to display the **Bread Crumb Details** menu.

To change the name of the respective tracking session, select the **Edit Name** menu item. A keyboard is displayed. Enter the desired name and select the **Done** screen button.

Select the **Load** menu item to display the bread crumb main menu. If you wish the respective tracking session to be constantly displayed on the map, activate the **Display** menu item.

To directly display the whole tracking session in the respective map section, select the **Show on Map** menu item.

To delete the respective tracking session, select the **Delete** menu item.

**Routing**
When a route has been calculated, you may manually change certain parts or recalculate the whole route.
**Navigation**

**Turn List**
The **Turn List** displays all streets and turning manoeuvres on the calculated route starting from the current location.

Press the **DEST / NAV** button and then select the **Turn List** menu item. The turn list is displayed.

---

**Avoid List**
When streets have been excluded from the original route, they are displayed in the **Avoid List**.

Press the **DEST / NAV** button and then select the **Avoid List** menu item to display the respective submenu.

To display all streets avoided, select the **View List** menu item.

To delete all avoidances and return to the original route, select the **Delete All Items** menu item.

**Detour**
Press the **DEST / NAV** button and then select the **Detour** menu item. To change the route for a certain distance, select the **Detour By Distance** menu item. A menu listing different distances is displayed.

Select the desired distance. The route is recalculated accordingly.

To block the whole route, select the **Detour Complete Route** menu item. The original route is blocked and a new route to the desired destination is calculated.

---

**Exit list**
To display a list of the next exits and motorway stations while driving on a motorway, press the **NAV** button and then press the multifunction knob to display the **Navigation Menu**.

Scroll through the list and select the **Exit List** menu item.

**Route options**
When route guidance is active, press the **DEST / NAV** button and then select the **Route Options** menu item.

A list of route calculation options and road types is displayed.

To define by what criteria a route may be calculated, activate one of the options: **Fastest** for the fastest route (in time), **Shortest** for the shortest route (in distance) or **Eco** for the route with the lowest fuel consumption.

To define which road types may be included in the calculation of the route, activate the desired options: highways, tollroads, ferries, etc.
Speech recognition

General information ..................... 55
Usage .......................................... 56
Speech commands overview ...... 59

General information

Embedded speech recognition
The speech recognition of the Infotainment system enables you to operate various functions of the Infotainment system via voice input. It recognises commands and numeric sequences independently of the relevant speaker. The commands and numeric sequences can be spoken without a pause between the individual words.

In the event of incorrect operation or commands, the speech recognition gives visual and/or acoustic feedback and requests you to re-enter the desired command. Apart from this, the speech recognition acknowledges important commands and will enquire if necessary.

In general, there are different ways to speak commands for completing the tasks. Most of them, except destination entry and voice keypad, can be completed in a single command.

If the action takes more than one command to be performed, proceed as follows:
In the first command, you indicate the type of action to be performed, e.g. "Navigation destination entry". The system replies with prompts that lead you through a dialogue for entering the necessary information. For example, if a destination for route guidance is needed, say "Navigation" or "Destination entry".

Note
To ensure that conversations inside the vehicle do not lead to unintentional triggering of the system functions, the speech recognition does not start until it has been activated.

Language support
■ Not all languages available for the display of the Infotainment system are also available for the speech recognition.
■ If the currently selected display language is not supported by the speech recognition, speech recognition is not available.
In such a case you must select another language for the display if you want to control the Infotainment system via voice input. Changing the display language, see "Language" in chapter "System settings"  \( \diamond \) 21.

**Address input for destinations in foreign countries**

In case you want to enter the address of a destination located in a foreign country via voice input, you must change the language of the Infotainment display to the language of the foreign country.

E.g. if the display is currently set to English and you want to enter the name of a city located in France, you must change the display language to French.

Exceptions: If you want to enter addresses in Belgium, you may optionally change the display language to French or Dutch. For addresses in Switzerland you may optionally change the display language to French, German, or Italian.

For changing the display language, see "Language" in chapter "System settings"  \( \diamond \) 21.

**Input order for destination addresses**

The order in which the parts of an address must be entered using the speech recognition system is dependent on the country where the destination is located.

An example for the respective input order is given out by the system.

**Voice pass-thru application**

The voice pass-thru application of the Infotainment system allows access to the speech recognition commands on your smartphone. See the operating instructions for your smartphone to find out whether your smartphone supports this feature.

---

**Usage**

**Embedded speech recognition**

**Activating speech recognition**

**Note**

Speech recognition is not available during an active phone call.

Press the button on the right side of the steering wheel.

The audio system mutes, the symbol on the display is highlighted, and a voice output message prompts you to say a command.

As soon as the speech recognition is ready for voice input, a beep is heard. You can now say a voice command to directly initiate a system function (e.g. playing a radio station), or to start a dialogue sequence with several dialogue steps (e.g. entering a destination address), see "Operation via speech commands" further below.
After a dialogue sequence is finished, the speech recognition is deactivated automatically. To initiate another dialogue sequence, you must activate the speech recognition again.

Adjusting the volume of voice prompts
Press the + or − buttons on the right side of the steering wheel.

Interrupting a voice prompt
As an experienced user, you can interrupt a voice prompt by briefly pressing the ⋅ button on the steering wheel.

A beep is heard immediately, and a command can be stated without having to wait.

Cancelling a dialogue sequence
There are several possibilities to cancel a dialogue sequence and to deactivate the speech recognition:

- Say "Cancel" or "Exit".
- Press the ⋅ button on the right side of the steering wheel.

In the following situations a dialogue sequence is automatically cancelled:

- If you do not say any commands for some time (by default you are prompted three times to say a command).
- If you say commands that are not recognised by the system (by default you are prompted three times to say a correct command).

Operation via speech commands
The speech recognition can understand commands that are either naturally stated in sentence form, or direct commands stating the application and the task.

For best results:

- Listen for the voice prompt and wait for the beep before saying a command or replying.
- Say "Help" if you want to listen again to the help prompt for the current dialogue step.

- The voice prompt can be interrupted by pressing the ⋅ button again. If you wish to directly speak your command, press the ⋅ button twice.
- Wait for the beep and then speak the command naturally. In most cases, recognition rates will be higher if pauses are kept to a minimum. Use short and direct commands.

Usually phone and audio commands can be spoken in a single command. For example, "Call David Smith at work", "Play" followed by the artist or song name, or "Tune to" followed by the radio frequency and the waveband.

Navigation destinations, however, are too complex for a single command. First, state "Navigation" and then, e.g. "Address" or "Point of Interest". The system responds with requesting more details.

After saying "Point of Interest", only major chains may be selected by name. Chains are businesses with at
least 20 locations. For other POIs, say the name of a category, e.g. "Restaurants", "Shopping centres", or "Hospitals".

Direct commands are easier understood by the system, e.g. "Call 01234567".

If you say "Phone", the system understands that a phone call is requested and responds with respective questions until enough details are gathered. If the phone number has been saved with a name and a place, the direct command should include both, for example "Call David Smith at work".

Selecting list items
When a list is displayed, a voice prompt asks to confirm or select an item from that list. A list item may be manually selected, or by speaking the line number of the item.

The list on a speech recognition screen functions the same as a list on other screens. Manually scrolling the list on a screen during a speech recognition session suspends the current speech recognition event and plays a prompt like "Make your selection from the list using the manual controls, or press the back button on the faceplate to try again".

If no manual selection is made within 15 seconds, the speech recognition session terminates, you are prompted with a message, and the former screen is redisplayed.

**The "Back" command**
To return to the previous dialogue step, alternatively: say "**Back**", or press the **BACK** button on the instrument panel.

**The "Help" command**
After saying "**Help**", the help prompt for the current dialogue step is read aloud.

To interrupt the help prompt, press the ⏪ button again. A beep is heard. You may say a command.

---

**Voice pass-thru application**

**Activating the voice pass-thru speech recognition**
Press and hold the ⚫ button on the right side of the steering wheel until a speech recognition session is started.

Find further information in the operating instructions for your smartphone.

**Adjusting the volume of voice prompts**
Press the + or − buttons on the right side of the steering wheel.

**Deactivating the voice pass-thru speech recognition**
Press the ⏪ button on the right side of the steering wheel. The speech recognition session is ended.
Speech commands overview
The table below contains an overview of the most important speech commands.

General information

The Phone portal provides you with the possibility of having mobile phone conversations via a vehicle microphone and the vehicle loudspeakers as well as operating the most important mobile phone functions via the Infotainment system in the vehicle. To be able to use the Phone portal, the mobile phone must be connected with it via Bluetooth. The Phone portal can be operated optionally via the speech recognition system.

Not all Phone portal functions are supported by every mobile phone. The possible phone functions depend on the relevant mobile phone and network provider. You will find further information on this in the operating instructions for your mobile phone or you can enquire about them with your network provider.

Important information for operation and traffic safety

⚠️ Warning

Mobile phones have effects on your environment. For this reason safety regulations and directions have been prepared. You should be familiar with the related directions before you use the telephone function.

⚠️ Warning

Use of the hands-free facility while driving can be dangerous because your concentration is reduced when telephoning. Park your vehicle before you use the hands-free facility. Follow the stipulations of the country in which you find yourself at present.

Do not forget to follow the special regulations that apply in specific areas and always switch off the mobile phone if the use of mobile
phones is prohibited, if interference is caused by the mobile phone or if dangerous situations can occur.

Bluetooth
The Phone portal is certified by the Bluetooth Special Interest Group (SIG).
You will find further information about the specification on the Internet at http://www.bluetooth.com

Bluetooth connection
Bluetooth is a radio standard for the wireless connection of e.g. mobile phones, iPod/iPhone models, or other devices.
To be able to set up a Bluetooth connection to the Infotainment system, the Bluetooth function of the Bluetooth device must be activated. For further information, please consult the user guide of the Bluetooth device.

Via the Bluetooth menu, pairing (PIN code exchange between Bluetooth device and Infotainment system) and connecting of the Bluetooth devices to the Infotainment system are carried out.

Important information
- Up to five devices can be paired to the system.
- Only one paired device can be connected to the Infotainment system at a time.
- Pairing normally only needs to be carried out once, unless the device is deleted from the list of paired devices. If the device has been connected previously, the Infotainment system establishes the connection automatically.
- Bluetooth operation considerably drains the device’s battery. Therefore, connect the device to the power outlet for charging.

Bluetooth menu
To open the Bluetooth menu, press the CONFIG button. Select the Phone Settings menu item and then Bluetooth.
The menu items Device list and Pair device are displayed.

Pair device
To initiate the pairing process on the Infotainment system, select the Pair device menu item. A message with a four-digit Infotainment system code is displayed.
Initiate the pairing process on the Bluetooth device. If required, enter the Infotainment system code on the Bluetooth device.
A six-digit PIN code for the pairing process is displayed on the Infotainment system.
To confirm the pairing process:
- If SSP (secure simple pairing) is supported:
  Compare the PIN codes displayed on the Infotainment system and on the Bluetooth device (if demanded)
and confirm the message on the Bluetooth device.

- If SSP (secure simple pairing) is not supported:
  
  Enter the PIN code on the Bluetooth device and confirm your input.

The devices are paired and the phone main menu is displayed.

The phone book and call lists (if available) are downloaded from the Bluetooth device.

If required, confirm the corresponding message on the Bluetooth device.

**Device list**

The device list contains all Bluetooth devices paired to the Infotainment system.

If a new device is paired, it is displayed in the device list.

**Connecting a device**

Select the device you wish to connect. A submenu is displayed.

Select the **Select** screen button.

The device previously connected is disconnected and this device is connected.

**Deleting a device**

Select the device you wish to delete.

A submenu is displayed.

Select the **Delete** screen button.

The device is deleted.

---

**Emergency call**

⚠️ **Warning**

Connection setup cannot be guaranteed in all situations. For this reason you should not rely exclusively on a mobile phone when a vitally important communication (e.g. a medical emergency) is concerned.

In some networks it may be necessary for a valid SIM card to be properly inserted in the mobile phone.

⚠️ **Warning**

Bear in mind that you can make and receive calls with the mobile phone, if it is in a service area with a sufficiently strong signal. Under certain circumstances emergency calls cannot be made on all mobile phone networks; it is possible that they cannot be made when certain network services and/or telephone
functions are active. You can enquire about this with the local network operators.

The emergency call number can differ depending on the region and country. Please enquire beforehand about the correct emergency call number for the relevant region.

Making an emergency call
Dial the emergency call number (e.g. 112).

The telephone connection to the emergency call centre is set up.

Answer when the service personnel questions you about the emergency.

⚠️ Warning
Do not end the call until you are requested to do so by the emergency call centre.

Operation
As soon as a connection via Bluetooth has been set up between your mobile phone and the Infotainment system, you can also operate many functions of your mobile phone via the Infotainment system.

After setting up a connection between the mobile phone and the Infotainment system, the mobile phone data is transmitted to the Infotainment system. This can take some time depending on the phone model. During this period, operation of the mobile phone is possible via the Infotainment system only to a limited extent.

Not every telephone supports all functions of the phone application. Therefore, deviations from the range of functions described are possible.

Phone main menu
To display the phone main menu, press the \( \text{O} \) button. The following screen is displayed (if a mobile phone is connected).

Initiating a phone call
Entering a number
Press the \( \text{O} \) button and then select the Enter number menu item. A keypad is displayed.
Enter the desired number.
Select the Del screen button or press the BACK button to delete the last digit entered.
Select the ▶ or ◄ screen button to move the cursor within the number already entered.
To start dialling, select the OK screen button.

**Note**
You may access the phone book from the keypad by pressing the PB button.

---

**Phone book**
Press the ➫ button and then select the Phone Book menu item. The Phone Book Search menu is displayed.

Select the desired first letter range to display a preselection of the telephone book entries you wish to be displayed. The phone book jumps to the position of the letter range selected.

---

Select the desired entry in the telephone book to display the numbers saved under this entry.
Select the desired number to start dialling.

**Phone book sorting**
The phone book may be sorted by last name or by first name.
To change the sorting order, select the ➫ button and then the Phone Settings menu item.
Select Sort Order to display the respective submenu.
Activate the desired option.
Call lists
Press the \( \text{Menu} \) button and then select the Call Lists menu item. The Call Lists menu is displayed.

Select the desired call list. Depending on the list selected, the last incoming, outgoing or missed calls are displayed.

Select the desired entry in the call list to start dialling.

Incoming calls
When a call comes in, a message is displayed on the screen.

To take the call, select the Answer screen button.
To reject the call, select the Decline screen button.

Functions during a phone call
When a call is active, the in-call view is displayed.

Ending a phone call
To end the call, select the Hang up screen button.

Muting a call
To temporarily mute the microphone, activate the Mute call screen button.
Deactivate the Mute call screen button to unmute the microphone.

Transferring to handset
Select the Transfer to Handset menu item to transfer the call to the mobile phone. The Private Call menu is displayed.
To transfer the call back to the Infotainment system, select the **Transfer call** menu item in the **Private Call** menu.

**Second phone call**

Initiating a second phone call
While a call is active, select the **Enter number** menu item in the in-call view. The keypad is displayed. You may enter a number or select a number from the phone book, see above.

Second incoming phone call
When a second call comes in, a message is displayed at the bottom of the screen.
Select the desired option.
If the call is taken, the first call is put on hold and the second call becomes active.
Both calls are displayed in the in-call view.

To switch between the calls, select the **Switch calls** menu item.

Conference call
Select the **Merge calls** screen button to activate both calls at the same time.
The **Merge calls** screen button changes to **Detach call**.
To end a conference call, select the **Detach call** screen button.

Ending phone calls
In a conference call, select the **Hang up** screen button to end both phone calls.

**Text messages**

As soon as a connection via Bluetooth has been set up between your mobile phone and the Infotainment system, you can operate the messages inbox of your mobile phone via the Infotainment system.

Not every phone supports the text messages function of the Infotainment system.

**Activating the messages application on the mobile phone**

The transmission of text message data to the Infotainment system must be activated on the mobile phone.

After connecting to the Infotainment system you may be prompted with a message on your mobile phone requesting permission to access the mobile phone text messages via the Infotainment system. Confirm the message.
If no message is displayed, access the Bluetooth menu on your mobile phone, select the name of the Infotainment system and activate the corresponding access function.
Note
Find detailed information for granting access on different mobile phones on our website.

The Messages icon in the Home menu of the Infotainment system is then selectable.

Incoming text message
When a new text message is received, you are prompted with a message indicating the name or number of the sender.
Select one of the options in the message.

Listen
If you wish the system to read out the message, select the Listen screen button.

View
To display the message on the screen, select the respective screen button.

Note
Messages are only displayed on the screen when the vehicle is parked.

Dismiss
To dismiss the message, select the respective screen button.

Reply
To directly answer the message, select the Reply screen button. A list of predefined messages is displayed.
Select the desired message and confirm your input.
The message is sent.

Note
New predefined messages may be created in the settings menu.

Call
To call the sender of the text message, select the Call screen button.

Inbox
Press the button and then select the Messages icon to display the respective menu.
Select the Inbox menu item to display a list of all inbox messages.

Note
Messages are only displayed on the screen when the vehicle is parked.

If desired, select one of the options at the bottom of the screen (see above).

Settings
Press the button and then select the Messages icon to display the respective menu.
Select the Settings menu item to display the respective submenu.
Adjust the settings as desired.
Mobile phones and CB radio equipment

Installation instructions and operating guidelines
The vehicle specific installation instructions and the operating guidelines of the mobile phone and handsfree manufacturer must be observed when installing and operating a mobile telephone. Failure to do so could invalidate the vehicle type approval (EU directive 95/54/EC).

Recommendations for fault-free operation:

■ Professionally installed exterior antenna to obtain the maximum range possible,
■ Maximum transmission power 10 watts,
■ Installation of the phone in a suitable spot, consider relevant Note in the Owner's Manual, chapter Airbag system.

Seek advice on predetermined installation points for the external antenna or equipment holder and ways of using devices with a transmission power exceeding 10 watts.

Use of a handsfree attachment without external antenna with mobile telephone standards GSM 900/1800/1900 and UMTS is only permitted if the maximum transmission power of the mobile telephone is 2 watts for GSM 900 or 1 watt for the other types.

For reasons of safety, do not use the phone while driving. Even use of a handsfree set can be a distraction while driving.

⚠️ Warning

Operation of radio equipment and mobile telephones which fail to meet above mentioned mobile telephone standards is only permitted using an antenna located outside of the vehicle.

Caution

Mobile telephones and radio equipment may lead to malfunctions in the vehicle electronics when operated inside the vehicle with no exterior antenna, unless the above mentioned regulations are observed.
Frequently asked questions

Speech recognition

⚠️ The speech recognition function does not work very well. How can I improve its performance?

⚠️ Wait for the beep and then try to speak the command naturally. Avoid long pauses, use little accentuation and speak at a moderate volume.

Detailed description ⬤ 56.

⚠️ The voice prompts given out by the speech recognition system are too long. How can I interrupt them to directly speak a command?

⚠️ To interrupt the voice prompt of the speech recognition system, press the  button on the steering wheel. Wait for the beep and then speak your command.

Detailed description ⬤ 56.

⚠️ I cannot select a phone contact via speech recognition. What am I doing wrong?

⚠️ The Infotainment system accesses the phone book entries as they are stored. If the sorting order is set to "last name, first name", the correct command for calling John Smith is "Smith, John".

Detailed description ⬤ 55.

⚠️ I cannot enter an address located in another country via speech recognition. What am I doing wrong?

⚠️ Via speech recognition, you can only enter addresses for destinations located in the country whose language is selected as the system language, e.g. if the system is set to German, you cannot enter a destination located in France.

Detailed description ⬤ 55.
Phone

How can I pair my phone with the Infotainment system?

1 In order to pair a phone, press the \( \text{Pair} \) button, select the Phone Settings menu item and then Bluetooth. Select Pair device and follow the instruction on the Infotainment system and your mobile phone. Make sure Bluetooth is enabled.

Detailed description \( \text{65} \).

How can I access my phone book or recent calls list via the Infotainment system?

1 Depending on the phone, you must allow access to the respective data in the settings of your mobile phone. In general, the download of the phone book and recent calls list is not supported by all mobile phones.

Detailed description \( \text{65} \).

Although access to my phone book has been granted, not all contacts are available in the Infotainment system. Why is that?

1 Depending on the phone, contacts stored on the SIM card cannot be read by the Infotainment system.

Detailed description \( \text{65} \).

How can I access my phone book or recent calls list via the Infotainment system?

1 Depending on the phone, contacts stored on the SIM card cannot be read by the Infotainment system.

Detailed description \( \text{65} \).

How can I access my phone book or recent calls list via the Infotainment system?

1 Depending on the phone, contacts stored on the SIM card cannot be read by the Infotainment system.

Detailed description \( \text{65} \).

Navigation

How can I toggle between total driving time or remaining driving time and total distance or partial distance?

1 When the navigation application is active, press the multifunction knob to display the Navigation Menu. Select Switch Route Time/Destination and adjust the settings as desired.

Detailed description \( \text{38} \).

When pressing the DEST/NAV button, different menus are displayed sometimes. Why is that?

1 If route guidance is active, the destination application is displayed for you to select a destination.

Detailed description \( \text{42} \).

If route guidance is not active, the Route Menu is displayed.

Detailed description \( \text{50} \).

Audio

When playing media files from a device connected via Bluetooth, the track title and artist are not displayed in the Infotainment system and the media browse function is not available. Why is that?

1 When connecting a device via Bluetooth, due to the Bluetooth protocol supported only restricted functions are available.

Detailed description \( \text{34} \).
The Infotainment system does not have a tone button on the faceplate. How can I change the tone settings?

The tone settings menu is accessible via the Home Page. Press the button and then select the More screen button to display the second Home Page. To access the tone settings menu, select the Tone icon.

Detailed description 19.

General information

The Infotainment system provides you with state-of-the-art in-car infotainment.

Using the FM, AM or DAB radio functions, you may register up to 36 stations on six favourites pages.

The integrated audio player will entertain you with audio CDs and MP3/WMA CDs.

You can connect external data storage devices, e.g. iPod, MP3 player, USB stick, or a portable CD player to the Infotainment system as further audio sources; either via cable or via Bluetooth.

In addition, the Infotainment system is equipped with a Phone portal that allows for comfortable and safe use of your mobile phone in the vehicle.

Optionally, the Infotainment system can be operated using controls on the steering wheel.

The well-thought-out design of the control elements and the clear displays enable you to control the system easily and intuitively.

Safe Use

Warning

The Infotainment system must be used so that the vehicle can be driven safely at all times. If in doubt, stop the vehicle and operate the Infotainment system while the vehicle is stationary.
Radio reception
Radio reception may be disrupted by static, noise, distortion or loss of reception due to:
- changes in distance from the transmitter,
- multipath reception due to reflection,
- shadowing.

Theft-deterrent feature
The Infotainment system is equipped with an electronic security system for the purpose of theft deterrence. The Infotainment system therefore functions only in your vehicle and is worthless to a thief.

4 Increase or reduce volume

Usage

Control elements
The Infotainment system is operated via function buttons, a multifunction knob and menus that are shown on the display.

Inputs are made optionally via:

- the control panel on the Infotainment system ➔ 84
- audio controls on the steering wheel ➔ 84.

Switching the Infotainment system on or off
Press the ⊙ VOL knob briefly. After switching on, the last selected Infotainment source becomes active.

Press the ⊙ VOL knob again to turn the system off.

Automatic switch-off
If the Infotainment system is switched on using the ⊙ VOL knob while the ignition is turned off, it will switch off again automatically 10 minutes after the last user input.
Setting the volume
Turn the VOL knob. The current setting is shown on the display.
When the Infotainment system is switched on, the last selected volume is set, provided this setting is lower than the maximum startup volume (see below).
The following inputs can be made separately:
■ the maximum startup volume ➔ 91
■ the volume of traffic announcements ➔ 91.

Speed compensated volume
When speed compensated volume is activated ➔ 91, the volume is adapted automatically to make up for the road and wind noises as you drive.

Mute function
Press the / button or the button (if Phone portal available: press for a few seconds) to mute the audio sources.

To cancel the mute function: turn the VOL knob or press the / button (if Phone portal available: press for a few seconds) or press the button again.

Volume limitation at high temperatures
At very high temperatures inside the vehicle the Infotainment system limits the maximum adjustable volume. If necessary, the volume is decreased automatically.

Modes of operation

Radio
Press the RADIO BAND button to open the radio main menu or to change between the different wavebands.
Press the multifunction knob to open the waveband menus with options for the station selection.
For a detailed description of the radio functions ➔ 92.

Audio players
Press the AUX button once or several times to open the USB, iPod or AUX main menu (if available) or to switch between these menus.
Press the multifunction knob to open the relevant menus with options for the track selection.
For a detailed description of:
■ CD player functions ➔ 101
■ AUX functions ➔ 104
■ USB port functions ➔ 105
■ Bluetooth music functions ➔ 108.

Phone
Press the button briefly to open the telephone menu.
Press the multifunction knob to open the phone menu with options for the input and selection of numbers.
For a detailed description of the Phone portal ➔ 110.
System settings

Adjusting the language
The menu texts on the Infotainment system's display can be displayed in various languages.
Press the CONFIG button to open the Settings menu.
Select the Languages menu item in the Settings menu to display the respective menu.
Choose the desired language for the menu texts.

Note
Find a detailed description for the menu operation 88.

Time and date settings
Find a detailed description in your Owner's Manual.

Basic operation

Multifunction knob
The multifunction knob is the central control element for the menus.

Turn the multifunction knob:
- to mark a menu option
- to set a numeric value.
Press the multifunction knob:
- to select or activate the marked option
- to confirm a set value
- to switch a system function on/off.

◊ BACK button
Press the ◊ BACK button briefly to:
- exit a menu
- return from a submenu to the next higher menu level
- delete the last character in a character sequence.
Press and hold the ◊ BACK button for a few seconds to delete the entire entry.

Examples of menu operation

Selecting an option

Turn the multifunction knob to move the cursor (= coloured background) to the desired option.
Press the multifunction knob to select the marked option.

Submenus
An arrow on the right-hand edge of the menu indicates that after selection of the option a submenu with further options will be opened.
Activating a setting

Turn the multifunction knob to mark the desired setting.
Press the multifunction knob to activate the setting.

Setting a value

Turn the multifunction knob to change the current value of the setting.
Press the multifunction knob to confirm the set value.
The cursor then switches to the next value. If all values are set, you are automatically returned to the next higher menu level.

Adjusting a setting

Turn the multifunction knob to adjust the setting.
Press the multifunction knob to confirm the setting.
Switching a function on or off

Turn the multifunction knob to mark the function to be switched on or off. Press the multifunction knob to switch between the settings On and Off.

Entering a character sequence

To enter character sequences, e.g. PIN codes or telephone numbers:
Turn the multifunction knob to mark the desired character.
Press the multifunction knob to confirm the marked character.
The last character in the character sequence can be deleted by selecting ◀ on the display or pressing the BACK button. Pressing and holding the BACK button deletes the entire entry.

To change the position of the cursor in the character sequence already entered, select ◀ or ▶ on the display.

Tone settings

In the tone settings menu the tone characteristics can be set differently for each radio waveband and each audio player source.
Press the TONE button to open the tone settings menu.

Setting bass, midrange, and treble
Scroll through the list and select Bass, Midrange or Treble.
Set the desired value for the selected option.

Setting the volume distribution between front and rear
Scroll through the list and select Fader.
Set the desired value.
Setting the volume distribution between right and left
Scroll through the list and select Balance.
Set the desired value.

Selecting a tone style
Scroll through the list and select EQ (Equaliser). The EQ presets menu is displayed.

Select the desired option.

The displayed options offer optimised bass, middle, and treble presettings for the relevant style of music.

Setting an individual setting to "0"
Select the desired option and press the multifunction knob for a few seconds.
The value is reset to "0".

Setting all settings to "0" or "OFF"
Press the TONE button for a few seconds.
All values are reset to "0", the EQ preset is set to "OFF".

Volume settings

Adjusting the speed compensated volume
Press the CONFIG button to open the Settings menu.
Select Radio settings and then Auto volume control.
The Auto volume control function can be deactivated or the degree of the volume adaptation can be selected in the menu displayed.
Select the desired option.

Adjusting all settings to "0" or "OFF"
Press the TONE button for a few seconds.
All values are reset to "0", the EQ preset is set to "OFF".

Adjusting the maximum startup volume
Press the CONFIG button to open the Settings menu.
Select Radio settings and then Maximum startup volume.
Set the desired value.

Adjusting the volume of traffic announcements
The volume of traffic announcements can be preset to increase or decrease in proportion to the normal audio volume.
Press the CONFIG button to open the Settings menu.
Select Radio settings, RDS options and then TA volume.
Set the desired value.

Adjusting the volume of the ring tone
Press the CONFIG button to open the Settings menu.
Select Phone settings, Sound & Signals and then Ring Volume.
Set the desired value.
Radio

Usage .......................................... 92
Station search .............................. 92
Autostore lists .............................. 93
Favourite lists ............................... 93
Waveband menus ........................ 94
Radio data system (RDS) .......... 97
Digital audio broadcasting ........... 98

Activating the radio
Press the RADIO BAND button to open the radio main menu.

The station last played will be received.

Selecting the waveband
Press the RADIO BAND button once or several times to select the desired waveband.

The station last played in that waveband will be received.

Station search

Automatic station search
Briefly press the buttons ◀ or ▶ to play the previous or next station in the station memory.

Manual station search
Press and hold the buttons ◀ or ▶. Release the respective button when the required frequency has almost been reached on the frequency display.

A search is made for the next station that can be received and it is played automatically.

Note
Manual station search: If the radio does not find a station, it switches automatically to a more sensitive search level. If it still does not find a station, the frequency that was last active is set again.

Note
FM waveband: when the RDS function is activated, only RDS stations 97 are searched for, and
when the radio traffic service (TP) is activated, only traffic service stations 97 are searched for.

**Manual station tuning**

**AM and FM radio**
Turn the multifunction knob and set the optimal reception frequency.

**DAB radio**
Press the multifunction knob to open the respective waveband menu and select DAB manual tuning. On the popup frequency display, turn the multifunction knob and set the optimal reception frequency.

**Autostore lists**
The stations received best in a waveband can be searched for and stored automatically via the autostore function.

Each waveband has 2 autostore lists (AS-Stations 1, AS-Stations 2), in each of which 6 stations can be stored.

**Note**
The currently received station is marked by 🅱️.

**Automatic station storing**
Keep the AS 1-2 button pressed until an autostore message is displayed. The 12 strongest stations in the current waveband will be stored in the 2 autostore lists.
To cancel the autostore procedure, press the multifunction knob.

**Storing stations manually**
Stations can also be stored manually in the autostore lists.

Set the station to be stored.
Briefly press the AS 1-2 button once or several times to switch to the desired list.
To store the station in a list position: press the corresponding station button 1...6 until a confirmation message is displayed.

**Note**
Manually stored stations are overwritten in an automatic station storing process.

**Retrieving a station**
Briefly press the AS 1-2 button once or several times to switch to the desired list.
Briefly press one of the station buttons 1...6 to open the station at the corresponding list position.

**Favourite lists**
Stations of all wavebands can be stored manually in the favourite lists.
6 stations can be stored in each favourite list. The number of available favourite lists can be set (see below).

**Note**
The currently received station is marked by 📋.

**Storing a station**
Set the station to be stored.

Briefly press the FAV 1-2-3 button once or several times to switch to the desired list.

To store the station in a list position: press the corresponding station button 1...6 until a confirmation message is displayed.

**Retrieving a station**
Briefly press the FAV 1-2-3 button once or several times to switch to the desired list.

Briefly press one of the station buttons 1...6 to open the station at the corresponding list position.

**Defining the number of available favourite lists**
Press the CONFIG button to open the Settings menu.

Select **Radio settings** and then **Radio favourites** to open the menu **Max. number of favourites pages**.

Select the desired number of available favourite lists.

**Waveband menus**
Alternative facilities for station selection are available via waveband specific menus.

**Note**
The following displays are shown as examples.

**Stations lists**
When in a radio main menu, turn the multifunction knob to open the stations list of the respective waveband.

All receivable FM, AM or DAB stations in the current reception area are displayed.
**Note**
If no station list has been created beforehand, the Infotainment system performs an automatic station search.

Select the desired station.

**Note**
The currently received station is marked by 🎧.

**Updating the stations lists**
When in a radio main menu, press the multifunction knob to open the relevant waveband menu.

If the stations stored in the waveband-specific station list can no longer be received:

Select the menu item **Update FM stations list**, **Update AM stations list** or **Update DAB stations list** in the respective waveband menu.

A station search is started. Once the search is completed, the station last received will be played.

To cancel the station search: press the multifunction knob.

**Note**
If the Infotainment system features a dual tuner, the stations lists are continuously updated in the background. No manual update is required.

**Note**
If a waveband specific station list is updated the corresponding category list (if available) is also updated.

**Favourites list**
Being in a radio main menu, press the multifunction knob to open the relevant waveband menu.

Select **Favourites list**. All stations saved in the favourite lists are displayed.

Select the desired station.

**Note**
The currently received station is marked by 🎧.

**Category lists**
Numerous RDS 📢 97 and DAB 📢 98 stations broadcast a PTY code, which specifies the type of programme transmitted (e.g. news). Some stations also change the PTY code depending on the content currently being transmitted.
The Infotainment system stores these stations, sorted by programme type, in the corresponding category list.

To search for a programme type determined by station: select the waveband specific category list option.

A list of programme types currently available is displayed.

Select the desired programme type. A list of stations is displayed that transmit a programme of the selected type.

Select the desired station. The category list is updated, too, when the corresponding waveband specific station list is updated.

Note
The currently received station is marked by ●.

DAB announcements
Besides their music programmes, numerous DAB stations broadcast various announcement categories. The currently received DAB service (programme) is interrupted when any announcement of previously activated categories is pending.

Activating announcement categories
Being in the DAB menu, select DAB announcements to display the respective menu.

Activate the desired announcement categories. Several announcement categories can be selected at the same time.
Radio data system (RDS)

RDS is a service of FM stations that considerably facilitates the finding of the desired station and its fault-free reception.

Advantages of RDS

- On the display, the programme name of the set station appears instead of its frequency.
- During a station search, the Infotainment system tunes in to RDS stations only.
- The Infotainment system always tunes into the best receivable broadcasting frequency of the set station by means of AF (Alternative Frequency).
- Depending on the station that is received, the Infotainment system displays radio text that can contain e.g. information about the current programme.

Configuring RDS

Press the CONFIG button to open the Settings menu.
Select Radio settings and then RDS options.

Set the option RDS to On or Off.

Note
If RDS is switched off, it will be automatically switched on again when a radio station is changed (by search function or preset button).

Note
The following options are only available, if RDS is set to On.

RDS options

Switching regionalisation on and off
At certain times some RDS stations broadcast regionally different programmes on different frequencies.
Set the option Regional to On or Off.
If regionalisation is switched on, only alternative frequencies (AF) with the same regional programmes are selected.
If regionalisation is switched off, alternative frequencies of the stations are selected without regard to regional programmes.

RDS scrolling text
Some RDS stations hide the programme name in the display line in order to display additional information.
To prevent additional information being displayed:
Set Text scroll freeze to On.
Radio text
If the RDS function is activated and a RDS station is currently received, information about the current programme and the music track currently playing are displayed below the programme name.
To show or hide the information, set Radio text to On or Off.

Radio traffic service
(TP = Traffic Programme)
Radio traffic service stations are RDS stations that broadcast traffic news.

Switching the radio traffic service on and off
To switch the traffic announcement standby facility of the Infotainment system on and off:
Press the TP button.
- If the radio traffic service is switched on, [ ] is displayed in the radio main menu.
- Only radio traffic service stations are received.
- If the current station is not a radio traffic service station, a search is started automatically for the next radio traffic service station.
- If a radio traffic service station has been found, [TP] is displayed in the radio main menu.
- Traffic announcements are played at the preset TA volume.
- If the radio traffic service is switched on, CD/MP3 replay is interrupted for the duration of the traffic announcement.

Listening to traffic announcements only
Switch on the radio traffic service and completely turn down the volume of the Infotainment system.

Blocking out traffic announcements
To block out a traffic announcement, e.g. during CD/MP3 replay:
Press the TP button or the multifunction knob to confirm the cancelling message on the display. The traffic announcement is cancelled, but the radio traffic service remains switched on.

Digital audio broadcasting
Digital audio broadcasting (DAB) is an innovative and universal broadcast system.
DAB stations are indicated by the programme name instead of the broadcasting frequency.
General information

- With DAB, several radio programmes (services) can be broadcasted on a single frequency (ensemble).
- Besides high-quality digital audio services, DAB is also able to transmit programme-associated data and a multitude of other data services including travel and traffic information.
- As long as a given DAB receiver can pick up the signal sent out by a broadcasting station (even if the signal is very weak), sound reproduction is ensured.
- There is no fading (weakening of the sound that is typical of AM or FM reception). The DAB signal is reproduced at a constant volume.
- If the DAB signal is too weak to be picked up by the receiver, reception is interrupted completely. This incident can be avoided by activating Auto ensemble linking and/or Auto linking DAB-FM in the DAB settings menu.

- Interference caused by stations that are on nearby frequencies (a phenomenon that is typical of AM and FM reception) does not occur with DAB.
- If the DAB signal is reflected by natural obstacles or buildings, the reception quality of DAB is improved, whereas AM or FM reception is considerably impaired in such cases.
- When DAB reception is enabled, the FM tuner of the Infotainment system remains active in the background and continually searches for the best receivable FM stations. If TP is activated, traffic announcements of the FM station which is currently best receivable are issued. Deactivate TP, if DAB reception should not be interrupted by FM traffic announcements.

Configuring DAB

Press the CONFIG button.
Select Radio settings and then DAB settings.

The following options are available in the configuration menu:

Auto ensemble linking
With this function activated, the device switches over to the same service (programme) on another DAB ensemble (frequency) when the DAB signal is too weak to be picked up by the receiver.
Set the function to On or Off.

Auto linking DAB-FM
With this function activated, the device switches over to a corresponding FM station of the active DAB service when the DAB signal is too weak to be picked up by the receiver.
Set the function to On or Off.

Dynamic audio adaption
With this function activated, the dynamic range of the DAB signal is reduced. That means the level of the loud sounds is reduced and the level of the quiet sounds is increased. Therefore, the volume of the Infotainment system can be raised to
a point where the quiet sounds are audible, without the loud sounds being too loud.

Set the function to **On** or **Off**.

**Band selection**
Select the menu item **Band selection** to display the respective menu.

To define which DAB wavebands are to be received by the Infotainment system, activate one of the options:

- **L-Band**: 1452 - 1492 MHz, earth and satellite radio
- **Band III**: 174 - 240 MHz, earth radio
- **Both**
CD Player

General information

The Infotainment system's CD player can play audio CDs and MP3/WMA CDs.

Important information

Caution

- Under no circumstances place single-CDs with a diameter of 8 cm or shaped CDs in the audio player. You must not put any stickers on CDs. These discs can get jammed in the CD drive and ruin the player. Replacement of the device will then be necessary.

- The following CD formats can be used:
  - CD-ROM Mode 1 and Mode 2.
  - CD-ROM XA Mode 2, Form 1 and Form 2.

- The following file formats can be used:
  - ISO 9660 Level 1, Level 2 (Romeo, Joliet).

MP3 and WMA files written in any format other than listed above may not play correctly and their file names and folder names may not be displayed correctly.

- Audio CDs with copy protection, which are not in compliance with the audio CD standard, may not play correctly or not at all.

- Self-recorded CD-Rs and CD-RWs are more vulnerable to mishandling than prerecorded CDs. Correct handling, especially in the case of self-recorded CD-Rs and CD-RWs, must be ensured (see below).

- Self-recorded CD-Rs and CD-RWs may not play correctly or not at all. In such cases it is not the equipment that is at fault.

- On mixed mode CDs (audio tracks and compressed files, e.g. MP3, are stored), the audio tracks part and the compressed files part can be played separately.

- Avoid leaving fingerprints when you change CDs.
Put CDs back in their sleeves immediately after removing them from the CD player in order to protect them from damage and dirt.

Dirt and liquids on CDs can smear the lens of the CD player inside the device and cause faults.

Protect CDs from heat and direct sunlight.

The following restrictions apply to MP3/WMA CDs:
- Bit rate: 8 kbit/s - 320 kbit/s.
- Sampling frequency: 48 kHz, 44.1 kHz, 32 kHz (for MPEG-1) and 24 kHz, 22.05 kHz, 16kHz (for MPEG-2).

The following restrictions apply to the data stored on an MP3/WMA CD:
- Number of tracks: max. 999.
- Number of tracks per folder level: max. 512.
- Folder structure depth: max. 10 levels.

Note
This chapter deals only with playing MP3 files since the operation for MP3 and WMA files is identical. When a CD with WMA files is loaded MP3 related menus are displayed.

Usage
Starting CD replay
Press the CD button once or several times to open the CD or MP3 main menu.

If there is a CD in the CD player, CD replay is started.

Depending on the data stored on the audio CD or MP3 CD, differing information about the CD and the current music track will be shown on the display.

Inserting a CD
Insert a CD with the printed side facing up into the CD slot until it is drawn in.

Note
If a CD is inserted, ♠️ is shown on the display.

Skipping to the next or previous track
Briefly press the buttons ◄ or ►. Fast forward or rewind
Press the buttons ◄ or ► and hold them down to fast forward or fast rewind the current track.

Selecting tracks using the audio CD menu
Press the multifunction knob to open the CD menu.
Shuffle songs
To play all tracks in a random order: set this function to On.

Note
If this function is activated, $\Rightarrow$ is shown in the respective main menu.

Repeat
To repeatedly listen to a track: set this function to On.

Note
If this function is activated, $\rightarrow$ is shown in the respective main menu.

Track list
To select a track on the CD: select Track list and then select the desired track.

Folders
To select a track from a folder: select Folders. A list of the folders stored on the CD is displayed.
Select one of the folders and then select the desired track.

Note
This menu item is only available, if an MP3 CD is inserted.

Search...
To open a menu for track search and selection: select Search....
Select one of the categories and then select the desired track.

Note
This menu item is only available, if an MP3 CD is inserted.

Removing a CD
Press the $\Delta$ button.
The CD is pushed out of the CD slot.

If the CD is not removed after ejection, it will be drawn back in again automatically after a few seconds.
AUX input

General information

On the control panel of the Infotainment system 84, there is an AUX input for the connection of external audio sources. It is possible, for example, to connect a portable CD player with a 3.5 mm jack plug to the AUX input.

Note
The socket must always be kept clean and dry.

Usage

Press the AUX button once or several times to activate the AUX mode.

Turn the VOL knob of the Infotainment system to adjust the volume.
All other functions can be operated only via the control elements of the audio source.
USB port

General information .................. 105
Playing saved audio files .......... 106

General information
In the centre console below the climate controls there is a USB socket for the connection of external audio data sources.

Note
The socket must always be kept clean and dry.

An MP3 player, USB drive, SD card (via USB connector/adapter), or iPod can be connected to the USB port.
When connected to the USB port, various functions of the above devices can be operated via the controls and menus of the Infotainment system.

Note
Not all MP3 player, USB drive, SD card or iPod models are supported by the Infotainment system.

Important information
■ The external devices connected to the USB port must comply with the USB Mass Storage Class specification (USB MSC).

■ Devices connected via USB are supported according to USB Specification V 2.0. Maximum supported speed: 12 Mbit/s.
■ Only devices with a FAT16/FAT32 file system are supported.
■ Hard disk drives (HDD) are not supported.
■ USB hubs are not supported.
■ The following file formats can be used:
  ISO9660 Level 1, Level 2 (Romeo, Joliet).
  MP3 and WMA files written in another format than listed above may not play correctly, and their file names and folder names may not be displayed correctly.
■ The following restrictions apply to the files stored on the external device:
  Bit rate: 8 kbit/s - 320 kbit/s.
  Sampling frequency: 48 kHz, 44.1 kHz, 32 kHz (for MPEG-1) and
24 kHz, 22.05 kHz, 16kHz (for MPEG-2).

The following restrictions apply to the data stored on external devices connected to the USB port:
Number of tracks: max. 999.
Number of tracks per folder level: max. 512.
Folder structure depth: max. 10 levels.
WMA files with Digital Rights Management (DRM) from online music shops cannot be played.
WMA files can only be played safely, if they were created with Windows Media Player version 9 or later.
Applicable playlist extensions: .m3u, .pls, .wpl.
Playlist entries must be in the form of relative paths.
The system attribute for folders/files that contain audio data must not be set.

Playing saved audio files
Press the AUX button once or several times to activate the MP3 or iPod mode.
Replay of the audio data stored on the device is started automatically.

Using the device-specific menu
Press the multifunction knob to open the menu of the device currently connected.

Shuffle songs
To play all tracks in a random order: set this function to On.

Repeat
To repeatedly listen to a track: set this function to On.

Note
If this function is activated, ✈ is shown in the respective main menu.
Folders
To select a track from a folder: select **Folders**. A list of the folders stored on the device is displayed.

Select one of the folders and then select the desired track.

**Note**
This menu item is not available, if an iPod is connected.

**Search...**
To open a menu for track search and selection: select **Search...**.
Select one of the categories and then select the desired track.

**Removing the device**
To safely remove the device, select **Remove USB** or **Eject iPod** and then disconnect the device.
Bluetooth music

General information

Bluetooth enabled audio sources (e.g. music mobile phones, MP3 players featuring Bluetooth, etc.) which support the Bluetooth music protocol A2DP can be connected wirelessly to the Infotainment system.

**Important information**

- The Infotainment system only connects to Bluetooth devices that support A2DP (Advanced Audio Distribution Profile) version 1.2 or higher.
- The Bluetooth device must support AVRCP (Audio Video Remote Control Profile) version 1.0 or higher. If the device does not support AVRCP, only the volume can be controlled via the Infotainment system.
- Before connecting the Bluetooth device to the Infotainment system, become acquainted with its user guide for Bluetooth functions.

Operation

**Prerequisites**

The following prerequisites must be met in order to use the Bluetooth music mode of the Infotainment system:

- The Bluetooth function of the Infotainment system must be activated.
- The Bluetooth function of the external Bluetooth audio source must be activated (see user guide of the device).
- Depending on the external Bluetooth audio source, it may be required to set the device to "visible" (see user guide of the device).
- The external Bluetooth audio source must be paired and connected to the Infotainment system.
Activating the Bluetooth music mode
Press the AUX button once or several times to activate the Bluetooth music mode.
Bluetooth music playback has to be started and paused/stopped via the Bluetooth device.

Operation via Infotainment system

Adjusting the volume
The volume can be adjusted via the Infotainment system 86.

Skipping to previous or next track
Briefly press the buttons  << or >> on the control panel of the Infotainment system.
Phone

General information

The Phone portal provides you with the possibility of having mobile phone conversations via a vehicle microphone and the vehicle loudspeakers as well as operating the most important mobile phone functions via the Infotainment system in the vehicle. To be able to use the Phone portal, the mobile phone must be connected to the Infotainment system via Bluetooth.

Not all Phone portal functions are supported by every mobile phone. The possible phone functions depend on the relevant mobile phone and network provider. You will find further information on this in the operating instructions for your mobile phone or you can enquire about them with your network provider.

Important information for operation and traffic safety

⚠️ Warning

Mobile phones have effects on your environment. For this reason safety regulations and directions have been prepared. You should be familiar with the related directions before you use the telephone function.

⚠️ Warning

Use of the hands-free facility while driving can be dangerous because your concentration is reduced when telephoning. Park your vehicle before you use the hands-free facility. Follow the stipulations of the country in which you find yourself at present.

Do not forget to follow the special regulations that apply in specific areas and always switch off the mobile phone if the use of mobile
phones is prohibited, if interference is caused by the mobile phone or if dangerous situations can occur.

Bluetooth

The Phone portal is certified by the Bluetooth Special Interest Group (SIG).

You will find further information about the specification on the Internet at http://www.bluetooth.com

Control elements

The most important telephone specific control elements are the following:

📞 / ✏️ button: opens the telephone main menu.

Controls on steering wheel:

📞: take call.

🔗: end/reject call.

Bluetooth connection

Bluetooth is a radio standard for the wireless connection of e.g. a telephone with other devices. Data such as a telephone book, call lists, the network operator's name, and field strength can be transferred. The functionality can be restricted depending on the telephone type.

To be able to set up a Bluetooth connection with the Phone portal, the Bluetooth function of the mobile phone must be activated and the mobile phone must be set to "visible". Find a detailed description in the operating instructions for the mobile phone.

Activating Bluetooth

Press the CONFIG button to open the Settings menu.

Select Bluetooth settings and then Bluetooth.

Select Activation and then On.

Pairing a Bluetooth device

Press the CONFIG button to open the Settings menu. Select Bluetooth settings and then Add device (Handsfree).

The following display is shown.
As soon as the Phone portal of the Infotainment system is detected, it appears in the device list of your Bluetooth device. Select the Phone portal.

Upon request, enter the PIN code on your Bluetooth device. The devices are paired and connected.

**Note**
Your mobile phone book will be downloaded automatically. The presentation and order of the telephone book entries may be different on the Infotainment system's display and the mobile phone’s display.

If the Bluetooth connection has been successfully performed: in case another Bluetooth device had been connected to the Infotainment system, this device is now disconnected from the system.

If the Bluetooth connection failed: start the procedure described above again or consult the user guide of the Bluetooth device.

**Note**
A maximum of 5 devices can be paired with the Infotainment system.

**Changing the Bluetooth code**
Press the CONFIG button to open the Settings menu. Select Bluetooth settings and then Change Bluetooth code. The following display is shown.

Enter the desired four-digit PIN code and confirm your input with OK.

**Connecting another paired device**
Press the CONFIG button to open the Settings menu.

Select Bluetooth settings and then Device list. A list of all Bluetooth devices currently paired to the Infotainment system is displayed.

Select the desired device. A submenu is displayed.
Select the submenu item **Select** to establish the connection.

**Disconnecting a device**
Press the CONFIG button to open the Settings menu.
Select Bluetooth settings and then Device list. A list of all Bluetooth devices currently paired to the Infotainment system is displayed.

Select the paired device. A submenu is displayed.

Select the submenu item Disconnect to disconnect the device.

Removing a paired device
Press the CONFIG button to open the Settings menu.

Select Bluetooth settings and then Device list. A list of all Bluetooth devices currently paired to the Infotainment system is displayed.

Select the desired device. A submenu is displayed.

If the device is connected, it has to be disconnected first (see above).

Select the submenu item Delete to remove the device.

Restoring the factory defaults
The phone settings, e.g. the device list, the Bluetooth code, and the ring tone, can be reset to the factory defaults.

Press the CONFIG button to open the Settings menu. Select Bluetooth settings and then Restore factory settings.

The submenu prompts you with a question. To reset all values to the factory defaults, select Yes.

Emergency call

⚠️ Warning
Connection setup cannot be guaranteed in all situations. For this reason you should not rely exclusively on a mobile phone when a vitally important communication (e.g. a medical emergency) is concerned.

In some networks it may be necessary for a valid SIM card to be properly inserted in the mobile phone.

⚠️ Warning
Bear in mind that you can make and receive calls with the mobile phone, if it is in a service area with a sufficiently strong signal. Under certain circumstances emergency calls cannot be made on all mobile phone networks; it is possible that they cannot be made when certain network services and/or telephone functions are active. You can enquire about this with the local network operators.

The emergency call number can differ depending on the region and country. Please enquire beforehand about the correct emergency call number for the relevant region.

Making an emergency call
Dial the emergency call number (e.g. 112).

The telephone connection to the emergency call centre is set up.
Answer when the service personnel questions you about the emergency.

⚠️ Warning
Do not end the call until you are requested to do so by the emergency call centre.

**Operation**
As soon as a Bluetooth connection has been set up between your mobile phone and the Infotainment system, you can also operate many functions of your mobile phone via the Infotainment system.

Via the Infotainment system, you can, e.g., set up a connection to the telephone numbers stored in your mobile phone or change the telephone numbers.

**Note**
In the handsfree mode, mobile phone operation is still possible, e.g. taking a call or adjusting the volume.

After the setup of a connection between the mobile phone and the Infotainment system, mobile phone data is transmitted to the Infotainment system. This can take several minutes depending on the phone model. During this period, operation of the mobile phone is possible via the Infotainment system only to a limited extent.

**Note**
Not every mobile phone supports all functions of the Phone portal. Therefore deviations from the range of functions described with these specific mobile phones are possible.

**Prerequisites**
The following prerequisites must be met in order to use the handsfree mode of the Infotainment system:

- The Bluetooth function of the Infotainment system must be activated.
- The Bluetooth function of the mobile phone must be activated (see user guide of the device).
- The mobile phone must be set to "visible" (see user guide of the device).
- The mobile phone must be paired to the Infotainment system.

**Activating the handsfree mode**
Press the 📞 / ⏯ button on the control panel of the Infotainment system. The phone main menu is displayed.

**Note**
If there is no mobile phone connected to the Infotainment system, No phone available is displayed. For a detailed description of how to establish a Bluetooth connection, see page 111.

Many functions of the mobile phone can now be controlled via the phone main menu (and associated submenus) and via the phone-specific controls on the steering wheel.
Initiating a phone call

Entering a number manually
Being in the phone main menu, press the multifunction knob to open the Phone Menu.
Select the submenu item Enter number. The following screen is displayed.

Enter the desired number and select ✉ on the display to start dialling.

Note
To open the Search screen of the phone book, select ☑.

Using the phone book

Note
The phone book may only be downloaded, if this function is supported by your mobile phone. For further information please consult the user guide of your mobile phone.

The phone book contains contact names and numbers.

Being in the phone main menu, press the multifunction knob to open the Phone Menu.

Select the submenu item Phone book. Select Search and then First Name or Last Name. The following screen is displayed.

As on a telephone or mobile phone, the letters are organised in alphabetical groups on the display: abc, def, ghi, jkl, mno, pqrs, tuv, and wxyz.
Select the desired group of letters. The phone book is displayed showing the entries starting with one of the letters in the letter group.
Scroll through the list and select the desired entry name.
Scroll through the list of phone numbers and select the desired number. The corresponding phone number is dialled.

**Updating the phone book**
If entries in the phone book of your mobile phone have changed, you may update the phone book entries first downloaded to the Infotainment system.

Press the \texttt{7} / \texttt{7} button to display the Phone Menu. Select Phone book and then Update. You are prompted with a question. Select Yes to start the updating process.

**Deleting the phone book**
To delete all entries in the phone book on the Infotainment system, press the \texttt{7} / \texttt{7} button. Select Phone book and then Delete all.

**Using the call lists**
All incoming, outgoing, or missed calls are registered in corresponding call lists.

Being in the phone main menu, press the multifunction knob to open the Phone Menu. Select the submenu item Call lists.

The following screen is displayed.

![Call lists](image)

Select the desired call list, e.g. Missed calls. A menu with the corresponding call list is displayed.

To initiate a phone call: select the desired list entry. The corresponding phone number is dialled.

**Redialling a phone number**
The last dialled phone number can be redialled.

Press the \texttt{7} button on the steering wheel to open the Redial menu.

Press the \texttt{7} button again to start dialling.

Press the \texttt{7} button on the steering wheel to exit the Redial menu. You may optionally use the multifunction knob to select No on the display.

**Incoming phone call**
If an audio mode, e.g. the radio or CD mode, is active at the time of an incoming call, the relating audio source will be muted and stay muted until the call ends.

To answer the call: select Answer on the display.

To reject the call: select Decline on the display.

**Second incoming phone call**
If a second phone call comes in during an ongoing call, a message is displayed.

To answer the second call and end the ongoing call: select Answer on the display.
To reject the second call and continue the ongoing call: select **Decline** on the display.

### Changing the ring tone
Press the **CONFIG** button to open the **Settings** menu.
Select **Phone settings**, **Sound & Signals** and then **Ring tone**. A list of all ring tones available is displayed.
Select the desired ring tone.
For a detailed description on the ring tone volume ▶ 91.

### Functions during a phone call
During an ongoing phone call, the phone main menu is displayed.
Select **Menu** on the display to open the menu **Connected**.
Select **Hang up** on the display to end the call.

### Activating the private mode
In the **Connected** menu, select the submenu item **Private call** to switch the call to the mobile phone.

To switch the call back to the Infotainment system, select **Menu** on the display and then **Transfer call**.

### Deactivating/activating the microphone
In the **Connected** menu, set the submenu item **Mute Mic** to **On**. The caller cannot hear you any more.
To reactivate the microphone: set the submenu item **Mute Mic** to **Off** again.

### Mobile phones and CB radio equipment

#### Installation instructions and operating guidelines
The vehicle specific installation instructions and the operating guidelines of the mobile phone and handsfree manufacturer must be observed when installing and operating a mobile telephone. Failure to do so could invalidate the vehicle type approval (EU directive 95/54/EC).

#### Recommendations for fault-free operation:
- Professionally installed exterior antenna to obtain the maximum range possible,
- Maximum transmission power 10 watts,
- Installation of the phone in a suitable spot, consider relevant Note in the Owner’s Manual, section **Airbag system**.

Seek advice on predetermined installation points for the external antenna or equipment holder and ways of using devices with a transmission power exceeding 10 watts.

Use of a handsfree attachment without external antenna with mobile telephone standards GSM 900/1800/1900 and UMTS is only permitted if the maximum transmission power of the mobile telephone is 2 watts for GSM 900 or 1 watt for the other types.
For reasons of safety, do not use the phone while driving. Even use of a handsfree set can be a distraction while driving.

⚠️ Warning

Operation of radio equipment and mobile telephones which fail to meet above mentioned mobile telephone standards is only permitted using an antenna located outside of the vehicle.

⚠️ Caution

Mobile telephones and radio equipment may lead to malfunctions in the vehicle electronics when operated inside the vehicle with no exterior antenna, unless the above mentioned regulations are observed.
