Vehicle specific data
Please enter your vehicle's data on the previous page to keep it easily accessible. This information is available in the sections "Service and maintenance" and "Technical data" as well as on the identification plate.

Introduction
Your vehicle is a designed combination of advanced technology, safety, environmental friendliness and economy.

This Owner's Manual provides you with all the necessary information to enable you to drive your vehicle safely and efficiently.

Make sure your passengers are aware of the possible risk of accident and injury which may result from improper use of the vehicle.

You must always comply with the specific laws and regulations of the country that you are in. These laws may differ from the information in this Owner's Manual.

Disregarding the description given in this manual may affect your warranty.

When this Owner's Manual refers to a workshop visit, we recommend your Opel Service Partner.

All Opel Service Partners provide first-class service at reasonable prices. Experienced mechanics trained by Opel work according to specific Opel instructions.

The customer literature pack should always be kept ready to hand in the vehicle.

Using this manual
- This manual describes all options and features available for this model. Certain descriptions, including those for display and menu functions, may not apply to your vehicle due to model variant, country specifications, special equipment or accessories.
- The "In brief" section will give you an initial overview.
- The table of contents at the beginning of this manual and within each section shows where the information is located.
- The index will enable you to search for specific information.
- This Owner's Manual depicts left-hand drive vehicles. Operation is similar for right-hand drive vehicles.
- The Owner's Manual uses the factory engine designations. The corresponding sales designations can be found in the section "Technical data".
- Directional data, e.g. left or right, or front or back, always relate to the direction of travel.
- The vehicle display screens may not support your specific language.
- Display messages and interior labelling are written in bold letters.
Danger, Warnings and Cautions

⚠️ Danger
Text marked ⚠️ Danger provides information on risk of fatal injury. Disregarding this information may endanger life.

⚠️ Warning
Text marked ⚠️ Warning provides information on risk of accident or injury. Disregarding this information may lead to injury.

Caution
Text marked Caution provides information on possible damage to the vehicle. Disregarding this information may lead to vehicle damage.

Symbols
Page references are indicated with ⚫. ⚫ means "see page".
Page references and index entries refer to the indented headings given in the section table of content.
We wish you many hours of pleasurable driving.
Adam Opel AG
In brief

Initial drive information

Vehicle unlocking
Unlocking with remote control

Press unlock symbol to unlock the driver's door.
Press again to unlock entire vehicle.
Open the doors by pulling the handles.
Press locking symbol; only the load compartment is unlocked.
Radio remote control ➔ 22, Central locking system ➔ 25, Load compartment ➔ 34, Unlocking with manual key ➔ 25.

Unlocking with electronic key

Press the button on any exterior door handle when the electronic key is within range of the detection zone (approx. one metre of the front doors or load compartment) and pull the handle to open.
- or -
Press electronic key button unlock symbol to unlock all doors and the load compartment.
Electronic key system ➔ 23.
Seat adjustment

Longitudinal adjustment

Pull handle, slide seat, release handle.
Try to move the seat back and forth to ensure that the seat is locked in place.
Seat position 46, Seat adjustment 47.

Backrests inclination

Pull lever, adjust inclination and release lever. Allow the backrest to engage. Do not lean on backrest when adjusting.
Seat position 46, Seat adjustment 47.

Seat height

Lever pumping motion:
up : seat higher
down : seat lower
Seat position 46, Seat adjustment 47.
Head restraint adjustment

Press release button, adjust height, engage.
Head restraints ☞ 45.

Seat belt

Pull out the seat belt and fasten in belt buckle. The seat belt must not be twisted and must fit close against the body. The backrest must not be tilted back too far (maximum approx. 25°).
To unfasten belt, press red button on belt buckle.
Seat position ☞ 46, Seat belts ☞ 52, Airbag system ☞ 57.

Mirror adjustment

Interior mirror

To adjust the mirror, move the mirror housing in the desired direction.
Interior mirror, Wide view mirror ☞ 41, Automatic anti-dazzle interior mirror ☞ 42.
Exterior mirrors

Manual adjustment

Swivel mirror in required direction. The lower mirrors are not adjustable. Exterior mirrors  40.

Electric adjustment

Select the relevant exterior mirror and adjust it.
Convex exterior mirrors  40, Electric adjustment  40, Folding exterior mirrors  40, Heated exterior mirrors  41.

Steering wheel adjustment

Unlock the lever, adjust the steering wheel, then engage the lever and ensure it is fully locked.
Do not adjust the steering wheel unless vehicle is stationary and the steering wheel lock has been released.
Airbag system  57, Ignition positions  126.

Rear window wiper/washer ➤ 83, Washer fluid ➤ 163.

Climate control

Heated rear window

Heating is operated by pressing ⚔️.
Heated rear window ➤ 44.

Heated exterior mirrors

Pressing ⚔️ also activates the heated exterior mirrors.
Heated exterior mirrors ➤ 41.

Demisting and defrosting the windows

Climate control system

- Air distribution to ⚔️.
- Set temperature control to warmest level.
- Set fan speed to highest level.
- Cooling A/C on.
- Heated rear window ⚔️ on.

Climate control system ➤ 111.
Electronic climate control system

- Press \( \text{LED} \). LED illuminates in the button when activated.
- Temperature, air distribution and cooling are regulated automatically and the fan runs at high speed.
- Switch on heated rear window \( \text{Heated} \) \( \text{44} \).

Transmission

Manual transmission

Reverse: with the vehicle stationary, wait three seconds after depressing clutch pedal and then pull up the collar on the selector lever and engage the gear.
If the gear does not engage, set the lever to neutral, release the clutch pedal and depress again; then repeat gear selection.

Starting off

Check before starting off

- Tyre pressure and condition \( \text{178, 212} \).
- Engine oil level and fluid levels \( \text{160} \).
- All windows, mirrors, exterior lighting and number plates are free from dirt, snow and ice and are operational.
- Proper position of mirrors, seats and seat belts \( \text{40, 46, 53} \).
- Brake function at low speed, particularly if the brakes are wet.
Starting the engine with key

- Turn key to position 1.
- Move the steering wheel slightly to release the steering wheel lock.
- Operate clutch and brake pedal.
- Do not operate accelerator pedal.
- Diesel engines: turn the key to position 2 for preheating and wait until control indicator ! extinguishe in the instrument cluster.
- Turn key to position 3 and release.

Starting the engine \( \Rightarrow \) 128.

Starting the engine with the power button

Electronic key must be inside the vehicle, either in the card reader or the front passenger compartment.

- Move the steering wheel slightly to release the steering wheel lock.
- Operate clutch and brake pedal.
- Do not operate accelerator pedal.
- Press START/STOP and release.
- Engine starts after a short delay.

Power button \( \Rightarrow \) 126.

Stop-start system

If the vehicle is at low speed or in standstill and certain conditions are fulfilled, activate an Autostop as follows:

- Depress the clutch pedal.
- Move the selector lever to neutral.
- Release the clutch pedal.

An Autostop is indicated when \( \bigtriangleup \) illuminates in the instrument cluster \( \Rightarrow \) 96.

To restart the engine, depress the clutch pedal again.

Stop-start system \( \Rightarrow \) 130.
Parking

⚠️ Warning

- Do not park the vehicle on an easily ignitable surface. The high temperature of the exhaust system could ignite the surface.
- Always apply parking brake without pressing release button. Apply as firmly as possible on a downhill slope or uphill slope. Depress brake pedal at the same time to reduce operating force.
- Switch off the engine.
- If the vehicle is on a level surface or uphill slope, engage first gear. On an uphill slope, turn the front wheels away from the kerb. If the vehicle is on a downhill slope, engage reverse gear. Turn the front wheels towards the kerb.

- Close the windows.
- Remove the ignition key from the ignition switch. Turn the steering wheel until the steering wheel lock is felt to engage.
- Lock the vehicle by pressing ⬍ on the remote control ⬈ 25. Activate the anti-theft locking system ⬈ 36 and anti-theft alarm system ⬈ 37.
- The engine cooling fans may run after the engine has been switched off ⬈ 159.

Caution

After running at high engine speeds or with high engine loads, operate the engine briefly at a low load or run in neutral for approx. 30 seconds before switching off, in order to protect the turbocharger.

Keys, locks ⬈ 21, Laying the vehicle up for a long period of time ⬈ 158.

Replacement keys

The key number is specified on the key or on a detachable tag.
The key number must be quoted when ordering replacement keys as it is a component of the immobiliser system.

Locks 192, Radio remote control 22, Electronic key system 23, Central locking 25, Starting the engine 128.

Car Pass

The Car Pass contains security related vehicle data and should therefore be kept in a safe place.
When the vehicle is taken to a workshop, this vehicle data is needed in order to perform certain operations.

**Radio remote control**

Used to operate:
- central locking system 25
- anti-theft locking system 36
- anti-theft alarm system 37
- load compartment 34

The remote control has a range of approx. five metres. It can be restricted by external influences. The hazard warning flashers confirm operation.

Handle with care, protect it from moisture and high temperatures and avoid unnecessary operation.

Depending on model, the vehicle may use a 2-button or 3-button remote control or an electronic key which includes the functionality of the radio remote control.

Electronic key system 23.

**Fault**

If the central locking system cannot be operated with the remote control, it may be due to the following:
- The range is exceeded.
- The battery voltage is too low.
- Frequent, repeated operation of the remote control while not in range, which will require reprogramming by a workshop.
- Overload of the central locking system by operating at frequent intervals; the power supply is interrupted for a short time.
- Interference from higher-power radio waves from other sources.

Manual key operation 25.

**Remote control battery replacement**

Replace the battery as soon as the range reduces.

Batteries do not belong in household waste. They must be disposed of at an appropriate recycling collection point.

**2-button and 3-button remote control**
Remove screw and open battery compartment by inserting a coin into the slot and twisting.

Replace the battery (battery type CR 2016), paying attention to the installation position.
Reattach both halves of the cover, ensuring they engage correctly.
Replace screw and tighten.

**Electronic key**
The need for battery replacement is indicated by a message in the Driver Information Centre 98.

Press and hold the release button on the side of the electronic key and pull out the emergency manual key from the top. Unclip the battery cover located on the rear of the electronic key, then press one side of the battery to release and remove the battery.
Replace the battery (battery type CR 2016), paying attention to the installation position.
Reattach battery cover and reinsert the emergency manual key.

**Electronic key synchronisation**
Press any button on the electronic key four times within range of the detection zone (approx. one metre) of the front doors or load compartment. The electronic key will be synchronised when the ignition is switched on.

**Electronic key system**
Enables a handsfree operation of the following functions:
- central locking system 25
- load compartment 34
- ignition switching on and starting the engine 126
The electronic key simply needs to be on the driver's person.
Note
Always take the electronic key with you when exiting the vehicle.

The electronic key being left in the card reader is indicated by a warning chime 99 and a message in the Driver Information Centre 98 when the driver’s door is opened.

Additionally, the electronic key includes the functionality of the radio remote control 22 and an entry lighting function 109.

Handle with care, protect from moisture and high temperatures and avoid unnecessary operation.

Note
Do not put the electronic key in the load compartment during driving, as this is outside of the detection zone (indicated by a warning chime at low speed 99 and a message in the Driver Information Centre 98).

Note
In the event the electronic key is kept in the front passenger compartment and a message appears in the Driver Information Centre (possibly accompanied by a warning chime) indicating that it is out of reception range, we recommend inserting the electronic key in the card reader.

Handsfree operation is automatically disabled when the electronic key buttons have been operated or the central locking switch 25 is pressed. To re-enable handsfree operation, restart the engine.

Power button 126.

Replacing battery in electronic key
Replace the battery as soon as the system no longer operates properly or the range is reduced. The need for battery replacement is indicated by a message in the Driver Information Centre 98.

Battery replacement, see Radio remote control 22.

Fault
If the central locking system cannot be operated or the engine cannot be started, the cause may be one of the following:

- fault in electronic key
- electronic key out of reception range
- battery voltage too low
- overload of the central locking system by operating at frequent intervals, the power supply is interrupted for a short time
- interference from higher-power radio waves from other sources

Emergency manual key

Press and hold the release button on the side of the electronic key and pull out the emergency manual key from the top.
Manually lock or unlock the doors by turning the key in the lock. After use, reinsert the emergency manual key in the housing of the electronic key.

**Door locks**

**Anti-theft security lock**

To prevent the front door from being opened from the outside, open the door and engage the anti-theft security lock.

Using a suitable tool, turn the lock switch on the door to the locked position. The door cannot be opened from outside. The anti-theft security lock remains engaged even after unlocking the vehicle with the remote control. The door can only be opened from inside or by using the manual key. To disengage, turn the switch to the unlocked position.

**Rear door manual lock**

Turn the lock switch clockwise to lock the left-hand rear door from inside the load compartment. To disengage lock, turn the switch anticlockwise.

Rear doors 32.

**Central locking system**

Unlocks and locks the front doors, sliding side doors and load compartment. With the 3-button remote control, the front doors and load compartment/sliding side doors (where fitted) can be unlocked and locked separately. For safety reasons, the vehicle cannot be locked if the key is in the ignition switch.

**Note**

If no door is opened within approx. two minutes after the vehicle has been unlocked, the vehicle is re-locked automatically.

Close doors and load compartment. If the doors are not closed properly, the central locking system will not work. Refer to "Manual key operation" below for further information.
Remote control operation

Operation of central locking system with the remote control is confirmed by the hazard warning flashers. The hazard warning flashers flash once to indicate the vehicle is unlocked, and twice to indicate the vehicle is locked.

Unlocking with 2-button remote control

Depending on model and configuration:
- Press and hold to unlock all doors and the load compartment.

- or -
- Press once to unlock the driver’s door, and press twice to unlock all doors and the load compartment.

Unlocking with 3-button remote control

Depending on model and configuration:
- Press and hold to unlock all doors and the load compartment.
- or -
- Press once to unlock all doors and the load compartment.

- or -
- Press once to unlock the driver’s door, and press twice to unlock all doors and the load compartment.

Locking with 2-button remote control

Press : All doors and the load compartment are locked.
Locking with 3-button remote control

Press •: All doors and the load compartment are locked.

Note
Where fitted, alarm monitoring of the passenger compartment ⬤ 37 is switched off by pressing and holding • (which is confirmed by an audible signal).

If this was done unintentionally, unlock the doors again and press • briefly to lock the vehicle.

Load compartment locking and unlocking with 2-button remote control

Depending on model and configuration, press • once or twice to unlock the load compartment (and sliding side doors).
Press • to lock the load compartment (and, depending on version, the sliding side doors).

Load compartment locking and unlocking with 3-button remote control

Press • to lock or unlock load compartment (and, depending on version, the sliding side doors).
Electronic key system operation

For handsfree operation, the electronic key must be outside the vehicle, within a range of approx. one metre of the front doors or load compartment.

Note
There is no button for handsfree operation in the exterior door handle of the sliding side door.

There must be no electronic key left inside the vehicle and no additional electronic key in the detection zones, or handsfree operation of the central locking system will not work.

Operation of central locking system with the electronic key is confirmed by the hazard warning flashers. The hazard warning flashers flash once to indicate the vehicle is unlocked, and twice to indicate the vehicle is locked.

When locking, if a door is open or incorrectly closed, the central locking system will lock and unlock in quick succession without flashing the hazard warning flashers.

⚠️ Danger

Never leave an electronic key inside the vehicle when children or animals are left in the vehicle, to avoid unintended operation of windows, doors or engine. Risk of fatal injury.

Unlocking with electronic key - handsfree operation

Press the button on either front door handle
or the button on the load compartment handle and pull the handle to open.
The vehicle only unlocks when at least three seconds have passed since locking using handsfree operation.
Handsfree operation is automatically disabled when the electronic key buttons have been operated. To re-enable handsfree operation, restart the engine.

Unlocking with electronic key buttons

Press  to unlock all doors and the load compartment.

Locking with electronic key - handsfree operation
Press the button on any exterior door handle. All doors and the load compartment are locked.
The vehicle only locks when at least three seconds have passed since unlocking using handsfree operation.
Handsfree operation is automatically disabled when the electronic key buttons have been operated. To re-enable handsfree operation, restart the engine.

Locking with electronic key buttons

Press  to lock all doors and the load compartment.

Load compartment locking and unlocking with electronic key - handsfree operation
Press the button on the exterior door handle to lock or unlock the rear doors/tailgate (and sliding side doors) when the electronic key is within range of the detection zone (approx. one metre).
The rear doors/tailgate (and sliding side doors) only lock/unlock when at least three seconds have passed since the button was last pressed.
Handsfree operation is automatically disabled when the electronic key buttons have been operated. To re-enable handsfree operation, restart the engine.
Load compartment locking and unlocking with electronic key buttons

Press 🕔 to lock/unlock the rear doors/tailgate (and sliding side doors).

Electronic key system 23.

Manual key operation

Manually lock or unlock the doors by turning the key in the lock.

Rear doors
In the event the rear doors are locked manually after the vehicle has been unlocked with remote control button 🕒, lock the entire vehicle again by pressing 🕒 to reset central locking system. Otherwise pressing 🕒 may not unlock the rest of the vehicle.

After manually unlocking the rear doors when the rest of the vehicle is locked, it may be necessary to press 🕒 twice to lock the entire vehicle.

Central locking switch

Locks or unlocks the doors and load compartment from the passenger compartment.

Press 🕒 to lock the vehicle. Activation is indicated by the LED in the button. When closing any open door, the door is locked automatically.

Press 🕒 again to unlock the vehicle.

If the vehicle is driven with an open load compartment, the front doors (and sliding side doors) can still be locked. With the ignition switched on, press and hold 🕒 for approx.
Keys, doors and windows

five seconds. When closing the rear doors/tailgate, they are locked automatically.

Automatic locking 31.

Handsfree operation is automatically disabled when  is pressed. To re-enable handsfree operation, restart the engine.

Electronic key system 23.

**Slam door locks**

Certain models feature load compartment locks which are isolated for added security.

With slam door locks, while the doors can be locked and unlocked using the remote control or electronic key, the load compartment must be manually opened by turning the key in the lock.

Rear doors 32.

**Automatic locking**

**Automatic locking after driving off**

This security feature can be configured to automatically lock the doors and load compartment as soon as the vehicle is driven.

**Activation**

With the ignition switched on, press and hold  on the central locking switch for approx. 5 seconds. An audible signal confirms activation.

**Deactivation**

With the ignition switched on, press and hold  on the central locking switch for approx. 5 seconds. An audible signal confirms deactivation.

Central locking switch 25.

**Child locks**

The child safety lock for the sliding side door is located on its rearward facing edge.

To prevent the sliding side door from being opened from the inside, open the door and engage the child lock.

⚠️ **Warning**

Use the child locks whenever children are occupying the rear seats, to prevent unintentional opening from the inside.
Using a suitable tool, turn the child lock switch in the sliding side door to the locked position; the door cannot be opened from the inside.
The child lock remains engaged even after unlocking the vehicle with the remote control. The door can only be opened from outside.
To disengage, turn the child lock switch to the unlocked position.

### Doors

#### Sliding door

Open and close the sliding side door only when the vehicle is at a standstill with the parking brake applied.
Pull the interior handle towards the rear to unlock and open.
The door can be locked from inside the vehicle with the interior lock switch.
Central locking system  25.

#### Warning

Take care when operating the sliding side door. Risk of injury.
Ensure that nothing becomes trapped during operation and no-one is standing within the moving area.
If the vehicle is parked on a slope, open sliding doors may move accidentally on account of their weight.
Close the sliding doors before driving off.

#### Rear doors

The rear doors can only be opened if the vehicle is unlocked. Central locking system, manual key operation  25.
To open the left-hand rear door, pull the outside handle.
The door is opened from inside the vehicle by pulling the interior handle.
The right-hand rear door is released using the lever.

⚠️ Warning

The rear lights may be obscured if the rear doors are open and the vehicle is parked on the roadside. Make other road users aware of the vehicle, by using a warning triangle or other equipment specified in the road traffic regulations.

The doors are retained in the 90° position by locking stays. To open the doors to 180° or further, pull the door release handles and swing open to the desired position.

⚠️ Warning

Ensure extended opening doors are secured when fully opened. Opened doors may slam closed due to the force of the wind!

When closing the doors, secure each locking stay to the catch on the door frame.

Always close the right-hand door before the left-hand door.

Door locks 🔒 25, Central locking system 🔒 25.
Driving with an open load compartment

To drive with the right-hand rear door open, e.g. if long objects need to be transported, open the left-hand followed by the right-hand rear door, then close the left-hand rear door.

Engage the interior lock in its housing by turning the handle clockwise to the locked position. The door is bolted and cannot be opened from outside. Disengage the lock by turning the handle anticlockwise, to enable the door to be opened.

Caution

Always make sure that the load in the vehicle is securely stowed when driving with an open load compartment.

For further information, refer to "Loading information" 79. Always comply with local or national regulations.

Load compartment

Tailgate

Opening

After unlocking, press tailgate button and lift tailgate to the fully open position. The tailgate can be also opened from inside the vehicle by operating the tailgate interior release.
**Note**
In very cold climates, the opening assistance provided by the tailgate hydraulic struts may be reduced.

Central locking system ⦿ 25.

**Closing**

Lower the tailgate using the interior strap.

**Caution**

Place fingers through the strap before pulling, to avoid damage to the strap.

Release strap when tailgate is lowered and push tailgate to close fully.

Central locking system ⦿ 25.

**Emergency tailgate opening from inside the vehicle**

Then grasp the metal string and pull it downwards to unlock. Push the tailgate to open.

**General hints for operating tailgate**

Depending on model, prise off the cover on the inside of the tailgate.

**Danger**

Do not drive with the tailgate open or ajar, e.g. when transporting bulky objects, since toxic exhaust gases, which can not be seen or smelled, could enter the vehicle. This can cause unconsciousness and even death.
Caution

Before opening the tailgate, check overhead obstructions, e.g. a garage door, to avoid damage to the tailgate.
Ensure there is adequate clearance both above (at least 2.15 metres) and behind when opening tailgate.

Note
The installation of certain heavy accessories onto the tailgate may affect its ability to remain open.

Vehicle security

Anti-theft locking system

⚠️ Warning
Do not use the system if there are people in the vehicle! The doors cannot be unlocked from the inside.

The system deadlocks all doors and the load compartment.
All doors and the load compartment must be closed or the system cannot be activated.

Note
The anti-theft locking system cannot be activated when the hazard warning lights or sidelights are switched on.
Activation and deactivation are not possible with the central locking switch.
Central locking system 25.

2-button and 3-button remote control operation

Operation is confirmed by the hazard warning flashers flashing five times.

Activation

Press 🗝 twice.
- or -
Turn manual key in driver's door lock towards rear of vehicle twice.

Deactivation
Unlock the doors by pressing 🆕 on the remote control or by turning the manual key in driver's door lock towards front of vehicle.
Electronic key system operation

Operation is confirmed by the hazard warning flashers.

Activation

For handsfree operation, the electronic key must be outside the vehicle, within a range of approx. one metre of the front doors or load compartment.

Press the button twice on any exterior door handle.
- or -

Press twice.

Deactivation

Unlock the doors by pressing the button on any exterior door handle or press .

Handsfree operation is automatically disabled when the electronic key buttons have been operated (or the central locking switch is pressed). To re-enable handsfree operation, restart the engine.

Central locking system 25.

Electronic key system 23.

Anti-theft alarm system

The anti-theft alarm system is operated in conjunction with the central locking system 25.

It monitors:
- doors, tailgate, bonnet
- passenger compartment
- load compartment
- ignition
- interruption of alarm siren power supply

Activation

All doors and the bonnet must be closed.

Hazard warning lights flash to confirm activation. If the hazard warning lights do not flash upon activation, a door or the bonnet is not fully closed.
2-button and 3-button remote control

Press \( \square \) to activate the anti-theft alarm system.

Electronic key
For handsfree operation, the electronic key must be outside the vehicle, within a range of approx. one metre of the front doors or load compartment.

Press the button on any exterior door handle.
- or -

Press \( \square \) to activate the anti-theft alarm system.

Electronic key system \( \square \) 23.

Deactivation
Unlocking the vehicle (with \( \square \) or the button on any exterior door handle) or switching on the ignition deactivates the anti-theft alarm system. Hazard warning lights flash to confirm deactivation.

The system is not deactivated when unlocking the driver's door with the key or with the central locking switch in the passenger compartment.

Note
If the alarm has been triggered, unlocking the vehicle with the key will not stop the alarm siren. To stop the siren, switch on the ignition. The hazard warning lights will not flash upon deactivation if the alarm has been triggered.
Activation without monitoring of passenger compartment

Disable monitoring of the passenger compartment, e.g. when animals are being left in the vehicle, or if the auxiliary heater has been set for a timed or remote controlled start .isNotBlank.

Press and hold NotBlank on the remote control or electronic key; an audible signal will sound as confirmation. The status will remain until the doors are unlocked.

Alarm

When triggered, the alarm sounds via a separate battery-backed power sounder, and the hazard warning lights flash simultaneously. The number and duration of alarm signals are stipulated by legislation.

If the vehicle battery is disconnected or its power supply is interrupted, the alarm siren will be triggered. First deactivate the anti-theft alarm system if the vehicle battery must be disconnected.

To silence the alarm siren (if triggered) and therefore deactivate the anti-theft alarm system, reconnect vehicle battery and unlock the vehicle or switch on the ignition.

Immobiliser

The immobiliser is part of the ignition switch and checks whether the vehicle is allowed to be started with the key being used.

The immobiliser is activated automatically after the key has been removed from the ignition switch and also if the key is left in the ignition switch when the engine is turned off.

If the engine cannot be started, switch off the ignition and remove key, wait approx. two seconds and then repeat the start attempt. If start attempt is unsuccessful, attempt to start the engine using the spare key and seek the assistance of a workshop.

Note

Radio Frequency Identification (RFID) tags may cause interference with the key. Do not have it placed near the key when starting the vehicle.

Note

The immobiliser does not lock the doors. You should always lock the vehicle after leaving it and switch on the anti-theft alarm system .isNotBlank, .isNotBlank.
Exterior mirrors

Convex shape
The convex exterior mirror contains an aspherical area and reduces blind spots. The shape of the mirror makes objects appear smaller, which will affect the ability to estimate distances.

Manual adjustment
Adjust mirrors by swivelling in required direction.

Electric adjustment
Select the relevant exterior mirror by switching the control to the left or right, then swivel the control to adjust the mirror.
No mirror is selected when the control is in the centre position.

Folding mirrors
For pedestrian safety, the exterior mirrors will swing out of their normal mounting position if they are struck with sufficient force. Reposition the mirror by applying slight pressure to the mirror housing.

Parking position
The exterior mirrors can be folded in by pressing gently on the outer edge of the housing, e.g. when in a confined parking situation.
Depending on version, exterior mirrors can be automatically folded to the parking position upon locking the vehicle. For further information, refer to the Infotainment manual.

**Heated mirrors**

Operated by pressing \(\text{図} \). Activation is indicated by the LED in the button. Heating functions with the engine running. It is switched off automatically after a short time. Climate control system \(\triangleright 111\).

**Interior mirrors**

**Manual anti-dazzle**

To reduce dazzle, adjust the lever on the underside of the mirror housing.

**Wide view mirror**

Depending on vehicle, a large convex mirror is located in the front passenger sun visor which helps to increase visibility and reduce blind spots.
Automatic anti-dazzle

Dazzle from following vehicles at night is automatically reduced.

Windows

Windscreen

Heat-reflecting windscreen

The heat-reflecting windscreen has a coating which reflects solar radiation. Also data signals, e.g. from toll stations, might be reflected.

The marked areas on the windscreen are not covered with the coating. Devices for electronic data recording and fee payment must be attached in these areas. Otherwise data recording malfunctions may occur.

Windscreen stickers

Do not attach stickers such as toll road stickers or similar on the windscreen in the area of the interior mirror.

Windscreen replacement

Caution

If the vehicle has a front-looking camera sensor for the driver assistance systems, it is very important that any windscreen replacement is performed accurately according to Opel specifications. Otherwise, these systems may not work properly and there is a risk of unexpected behaviour and/or messages from these systems.
Power windows

⚠️ Warning

Take care when operating the power windows. Risk of injury, particularly to children.
Keep a close watch on the windows when closing them.
Ensure that nothing becomes trapped in them as they move.

Switch on ignition to operate the power windows.

Operate the switch for the respective window by pushing to open or pulling to close.
For incremental operation: Push or pull switch briefly.
For automatic opening or closing: Push or pull switch for longer.
Window moves up or down automatically with safety function enabled. To stop movement, operate the switch once more in the same direction.

In the event of closing difficulties due to frost or the like, operate the switch several times to close the window in stages.

Safety function

If the window glass encounters resistance during automatic closing, it is immediately stopped and opened again.

Overload

If the windows are repeatedly operated within short intervals, the window operation is disabled for some time.

Rear windows

Sliding side windows

To open or close, raise the handle and slide window.
Sun blind

Depending on vehicle, a sunblind is integrated into the window cover.
To close, pull handle downwards and engage the locks at the bottom.
To open, disengage the locks by pulling sunblind towards you slightly and guide it upwards.

Heated rear window

Operated by pressing \includegraphics[width=0.07\textwidth]{heated-rear-window-button}. Activation is indicated by the LED in the button.
Heating functions with the engine running and is switched off automatically after a short time.
Climate control system \includegraphics[width=0.07\textwidth]{111}.

Sun visors

The sun visors can be folded down or swivelled to the side to prevent dazzling.
Sun visors have vanity mirrors and a ticket holder on the rear.

The mirror covers should be closed when driving.
Wide view mirror \includegraphics[width=0.07\textwidth]{41}.

Head restraints

Position

⚠️ Warning

Only drive with the head restraint set to the proper position.

The upper edge of the head restraint should be at upper head level. If this is not possible for extremely tall people, set to highest position, and set to lowest position for small people.

Adjustment

Press release button, adjust height and engage.
The rear seat head restraints can also be folded forwards.

**Note**
Approved accessories may only be attached to the front passenger seat head restraint if the seat is not in use.

**Removal**
E.g. when using a child restraint system 62.
First tilt the backrest forwards, then pull up head restraint to uppermost position. Press release button and pull the head restraint upwards to remove.
Stow head restraints securely in load compartment. Do not drive with head restraints removed if the seat is occupied.

## Front seats

### Seat position

<table>
<thead>
<tr>
<th>Warning</th>
<th>Only drive with the seat correctly adjusted.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Danger</td>
<td>Do not sit nearer than 25 cm from the steering wheel, to permit safe airbag deployment.</td>
</tr>
<tr>
<td>Warning</td>
<td>Never adjust seats while driving as they could move uncontrollably.</td>
</tr>
<tr>
<td>Warning</td>
<td>Never store any loose objects under the seats. Underseat storage, storage box 73.</td>
</tr>
</tbody>
</table>

- Sit with buttocks as far back against the backrest as possible. Adjust the distance between the seat and the pedals so that legs are slightly angled when pressing the pedals. Slide the front passenger seat as far back as possible.
- Set seat height high enough to have a clear field of vision on all sides and of all display instruments. There should be at least one hand of clearance between head and the roof frame. Thighs should rest lightly on the seat without pressing into it.
• Sit with shoulders as far back against the backrest as possible. Set the backrest rake so that it is possible to reach the steering wheel with arms slightly bent. Maintain contact between shoulders and the backrest when turning the steering wheel. Do not angle the backrest too far back. We recommend a maximum rake of approx. 25°.

• Adjust seat and steering wheel in a way that the wrist rests on top of the steering wheel while the arm is fully extended and shoulders on the backrest.

• Adjust the steering wheel ▶ 81.

• Adjust the head restraint ▶ 45.

• Adjust the height of the seat belt ▶ 53.

• Adjust the lumbar support so that it supports the natural shape of the spine ▶ 47.

**Seat adjustment**

Drive only with engaged seats and backrests.

---

**Longitudinal adjustment**

Pull handle, slide seat, then release handle.

Try to move the seat back and forth to ensure that the seat is locked in place.

---

**Backrest inclination**

Pull lever, adjust inclination and release lever. Allow the backrest to engage audibly.

Do not lean on backrest when adjusting.
Seat height

Lever pumping motion:
up : seat higher
down : seat lower

Lumbar support

Adjust lumbar support using handwheel to suit personal requirements.
Rotate handwheel to increase and decrease support.

Seat folding

Folding front centre passenger seat

Pull release lever, fold backrest fully forwards then release the lever. Allow the backrest to engage audibly.

Note
When seat height is in its highest position, push head restraints down before folding backrest.
Ensure that nothing prevents the seat from folding, e.g. sun visor 44, cup holder 72.
To restore, pull release lever, raise backrest then release the lever. Allow the backrest to engage audibly.

⚠️ Warning

When the front passenger seat is in the folded position, the front passenger airbag system must be deactivated.
Airbag deactivation 61.

**Armrest**

Raise or lower the armrest as required.

**Heating**

Press ⬇️ for the respective seat when the engine is running; LED in switch illuminates. Press other end of rocker switch to turn seat heating off.

Seat heating is thermostatically controlled and switches off automatically when seat temperature is sufficient.

Prolonged use for people with sensitive skin is not recommended.

**Rear seats**

⚠️ Warning

When rear seats or backrests are being adjusted or folded, keep hands and feet away from the moving area.

Never adjust seats while driving as they could move uncontrollably.

Drive only with engaged seats and backrests.

When folding or removing the rear seat, ensure the armrests are folded away in their most upright position.
Rear seat access

To facilitate access to the rear seats, pull release lever and fold the seat backrest forwards. If necessary, unfasten seat belts from their buckles.

⚠️ Warning

Ensure that the backrest returns to its correct position and the seat belt buckles are fastened securely.

Fastening seat belt 53.

Seat cushion

Depending on version, the seat cushion can be adjusted to one of five positions by pulling the strap located at the front of the seat and sliding seat cushion gently forwards or backwards.

Underseat storage 73.

Folding seats

On some variants, the cargo area can be increased by folding up the rear seats.

⚠️ Warning

When folding the seat use caution - beware of moving parts. Ensure the seat is secure when completely folded.

Release seat belts from their buckles and store in the housing.
If necessary, remove the head restraints 45.
Pull the release strap and fold the backrest onto the seat.
Hold the locking bars and bring them together simultaneously.

Lift and fold the seat assembly forwards until it engages in the folded forward position.
Lock the seat into position by pushing the rear support legs and ensure they are engaged.

**Caution**

For safety reasons, do not place loads on the folded rear seats.

When returning the seat assembly to its original position, pull locking bars, carefully lower seat assembly and ensure the rear support legs are correctly located and latched. Raise the backrest, and if necessary, replace the head restraints.

**Removable rear seats**

On some variants, the cargo area can be increased by removing the rear seats.

Release the seats by pressing down and sliding forward the locking catches located on the left and right-hand seat mountings.
Raise the locking catches, then move the seat unit towards the rear to release from the rear floor anchor points.

Raise the seat unit, then move it towards the rear again to release from the front floor anchor points. The seat unit can then be lifted out.

The seats must be removed through the sliding door only.

⚠️ Warning

Removable seats are heavy! Do not attempt to remove without assistance.

When installing the seats, ensure that the seats are properly located on the anchor points and that the locking catches are fully engaged.

When re-installing seats always ensure that the row with the folding access seat B is positioned correctly in front of the fixed seat row A.

_seat belts

The seat belts are locked during heavy acceleration or deceleration of the vehicle holding the occupants in the sitting position. Therefore, the risk of injury is considerably reduced.

⚠️ Warning

Fasten seat belt before each trip.

In the event of an accident, people not wearing seat belts endanger their fellow occupants and themselves.
Seat belts are only designed for use by one person at a time. Child restraint system ◊ 62.
Periodically check all parts of the belt system for damage and proper functionality.
Have damaged components replaced. After an accident, have the belts and triggered belt tensioners replaced by a workshop.

**Note**
Make sure that the belts are not damaged by shoes or sharp-edged objects or trapped. Prevent dirt from getting into the belt retractors.

**Seat belt reminder**
Front seat is equipped with a seat belt reminder, indicated by control indicator ◊ in the roof console ◊ 92.

**Belt force limiters**
On the front seats, stress on the body is reduced by the gradual release of the belt during a collision.

**Belt tensioners**
In the event of a head-on or rear-end collision of a certain severity, the front seat belts are tightened.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Incorrect handling (e.g. removal or fitting of belts) can trigger the belt tensioners with risk of injury.</td>
</tr>
</tbody>
</table>

Deployment of the belt tensioners is indicated by continuous illumination of control indicator ◊ 92.
Triggered belt tensioners must be replaced by a workshop. Belt tensioners can only be triggered once.

**Note**
Do not affix or install accessories or other objects that may interfere with the operation of the belt tensioners. Do not make any modifications to belt tensioner components as this will invalidate the vehicle type approval.

**Three-point seat belt**

**Seat belts on the front seats**

**Fasten**

Withdraw the belt from the retractor, guide it untwisted across the body and insert the latch plate into the buckle.
Tighten the lap belt regularly whilst driving by pulling the shoulder belt.
Seat belt reminder ◊ 92.
Loose or bulky clothing prevents the belt from fitting snugly. Do not place objects such as handbags or mobile phones between the belt and your body.

⚠️ Warning
The belt must not rest against hard or fragile objects in the pockets of your clothing.

Height adjustment
Slide adjuster up or down to desired position:
- Pull belt out slightly.
- Tilt adjuster downwards to disengage then slide height adjustment downwards or push the height adjustment up without tilting adjuster.

Adjust the height so that the belt lies across the shoulder. It must not lie across the throat or upper arm.

⚠️ Warning
Do not adjust while driving.
To unfasten belt, press red button on belt buckle. The seat belt retracts automatically.

For the second row seats, always use frontmost seat belts 2 located in the rear passenger compartment. When the second row seat belts 2 are not in use, place latch plate 3 in its housing 4.

For the third row seats, always use rearmost seat belts 1 located in the rear passenger compartment.

Before fastening the rear outer seat belt, first ensure that the lower latch plate 5 is fully engaged in its buckle 6. Then guide the belt over the lap area and the shoulder (do not twist) and insert the upper latch plate into the appropriate buckle.

Refer to "Seat belts on the front seats" above for fastening and unfastening.
**Warning**

The seat belt will not be effective in the event of an accident unless both the lower and upper latch plates are correctly fitted.

When unfastening the seat belt, always release the upper latch plate from its buckle before the lower latch plate.

Remove latch plates from their buckles before removing seats from the vehicle or to facilitate access to the rear seats.

---

For the rear centre seat, withdraw belt from the retractor, guide it untwisted across the body and insert latch plate into the buckle 7.

**Warning**

Ensure that the rear seats and backrests are fully engaged before occupying the rear seats.

Rear seats ★ 49.

---

**Warning**

The lap belt must be positioned as low as possible across the pelvis to prevent pressure on the abdomen.

---

**Using the seat belt while pregnant**

![Image of pregnant woman using seat belt](image-url)
Airbag system

The airbag system consists of a number of individual systems depending on the scope of equipment.

When triggered, the airbags inflate within milliseconds. They also deflate so quickly that it is often unnoticeable during the collision.

⚠️ Warning

If handled improperly the airbag systems can be triggered in an explosive manner.

Note

The airbag systems and belt pretensioner control electronics are located in the centre console area.

Do not put any magnetic objects in this area.

Do not affix any objects onto the airbag covers and do not cover them with other materials.

Each airbag is triggered only once. Have deployed airbags replaced by a workshop. Furthermore, it may be necessary to have the steering wheel, the instrument panel, parts of the panelling, the door seals, handles and the seats replaced.

Do not make any modifications to the airbag system as this will invalidate the vehicle type approval.

When the airbags inflate escaping hot gases may cause burns.

Control indicator 🔄 for airbag systems 🔄 92.

Child restraint systems on front passenger seat with airbag systems

Warning according to ECE R94.02:

EN: NEVER use a rear-facing child restraint system on a seat protected by an ACTIVE AIRBAG in front of it, DEATH or SERIOUS INJURY to the CHILD can occur.

DE: Nach hinten gerichtete Kindersitze NIEMALS auf einem Sitz verwenden, der durch einen davor befindlichen AKTIVEN AIRBAG geschützt ist, da dies den TOD oder SCHWERE VERLETZUNGEN DES KINDES zur Folge haben kann.

FR: NE JAMAIS utiliser un siège d'enfant orienté vers l'arrière sur un siège protégé par un COUSSIN GONFLABLE ACTIF placé devant lui, sous peine d'infliger des BLESSURES GRAVES, voire MORTELLES à l'ENFANT.

ES: NUNCA utilice un sistema de retención infantil orientado hacia atrás en un asiento protegido por un AIRBAG FRONTAL ACTIVO. Peligro de MUERTE o LESIONES GRAVES para el NIÑO.

RU: ЗАПРЕЩАЕТСЯ устанавливать детское удерживающее устройство лицом назад на сиденье автомобиля,
Seats, restraints

орудованном фронтальной подушкой безопасности, если ПОДУШКА НЕ ОТКЛЮЧЕНА! Это может привести к СМЕРТИ или СЕРЬЕЗНЫМ ТРАВМАМ РЕБЕНКА.

NL: Gebruik NOOIT een achterwaarts gericht kinderzitje op een stoel met een ACTIEVE AIRBAG ervoor, om DODELIJK of ERSNIG LETSEL van het KIND te voorkomen.

DA: Brug ALDRIG en bagudvendt autostol på et forsæde med AKTIV AIRBAG, BARNET kan komme i LIVSFARE eller komme ALVORLIGT TIL SKADE.

SV: Använd ALDRIG en bakåtvänd barnstol på ett säte som skyddas med en framförvarande AKTIV AIRBAG. DÖDSFALL eller ALLVARLIGA SKADOR kan drabba BARNET.

FI: ÄLÄ KOSKAAN sijoita taaksepäin suunnattua lasten turvaistuinta istuimelle, jonka edessä on AKTIIVINEN TURVATYYNY, LAPSI VOI KUOLLA tai VAMMAUTUA VAKAVASTI.

NO: Bakovervendt barnesikringsutstyr må ALDRI brukes på et sete med AKTIV KOLLISJONSPUTE foran, da det kan føre til at BARNET utsettes for LIVSFARE og fare for ALVORLIGE SKADER.

PT: NUNCA use um sistema de retenção para crianças voltado para trás num banco protegido com um AIRBAG ACTIVO na frente do mesmo, poderá ocorrer a PERDA DE VIDA ou FERIMENTOS GRAVES na CRIANÇA.

IT: Non usare mai un sistema di sicurezza per bambini rivolto all’indietro su un sedile protetto da AIRBAG ATTIVO di fronte ad esso: pericolo di MORTE o LESIONI GRAVI per il BAMBINO!

EL: ΠΟΤΕ μη χρησιμοποιείτε παιδικό κάθισμα ασφαλείας με φορά προς τα πίσω σε κάθισμα που προστατεύεται από μετωπικό ΕΝΕΡΓΟ ΑΕΡΟΣΑΚΟ, διότι το παιδί μπορεί να υποστεί ΘΑΝΑΣΙΜΟ ή ΣΟΒΑΡΟ ΤΡΑΥΜΑΤΙΣΜΟ.

PL: NIE WOLNO montować fotelika dziecięcego zwróconego tyle do kierunku jazdy na fotelu, przed którym znajduje się WŁĄCZONA PODUSZKA POWIETRZNA. Niezastosowanie się do tego zalecenia może być przyczyną ŚMIERCI lub POWAŻNYCH OBRAŻEN u DZIECKA.

TR: Arkaya bakarı küçük çocuk emniyet sistemini KESİNLIKLE önünde bir AKTİF HAVA YASTIĞI ile korunmakta olan bir koltukta kullanmayıniz. ÇOCUK ÖLEBİLİR veya AĞIR ŞEKİLDE YARALANABİLİR.

UK: НІКОЛИ не використовуйте систему безпеки для дітей, що встановлюється обличчям назад, на сидінні з УВІМКНЕННОЮ ПОДУШКОЮ БЕЗПЕКИ, інакше це може призвести до СМЕРТІ чи СЕРЬЄЗНОГО ТРАВМУВАННЯ ДИТИНИ.

HU: SOHA ne használjon hátrafelé néző biztonsági gyerekülést előlről AKTÍV LÉGZSÁKKAL védett ülésen, mert a GYERMEK HALÁLÁT vagy KOMOLY SÉRÜLÉSÉT okozhatja.
HR: NIKADA nemojte koristiti sustav zadržavanja za djecu okrenut prema natrag na sjedalu s AKTIVNIYM ZRAČNJIM JASTUKOM ispred njega, to bi moglo dovesti do SMRTI ili SERIOZNO NARANJAVANJE na DETETO.

SL: NIKOLI ne nameščajte otroškega varnostnega sedeža, obrnjenega v nasprotni smeri vožnje, na sedež z AKTIVNO ČELNO ZRAČNO BLAZINO, saj pri tem obstaja nevarnost RESNIH ali SMRTNIH POŠKODB za OTROKA.

SR: NIKADA ne koristiti bezbednosni sistem za decu u kome su deca okrenuta unazad na sedištu sa AKTIVNIM VAZDUŠNIM JASTUKOM ispred sedišta zato što DETE može da NASTRADA ili da se TEŠKO POVREDI.

MK: НИКОГАШ не користете детско седиште свртено наназад на седиште, заштита пред него, затоа што детето може ДА ЗАГИНЕ или да биде ТЕШКО ПОВРЕДЕНО.

BG: НИКОГА не използвайте детска седалка, гледаща назад, върху седалка, която е защитена чрез АКТИВНА ВЪЗДУШНА ВЪЗГЛАВНИЦА пред нея - може да се стигне до СМЪРТ или СЕРИОЗНО НАРАНЯВАНЕ на ДЕТЕТО.

RO: Nu utilizați NICIODATĂ un scaun pentru copil îndreptat spre partea din spate a mașinii pe un scaun protejat de un AIRBAG ACTIV în fața sa; acest lucru poate duce la DECESUL sau VĂTĂMAREA GRAVĂ a COPILULUI.

CS: NIKDY nepoužívejte dětský zádržný systém instalovaný proti směru jízdy na sedadle, které je chráněno před sedadlem AKTIVNÍM AIRBAGEM. Mohlo by dojít k VÁŽNÉMU PORANĚNÍ nebo ÚMRTÍ DÍTĚTE.

SK: NIKDY nepoužívajte detskú sedačku otočenú vzad na sedadle chránenom AKTÍVNYM AIRBAGOM, pretože môže dôjsť k SMRTI alebo VÁŽNYM ZRANENIAM DIEŤAŤA.

LT: JOKIU BŪDU nemontuokite atgal atgręžtos vaiko tvirtinimo sistemos sėdynėje, prieš kurią įrengta AKTYVI ORO PAGALVĖ, nes VAIKAS GALI ŽŪTI arba RIMTAI SUSIŽALOTI.

LV: NEKĀDĀ GADĪJUMĀ neizmantojiet uz aizmuguri vērstu bērnu sēdekļi sēdvietā, kas tiek aizsargāta ar tās priekšā uzstādītu AKTĪVU DROŠĪBAS SPILVENU, jo pretējā gadījumā BĒRNS var gūt SMAGAS TRAUMAS vai IET BOJĀ.

ET: ÄRGE kasutage tahapoole suunatud lapseturvaistet istmel, mille ees on AKTIIVSE TURVAPADJAGA kaitstud iste, sest see võib põhjustada LAPSE SURMA või TÕSISE VIGASTUSE.

MT: QATT tuża trażżin għat-tfal li jhares lejn in-naħa ta' wara fuq sit protett b’AIRBAG ATTIV quddiemu; dan jista’ jikkawża l-MEWT jew ĠRIEĦI SERJI li-t-Tfal.

Beyond the warning required by ECE R94.02, for safety reasons a forward-facing child restraint system must only be used subject to the instructions and restrictions in the Child restraint installation locations tables 65.

The airbag label is located on the front passenger sun visor.
<table>
<thead>
<tr>
<th>Danger</th>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not use a child restraint system on the passenger seat with active front airbag.</td>
<td>Optimum protection is only provided when the seat is in the proper position. Seat position 46. Keep the area in which the airbag inflates clear of obstructions. Fasten the seat belt correctly and engage securely. Only then is the airbag able to protect.</td>
</tr>
</tbody>
</table>

Airbag deactivation 61.

Front airbag system
The front airbag system consists of one airbag in the steering wheel and one in the instrument panel on the front passenger side. These can be identified by the word AIRBAG.
The front airbag system is triggered in the event of an accident of a certain severity. The ignition must be switched on.
The inflated airbags cushion the impact, thereby reducing the risk of injury to the upper body and head of the front seat occupants considerably.

Side airbag system
The side airbag system consists of an airbag in each front seat backrest. This may be identified by the word AIRBAG.
The side airbag system is triggered in the event of an accident of a certain severity. The ignition must be switched on.
The inflated airbags cushion the impact, thereby reducing the risk of injury to the upper body and pelvis in the event of a side-on collision considerably.
## Warning
Keep the area in which the airbag inflates clear of obstructions.

### Note
Only use protective seat covers that have been approved for the vehicle. Be careful not to cover the airbags.

### Curtain airbag system

The curtain airbag system consists of an airbag in the roof frame on each side. This may be identified by the word AIRBAG on the headlining trim.

The curtain airbag system is triggered in the event of a side-on impact of a certain severity. The ignition must be switched on. The inflated airbags cushion the impact, thereby reducing the risk of injury to the head in the event of a side-on impact considerably.

### Warning
Keep the area in which the airbag inflates clear of obstructions.

The hooks on the handles in the roof frame are only suitable for hanging up light articles of clothing, without coat hangers. Do not keep any items in these clothes.

### Airbag deactivation

The front passenger airbag system must be deactivated if a child restraint is to be fitted on the front passenger seat in accordance with the instructions in the Child restraint installation locations tables 65.

Front passenger airbag system can be deactivated via a switch located on the side of the instrument panel. Open the front passenger door to access the switch.

The belt tensioners and all other airbag systems will remain active. Depending on vehicle, there is a warning on the airbag label located on the front passenger sun visor. Refer to "Airbag system" for further information 57.
Press the switch in and rotate to choose the position:

*OFF*: front passenger seat airbag system is deactivated and will not inflate in the event of a collision. Control indicator *OFF* illuminates continuously in the roof console and a corresponding message appears in the Driver Information Centre.

*ON*: front passenger airbag system is active.

If control indicator *ON* illuminates after the ignition is switched on and control indicator *OFF* is not illuminated, the front passenger airbag system will inflate in the event of a collision.

If both control indicators *ON* and *OFF* are illuminated simultaneously, there is a system failure. The status of the system is not discernible, therefore no person is permitted to occupy the front passenger seat. Contact a workshop immediately.

If control indicator *ON* illuminates together with *OFF*, this indicates a fault within the system. The switch position may have been changed inadvertently with the ignition on. Turn ignition off and on again and reset the switch position. If *ON* and *OFF* still remain illuminated, seek the assistance of a workshop.

Change status only when the vehicle is stopped with the ignition off. Status remains until the next change.

Control indicator for airbag deactivation *OFF*.

---

**Danger**

Deactivate passenger airbag only in combination with the use of a child restraint system, subject to the instructions and restrictions in the table.

Otherwise, there is a risk of fatal injury for a person occupying a seat with a deactivated front passenger airbag.

---

### Child restraints

#### Child restraint systems

<table>
<thead>
<tr>
<th>Danger</th>
</tr>
</thead>
</table>

If using a rear-facing child restraint system on the front passenger seat, the airbag system for the front passenger seat must be deactivated. This also applies to certain forward-facing child restraint systems as indicated in the table.

Airbag deactivation.

Airbag label.

We recommend a child restraint system which is tailored specifically to the vehicle. For further information, contact your workshop.

When a child restraint system is being used, pay attention to the following usage and installation instructions and also those supplied with the child restraint system.
Always comply with local or national regulations. In some countries, the use of child restraint systems is forbidden on certain seats.

Child restraint systems can be fastened with:
- Three-point seat belt
- ISOFIX brackets
- Top-Tether

**Three-point seat belt**

Child restraint systems can be fastened by using a three-point seat belt 53.

Depending on the size of the used child restraint systems and the model variant, child restraint systems can be attached to certain 2nd row and 3rd row rear seats 65.

**ISOFIX brackets**

ISOFIX mounting brackets are indicated by the ISOFIX logo or symbol on the seat cushion.

Fasten vehicle-approved ISOFIX child restraint systems to the ISOFIX mounting brackets.

When using ISOFIX mounting brackets for seat mounting, universally approved child restraint systems for ISOFIX may be used.

A Top-Tether strap must be used in addition to the ISOFIX mounting brackets.

Permissible mounting location positions for ISOFIX child restraint systems are marked in the tables by †, IL and IUF.

**Top-Tether fastening eyes**

Top-Tether fastening eyes are located on the back of the seat.

In addition to the ISOFIX mounting brackets, fasten the Top-Tether strap to the Top-Tether fastening eyes. The strap must run between the two guide rods of the head restraint.

ISOFIX child restraint systems of universal category positions are marked in the table by IUF 65.

**Selecting the right system**

The rear seats are the most convenient location to fasten a child restraint system.
Children should travel facing rearwards in the vehicle as long as possible. This makes sure that the child's backbone, which is still very weak, is under less strain in the event of an accident.

Suitable are restraint systems that comply with valid UN ECE regulations. Check local laws and regulations for mandatory use of child restraint systems.

Ensure that the child restraint system to be installed is compatible with the vehicle type.

Ensure that the mounting location of the child restraint system within the vehicle is correct, see following tables.

Allow children to enter and exit the vehicle only on the side facing away from the traffic.

When the child restraint system is not in use, secure the seat with a seat belt or remove it from the vehicle.

**Note**
Do not affix anything on the child restraint systems and do not cover them with any other materials.

A child restraint system which has been subjected to stress in an accident must be replaced.

Child locks 31.

Roof rack ............................... 78
Loading information .................. 79

Instrument panel storage

Storage compartments, pockets and trays are located in the instrument panel.

⚠️ Warning

Do not store heavy or sharp objects in the storage compartments. Otherwise, the storage compartment lid could open and vehicle occupants could be injured by objects being thrown around in the event of hard braking, a sudden change in direction or an accident.

A coin holder,
a phone holder,
and a tablet holder may be located on the instrument panel.
To use the tablet holder, pull the handle towards you fully. Swivel holder and push it in fully. If required, lower the base of the holder to extend it.
To refit, pull tablet holder fully towards you, lift it up until it is horizontal and push it in fully.

Depending on version, the tray located on top of the instrument panel may have a lid.

To open, pull the handle. Depending on version, the glovebox may feature a light that comes on when the glovebox is opened, and may also be lockable.
The glovebox should be closed while driving.
Cupholders

Cupholders are located at both ends of the instrument panel, centrally in the lower instrument panel, and depending on version, also in the door pockets and in the rear seat area.

Additional cupholders are located on the back of the folded down centre rear seat 72, 49.

The cupholders can also be used to hold the portable ashtray unit. Remove the portable ashtray unit to use the cupholders. Ashtrays 85.

Front storage

Coat hooks are located on the cabin bulkhead and on the grab handles in the roof lining.

Folding centre seatback

The centre seat backrest, when folded fully forwards, features a storage compartment, cupholder and a document tray.

Press button (arrowed) on rear side of backrest to unlock the document tray and access the storage compartments.

To install the document tray, insert the end piece(s) into any of the slots by the cupholder.

The document tray must always be returned to its original position before raising the seat backrest.
If necessary, secure objects with the strap.
When the storage compartment is closed, it is possible to run a charging cord from an item in the storage compartment through the notch, e.g. to connect devices to a power outlet. Power outlets 84.

Door panel storage
The front and rear door pockets contain bottle holders and depending on version, a holder for cups or ashtrays.

Underseat storage
On some variants, a storage box is located under the front seat. Pull storage box to remove.
Bench seats may also contain a storage compartment at the lower front part of the seat.

Using the straps on the passenger seat cushion, pull the cushion forwards to gain access to the storage under the seat cushion.

Double cab - Underseat storage
Depending on version, bench seats contain removable storage boxes beneath some of the seat cushions.

Opening
To access each storage box, first release the seat cushion by grasping the strap located at the front edge of the cushion and pulling the cushion up, then slide the seat cushion gently forwards.
Then pull up the rear of the seat cushion to flip open.

Removing
The storage box can also be removed when the seat cushion is flipped opened. Pull up to remove the retaining ring from inside the box, then slide the box out from beneath the seat.
Replace the storage box when not in use.

Closing
To close; fold down seat cushion, push it slightly rearwards then press front part of cushion downwards to engage.
When folded down, pulling the strap also allows you to adjust the position of the seat cushion to suit personal requirements.
Seat adjustment 47, Rear seats 49.

Load-through feature
To enable long items to be stored under the rear seats (on the front passenger side of the vehicle only), the lower trim flaps can be released.
First pull the strap on the passenger seat cushion to raise the seat, then tilt front flap inwards by pulling the tab behind the seat (see illustration).

Fold up the rear flap by hand; it is retained in the open position by magnets.
**Overcab storage**

![Overcab storage image]

The total weight in this compartment must not exceed 35 kg.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Passengers must not use the seat when transporting objects beneath it with the lower trim flaps opened.</td>
</tr>
</tbody>
</table>

**Load compartment**

![Load compartment image]

Do not attach items to or hang items on the upper or lower struts on either side of the load compartment.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Always make sure that the load in the vehicle is securely stowed. Otherwise objects can be thrown around inside the vehicle and cause personal injury or damage to the load or car.</td>
</tr>
</tbody>
</table>

Use the grab handles, located beside the rear and sliding side door(s), to assist during entry and exit of the load compartment.

**Load compartment cover**

**Rear parcel shelf**

![Rear parcel shelf image]

Do not place any excessively heavy or sharp-edged objects on the rear parcel shelf.

The maximum load permissible is 50 kg.

The rear parcel shelf can be installed in two positions, i.e. the upper position or the lower position.
The rear parcel shelf may also be folded up, allowing for greater flexibility in the load compartment.

Removing
To remove, release parcel shelf from its retainers on both sides.
If the rear seats are in the folded position, remove the parcel shelf and store it horizontally in front of the folded rear seats.

Installing
Refit the parcel shelf by engaging in the retainers on both sides.

Lashing eyes
Lashing eyes are mounted in the load compartment to enable cargo to be secured against slippage using lashing straps or a luggage floor net.
Lashing eyes may be located on the vehicle floor and/or in the sidewall. The number and location of the lashing eyes may vary depending on the vehicle.

The maximum force applied to the lashing eyes should not exceed 6250 N at 30°.
Depending on country, the maximum force (e.g. 5000 N) may be shown on a label.
Specifications on the label always have priority over those given in this manual.

Note
Specifications on the label always have priority over those given in this manual.
Safety net
The safety net can be installed behind the front seats or the rear seats. Passengers must not be transported behind the safety net.

Installing
Release the covers in the roof lining (using a flat blade screwdriver) to access the mountings, then insert the load compartment net rods into the left and right mounting locations and secure.

Load compartment grille
Vehicles with a window in the cabin bulkhead may include a metal grille on the load compartment side.

Installing
Attach the straps to the lashing eyes or rings behind the seats, then tension the straps.

Removal
Release tension from straps and unhook straps from lashing eyes or rings. Remove net rods from their mounting locations and close the covers.
Depending on vehicle, vehicles without a cabin bulkhead may include restraining lattices behind the front seats.

Combi vehicles may include a restraining lattice behind the 2nd row seats.

**Note**
The grille or lattice provides protection from load compartment objects being thrown around in the event of hard braking, a sudden change in direction or an accident.

Loading information 79.

---

**Warning triangle**
The warning triangle can be accommodated in the space under the seats.
Underseat storage 73.

**First aid kit**
The first aid kit can be accommodated in the space under the seats.
Underseat storage 73.

---

**Roof rack system**

**Roof rack**
For safety reasons and to avoid damage to the roof, the vehicle approved roof rack system is recommended. For further information, contact your workshop. Follow the installation instructions and remove the roof rack when not in use.

**Note**
If tyres of size 215/60 R17 C are fitted, consult a workshop before installing a roof rack.

Refer to "Loading information" below for further information.
Loading information

- Heavy objects in the load compartment should be evenly distributed and placed as far forward as possible. If objects can be stacked, the heavier objects should be placed at the bottom.
- Secure objects with lashing straps attached to lashing eyes.
- Secure loose objects in load compartment to prevent sliding.
- When transporting objects in the load compartment, the backrests of the rear seats must not be angled forward.
- Do not allow the load to protrude above the upper edge of the backrests.
- Do not place any objects on the instrument panel.
- The load must not obstruct the operation of the pedals, parking brake and gear selector, or hinder the freedom of movement of the driver. Do not place any unsecured objects in the interior.
- Do not drive with an open load compartment. In addition, the number plate is only distinguishable and illuminated correctly if the doors are closed.

⚠️ Warning

Always make sure that the load in the vehicle is securely stowed. Otherwise objects can be thrown around inside the vehicle and cause personal injury or damage to the load or car.

- The payload is the difference between the permitted gross vehicle weight (see identification plate) and the EC kerb weight.
  
  To calculate the payload, enter the data for your vehicle in the Weights table at the front of this manual.
  
  The EC kerb weight includes weights for the driver (68 kg), luggage (7 kg) and all fluids (fuel tank 90% full).

Optional equipment and accessories increase the kerb weight.

- Driving with a roof load increases the sensitivity of the vehicle to cross-winds and has a detrimental effect on vehicle handling due to the vehicle’s higher centre of gravity.
  
  Distribute the load evenly and secure it properly with retaining straps. Adjust the tyre pressure and vehicle speed according to the load conditions. Check and retighten the straps frequently.
  
  Do not drive faster than 120 km/h.

The permissible roof load is 200 kg for H1 Roof height variants and 150 kg for H2 Roof height variants (excludes Platform cab conversions). The roof load is the combined weight of the roof rack and the load.

Controls

Steering wheel adjustment

Unlock lever, adjust steering wheel, then engage lever and ensure it is fully locked.

Do not adjust steering wheel unless vehicle is stationary and steering wheel lock has been released.

Steering wheel controls

The cruise control and speed limiter can be operated via the controls on the steering wheel.

Cruise control and speed limiter 145.

Horn

Press 🚉.

The horn will sound regardless of ignition switch position.

Steering column controls

The Infotainment system and a connected mobile phone can be operated via the controls on the steering column.

Further information is available in the Infotainment manual.
Windscreen wiper/washer

Windscreen wiper

0 : off
AUTO or $\Rightarrow$ : interval wiping or automatic wiping with rain sensor
1 : slow
2 : fast

Do not use if the windscreen is frozen. Switch off in car washes.

Adjustable wiper interval

Wiper lever in position AUTO or $\Rightarrow$.
Turn the adjuster wheel to adjust the desired wipe interval:
- short interval : turn adjuster wheel upwards
- long interval : turn adjuster wheel downwards

Automatic wiping with rain sensor
Wiper lever in position AUTO or $\Rightarrow$.
The rain sensor detects the amount of water on the windscreen and automatically regulates the frequency of the windscreen wiper.

Automatic wiping will need to be reselected whenever the ignition has been switched off.

Adjustable sensitivity of the rain sensor
Turn the adjuster wheel to adjust the sensitivity:
- low sensitivity : turn adjuster wheel upwards
- high sensitivity : turn adjuster wheel downwards

The rain sensor is located on the windscreen. Keep the sensor area free from dust, dirt and ice.
Windscreen washer

Pull lever. Washer fluid is sprayed onto the windscreen.
short pull : wiper swipes once
long pull : wiper swipes for a few strokes

Rear window wiper/washer

Turn lever:
0 : off
♀ : wiper operation
♀ : washer fluid is sprayed onto the rear window

The rear window wiper comes on automatically when the windscreen wiper is switched on and reverse gear is engaged.

Outside temperature

A drop in temperature is indicated immediately and a rise in temperature after a time delay.

If outside temperatures drop to 3 °C, the °C flashes in the Driver Information Centre as a warning for icy road conditions. This will continue to flash until temperatures rise above 3 °C.

Instruments and controls

⚠️ Warning

The road surface may already be icy even though the display indicates a few degrees above 0 °C.

Clock

Depending on vehicle, the current time may appear in the central information display and/or the Driver Information Centre.

Info-display:

Hours and minutes can be adjusted by pressing the appropriate buttons by the display or with the Infotainment system controls.

For further information, refer to the Infotainment manual.

Driver Information Centre:

- Display the clock setting function by pressing the button repeatedly on the end of the wiper lever.
- Press and hold the button for approx. five seconds:
  - hours flash
  - press button repeatedly to change hours

- wait for approx. five seconds to set hours
- minutes flash
- press button repeatedly to change minutes
- wait for approx. five seconds to set minutes

Power outlets

12 V power outlets are located on the instrument panel and in the rear of the vehicle. Fold the cover upwards.
Depending on vehicle, additional outlets may be located at the outer edge of the bench seat.

Connecting electrical accessories while the engine is off will discharge the vehicle battery. Do not exceed the maximum power consumption of 120 Watts. Do not connect any current-delivering accessories, e.g. electrical charging devices or batteries.

Electrical accessories that are connected must comply with the electromagnetic compatibility requirements laid down in DIN VDE 40 839.

### Caution

| Do not connect any current-delivering accessories, e.g. electrical charging devices or batteries. |
| Do not damage the outlets by using unsuitable plugs. |

#### USB socket

In the Infotainment unit (or in the centre console) there is a USB socket for the connection of external audio sources and for charging devices.

**Note**

The sockets must always be kept clean and dry.

#### Cigarette lighter

The cigarette lighter is located on the instrument panel.

Press in cigarette lighter. It switches off automatically once the element is glowing. Pull out lighter.

#### Ashtrays

**Caution**

To be used only for ash and not for combustible rubbish.

#### Portable ashtray

Ashtray container for mobile use in the vehicle. To use, open cover. Ashtrays can be placed in the cupholders at both ends of the instrument panel, centrally in the lower instrument panel, and depending on version, in the door pockets or in the rear seat area.
Cupholders 72.

**Warning lights, gauges and indicators**

**Instrument cluster**
In some versions, the needles of the instruments briefly rotate to the end position when the ignition is switched on.

**Speedometer**
Indicates vehicle speed.

**Speed limiter**
Maximum speed may be restricted by a speed limiter. As a visible indication of this, a warning label is located on the instrument panel. A warning buzzer will sound for ten seconds every 40 seconds if the vehicle briefly exceeds the set limit.

**Note**
Under certain conditions (e.g. steep inclines), the vehicle speed may exceed the set limit.

Speed limiter 148, cruise control speed limiter 145.
Odometer

Displays the recorded distance.

Trip odometer

The trip odometer appears below the odometer in the Driver Information Centre and displays the distance travelled since the last reset.

To reset, with the trip odometer displayed, press and hold button on end of wiper lever for a few seconds with the ignition on. The display will flash and the value will reset to zero.

Driver Information Centre \(\text{\(\text{\textdegree}\)}\) 97.

Tachometer

Displays the engine speed.

Drive in a low engine speed range for each gear as much as possible.

Caution

If the needle is in the yellow warning zone, the maximum permitted engine speed is exceeded. Engine at risk.

Fuel gauge

Displays fuel level in the tank.

The arrow indicates the vehicle side where the fuel filler flap is located.

Control indicator \(\text{\(\text{\textdegree}\)}\) also illuminates in instrument cluster \(\text{\(\text{\textdegree}\)}\) 89 when fuel level is low (range of approx. 50 km): refuel immediately \(\text{\(\text{\textdegree}\)}\) 153.

Never run the tank dry.

Diesel fuel system, bleeding \(\text{\(\text{\textdegree}\)}\) 166.

Note

To ensure the fuel level is displayed correctly, the ignition must be switched off before refuelling. Avoid
Instruments and controls

minor fuel top-ups (e.g. less than five litres) to ensure accurate readings.

Because of the fuel remaining in the tank, the top-up quantity may be less than the specified tank capacity.

AdBlue level indicator

The current AdBlue percentage remaining can be shown in the Driver Information Centre.

Press button on end of wiper lever repeatedly until the 'AdBlue percentage remaining' menu is displayed.

Level warnings
If the AdBlue level falls below a certain value, a level warning will be displayed in the Driver Information Centre. Additionally, control indicator 95 illuminates continuously together with a warning chime.

Refill the AdBlue tank as soon as possible.

AdBlue 134.

Fuel economy gauge

The fuel economy gauge provides an instantaneous calculation of fuel efficiency based on current driving style.

The gauge uses colours to indicate current fuel efficiency:

Green: best fuel economy is being achieved
Yellow: driving style too aggressive
Orange: least efficient fuel economy

The fuel economy gauge is enabled by default.
Depending on version, the fuel economy gauge can be disabled via the Infotainment system. Refer to Infotainment manual for further information.

**Service display**

When the ignition is switched on, the remaining distance before the next service is due may be shown briefly in the Driver Information Centre. Based on driving conditions, the interval at which a service will be indicated can vary considerably.

The 'distance before service' display can also be shown by pressing button on end of wiper lever for approx. five seconds.

When the remaining distance before the next service is less than 1500 km or one month, a message appears in the Driver Information Centre.

When the distance reaches 0 km or the service date is due, control indicator \(\text{F}\) illuminates in the instrument cluster and the Driver Information Centre respectively, and a corresponding message appears in the Driver Information Centre.

The vehicle needs a service. Seek the assistance of a workshop.

**Resetting the service display**

After a service, the service display must be reset:

Select the 'distance before service' display in the Driver Information Centre by pressing button repeatedly on the end of the wiper lever, then press and hold button for approx. ten seconds until the 'distance before service' is displayed continuously, i.e. the display no longer flashes.

On some vehicles, it may be necessary to press and hold the button twice. In this event, proceed as follows:

After selecting the 'distance before service' display, press and hold button for approx. ten seconds until the 'distance before service' flashes in the display. Then press and hold button again for approx. ten seconds to reset the service interval.

If control indicator \(\text{F}\) does not extinguish from the instrument cluster, drive a minimum of 15km then switch off ignition for at least one minute before repeating procedure.

Trip computer \(\text{f}\) 100.

Driver Information Centre \(\text{f}\) 97.

Service information \(\text{f}\) 195.

**Control indicators**

The control indicators described are not present in all vehicles. The description applies to all instrument versions.

Depending on the equipment the position of the control indicators may vary.

When the ignition is switched on, most control indicators will illuminate briefly as a functionality test.

The control indicator colours mean:

- red : danger, important reminder
- yellow : warning, information, fault
- green : confirmation of activation
- blue : confirmation of activation
- white : confirmation of activation
Control indicators in the instrument cluster
Control indicators in the roof console

Overview

- **Turn signal** 91
- **Seat belt reminder** 92
- **Airbag and belt tensioners** 92
- **Airbag activation** 92
- **Airbag deactivation** 92
- **Charging system** 93
- **Malfunction indicator light** 93
- **Service vehicle soon** 93
- **Stop engine** 93
- **Brake system** 93
- **Antilock brake system (ABS)** 94
- **Upshift, downshift** 94
- **Electronic Stability Program** 94
- **Electronic Stability Program off** 94
- **Engine coolant temperature** 94
- **Preheating** 95
- **AdBlue** 95
- **Tyre pressure monitoring system** 95
- **Engine oil pressure** 95
- **Fuel economy mode** 96
- **Low fuel** 96
- **Autostop (Stop-start system)** 96
- **Autostop inhibited (Stop-start system)** 96
- **Exterior light** 96
- **Exterior light** 96
- **High beam** 96
- **Fog light** 96
- **Rear fog light** 96
- **Cruise control** 97
- **Cruise control speed limiter** 97
- **Tachograph** 97
- **Door open** 97

**Turn signal**

- **Flashes green.**
- Flashes if a turn signal or the hazard warning flashers are activated.
- Rapid flashing: failure of a turn signal light or associated fuse.
- An audible warning can be heard when the turn signals are on.
- Bulb replacement 167.
Fuses 173.
Turn signals 106.

**Seat belt reminder**

ι illuminates or flashes red.

If the seat belt is unfastened, control indicator ι will flash when vehicle speed exceeds approx. 16 km/h. A warning chime also sounds for up to two minutes.

If the seat belt is fastened, the indicator light extinguishes.

**Note**

Heavy objects on the front seats may cause control indicator ι to illuminate. Remove the object from the seat or fasten the seat belt.

<table>
<thead>
<tr>
<th>ι</th>
</tr>
</thead>
</table>

**Warning**

Fasten seat belt before each trip.
In the event of an accident, people not wearing seat belts endanger their fellow occupants and themselves.

Three-point seat belts 53.

**Airbag and belt tensioners**

ι illuminates yellow.

Illuminates briefly when the ignition is switched on.

If it does not illuminate or illuminates whilst driving, there is a fault in the belt tensioner or the airbag system. The airbags and belt tensioners may fail to trigger in the event of an accident.

Deployment of the belt tensioners or airbags is indicated by continuous illumination of ι.

<table>
<thead>
<tr>
<th>ι</th>
</tr>
</thead>
</table>

**Warning**

Have the cause of the fault remedied immediately by a workshop.

Belt tensioners, airbag system 52, 57.

**Airbag deactivation**

ΟN illuminates yellow.

The front passenger airbag is activated.

ΟFF illuminates yellow.

The front passenger airbag is deactivated 61.

If both control indicators οN and οFF are illuminated simultaneously, there is a system failure. The status of the system is not discernible, therefore no person is permitted to occupy the front passenger seat. Contact a workshop immediately.

If illuminated in conjunction with ι or \, seek the assistance of a workshop.

**Danger**

Risk of fatal injury for a child using a child restraint system together with activated front passenger airbag.

Risk of fatal injury for an adult person with deactivated front passenger airbag.

Airbag system 57, belt tensioners 52, airbag deactivation 61.
Charging system

illumines red.

Illuminates briefly when the ignition is switched on.

Illuminates when the engine is running

If control indicator illuminates when the engine is running (together with control indicator \( \text{STOP} \) and a warning chime): Stop, switch off engine.

Vehicle battery is not charging. Engine cooling may be interrupted. Power to the brake servo unit may be cut. Seek the assistance of a workshop.

Malfunction indicator light

illuminates or flashes yellow.

Illuminates briefly when the ignition is switched on.

Illuminates when the engine is running

Fault in the emission control system. The permitted emission limits may be exceeded. Seek the assistance of a workshop immediately.

Flashes when the engine is running

Fault that could lead to catalytic converter damage. Ease up on the accelerator until the flashing stops. Seek the immediate assistance of a workshop.

Service vehicle soon

illuminates yellow.

Illuminates briefly when the ignition is switched on.

May illuminate together with other control indicators and a corresponding message in the Driver Information Centre \( \mathbf{397} \). Seek the assistance of a workshop immediately.

Stop engine

illuminates red.

Illuminates briefly when the ignition is switched on.

Illuminates together with other control indicators (e.g., \( \mathbf{393} \), \( \mathbf{392} \) and \( \mathbf{394} \)), accompanied by a warning chime and a corresponding message in the Driver Information Centre \( \mathbf{397} \): stop engine immediately and seek the assistance of a workshop.

Brake system

illuminates red.

Illuminates after the ignition is switched on if the parking brake is applied \( \mathbf{141} \) and extinguishes when the parking brake is released.

Illuminates when the parking brake is released if the brake fluid level is too low \( \mathbf{163} \).

Warning

Stop. Do not continue your journey. Consult a workshop.
If ı illuminates together with control indicator stop and a warning chime, there is a fault in the braking system. A corresponding message also appears in the Driver Information Centre 97. Seek the assistance of a workshop immediately.

Brake system 140.

**Antilock brake system (ABS)**

ı illuminates yellow.

Illuminates briefly after the ignition is switched on. The system is ready for operation when ı extinguishes.

If control indicator ı does not go out after a few seconds, or if it illuminates while driving, there is a fault in the ABS. Control indicator ı may also illuminate in the instrument cluster together a corresponding message in the Driver Information Centre 97. The brake system remains operational but without ABS regulation.

If control indicators ı, ı, ı and stop illuminate, there is a fault in the braking system. A corresponding message appears in the Driver Information Centre. Seek the assistance of a workshop immediately.

Antilock brake system (ABS) 141.

**Upshift**

ı or ı illuminates.

It is recommended to shift gear when illuminated to improve fuel economy.

**Electronic Stability Program**

rı flashes or illuminates yellow.

Illuminates briefly when the ignition is switched on.

Flashing during driving

The system is actively engaged. Engine output may be reduced and the vehicle may be braked automatically to a small degree.

Illuminates while driving

The system is not available. A corresponding message also appears in the Driver Information Centre 97.

ESP® Plus 143, Traction Control system 142.

**Electronic Stability Program off**

ı illuminates green.

If ESP® Plus has been deactivated with ı on the instrument panel, control indicator ı illuminates and a corresponding message appears in the Driver Information Centre 97.

ESP® Plus 143, Traction Control system 142.

**Engine coolant temperature**

ı illuminates blue or red.

Illuminates red briefly when the ignition is switched on, then turns blue.

Illuminates red when the engine is running

Stop, switch off engine.
Caution

Coolant temperature too high.

Check coolant level 162.
If there is sufficient coolant, consult a workshop.
The control indicator must be blue before continuing driving.

Preheating

illuminates yellow.
Preheating is activated. Only activates when outside temperature is low.

AdBlue

illuminates yellow.
AdBlue level is low. Refill AdBlue as soon as possible, to avoid prevention of engine starts.
Illuminates together with control indicator to indicate a system failure or as a warning that engine starting may not be possible after a certain distance. Seek the assistance of a workshop immediately.
A corresponding message appears in the Driver Information Centre 97.
AdBlue percentage remaining can also be checked by pressing button repeatedly on end of wiper lever. Trip computer 100.
AdBlue 134.

Tyre pressure monitoring system

illuminates or flashes yellow.
Illuminates briefly when the ignition is switched on.

Illuminates

Tyre pressure loss. Stop immediately and check tyre pressure.
Control indicator illuminates together with stop 93 and a corresponding message appears in the Driver Information Centre when a puncture or severely under-inflated tyre is detected.

Flashes

Fault in system. After a delay the control indicator illuminates continuously. Consult a workshop.
Control indicator illuminates together with 93 and a corresponding message appears in the Driver Information Centre when a tyre without a pressure sensor is mounted (e.g. spare wheel).
Tyre pressure monitoring system 180.

Engine oil pressure

illuminates red.
Illuminates briefly when the ignition is switched on.

Illuminates when the engine is running

If control indicator illuminates when the engine is running (together with control indicator stop and a warning chime): Stop, switch off engine.
Instruments and controls

Caution

Engine lubrication may be interrupted. This may result in damage to the engine and/or locking of the drive wheels.

1. Depress clutch.
2. Select neutral gear (or move selector lever to N).
3. Move out of the flow of traffic as quickly as possible without impeding other vehicles.
4. Switch off ignition.

Warning

When the engine is off, considerably more force is needed to brake and steer.
Do not remove key until vehicle is stationary, otherwise the steering wheel lock could engage unexpectedly.

Check oil level before seeking assistance of a workshop.

Fuel economy mode

ECO illuminates green when ECO mode is engaged to reduce fuel consumption.
ECO mode, driving economically

Low fuel

illuminates yellow.
Illuminates briefly when the ignition is switched on.
Illuminates when level in fuel tank is low (range of approx. 50 km); refuel immediately.
Catalytic converter
Bleeding the diesel fuel system

Stop-start system

illuminates when engine is in an Autostop.
illuminates when an Autostop is inhibited when certain conditions are not fulfilled.

Exterior light

illuminates green.
Illuminated when the headlights are on.
illuminates green.
Illuminated when the sidelights are on.
Lighting

High beam

illuminates blue.
Illuminated when high beam is on and during headlight flash.

Fog light

illuminates green.
Illuminated when the front fog lights are on.

Rear fog light

illuminates yellow.
Illuminated when the rear fog light is on.
**Instruments and controls**

**Cruise control**
- illuminates green or yellow.
- illuminates green when a certain speed is stored.
- illuminates green when the system is on.

**Speed limiter**
- illuminates yellow.
- illuminates yellow when the system is on.
- Cruise control and speed limiter 145.

**Tachograph**
- illuminates when there is a fault 102.

**Door open**
- illuminates red.
- Illuminates when a door is not fully closed.
- A corresponding message also appears in the Driver Information Centre 97.

**Information displays**

**Driver Information Centre**

Depending on vehicle configuration, the following items appear in the display:
- outside temperature 83
- clock 84
- odometer 87
- trip odometer 87
- service display 89
- vehicle messages 98
- trip computer 100

**Info display**

The central display in the Infotainment system displays the time (and/or outside temperature, depending on version) and Infotainment system information.
- Press to switch the Infotainment system on. Alternatively, it automatically switches on when the ignition is switched on.
- Depending on system, the Infotainment system is operated via buttons and rotary knobs on the Infotainment system fascia, the
steering column controls, the voice recognition system (if available) or via the touchscreen display.

**Touchscreen operation**

Make the appropriate selection from the available menus and options by touching the display screen with the finger.

For further information, refer to the Infotainment manual.

---

**Vehicle messages**

Messages are displayed in the Driver Information Centre and may be accompanied by illumination of control indicator \( \text{\textbullet} \) or \( \text{STOP} \) in the instrument cluster.

**Information messages**

Information messages regarding, e.g. engine starting conditions, stop-start system, parking brake application, central locking, steering wheel lock etc. provide the current status of certain vehicle functions and instructions for use.

**Fault messages**

Fault messages regarding, e.g. fuel filter, airbags, exhaust emissions etc. are displayed together with control indicator \( \text{\textbullet} \). Drive with caution and seek the assistance of a workshop as soon as possible.

To remove fault messages, e.g. "CHECK INJECTION", from the display, press button on end of wiper lever. After a few seconds the message may disappear automatically and \( \text{\textbullet} \) remains illuminated. The fault will then be stored in the on board system.

**Warning messages**

Warning messages regarding, e.g. engine, battery or brake system failure, are displayed together with control indicator \( \text{STOP} \) and may be accompanied by a warning chime. Stop engine immediately and seek the assistance of a workshop.

Warning messages, e.g. "BATTERY CHARGING FAULT" disappear from the display automatically when the cause of the fault has been remedied.

**Fuel economy messages**

Fuel economy messages provide tips to improve fuel efficiency. Journeys can be saved in the system memory, enabling you to compare performances.

Refer to Infotainment manual for further information.

Fuel economy rating \( \text{\textbullet} 100 \).
Warning chimes
Only one warning chime will sound at a time.
A corresponding message may also appear in the Driver Information Centre when a warning chime is sounded.

When starting the engine or whilst driving:
- If seat belt is not fastened ▷ 52.
- If the parking assist detects an object ▷ 148.
- If the vehicle speed briefly exceeds a set limit ▷ 145, ▷ 148.
- If a door or the bonnet is not properly closed when vehicle exceeds a certain speed.
- During activation and deactivation of alarm monitoring of vehicle inclination ▷ 37.
- If there is a fault in the brake system ▷ 93.
- If the vehicle battery is not charging ▷ 93.
- If engine lubrication is interrupted ▷ 95.
- If AdBlue needs to be refilled or a fault is present ▷ 134.
- If the electronic key is outside of the detection range.
  Electronic key system ▷ 23, Power button ▷ 126.

When the vehicle is parked and/or the driver's door is opened:
- If the key has been left in the ignition.
- If the electronic key has been left in the card reader.
  Electronic key system ▷ 23, Power button ▷ 126.
- If the vehicle is in an Autostop.
  Stop-start system ▷ 130.
- If the exterior lights are on ▷ 103.

Engine oil level
If the minimum engine oil level is reached, a message is displayed in the Driver Information Centre ▷ 97 for 30 seconds after the engine is started.
Check oil level ▷ 160.
Trip computer

The trip computer provides information on driving data, which is continually recorded and evaluated electronically.

Depending on vehicle, the following functions can be selected by pressing button repeatedly on end of wiper lever:

- odometer 87
- fuel used
- average consumption
- instantaneous consumption
- range

- trip odometer
- average speed
- distance before service 89
- clock 84, outside temperature 83
- cruise control and speed limiter stored speed 145
- fuel economy rating
- AdBlue percentage remaining 134
- fault and information messages

Fuel used
Displays the amount of fuel consumed since the last reset. The measurement can be restarted at any time by pressing and holding the button.

Average consumption
The value is displayed after driving a distance of 400 metres.
Average consumption is displayed, taking into consideration the distance travelled and the fuel used since the last reset.

The measurement can be restarted at any time.

Instantaneous consumption
The value is displayed after reaching a speed of 30 km/h.

Range
The value is displayed after driving a distance of 400 metres.
The range is calculated from the current contents of the fuel tank and the average consumption since the last reset.
The range will not display if control indicator is illuminated in the instrument cluster 96.

Trip odometer
Displays the distance driven since the last reset.
The measurement can be restarted at any time.
Trip odometer 87.
Average speed
The value is displayed after driving a distance of 400 metres.
The average speed since the last reset is displayed.
The measurement can be restarted at any time.
Interruptions in the journey with the ignition off are not included in the calculations.

Reset trip computer information
To reset the trip computer, select one of its functions then press and hold the button on the end of the wiper lever.

The following trip computer information will be reset:
- fuel used
- average consumption
- trip odometer
- average speed
The trip computer will reset automatically when the maximum value of any of the parameters is exceeded.

Fuel economy rating (ecoScoring)
If equipped, a rating of 0 to 100 is shown in the Info-Display to help evaluate fuel efficiency, based on your driving style.
Higher ratings indicate better fuel economy.
Tips to improve fuel economy are also given in the Info-Display. Journeys can be saved in the system memory, enabling you to compare performances. Refer to Infotainment manual for further information.

Vehicle messages 98.

Journey record
When the engine is switched off, a record of the last journey is shown in the Info-Display.
The following information is displayed:
- average fuel consumption
- total fuel consumption
- trip odometer
- fuel saved in km

Unit of measurement
To change the unit of measurement for the duration of a journey:

Vehicles with power button:
With ignition off, simultaneously press and hold button on end of wiper lever and press the power button 126; the central display flashes for approx. ten seconds until the new unit is displayed. Release button on end of wiper lever when the display stops flashing.

Vehicles without power button:
With ignition off, simultaneously press and hold button on end of wiper lever and switch on the ignition; the central display flashes for approx. ten seconds until the new unit is displayed. Release button on end of wiper lever when the display stops flashing.

When the engine is switched off, the trip computer automatically returns to the original unit of measurement.
Instruments and controls

Interruption of power supply
If the power supply has been interrupted or if the vehicle battery voltage has dropped too low, the values stored in the trip computer will be lost.

Tachograph

The tachograph is operated as described in the operating instructions supplied. Observe regulations regarding use. Depending on equipment, the tachograph may be fitted in a console located above the Infotainment system in the instrument panel.

Note
When a tachograph is fitted, the total distance travelled may be shown only on the tachograph and not in the odometer within the instrument display.

Odometer 87.

Control indicator T 97 illuminates in the instrument cluster in the event of a fault. Seek the assistance of a workshop.

Exterior lighting

Light switch

Turn outer switch:

0 : off
P : sidelights
D : headlights

High beam control indicator D 96.
Low beam control indicator D 96.

Note
If the headlights have been switched on manually, a warning chime will sound when the engine is switched
Lighting

Tail lights
Tail lights are illuminated together with low beam and sidelights.

Automatic light control

AUTO : automatic light control

When the automatic light control function is activated and the engine is running, the system switches between daytime running lights and headlights depending on the external lighting conditions.

For reasons of safety, it is advisable to have the automatic light control function activated.

Automatic headlight activation
During poor lighting conditions the headlights are switched on.
Daytime running lights  105.

Headlight flash
To activate the headlight flash, pull lever.

Headlight range adjustment

Manual headlight range adjustment

Adapt headlight range to the vehicle load to prevent dazzling of oncoming traffic.

High beam

To switch from low to high beam, push lever.
To switch back to low beam, push lever again or pull.
Turn thumb wheel 🔄 to required position:
0 : No load
4 : Loaded up to permissible maximum weight

**Headlights when driving abroad**

The asymmetrical headlight beam extends visibility at the edge of the road at the passenger side.

However, when driving in countries where traffic drives on the opposite side of the road, adjust the headlights to prevent dazzling of oncoming traffic.

**Adjustment**

Open the bonnet 🋐 159 and identify the marking (shown in the illustration) beside each of the headlights.

For each headlight:
Using a screwdriver, turn the screw by a ¼ turn towards the ⤷ symbol to lower the beams or towards the ⤸ symbol to raise the beams.

Ensure the headlight beams are returned to their original positions when required.

**Daytime running lights**

Daytime running lights increase visibility of the vehicle during daylight. They are switched on automatically when the ignition is switched on.

If required, the daytime running lights can be deactivated via the Infotainment system. For further information, refer to Infotainment manual.

Automatic light control 🔄 104.

**Adaptive forward lighting**

**Cornering light**

With the low beam switched on, depending on the steering angle, vehicle speed and gear selected when cornering, the front fog light will also switch on, to illuminate the corner of the road on the respective side.
Hazard warning flashers

Operated by pressing ⚠️.
In the event of hard braking, the hazard warning flashers may turn on automatically. Switch off by pressing ⚠️.

Turn and lane-change signals

lever up : right turn signal
lever down : left turn signal

Turn and lane-change signals are operational when engine is running and during an Autostop.
When the steering wheel is turned back, the lever automatically returns to its original position and the turn signal is deactivated. This will not happen when making a minor steering manoeuvre such as lane changing.

For three flashes, e.g. when changing lanes, move lever part way to first stop and then release.
If the lever is moved past the first stop, the turn signal is switched on constantly. Switch the turn signal off manually by moving the lever to its original position.

Front fog lights

Turn inner switch to position ⚡️.
Front fog lights will only operate when the ignition and headlights are switched on.
Rear fog lights
Turn inner switch to position ø.
Rear fog light comes on together with front fog lights and will only operate when the ignition and headlights are switched on.

Reversing lights
The reversing lights come on when the ignition is on and reverse gear is selected.

Misted light covers
The inside of the light covers may mist up briefly in poor, wet and cold weather conditions, in heavy rain or after washing. The mist disappears quickly by itself; to help, switch on the headlights.

Interior lighting

Instrument panel illumination control
Brightness of the following lights can be adjusted when the exterior lights are on:
- instrument panel illumination
- info-display
- illuminated switches and operation elements.

Turn thumb wheel ⦿ until the desired brightness is obtained.

Interior lights

Courtesy lights
During entry and exit of the vehicle, depending on switch position the front and rear courtesy lights automatically switch on, together with the foot well lights, then switch off after a delay.

Front courtesy lights

Operate rocker switch:
press 0 : off
centre position : automatic switching
press ⦿ : on and off
press ⦿ : on
With the rocker switch in its central position, the light functions as a courtesy light and illuminates when the front doors are opened.

When the front doors are closed, the courtesy light extinguishes after a delay.

**Rear courtesy lights**

The upper load compartment lights can be set to illuminate when the side or rear doors are opened, or switched on constantly.

**Operate rocker switch:**
- press 0 : off
- centre position : automatic switching on and off
- press ✂ : on

With the rocker switch in its central position, the light functions as a courtesy light and illuminates when the side or rear doors are opened.

When the doors are closed, the courtesy light extinguishes after a delay.

**LED spotlights**

Depending on vehicle, adjustable LED spotlights, also including rocker switch, may be present.

**Bench seat lights**

Depending on vehicle, bench seat light illuminates when the sliding side door is opened.

**Load compartment lighting**

The lower load compartment lights come on when the load compartment is opened.

**Reading lights**

Front reading light
Operate rocker switch:
pressto: off
press (): on

**Glove box lighting**
The glovebox light comes on when the glovebox is opened.

**Lighting features**

**Entry lighting**

**Welcome lighting**
Vehicle lights are switched on for a short time to facilitate locating the vehicle when it is dark.

**Remote control operation**
Lights switch on when unlocking the vehicle with the remote control.

**Electronic key system operation**

Press (). Press again to switch off.

**Exit lighting**

If equipped, headlights come on for approx. 30 seconds after the vehicle is parked and the system is activated.

**Activating**
1. Switch off ignition.
2. Remove ignition key.
3. Open driver's door.
4. Pull turn signal lever towards steering wheel.

This action can be repeated up to four times to a maximum period of two minutes.
Lighting

The lighting is turned off immediately by switching on the ignition or turning the light switch.

Battery discharge protection

To prevent discharge of the vehicle battery when the ignition is switched off, some interior lights may be switched off automatically after some time.
## Climate control

Climate control systems .......... 111

## Climate control systems

### Heating and ventilation system

![Climate control system controls](image)

**Controls for:**
- **temperature**
- **fan speed**
- **air distribution**

**Heated rear window **

**Temperature**
- **red** : warm
- **blue** : cold

Heating will not be fully effective until the engine has reached normal operating temperature.

### Fan speed

Adjust the air flow by switching the fan to the desired speed.

### Air distribution

- ****: to head area
- ****: to head area and foot well
- ****: to foot well
- ****: to windscreen, front door windows and foot well
- ****: to windscreen and front door windows

Intermediate settings are possible.

### Demisting and defrosting the windows

- Set temperature control to warmest level.
- Set fan speed to highest level.
- Set air distribution control to **.
- Switch on heated rear window **.
Climate control

- Open side air vents as required and direct them towards door windows.
- For simultaneous warming of the foot well, set air distribution control to 🚶.

Heated rear window 🧊 44.

Air conditioning system

In addition to the heating and ventilation system, the air conditioning system has controls for:

A/C : cooling
귀 : air recirculation

Heated seats 🧊 49.

Cooling (A/C)

![Cooling control](image)

Press A/C to switch on cooling. Activation is indicated by illumination of the LED in the button. Cooling is only functional when the engine is running and climate control fan is switched on.

Press A/C again to switch off cooling. The air conditioning system cools and dehumidifies (dries) the air when outside temperature is above a specific level. Therefore condensation may form and drip from under the vehicle.

If no cooling or drying is required, switch off the cooling system for fuel saving reasons. Activated cooling may inhibit an Autostop.

Stop-start system 🧊 130.

Note

Air conditioning performance is reduced when ECO mode has been activated 🧊 124.

Air recirculation system 🧊

![Recirculation control](image)

Press 🧊 to activate air recirculation mode. Activation is indicated by illumination of the LED in the button.

Press 🧊 again to deactivate air recirculation mode.
**Warning**

The exchange of fresh air is reduced in air recirculation mode. In operation without cooling, the air humidity increases, so the windows may mist up from inside. The quality of the passenger compartment air deteriorates, which may cause the vehicle occupants to feel drowsy.

In warm and very humid ambient air conditions, the windscreen might mist up from outside when cold air is directed towards it. If windscreen mists up from outside, activate windscreen wiper and avoid the use of air distribution settings J and V.

**Maximum cooling**

Briefly open the windows so that hot air can disperse quickly.
- Cooling A/C on.
- Air recirculation system on.
- Set air distribution control to M.
- Set temperature control to coldest level.
- Set fan speed to highest level.
- Open all air vents.

**Demisting and defrosting the windows**

- Set temperature control to warmest level.
- Set fan speed to highest level.
- Set air distribution control to V.
- Switch cooling A/C on.
- Switch on heated rear window Ü.
- Open side air vents as required and direct them towards door windows.
- For simultaneous warming of the foot well, set air distribution control to J.

Heated rear window Ü 44.

**Electronic climate control system**

Controls for:
- air distribution
- temperature
- fan speed

AUTO : automatic mode
max : demisting and defrosting
: heated rear window
A/C OFF : switch off air conditioning
: manual air recirculation

Heated rear window Ü 44, Heated seats Ü 49.
Climate control

The preselected temperature is automatically regulated. In Automatic mode, the fan speed and air distribution automatically regulate the air flow.

The system can be manually adapted via the use of air distribution and air flow controls.

Electronic climate control system is only fully operational when the engine is running.

**Automatic mode AUTO**

Basic setting for maximum comfort:
- Switch on the fan.
- Press AUTO; fan speed, air distribution, cooling and air recirculation are regulated automatically.
- Set the desired temperature.
- Open all air vents.

To switch off the electronic climate control system, switch off the fan.

**Temperature preselection**

Temperatures can be set to the desired value.

If the minimum temperature is set, the climate control system runs at maximum cooling.

If the maximum temperature is set, the climate control system runs at maximum heating.

**Demisting and defrosting the windows**

- Press ; LED illuminates in the button when activated.
- Temperature, air distribution and cooling are regulated automatically and the fan runs at high speed.
- Switch on heated rear window 44.

To return to Automatic mode: press or AUTO.

**Manual settings**

Manually changing any of the following settings will deactivate Automatic mode:

**Fan speed**

Adjust the air flow manually by switching the fan to the desired speed.

If the fan is switched off, the air conditioning is also deactivated.

**Air distribution**

Press appropriate button for desired adjustment. LED illuminates in the button when activated.

- : to windscreen and front door windows
- : to head area
- : to foot well

Combinations of settings are possible by pressing two buttons until both LEDs are illuminated.

To return to Automatic mode: Press AUTO button.
Cooling A/C

The air conditioning system cools and dehumidifies (dries) the air when outside temperature is above a specific level. Therefore condensation may form and drip from under the vehicle.

**Note**
Air conditioning performance is reduced when ECO mode has been activated.

If no cooling or drying is required press A/C OFF to switch the cooling system off, thus saving fuel. LED illuminates in the button.

To return to Automatic mode: Press AUTO button.

**Air recirculation mode**
Activate or deactivate manual air recirculation mode with LED illuminates in the button when activated.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>The exchange of fresh air is reduced in air recirculation mode. In operation without cooling the air humidity increases, so the windows may mist up from inside. The quality of the passenger compartment air deteriorates, which may cause the vehicle occupants to feel drowsy.</td>
</tr>
</tbody>
</table>

To return to Automatic mode: Press AUTO button.

Rear heating system

The rear passenger compartment heating fan assists air flow to the rear passenger compartment via the rear air vents.

The rate of air flow is determined by the fan. Air temperature is controlled using the temperature control on the instrument panel.

Rear air conditioning system

The rear air conditioning system is actuated in conjunction with the front passenger compartment air conditioning system.
Rear air conditioning fan switch

The rear air conditioning fan assists air flow to the rear passenger compartment via the rear air vents. Switch on the fan while the air conditioning system is operating to allow cooled and dehumidified (dried) air to be distributed. The rate of air flow is determined by the fan.

Auxiliary heater

Coolant heater

The engine-independent, fuel-powered coolant heater provides rapid heating of the engine coolant to enable heating of the vehicle interior without the engine running.

⚠️ Warning

Do not operate the system when refuelling, when dust or combustible vapours are present or in enclosed spaces (e.g. garage).

Before starting or programming the system to start, turn the vehicle’s climate control system to heat, set the air distribution to 🌠 and turn the fan on.

Switch off when not required. Heating stops automatically after the programmed runtime. It will also cease to operate if the vehicle fuel level drops too low.

During operation, power from the vehicle battery is used. The driving time should therefore be at least as long as the heating time. For short journey times, check the vehicle battery regularly and recharge if necessary.

To ensure efficient performance, briefly operate the auxiliary heater once a month.

Control units

The timer or remote control unit turns the system on and off, and is used to programme specific departure times.
Climate control

Timer (Type A)

1 Display: Displays preset, current time or preset time, temperature, ☀, ☀ and ☀
2 ➤: Adjusts values up
3 ➡: Long press: switch heater on, short press: turns display on or confirms selection
4 ➣: Adjusts values down
5 □: Long press: switch heater off, short press: turns display on or exit menu

Remote control (Type A)

1 Display: Displays preset, current time or preset time, temperature, ☀, ☀, ☀, ☀, ☀, ☀ and ☀
2 ➡: Long press: switch heater on, short press: turns display on or confirms selection
3 ➤: Adjusts values up
4 □: Long press: switch heater off, short press: turns display on or exit menu
5 ➣: Adjusts values down

If no buttons are pressed within ten seconds the display automatically turns off.

Remote control (Type A) fault displays

INIT: automatic detection – wait until automatic detection is finished
NO SIGNAL: no signal – check heater fuse
Z: poor signal – move closer
Ü: battery low – replace battery
Y: heater fault – consult workshop
Add, AddE: system in learning mode

Teach remote control (Type A)

If the vehicle battery is reconnected, the LED in the instrument panel button illuminates and the system configures the remote control menu automatically. If the LED flashes, select Add or AddE and confirm.
Additional remote control units may also be configured. Press the button until LED flashes, switch on the remote control, select **Add** and confirm.

**AddE** teaches the current remote control unit exclusively and blocks all previously configured units. **Add** teaches up to four remote control units, but only one unit can operate the system at any one time.

### Remote control (Type B)

| 1 Display | Displays preset, current time or preset time, temperature, ℃, ℉, ° and ✿ |
| 2 ► | Adjusts values up |
| 3 | Switch heater off, or press **OFF** and **OFF** simultaneously to confirm selection |
| 4]| Switch heater on, or press and **OFF** simultaneously to confirm selection |
| 5 ◀ | Adjusts values down |

If no buttons are pressed within 30 seconds the display automatically turns off.

#### Warning

When refuelling, switch off the remote control unit as well as the heater!

The remote control has a maximum range of 1000 metres. The range may be reduced due to environmental conditions and as the battery becomes weaker.

#### Remote control (Type B) fault displays

- **فيلم** : poor signal – adjust position
- **FAIL** : error during signal transmission – move closer or check heater fuse
- **المكي** : battery low – replace battery

### Teach remote control (Type B)

Up to four additional remote control units may also be configured. During additional teaching processes, the oldest transmitter will be deleted each time.

Remove the heater fuse for five seconds, then refit the fuse. Within two - six seconds press **OFF** for one second. Teaching is completed.

If the remote has not been used for a long period, press the **OFF** button six times at intervals of two seconds, then press and hold for another two seconds, then wait two minutes.
Manual control

Depending on version, the auxiliary heater can also be switched on for the last duration time or the default duration 30 minutes, or cut-off immediately, using the button on the lower part of the instrument panel, beside the steering wheel.

The LED in the button confirms operation.

Battery replacement

Replace the battery when the range of the remote control is reduced or when the battery charge symbol flashes.

Open the cover and replace the battery (Type A: CR 2430, Type B: 2CR 11108, or equivalent), ensuring the new battery is correctly installed with the positive (+) side facing the positive terminals. Replace the cover securely.

Dispose of old batteries in accordance with environmental regulations.

Batteries do not belong in household waste. They must be disposed of at an appropriate recycling collection point.

Operation (Type A)

Heating

Select ⬇️ in the menu bar and press ➤ to confirm. The predetermined heating duration, e.g. L 30, flashes in the display. The factory setting is 30 minutes.

Adjust the heating duration using ⬇️ or ➤ and confirm. The value can be set from ten to 120 minutes. Due to the power consumption, note the heating duration.

To switch off, select ⬅️ in the menu bar again and press ☐️.

Ventilation

Select ✱ in the menu bar and press ➤ to confirm.

Adjust the ventilation duration using ⬇️ or ➤ and confirm. The value can be set from ten to 120 minutes. Due to the power consumption, note the heating duration.

To switch off, select ✱ in the menu bar again and press ☐️.

Programming P

Up to three preset departure times can be programmed, either during one day or over one week.

- Select P in the menu bar and press ➤ to confirm.
- Select desired preset memory number P1, P2 or P3 and confirm.
Climate control

- Select \ and confirm.
- Select weekday or weekday group and confirm.
- Select hour and confirm.
- Select minutes and confirm.
- Select \ or \ x and confirm.
- Select ECO or HIGH and confirm.
- Select duration and confirm.
- Press \ to exit.

Repeat the procedure to programme the other preset memory numbers if required.

To activate a desired preset memory number select P1, P2 or P3, then select On and confirm.

When a program is activated P and \ will be displayed together.

To deactivate a preset memory, select P1, P2 or P3, then select Off and confirm.

Heating stops automatically five minutes after the programmed departure time.

Note
The remote control system features a temperature sensor which calculates the runtime according to the ambient temperature and the desired heating level (ECO or HIGH). The system starts automatically between five and 60 minutes prior to the programmed departure time.

Set time and weekday
If the vehicle battery is disconnected or its voltage is too low, the unit will need to be reset.

- Select \ in the menu bar and confirm.
- Select \ in the menu bar and confirm.
- Adjust using \<<<< or \>>>> to change the hour and confirm.
- Adjust using \<<<< or \>>>> to change the minutes and confirm.
- Press \ to exit.
- Select \ in the menu bar and confirm.
- Select Mo in the menu bar and confirm.

- Adjust using \<<<< or \>>>> to change the weekday and confirm.
- Press \ to exit.

Heating level
The preferred heating level for programmed departure times can be set to either ECO or HIGH.

- Select \ in the menu bar and confirm.
- Select ECO or HIGH and confirm.
- Press \ to exit.

Operation (Type B)

Heating \ or Ventilation \x
Select the operating mode \ or \x, if necessary.

- Press \ three times.
- Press \ and OFF simultaneously, \ or \x flashes.
- Adjust using \<<<< or \>>>> to select \ or \x.
- Press \ and OFF simultaneously to confirm.
To switch on, press ⬇️ for one second. The predetermined heating duration, e.g. 30, is displayed. The factory setting is 30 minutes.

The heating duration can be set in increments of ten minutes. Due to the power consumption, note the heating duration.

- Press ⬆️ four times.
- Press ⬇️ and OFF simultaneously, ⬇️/▸ flashes.
- Adjust using ⬇️ or ⬆️ to select the desired heating duration.
- Press ⬇️ and OFF simultaneously to confirm.

To switch off, press OFF.

**Programming**

The system calculates the operating time of the heater depending on the temperature inside the vehicle.

- Press ⬇️ twice.
- Press ⬇️ and OFF simultaneously, ⬇️ flashes.

**Set time**

If the vehicle battery is disconnected or its voltage is too low, the time will need to be reset.

- Press ⬆️ once.
- Press ⬇️ and OFF simultaneously, ⬇️ flashes.
- Adjust using ⬇️ or ⬆️ to set the time.
- Press ⬇️ and OFF simultaneously to confirm.

**Heating level**

The preferred heating level for programmed departure times can be set to between C1 and C5.

- Press ⬇️ three times.
- Press ⬇️ and OFF simultaneously, ⬇️ flashes.
- Adjust using ⬇️ or ⬆️ to set the heating level.
- Press ⬇️ and OFF simultaneously to confirm.

To display the passenger compartment temperature, press ⬆️ twice.
Air vents

Adjustable air vents
At least one air vent must be open while cooling is on, in order to prevent the evaporator from icing up due to lack of air movement.

⚠️ Warning
Do not attach any objects to the slats of the air vents. Risk of damage and injury in case of an accident.

Centre air vents

To open or close the centre air vents and direct the flow of air, tilt the slats up or down and turn the adjuster wheel left or right.

Side air vents

To open or close the side air vents, tilt the slats up or down.
Direct the flow of air by rotating the vents.
Depending upon the position of the temperature control, air will be directed into the vehicle via the side air vents.

Rear air vents
Depending on vehicle, additional adjustable air vents are located in the rear passenger compartment.

Fixed air vents
Additional air vents are located beneath the windscreen and door windows, in the foot wells and, depending on vehicle, in the rear passenger compartment.

Glovebox cooler
The air conditioning system can also keep the contents of the glovebox cool.
Maintenance

Air intake
The air intake in front of the windscreen in the engine compartment must be kept clear to allow air intake. Remove any leaves, dirt or snow.

Pollen filter
The pollen filter cleans dust, soot, pollen and spores from the air entering the vehicle through the air intake.

Note
Pollen filter is only fitted to vehicles with air conditioning system.

Air conditioning regular operation
In order to ensure continuously efficient performance, cooling must be operated for a few minutes once a month, irrespective of the weather and time of year. Operation with cooling is not possible when outside temperature is too low.

Service
For optimal cooling performance, it is recommended to annually check the climate control system, starting three years after initial vehicle registration, including:
• functionality and pressure test
• heating functionality
• leakage check
• check of drive belts
• cleaning of condenser and evaporator drainage
• performance check

Note
Refrigerant R-134a contains fluorinated greenhouse gases with a global warming potential of 1430. Front air conditioning system is filled with 0.58 kg and has a CO₂ equivalent of 0.83 tonnes, the front and rear air conditioning system is filled with 0.88 kg and has a CO₂ equivalent of 1.26 tonnes.
Driving hints

Driving economically

ECO mode

ECO mode is a function that optimises fuel consumption. It affects engine power and torque, acceleration, gear shift indication, heating, air conditioning and electrical consumers.

Activation

Press ECO. Control indicator ECO illuminates in the instrument cluster when activated.
During driving, it is possible to temporarily disable ECO mode, e.g. to increase engine performance, by depressing the accelerator pedal firmly. ECO mode is reactivated when pressure is reduced on the accelerator pedal.

**Deactivation**
Press ECO again. Control indicator ECO extinguishes in the instrument cluster.

### Control of the vehicle

#### Never coast with engine not running

Many systems will not function in this situation (e.g. brake servo unit, power steering). Driving in this manner is a danger to yourself and others. All systems function during an Autostop, but there may be a controlled reduction in power steering assist and vehicle speed is reduced. Stop-start system $\Phi$ 130.

#### Pedals

To ensure the pedal travel is uninhibited, there must be no mats in the area of the pedals.

#### Steering

If power steering assist is lost because the engine stops or due to a system malfunction, the vehicle can be steered but may require increased effort.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Vehicles equipped with hydraulic power steering: If the steering wheel is turned until it reaches the end of its travel, and is held in that position for more than 15 seconds, damage may occur to the power steering system and there may be loss of power steering assist.</td>
</tr>
</tbody>
</table>
Starting and operating

New vehicle running-in
Do not brake unnecessarily hard for the first few journeys and after new disc brake pads have been fitted. During the first drive, smoke may occur because of wax and oil evaporating off the exhaust system. Park the vehicle in the open for a while after the first drive and avoid inhaling the fumes.

During the running-in period, fuel and engine oil consumption may be higher and the cleaning process of the diesel particle filter may take place more often. Autostop may be inhibited to allow for charging the vehicle battery.

Stop-start system  
Diesel particle filter  

Ignition switch positions

<table>
<thead>
<tr>
<th>Position</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Ignition off</td>
</tr>
<tr>
<td>1</td>
<td>Steering wheel lock released, ignition off</td>
</tr>
<tr>
<td>2</td>
<td>Ignition on</td>
</tr>
<tr>
<td>3</td>
<td>Starting</td>
</tr>
</tbody>
</table>

Steering wheel lock
Remove key from ignition switch and turn steering wheel until it engages.

Danger
Never remove the key from ignition switch during driving as this will cause steering wheel lock.

Power button

Electronic key must be inside the vehicle, either in the card reader or the front passenger compartment. If the electronic key is not inside the vehicle, a corresponding message appears in the Driver Information Centre  

97.
Note
Do not put the electronic key in the load compartment during driving, as this is outside of the detection zone (indicated by a warning chime at low speed \( \geq 99 \) and a message in the Driver Information Centre \( \geq 98 \)).

Note
In the event the electronic key is kept in the front passenger compartment and a message appears in the Driver Information Centre (possibly accompanied by a warning chime) indicating that it is out of reception range, we recommend inserting the electronic key in the card reader.

Some functions, e.g. Infotainment system, are available for use as soon as you enter the vehicle.

Accessory power mode
Press START/STOP without operating clutch or brake pedal to enable further electrical functions to be operated.
These functions switch off automatically after a delay.

Engine start
Operate clutch and brake pedal and press START/STOP. Release button after starting procedure begins.
If a gear is engaged, the engine can be started only by operating the clutch pedal and pressing the START/STOP button.
In some cases, it may be necessary to move the steering wheel slightly while pressing START/STOP to release the steering wheel lock. A corresponding message appears in the Driver Information Centre \( \geq 97 \).
At very low outside temperatures (e.g. below \(-10\, ^\circ C\) keep the clutch pedal depressed while pressing START/STOP until the engine starts.
If one of the starting conditions is not applied, a corresponding message appears in the Driver Information Centre \( \geq 97 \).
Vehicle messages \( \geq 98 \).

Engine stop
Electronic key must be inside the vehicle, either in the card reader or the front passenger compartment.

With the vehicle stationary, press START/STOP to stop the engine. The steering wheel lock is engaged when the driver's door is opened and the vehicle is locked.
If the electronic key is not detected, a corresponding message appears in the Driver Information Centre \( \geq 97 \). In this event, press START/STOP for two seconds to stop the engine.

Central locking system \( \geq 25 \).

Retained power off
Press START/STOP for more than two seconds; the engine is stopped while some functions, e.g. Infotainment system, are available for use for approx. 10 minutes.
These functions stop working when the driver's door is opened and the vehicle is locked.
Driving and operating

Note
Always take the electronic key with you when exiting the vehicle.
The electronic key being left in the card reader is indicated by a warning chime and a message in the Driver Information Centre when the driver's door is opened.

Danger
Never leave an electronic key inside the vehicle when children or animals are left in the vehicle, to avoid unintended operation of windows, doors or engine. Risk of fatal injury.

Fault
If the engine cannot be started, the cause may be one of the following:
• Fault in electronic key.
• Electronic key out of reception range.
• Battery voltage too low.

Starting the engine

• Overload of the central locking system by operating at frequent intervals, the power supply is interrupted for a short time.
• Interference from higher-power radio waves from other sources.

Battery replacement 22.
Central locking system 25.
Electronic key system 23.

Do not accelerate.

Diesel engines: turn the key to position 2 for preheating until control indicator extinguishes in the instrument cluster.
Turn key to position 3 and release.
The increased engine speed automatically returns to normal idling speed as the engine temperature rises.
Start attempts should not last longer than 15 seconds. If engine does not start, wait 15 seconds before repeating starting procedure. If necessary, depress accelerator before repeating starting procedure.
Before restarting or to switch off the engine, turn key back to 0.

During an Autostop, the engine can be started by depressing the clutch pedal. Stop-start system 130.

Turbo engine warm-up

Upon start-up, engine available torque may be limited for a short time, especially when the engine temperature is cold. The limitation is to allow the lubrication system to fully protect the engine.
Idle speed control

To increase the idle speed, press the switch. After a few seconds the function will be activated.

The function will be deactivated when:
- The clutch pedal is depressed.
- The accelerator pedal is depressed.
- Vehicle speed is above 0 km/h.
- Control indicator \(\text{\textcopyright}\), \(\text{\textcopyright}\) or \(\text{STOP}\) illuminate in the instrument cluster.

To increase or decrease the fast idle speed rate, consult a workshop.

Note
When the fast idle function is activated, the stop-start system is automatically deactivated.
Stop-start system \(\diamond\) 130.

Vehicle shutdown

Fuel cut-off system
If the vehicle runs out of fuel, the fuel system is cut-off and must be reset after refuelling. A corresponding warning message may also appear in the Driver Information Centre \(\diamond\) 97.

⚠️ Danger
If you can smell fuel in the vehicle, or a fuel leak is present, have the cause of this remedied immediately by a workshop. Do not reset the fuel cut-off system, to avoid the risk of fire.

Resetting with remote control key / manual key
To reset the fuel cut-off system and enable the vehicle to be driven:
1. Turn the ignition key to position 2 \(\diamond\) 126.
2. Wait a few minutes to allow the fuel system to be reset.
3. Turn key to position 3 to start the engine.

If the engine does not start, repeat the procedure.

Resetting with electronic key system
To reset the fuel cut-off system and enable the vehicle to be driven:
1. Insert the electronic key in the card reader \(\diamond\) 126.
2. Press START/STOP without depressing any pedals.
3. Wait a few minutes to allow the fuel system to be reset.

If the engine does not start, repeat the procedure.
Electronic key system \(\diamond\) 23.
130  Driving and operating

Power button  126.
Refuelling  153.

**Overrun cut-off**
The fuel supply is automatically cut off during overrun, i.e. when the vehicle is driven with a gear engaged but accelerator pedal is released.
Depending on driving conditions, the overrun cut-off may be deactivated.

**Stop-start system**
The stop-start system helps to save fuel and to reduce the exhaust emissions. When conditions allow, it switches off the engine as soon as the vehicle is at a low speed or at a standstill, e.g. at a traffic light or in a traffic jam. It restarts the engine automatically as soon as the clutch pedal is depressed.

A vehicle battery sensor ensures that an Autostop is only performed if the vehicle battery is sufficiently charged for a restart.

---

**Activation**
The stop-start system is available as soon as the engine is started, the vehicle starts-off and the conditions as stated below in this section are fulfilled.

If the below conditions are not fulfilled, an Autostop is prohibited and control indicator  illuminates in the instrument cluster  96.

**Deactivation**
Deactivate the stop-start system manually by pressing . LED in the button illuminates to indicate deactivation and a corresponding message appears in the Driver Information Centre  97.

If deactivated manually, it is possible to reactivate the stop-start system by pressing  again.

Vehicle messages  98.

**Note**
When the fast idle function is activated, the stop-start system is automatically deactivated and cannot be reactivated by pressing . LED in button illuminates to indicate deactivation and a corresponding message may appear in the Driver Information Centre  97.

Idle speed control  129.

**Autostop**
If the vehicle is at a low speed or at a standstill, activate an Autostop as follows:

- Depress the clutch pedal.
- Move the selector lever to neutral.
- Release the clutch pedal.
The engine will be switched off while the ignition stays on.

An Autostop is indicated when the Autostop indicator illuminates in the instrument cluster.

During an Autostop, heating and brake performance will be maintained. However, brake assist is not available.

Caution

The power steering assist may be reduced during an Autostop.

If you exit the vehicle while the engine is in an Autostop, a warning chime will sound and a message “IGNITION OFF” is displayed in the Driver Information Centre as a reminder that the engine is on standby and has not been switched off.

Conditions for an Autostop

The stop-start system checks if each of the following conditions is fulfilled:

- the stop-start system is not manually deactivated
- the bonnet is fully closed
- the vehicle battery is sufficiently charged and in good condition
- the engine is warmed-up
- the engine coolant temperature is not too high
- the outside temperature is not too low or too high (e.g. below 0 °C or above 35 °C)
- the brake vacuum is sufficient
- the defrosting function is not activated
- the self-cleaning function of the diesel particle filter is not active
- the Antilock brake system (ABS), Traction Control system (TC) and Electronic Stability Program (ESP®) ride control systems are not actively engaged
- the vehicle has moved since the last Autostop

Otherwise an Autostop will be inhibited.

Certain settings of the climate control system may inhibit an Autostop. See the “Climate control” chapter for further information.

New vehicle running-in.

Vehicle battery discharge protection

To ensure reliable engine restarts, several battery discharge protection features are implemented as part of the stop-start system.

Restart of the engine by the driver

Depress the clutch pedal to restart the engine.
Driving and operating

Note
If any gear is selected, the clutch pedal must be fully depressed to restart the engine.

Control indicator 🔴 96 extinguishes in the instrument cluster when the engine is restarted.

Restart of the engine by the stop-start system
The selector lever must be in neutral to enable an automatic restart.

If one of the following conditions occurs during an Autostop, the engine will be restarted automatically by the stop-start system:
- the stop-start system is manually deactivated
- the bonnet is opened
- the charging level of the vehicle battery is below a defined level
- the engine temperature is too low
- the brake vacuum is not sufficient
- the vehicle starts to move
- the defrosting function is activated 🔴 113

If an electrical accessory, e.g. a portable CD player, is connected to the power outlet, a brief power drop during engine restart may be noticeable.

Fault
If a fault occurs in the stop-start system, the LED in 🔴 illuminates, and a corresponding message appears in the Driver Information Centre 🔴 97. Seek the assistance of a workshop.
Vehicle messages 🔴 98.
Warning chimes 🔴 99.

Parking

⚠️ Warning
- Do not park the vehicle on an easily ignitable surface. The high temperature of the exhaust system could ignite the surface.

- Always apply parking brake without pressing release button. Apply as firmly as possible on a downhill slope or uphill slope. Depress brake pedal at the same time to reduce operating force.
- Switch off the engine.
- If the vehicle is on a level surface or uphill slope, engage first gear. On an uphill slope, turn the front wheels away from the kerb.
  If the vehicle is on a downhill slope, engage reverse gear. Turn the front wheels towards the kerb.
- Close the windows.
- Remove the ignition key from the ignition switch. Turn the steering wheel until the steering wheel lock is felt to engage.

- Lock the vehicle by pressing 🔑 on the remote control 🔴 25.
Activate the anti-theft alarm system 37.

- The engine cooling fans may run after the engine has been switched off 159.

### Caution

After running at high engine speeds or with high engine loads, operate the engine briefly at a low load or run in neutral for approx. 30 seconds before switching off, in order to protect the turbocharger.

Vehicle storage 158.

### Engine exhaust

<table>
<thead>
<tr>
<th>Danger</th>
</tr>
</thead>
<tbody>
<tr>
<td>Engine exhaust gases contain poisonous carbon monoxide, which is colourless and odourless and could be fatal if inhaled.</td>
</tr>
<tr>
<td>If exhaust gases enter the interior of the vehicle, open the windows. Have the cause of the fault rectified by a workshop.</td>
</tr>
<tr>
<td>Avoid driving with an open load compartment, otherwise exhaust gases could enter the vehicle.</td>
</tr>
</tbody>
</table>

### Diesel particle filter

The diesel particle filter system filters harmful soot particles out of the exhaust gases. The system includes a self-cleaning function that runs automatically during driving without any notification.

The filter is cleaned by periodically burning off the soot particles at high temperature. This process takes place automatically under set driving conditions. Autostop is not available and fuel consumption may be higher during this period. The emission of smells and smoke during this process is normal.

Under certain driving conditions, e.g. short distances, the system cannot clean itself automatically. If cleaning of the filter is required and if previous driving conditions did not enable automatic cleaning, it will be indicated by the illumination of control indicators \( \text{\ding{93}} \) and \( \text{\ding{93}} \) in the instrument cluster. Seek the assistance of a workshop immediately.

<table>
<thead>
<tr>
<th>Caution</th>

<tbody>
<tr>
<td>If the cleaning process is interrupted, there is a risk of provoking severe engine damage.</td>
</tr>
</tbody>
</table>

Cleaning takes place quickest at high engine speeds and loads.
Driving and operating

Catalytic converter
The catalytic converter reduces the amount of harmful substances in the exhaust gases.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fuel grades other than those listed on page 152, 202 could damage the catalytic converter or electronic components. Unburnt fuel will overheat and damage the catalytic converter. Therefore avoid excessive use of the starter, running the fuel tank dry and starting the engine by pushing or towing.</td>
</tr>
</tbody>
</table>

In the event of misfiring, uneven engine running, a reduction in engine performance or other unusual problems, have the cause of the fault rectified by a workshop as soon as possible. In an emergency, driving can be continued for a short period, keeping vehicle speed and engine speed low.

If control indicator \( \square \) flashes, the permitted emission limits may be exceeded. Lift your foot off the accelerator until \( \square \) stops flashing and is steadily illuminated. Contact a workshop immediately. Malfunction indicator light \( \triangleright \) 93.

AdBlue
General information
The selective catalytic reduction (BluelInjection) is a method to substantially reduce the nitrogen oxides in the exhaust emission. This is achieved by injecting a Diesel Exhaust Fluid (DEF) into the exhaust system.
The designation of this fluid is AdBlue®. It is a non-toxic, non-flammable, colourless and odourless fluid which consists of 32% urea and 68% water.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Avoid contact of your eyes or skin with AdBlue. In case of eye or skin contact, rinse off with water.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Avoid contact of the paintwork with AdBlue. In case of contact, rinse off with water.</td>
</tr>
</tbody>
</table>

AdBlue freezes at a temperature of approx. -11 °C. As the vehicle is equipped with an AdBlue pre-heater, the emissions reduction at low temperatures is ensured. The AdBlue pre-heater works automatically.
**AdBlue level indicator**

The current AdBlue percentage remaining can be shown in the Driver Information Centre.

Press button on end of wiper lever repeatedly until the 'AdBlue percentage remaining' menu is displayed.

**Level warnings**

The AdBlue consumption is approx. 0.7 litres per 1000 km and depends on the driving behaviour.

If the AdBlue level falls below a certain value, a level warning will be displayed in the Driver Information Centre. Additionally, control indicator illuminates continuously together with a warning chime.

Refill the AdBlue tank as soon as possible. Refer to "Refilling AdBlue" below.

If AdBlue is not refilled within a certain distance, further level warnings are displayed in the Driver Information Centre depending on the current AdBlue level.

**Engine restarts prevented**

Subsequent requests to refill AdBlue and finally the announcement that an engine restart will be prevented are displayed in the Driver Information Centre.

**Note**

These restrictions are a legal requirement.

Before the prevention of an engine restart, a warning message with 0 km is displayed in the Driver Information Centre, indicating that after switching off the ignition an engine restart will be prohibited.

After the prevention of an engine start, a warning message is displayed in the Driver Information Centre reminding the driver that AdBlue level is insufficient.
Driving and operating

To allow the engine to be restarted, the tank should be refilled completely or with a volume of at least ten litres of AdBlue, depending on AdBlue consumption.

Warning stages: level warnings, engine restarts prevented

1. \(\bigstar\) illuminates after ignition is switched on with warning message LEVEL ADBLUE LOW:
   
   Driving is possible without any restrictions.
   
   Refill the AdBlue tank as soon as possible.

2. \(\bigstar\) illuminates during driving with warning message TOP UP ADBLUE:
   
   Possible loss of engine power.
   
   Refill the AdBlue tank as soon as possible.

3. \(\bigstar\) illuminates during driving with warning message XXX KM STOP ADD ADBLUE:
   
   Vehicle speed may be limited to 20 km/h after switching the engine off and on again until the range is reduced to 0 km.

4. \(\bigstar\) illuminates during driving with warning message 0 KM STOP ADD ADBLUE:
   
   The engine cannot be restarted after switching off the ignition.
   
   To allow the engine to be restarted, refill the tank completely or with a volume of at least ten litres of AdBlue (depending on AdBlue consumption) as soon as possible.

   Illumination of control indicator \(\bigstar\) may be accompanied by a warning chime.
   
   Warning chimes \(\bigstar\) 99.

High emission warnings

If the exhaust emission rises above a certain value, warnings similar to the range warnings as described above will be displayed in the Driver Information Centre. Control indicator \(\bigstar\) illuminates continuously together with \(\bigtriangleup\) and a warning chime.

Requests to have the exhaust system checked and finally the announcement that an engine restart will be prevented are displayed in the Driver Information Centre.

Note
These restrictions are a legal requirement.

At an AdBlue range of 1100 km, a warning message is displayed in the Driver Information Centre showing the remaining distance the vehicle can travel before engine restarts are prevented. This warning message is repeated every 100 km.

Seek the assistance of a workshop as soon as possible.

Warning stages: high emission warnings

1. \(\bigstar\) and \(\bigtriangleup\) illuminate with warning message CHECK ANTI-POLLUTION:
   
   Fault in the system that may result in a loss of engine power.
Seek the assistance of a workshop as soon as possible.

2. Y and F illuminate with warning message **ANTIPOLLUTION xxx KM FAIL**:  
Indicates that in less than 1100 km an engine restart will be prohibited after switching off the ignition.  
This warning message will be repeated every 100 km.  
Vehicle speed may be limited to 20 km/h after switching the engine off and on again until the range is reduced to 0 km.  
Seek the assistance of a workshop as soon as possible.

3. Y and F illuminate with warning message **ANTIPOLLUTION 0 KM FAILURE**:  
The engine cannot be restarted after switching off the ignition.  
Seek the assistance of a workshop.  
Illumination of control indicators Y and F may be accompanied by a warning chime.

**Warning chimes  99.**

**Refilling AdBlue**

![AdBlue label]

**Caution**

Only use AdBlue that complies with European standards DIN 70 070 and ISO 22241-1.  
Do not use additives.  
Do not dilute AdBlue.  
Otherwise the selective catalytic reduction system could be damaged.

**Note**

If AdBlue must be refilled at very low temperatures, the refilling of AdBlue may not be detected by the system. In this case, park the vehicle in a space with a higher ambient temperature until AdBlue is liquefied.

**Note**

If engine starting is prohibited due to low AdBlue level, we recommend refilling the tank completely or with a volume of at least ten litres of AdBlue (depending on AdBlue consumption).  
Avoid minor top-ups (e.g. less than ten litres), otherwise the system may not detect a refill.

**Note**

When unscrewing the protective cap from the filler neck, ammonia fumes may emerge. Do not inhale as the fumes have a pungent smell. The fumes are not harmful by inhalation.  
The vehicle must be parked on a level surface.
Driving and operating

The filler neck for AdBlue is located behind the fuel filler flap, located on the left-hand side of the vehicle. The fuel filler flap can only be opened if the vehicle is unlocked and the left-hand door is opened.

**Danger**

Vehicles with stop-start system: The engine must be switched off and the ignition key removed, to avoid risk of engine being restarted automatically by the system.

Capacities ⧀ 211.

**Filling station**

**Danger**

Follow the operating and safety instructions of the filling station when refilling AdBlue.

1. Switch off engine and remove key from ignition switch.

2. Open left-hand door and pull fuel filler flap to open.

3. Unscrew protective cap anticlockwise from the filler neck.

**Caution**

The AdBlue protective cap is the blue lower cap (arrowed in illustration), and the fuel filler cap is the black upper cap ⧀ 153.

In case of incorrect refilling, do not switch on ignition. Seek the assistance of a workshop immediately.

4. Fully insert the pump nozzle into the filler neck and switch it on.

5. When refilling is complete, mount the protective cap and turn clockwise until it engages.

6. Close fuel filler flap and left-hand door.

**AdBlue canister**

**Note**

Only use the designated AdBlue canisters for refilling, to prevent a topping-up of too much AdBlue. Additionally, the fumes in the tank are captured in the canister and do not emerge.

**Note**

Since AdBlue has a limited durability, check the date of expiry before refilling.

1. Switch off engine and remove key from ignition switch.

2. Open left-hand door and pull fuel filler flap to open.
3. Unscrew protective cap anticlockwise from the filler neck.

4. Open AdBlue canister.

5. Mount one end of the hose on the canister and screw the other end on the filler neck.

6. Lift the canister until it is empty, or until the flow from the canister has stopped. This can take up to five minutes.

7. Place the canister on the ground to empty the hose, wait 15 seconds.

8. Unscrew the hose from the filler neck.

9. Mount the protective cap and turn clockwise until it engages.

10. Close fuel filler flap and left-hand door.

**Caution**
The AdBlue protective cap is the blue lower cap (arrowed in illustration), and the fuel filler cap is the black upper cap 153.

In case of incorrect refilling, do not switch on ignition. Seek the assistance of a workshop immediately.

**Note**
Dispose of AdBlue canister according to environmental requirements. Hose can be reused after flushing with clear water before AdBlue dries out.

**Note**
Allow the vehicle to idle for at least ten seconds to allow the system to detect the AdBlue refill.

Failure to observe this procedure will result in the system only recognising the AdBlue refill after approx. 20 minutes of driving.

If the AdBlue refill is detected successfully, AdBlue level warnings will disappear.

If the AdBlue refill is not detected some time after running the engine, seek the assistance of a workshop.

**Filler cap**
Only use genuine filler caps. AdBlue tank has a special filler cap.

**Fault**
If the system detects an operating fault, control indicator \( Y \) illuminates together with \( F \) and a warning chime. Seek the assistance of a workshop immediately.

A corresponding message appears in the Driver Information Centre 97.
**Manual transmission**

To engage reverse, with the vehicle stationary depress the clutch pedal, pull up the collar on the selector lever and engage the gear against the resistance.

If the gear does not engage, set the lever in neutral, release the clutch pedal and depress again; then repeat gear selection.

Do not slip the clutch unnecessarily.

When operating, depress the clutch pedal completely. Do not use the pedal as a foot rest.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>It is inadvisable to drive with hand resting on the selector lever.</td>
</tr>
</tbody>
</table>

Upshift 94.

Stop-start system 130.

**Brakes**

The brake system comprises two independent brake circuits.

If a brake circuit fails, the vehicle can still be braked using the other brake circuit. However, braking effect is achieved only when you depress the brake pedal firmly. You need to use considerably more force for this. The braking distance is extended. Seek the assistance of a workshop before continuing your journey.

When the engine is not running, the support of the brake servo unit disappears once the brake pedal has been depressed once or twice. Braking effect is not reduced, but braking requires significantly greater force. It is especially important to bear this in mind when being towed.

If control indicator R illuminates in the instrument cluster while driving and a corresponding message appears in the Driver Information Centre 97, there is a fault in the braking system. Seek the assistance of a workshop immediately.
Driving and operating

Control indicator \[\textcircled{\textregistered}\] 93.
Vehicle messages \[\textcircled{\textregistered}\] 98.

**Antilock brake system**

Antilock brake system (ABS) prevents the wheels from locking. ABS starts to regulate brake pressure as soon as a wheel shows a tendency to lock. The vehicle remains steerable, even during hard braking. ABS control is made apparent through a pulse in the brake pedal and the noise of the regulation process.

For optimum braking, keep the brake pedal fully depressed throughout the braking process, despite the fact that the pedal is pulsating. Do not reduce the pressure on the pedal.

After starting-off, the system performs a self-test which may be audible.
Control indicator \[\textcircled{\textregistered}\] 94.

**Fault**

If control indicator \[\textcircled{\textregistered}\] does not go out a few seconds after the ignition is switched on, or if it illuminates while driving, there is a fault in the ABS. Control indicator \[\textregistered\] 93 may also illuminate in the instrument cluster together with a corresponding message in the Driver Information Centre. The brake system remains operational but without ABS regulation.

### Warning

If there is a fault in the ABS, the wheels may be liable to lock due to braking that is heavier than normal. The advantages of ABS are no longer available. During hard braking, the vehicle can no longer be steered and may swerve.

If control indicators \[\textregistered\], \[\textregistered\], \[\textcircled{\textregistered}\] 93 and \[\textcircled{\textregistered}\] 93 illuminate, there is a fault in the braking system. A corresponding message also appears in the Driver Information Centre \[\textregistered\] 97. Have the cause of the fault remedied by a workshop.
Vehicle messages \[\textcircled{\textregistered}\] 98.

**Parking brake**

### Warning

Always apply parking brake firmly without operating the release button, and apply as firmly as possible on a downhill or uphill slope.

To release the parking brake, pull the lever up slightly, press the release button and fully lower the lever.

To reduce the operating forces of the parking brake, depress the brake pedal at the same time.
Driving and operating

Control indicator (①) 93.
Parking ② 132.

Brake assist
If the brake pedal is depressed quickly and forcefully, maximum brake force is automatically applied (full braking).

Maintain steady pressure on the brake pedal for as long as full braking is required. Maximum brake force is automatically reduced when the brake pedal is released.

Brake assist is not available during an Autostop.

Stop-start system ② 130.

Hill start assist
The system helps prevent unintended movement when driving away on inclines.

When releasing the brake pedal after stopping on an incline (with the selector lever in a forward gear or reverse gear), the brakes remain on for a further two seconds. The brakes release automatically as soon as the vehicle begins to accelerate.

Caution
The Hill start assist cannot completely prevent vehicle movement in all situations (extremely steep gradients, etc.). If necessary, depress the brake pedal to prevent the vehicle from rolling forwards or backwards.

The Hill start assist is not active during an Autostop. Stop-start system ② 130.

Ride control systems

Traction Control system
The Traction Control system (TC) is a component part of the Electronic Stability Program (ESP®Plus) which improves driving stability when necessary, regardless of the type of road surface or tyre grip, by preventing the drive wheels from spinning.

As soon as the drive wheels starts to spin, engine output is reduced and the wheel spinning the most is braked individually. This considerably improves the driving stability of the vehicle on slippery road surfaces.

TC is operational as soon as the ignition is switched on and control indicator ② extinguishes in the instrument cluster. A corresponding message also appears in the Driver Information Centre ② 97.

When TC is active ② flashes.
### Warning

Do not let this special safety feature tempt you into taking risks when driving. Adapt speed to the road conditions.

Control indicator 🚙 94.
Trailer stability assist (TSA) 156.

### Enhanced Traction function

If necessary, in the event of soft ground, mud or snow-covered road surfaces, the Traction control system (TC) can be deactivated to enhance traction:

Press 🚙 on the instrument panel.

Control indicator 🚙 illuminates in the instrument cluster and a corresponding message appears in the Driver Information Centre 97.

When vehicle speed reaches 50 km/h, the system switches automatically from Enhanced Traction function to TC operation. Control indicator 🚙 extinguishes in the instrument cluster.

TC is reactivated by pressing 🚙 again. Control indicator 🚙 extinguishes.
TC is also reactivated the next time the ignition is switched on.

### Fault

If the system detects a fault, control indicator 🚙 94 illuminates together with 🚙 93 in the instrument cluster and a corresponding message appears in the Driver Information Centre 97.

TC is not operational. Have the cause of the fault remedied by a workshop.
Vehicle messages 98.

### Electronic stability program

The Electronic Stability Program (ESP®Plus) improves driving stability when necessary, regardless of the type of road surface or tyre grip. It also prevents the drive wheels from spinning.

As soon as the vehicle starts to swerve (understeer/oversteer), engine output is reduced and the
Driving and operating

wheels are braked individually. This considerably improves the driving stability of the vehicle on slippery road surfaces.

ESP® Plus is operational as soon as the ignition is switched on and control indicator  extinguishes in the instrument cluster. A corresponding message also appears in the Driver Information Centre  97.

When ESP® Plus comes into action  flashes.

Warning

Do not let this special safety feature tempt you into taking risks when driving.
Adapt speed to the road conditions.

Control indicator   94.
Trailer stability assist (TSA)  156.

Enhanced Traction function

If necessary, in the event of soft ground, mud or snow-covered road surfaces, ESP® Plus can be deactivated to enhance traction:
Press  on the instrument panel.

Control indicator  illuminates in the instrument cluster and a corresponding message appears in the Driver Information Centre  97.

When vehicle speed reaches 50 km/h, the system switches automatically from Enhanced Traction function to ESP® Plus operation. Control indicator  extinguishes in the instrument cluster.
ESP® Plus is reactivated by pressing  again. Control indicator  extinguishes.
ESP® Plus is also reactivated the next time the ignition is switched on.
Fault
If the system detects a fault, control indicator \[::-1] 94 illuminates together with \[::-1] 93 in the instrument cluster and a corresponding message appears in the Driver Information Centre \[::-1] 97.

The Electronic stability program (ESP®Plus) is not operational. Have the cause of the fault remedied by a workshop.

Vehicle messages \[::-1] 98.

Driver assistance systems

⚠️ Warning

Driver assistance systems are developed to support the driver and not to replace the driver’s attention.

The driver accepts full responsibility when driving the vehicle.

When using driver assistance systems, always take care regarding the current traffic situation.

Cruise control
The cruise control can store and maintain speeds of 30 km/h and above. Deviations from the stored speeds may occur when driving uphill or downhill.

For safety reasons, the cruise control cannot be activated until the brake pedal has been operated once.

Do not use the cruise control if it is not advisable to maintain a constant speed.

Control indicators \[::-1] and \[::-1] 97.

Activation

Press \[::-1]; control indicator \[::-1] illuminates green in the instrument cluster.

Cruise control is now in standby mode and a corresponding message appears in the Driver Information Centre.
Accelerate to the desired speed and press \( + \) or \( - \). The current speed is now stored and maintained and the accelerator pedal can be released.

Control indicator \( \checkmark \) illuminates green in the instrument cluster together with \( \mathbb{U} \) and a corresponding message appears in the Driver Information Centre.

Vehicle speed can be increased by depressing the accelerator pedal. The stored speed flashes in the instrument cluster. When the accelerator pedal is released, the previously stored speed is resumed.

Cruise control remains activated while gearshifting.

The speed is saved until the ignition is switched off.

**Increase speed**

With cruise control active, the vehicle speed can be increased continuously or in small increments by holding down or tapping \( + \) repeatedly.

When the switch is released the current speed is stored and maintained.

Alternatively, accelerate to the desired speed and store by pressing \( + \).

**Reduce speed**

With cruise control active, the vehicle speed can be decreased continuously or in small increments by holding down or tapping \( - \) repeatedly.

When the switch is released the current speed is stored and maintained.

**Deactivation**

Press \( \mathcal{O} \); cruise control is deactivated and the green control indicator \( \mathbb{U} \) extinguishes in the instrument cluster.
Automatic deactivation:
- vehicle speed drops below 30 km/h
- the brake pedal is depressed
- the clutch pedal is depressed
- selector lever in N
- engine speed is in a very low or very high range

The speed is stored and a corresponding message appears in the Driver Information Centre.

Reactivation
Press R at a speed above 30 km/h.
If the stored speed is much higher than the current speed, the vehicle will accelerate powerfully until the stored speed is obtained.
Pressing + will also reactivate the cruise control function, but at the current vehicle speed only, not the stored speed.

Deleting the stored speed
Press ✎; Green control indicators ✎ and ✎ extinguish in the instrument cluster.

Cruise control speed limiter
The speed limiter prevents the vehicle exceeding a preset maximum speed above 30 km/h.

Activation
Press ✎; control indicator ✎ illuminates yellow in the instrument cluster.
Cruise control speed limiter function is now in standby mode and a corresponding message appears in the Driver Information Centre.
Accelerate to the desired speed and press + or −. The current speed is recorded.

The vehicle can be driven normally but it will not be possible to exceed the programmed speed limit except in an emergency.
Where the limit speed cannot be maintained, e.g. when driving on a steep decline, the limit speed will flash in the Driver Information Centre -chevron, accompanied by a warning chime.

Increase limit speed
The limit speed can be increased continuously or in small increments by holding down or tapping + repeatedly.

Reduce limit speed
The limit speed can be decreased continuously or in small increments by holding down or tapping − repeatedly.

Exceeding the limit speed
In the event of an emergency, it is possible to exceed the limit speed by depressing the accelerator pedal firmly beyond the point of resistance. The limit speed will flash in the Driver Information Centre -chevron.
Driving and operating

Information Centre 97 during this period, accompanied by a warning chime.

Release the accelerator pedal and the speed limiter function is reactivated once a speed lower than the limit speed is obtained.

**Note**
In vehicles fitted with a Speed limiter, fully depressing the accelerator pedal will not allow you to exceed the set maximum vehicle speed. Speed limiter 148.

**Deactivation**
Press O; Speed limiter is deactivated and the vehicle can be driven normally.

The limit speed is stored and a corresponding message appears in the Driver Information Centre.

**Reactivation**
Press R; The speed limiter function is reactivated.

Pressing will also reactivate the speed limiter function, but at the current vehicle speed only, not the stored speed.

---

**Deleting the limit speed**
Press ; Yellow control indicator extinguishes in the instrument cluster.

**Speed limiter**

**Maximum speed limiter**

In accordance with local or national regulations, the vehicle may be equipped with a fixed maximum speed limiter that cannot be disabled.

If equipped, a warning label indicating the fixed maximum speed limit (90 to 130 km/h) is located on the instrument panel.

Deviations from the maximum speed limit may occur briefly when driving downhill, for physical reasons.

A warning buzzer will sound for ten seconds every 40 seconds if the vehicle briefly exceeds the set limit.

Vehicles also equipped with cruise control speed limiter: the maximum speed cannot be exceeded by depressing the accelerator pedal firmly beyond the point of resistance.

Cruise control speed limiter 145.

**Parking assist**

<table>
<thead>
<tr>
<th>![Warning]</th>
</tr>
</thead>
<tbody>
<tr>
<td>It is the driver who bears full responsibility for the parking manoeuvre.</td>
</tr>
<tr>
<td>Always check the surrounding area while reversing and using the rear parking assist system.</td>
</tr>
</tbody>
</table>

The parking assist makes reverse parking easier by measuring the distance between the rear of the vehicle and obstacles.
The system consists of four ultrasonic parking sensors in the rear bumper.

**Note**
Attached parts in the detection area cause system malfunction.

**Activation**
When reverse gear is engaged, the system switches itself on automatically. Readiness for operation is indicated by a brief acoustic signal.

An obstacle is indicated by buzzers and, depending on vehicle, is also indicated in the Info-Display. The interval between the buzzers becomes shorter as the vehicle gets closer to the obstacle. When the distance is less than 30 cm, the buzzer is continuous.

**Note**
In versions with Info-Display indication, the volume of the buzzer can be adjusted via the Infotainment system. Refer to Infotainment manual for further information.

**Deactivation**
It is possible to permanently or temporarily deactivate the system.

**Note**
In versions with Info-Display indication, the function can be deactivated via the Infotainment system. Refer to Infotainment manual for further information.

**Temporary deactivation**
Temporarily deactivate the system by pressing P on the instrument panel with the ignition on. LED illuminates in the button when deactivated.

When reverse gear is selected, no acoustic signal will sound, indicating deactivation.

The function is reactivated by pressing P again or the next time the ignition is switched on.

**Permanent deactivation**
Permanently deactivate the system by pressing and holding P on the instrument panel for approx. three seconds with the ignition on. LED illuminates continuously in the button when permanently deactivated.
The system is deactivated and will not operate. When reverse gear is selected, no acoustic signal will sound, indicating deactivation.

The function is reactivated by pressing and holding P.nlm for approx. three seconds.

**Fault**

If the system detects an operating fault, when selecting reverse gear a continuous acoustic alarm will sound for approx. five seconds, a corresponding message appears in the Driver Information Centre 97 and \\ illuminates in the instrument cluster 93. Consult a workshop to have the cause of the fault remedied.

**Caution**

When reversing, the area should be free from obstacles which could impact on the underside of the vehicle.

Impact to the rear axle, which may not be visible, could lead to uncharacteristic changes in the vehicle handling. In the event of such an impact, consult a workshop.

Vehicle messages 98.

**Basic notes on parking assist system**

**⚠️ Warning**

Under certain circumstances, various reflective surfaces on objects or clothing as well as external noise sources may cause the system to fail to detect obstacles.

Special attention must be paid to low obstacles which can damage the lower part of the bumper.

**Caution**

Performance of the sensors can be reduced when sensors are covered, e.g. by ice or snow.

Performance of the parking assist system can be reduced due to heavy loading.

Special conditions apply if there are taller vehicles involved (e.g. off-road vehicles, mini vans, vans). Object identification in the upper part of these vehicles cannot be guaranteed.

Objects with a very small reflection cross-section, e.g. objects of narrow size or soft materials, may not be detected by the system.

The parking assist system will not detect objects which are out of the detection range of the sensors.

**Rear view camera**

The rear view camera assists the driver when reversing by displaying a view of the area behind the vehicle in the interior mirror or in the Info-Display.
Driving and operating

⚠️ Warning

The rear view camera does not replace driver vision. Note that objects that are outside the camera's field of view, e.g. below the bumper or underneath the vehicle, are not displayed.

Do not reverse the vehicle by only looking at the display and check the surrounding area behind and around the vehicle before reversing.

Activation

Rear view camera is automatically activated when reverse gear is engaged. An audible signal confirms activation.

Functionality

The camera is mounted above the rear doors/tailgate.

The area displayed by the camera is limited. The distance of the image that appears on the display differs from the actual distance.

Trajectory lane display (1)

Depending on version, the trajectory lane (1) of the vehicle is shown in blue on the Info-Display. It shows the path of the vehicle in accordance with the steering angle.

Fixed lane display (2)

The fixed lane display (2) shows the path of the vehicle if the wheels are kept straight.

Guide lines (3, 4, 5) are used together with the fixed lane display (2) and indicate the distance behind the vehicle.
The guide line intervals are as follows:
3 (red) : 30 cm
4 (yellow) : 70 cm
5 (green) : 150 cm

**Settings**
Settings, e.g. brightness, contrast and colours can be changed via the Infotainment system. The feature may also be switched off permanently. Refer to Infotainment manual for further information.

**Deactivation**
The camera is deactivated after a delay if reverse gear is not engaged for approx. five seconds.

**Fault**
The rear view camera may not operate properly when:
- the surrounding is dark
- the sun or the beam of headlights is shining directly into the camera lens
- ice, snow, mud, or anything else covers the camera lens. Clean the lens, rinse it with water, and wipe it with a soft cloth
- the rear doors/tailgate are not closed correctly
- the vehicle had a rear-end accident
- there are extreme temperature changes

**Fuel**

**Fuel for diesel engines**
Only use diesel fuel that complies with EN 590. The fuel must have low sulphur content (max. 10 ppm). Equivalent standardised fuels with a biodiesel (= FAME according to EN14214) content of max. 7% by volume (like DIN 51628 or equivalent standards) may be used.
In countries outside the European Union, use Euro-Diesel fuel with a sulphur concentration below 50 ppm.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use of fuel that does not comply to EN 590 or similar can lead to engine powerloss, increased wear or engine damage and loss of warranty.</td>
</tr>
</tbody>
</table>

Do not use marine diesel oils, heating oils, Aquazole and similar diesel-water emulsions. Diesel fuels must not be diluted with fuels for petrol engines.
The flow and filterability of diesel fuels are temperature-dependent. When temperatures are low, refuel with diesel fuel with guaranteed winter properties.

Diesel fuel filter 166, diesel fuel system bleeding 166.

**Refuelling**

<table>
<thead>
<tr>
<th>△ Danger</th>
</tr>
</thead>
<tbody>
<tr>
<td>Before refuelling, switch off engine and any external heaters with combustion chambers.</td>
</tr>
<tr>
<td>Vehicles with stop-start system: The engine must be switched off and the ignition key removed, to avoid risk of engine being restarted automatically by the system.</td>
</tr>
<tr>
<td>Switch off any mobile phones.</td>
</tr>
<tr>
<td>Follow the operating and safety instructions of the filling station when refuelling.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>△ Danger</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fuel is flammable and explosive. No smoking. No naked flames or sparks.</td>
</tr>
<tr>
<td>If you can smell fuel in your vehicle, have the cause of this remedied immediately by a workshop.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>In case of misfuelling, do not switch on ignition.</td>
</tr>
</tbody>
</table>

**Note**

To ensure the fuel level is displayed correctly, the ignition must be switched off before refuelling. Avoid minor fuel top-ups (e.g. less than five litres) to ensure accurate readings.

The fuel filler flap is located on the left-hand side of the vehicle.

The fuel filler flap can only be opened if the vehicle is unlocked and the left-hand door is opened.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>In vehicles with AdBlue, the AdBlue protective cap is the blue lower cap 134, and the fuel filler cap is the black upper cap (arrowed in illustration).</td>
</tr>
<tr>
<td>In case of misfuelling, do not switch on ignition. Seek the assistance of a workshop immediately.</td>
</tr>
</tbody>
</table>

To open the fuel filler cap, turn anticlockwise.

Pull flap to open.
Driving and operating

The fuel filler cap can be retained in the bracket on the fuel filler flap. For refuelling, fully insert the pump nozzle and switch it on. After automatic cut-off, it can be topped up by operating the pump nozzle a maximum of two more times.

**Caution**

Wipe off any overflowing fuel immediately.

When refuelling is complete, replace the fuel filler cap and turn clockwise as far as it will go. Close the fuel filler flap.

**Fuel filler cap**

Only use genuine fuel filler caps. Diesel-engined vehicles have special fuel filler caps.

---

**Fuel consumption - CO₂-Emissions**

The values for fuel consumption (combined) of the model Opel Vivaro is within a range of 7.4 to 5.7 l/100 km.

Depending on country, the fuel consumption is displayed in km/l. In this case, the fuel consumption (combined) of the model Opel Vivaro is within a range of approx. 13.5 to 17.5 km/l.

The CO₂ emission (combined) is within a range of 195 to 149 g/km.

For the values specific to your vehicle, refer to the EEC Certificate of Conformity provided with your vehicle or other national registration documents.

**General information**

The official fuel consumption and specific CO₂ emission figures quoted relate to the EU base model with standard equipment.

Fuel consumption data and CO₂ emission data are determined according to regulation R (EC) No. 715/2007 (in the latest applicable version), taking into consideration the vehicle weight in running order, as specified by the regulation.

The figures are provided only for the purpose of comparison between different vehicle variants and must not be taken as a guarantee for the actual fuel consumption of a particular vehicle.

Additional equipment may result in slightly higher results than the stated fuel consumption and CO₂ figures. Furthermore, fuel consumption is dependent on personal driving style as well as road and traffic conditions.
Driving and operating

Trailer hitch

General information

Entrust retrofitting of towing equipment to a workshop. It may be necessary to make changes that affect the cooling system, heat shields or other equipment. Only use towing equipment that has been approved for your vehicle.

Driving characteristics and towing tips

In the case of trailers with brakes, attach the breakaway stopping cable. Before attaching a trailer, lubricate the coupling ball. However, do not do so if a stabiliser, which acts on the coupling ball, is being used to reduce snaking movements. For trailers with low driving stability the use of a stabiliser is recommended.

A maximum speed of 80 km/h must not be exceeded, even in countries where higher speeds are permitted.

If the trailer starts snaking, drive more slowly, do not attempt to correct the steering and brake sharply if necessary.

When driving downhill, drive in the same gear as if driving uphill and drive at a similar speed.

Adjust tyre pressure to the value specified for full load ✈ 212.

Trailer towing

Trailer loads

The permissible trailer loads are vehicle and engine-dependent maximum values which must not be exceeded. The actual trailer load is the difference between the actual gross weight of the trailer and the actual coupling socket load with the trailer coupled.

The permissible trailer loads are specified in the vehicle documents. In general, they are valid for gradients up to max. 12%.

The permitted trailer load applies up to the specified incline and up to an altitude of 1000 metres above sea level. Since engine power decreases as altitude increases due to the air becoming thinner, therefore reducing climbing ability, the permissible gross train weight also decreases by 10% for every 1000 metres of additional altitude. The gross train weight does not have to be reduced when driving on roads with slight inclines (less than 8%, e.g. motorways).

The permissible gross train weight must not be exceeded. This weight is specified on the identification plate ✈ 200.

Vertical coupling load

The vertical coupling load is the load exerted by the trailer on the coupling ball. It can be varied by changing the weight distribution when loading the trailer.

The maximum permissible vertical coupling load is specified on the towing equipment identification plate and in the vehicle documents. Always aim for the maximum load, especially in the case of heavy trailers. The vertical coupling load should never fall below 25 kg.
In the case of trailer loads of 1200 kg or more, the vertical coupling load should not be less than 50 kg.

**Rear axle load**

When the trailer is coupled and the towing vehicle fully loaded (including all occupants), the permissible rear axle load (see identification plate or vehicle documents) must not be exceeded.

**Trailer stability assist**

If the system detects snaking movements, engine power is reduced and the vehicle/trailer combination is selectively braked until the snaking ceases. While the system is working, keep steering wheel as still as possible.

Trailer stability assist (TSA) is a function of the Electronic Stability Program (ESP®Plus) ♦ 143.

General Information

Accessories and vehicle modifications

We recommend the use of genuine parts and accessories and factory approved parts specific for your vehicle type. We cannot assess or guarantee reliability of other products - even if they have a regulatory or otherwise granted approval.

Any modification, conversion or other changes made to standard vehicle specifications (including, without limitation, software modifications, modifications of the electronic control units) may invalidate the warranty offered by Opel. Furthermore, such changes may impact fuel consumption, CO₂ emissions and other emissions of the vehicle and cause the vehicle to no longer conform to the type approval, impacting the validity of your vehicle registration.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>When transporting the vehicle on a train or on a recovery vehicle, the mud flaps might be damaged.</td>
</tr>
</tbody>
</table>

Vehicle storage

Storage for a long period of time

If the vehicle is to be stored for several months:
- Wash the vehicle. Wax painted parts of the vehicle. Exterior care 192.
- Have the wax in the engine compartment and underbody checked.
- Clean and preserve rubber seals.
- Fill up fuel tank completely.
- Change the engine oil.
- Drain the washer fluid reservoir.
- Check the coolant antifreeze and corrosion protection.
- Adjust tyre pressure to the value specified for full load.
- Park vehicle in a dry, well ventilated place. Engage first or reverse gear. Prevent the vehicle from rolling.
- Do not apply the parking brake.
- Open the bonnet, close all doors and lock the vehicle.

Putting back into operation

When the vehicle is to be put back into operation:
- Check tyre pressure.
- Fill up the washer fluid reservoir.
- Check the engine oil level.
- Check the coolant level.
- Since the durability of AdBlue is limited to two years, fluid should be exchanged if it is too old. Seek the assistance of a workshop.
- Fit the number plate, if necessary.
End-of-life vehicle recovery
Information on end-of-life vehicle recovery centres and the recycling of end-of-life vehicles is available on our website, where legally required. Only entrust this work to an authorised recycling centre.

Vehicle checks
Performing work

⚠️ Warning
Only perform engine compartment checks when the ignition is off. The cooling fan may start operating even if the ignition is off.

⚠️ Danger
The ignition system generates extremely high voltages. Do not touch.

The caps for topping up the engine oil, the coolant, the brake fluid, the washer fluid and the oil dipstick handle are yellow for ease of identification.

Bonnet
Opening

Pull the release lever and return it to its original position.
Move the safety catch, located slightly right of centre (see illustration), sideways to the left and raise the bonnet.

The bonnet is held open automatically by a lifter.

If the bonnet is opened during an Autostop, the engine will be restarted automatically for safety reasons.

Stop-start system \(\Diamond\) 130.

**Closing**

Lower the bonnet and allow it to fall into the latch from a low height (approx. 30 cm). Check that the bonnet is engaged.

---

**Engine oil**

Check the engine oil level manually on a regular basis to prevent damage to the engine.

Ensure that the correct specification of oil is used. Recommended fluids and lubricants \(\Diamond\) 197.

The maximum engine oil consumption is 0.6 l per 1000 km.

Check with the vehicle on a level surface. The engine must be at operating temperature and switched off for at least ten minutes.

Pull out the dipstick, wipe it clean, insert it to the stop on the handle, pull out and read the engine oil level.

When the engine oil level has dropped to the MIN mark, top-up engine oil.

---

**Caution**

Do not press the bonnet into the latch, to avoid dents.

**Caution**

Do not allow the engine oil level to drop below the minimum level!
We recommend the use of the same grade of engine oil that was used at the last change.

The engine oil level must not exceed the maximum mark MAX on the dipstick.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Overfilled engine oil must be drained or suctioned out.</td>
</tr>
</tbody>
</table>

To prevent spillage when replenishing the engine oil, we recommend using a funnel to top-up the engine oil. Ensure funnel is securely located onto the filler pipe.

After topping-up, put the funnel into a plastic bag and stow it securely.

A stabilization of the engine oil consumption will not take place until the vehicle has been driven several thousand kilometres. Only then can the actual degree of consumption be established.

If consumption exceeds more than 0.6 litres every 1000 km after this running-in period, consult a workshop.

Capacities ❖ 211.

Fit the cap on straight and tighten it.

---

Engined air filter

Engine air flow indicator

On certain models, an indicator is located in the engine induction system and indicates if the air-intake to the engine is restricted.

Clear : No restriction

Red tell-tale : Restricted

If the red tell-tale is displayed when the engine is running, consult a workshop.
Engine coolant
The coolant provides freeze protection down to approx. -28 °C.

Caution
Only use approved antifreeze.

Coolant level

Caution
Too low a coolant level can cause engine damage.

If the cooling system is cold, the coolant level should be just above the MINI mark. Top-up if the level is low.

⚠️ Warning
Allow the engine to cool before opening the cap. Carefully open the cap, relieving the pressure slowly.

Top-up with antifreeze. If no antifreeze is available, use clean tap water or distilled water. Install the cap tightly. Have the antifreeze concentration checked and have the cause of the coolant loss remedied by a workshop.

If a substantial amount of coolant is required, it will be necessary to bleed any trapped air from the cooling system. Seek the assistance of a workshop.

If the coolant temperature is too high, control indicator ⚠️ 94 illuminates red in the instrument cluster, together with ⏰ 93. Consult a workshop if coolant level is sufficient.

Power steering fluid

Caution
Extremely small amounts of contamination can cause steering system damage and cause it to not work properly. Do not allow contaminants to contact the fluid side of the reservoir cap or from entering the reservoir.

The power steering fluid reservoir is located below the front left wheel arch, behind a trim panel.

The fluid level normally does not need to be checked. If an unusual noise is heard during steering or if the power steering reacts conspicuously, seek the assistance of a workshop.
If the fluid level in the reservoir falls below the MIN mark consult a workshop.

Washer fluid

Fill with clean water mixed with a suitable quantity of windscreen washer fluid which contains antifreeze.

**Caution**

Only washer fluid with a sufficient antifreeze concentration provides protection at low temperatures or a sudden drop in temperature. Use of washer fluid containing isopropanol can damage exterior lamps.

Washer fluid ⇒ 197.

**Brakes**

A squealing noise indicates that the brake lining is at its minimum thickness. Continued driving is possible but have the brake lining replaced as soon as possible.

Once new brake linings are installed, do not brake unnecessarily hard for the first few journeys.

**Brake fluid**

⚠️ **Warning**

Brake fluid is poisonous and corrosive. Avoid contact with eyes, skin, fabrics and painted surfaces.
The brake fluid level must be between the **MINI** and **MAXI** marks.
When topping up, ensure maximum cleanliness as contamination of the brake fluid can lead to brake system malfunctions. Have the cause of the loss of brake fluid remedied by a workshop.
Only use high-performance brake fluid approved for your vehicle. Brake fluid 197.

**Vehicle battery**

The vehicle battery is located under a cover in the engine compartment.
The vehicle battery is maintenance-free provided that the driving profile allows sufficient charging of the battery. Short-distance driving and frequent engine starts can discharge the battery. Avoid the use of unnecessary electrical consumers.

Batteries do not belong in household waste. They must be disposed of at an appropriate recycling collection point.
Laying up the vehicle for more than four weeks can lead to battery discharge.
Ensure the ignition is switched off before connecting or disconnecting the vehicle battery.

**Replacing the vehicle battery**

In vehicles with an AGM (Absorptive Glass Mat) battery, make sure to have the battery replaced with another AGM battery.
An AGM battery can be identified by the label on the battery. We recommend the use of an original Opel battery.

Note
Using an AGM vehicle battery different from the original Opel vehicle battery may result in a lower performance of the stop-start system.

We recommend that you have the vehicle battery replaced by a workshop.

Stop-start system  130.

Charging the vehicle battery

⚠️ Warning
On vehicles with stop-start system, ensure that the charging potential does not exceed 14.6 volts when using a battery charger. Otherwise the vehicle battery might be damaged.

⚠️ Danger
Ensure adequate ventilation when charging the battery. There is a risk of explosion if gases generated during charging are allowed to accumulate!

Jump starting  188.

Warning label

Meaning of symbols:
- No sparks, naked flames or smoking.
- Always shield eyes. Explosive gases can cause blindness or injury.
- Keep the vehicle battery out of reach of children.
- The vehicle battery contains sulfuric acid which could cause blindness or serious burn injuries.
- See the Owner's Manual for further information.
- Explosive gas may be present in the vicinity of the battery.

Additional battery
Depending on the vehicle's auxiliary equipment, certain models may have an additional battery located under the front passenger seat.

Note
The additional battery is automatically connected to the main vehicle battery only when the engine is running. It does not need to be
Vehicle care

manually disconnected before disconnecting the main vehicle battery or before jump starting the vehicle.

Jump starting 188.

Diesel fuel filter
The diesel fuel filter is accessible from the underside of the vehicle.

Drain filter of residual water at every engine oil change.
Place a container underneath the filter housing. Loosen the knurled screw on the lower part of the filter by approx. one turn, to drain off the water.

The filter is drained as soon as water-free diesel fuel emerges. Retighten the screw.

Check diesel fuel filter at shorter intervals if the vehicle is subjected to extreme operating conditions.

Diesel fuel system bleeding
If the fuel tank has been run dry, it will be necessary to air vent or bleed the diesel fuel system.

Refuel then proceed as follows:

With ignition key

- Switch on the ignition (key to position 2) for five seconds at a time.
- Switch off ignition (key to position 1) for three seconds.
- Repeat this process multiple times.
- Start the engine (key to position 3) then switch off (key to position 0).

Ignition switch positions 126.

With power button
Vehicle care

• Insert the electronic key in the card reader.
• Press START/STOP without pressing any of the pedals.
• Wait a few minutes before starting engine.

Power button 126.
If the engine fails to start, seek the assistance of a workshop.
Starting the engine 128.

Wiper blade replacement

Wiper blades on the windscreen

Lift the wiper arm, press button to disengage the wiper blade and remove.
Attach new wiper blade slightly angled to the wiper arm and push until it engages.
Lower wiper arm carefully.

Bulb replacement

Switch off the ignition and turn off the relevant switch or close the doors.
Only hold a new bulb at the base. Do not touch the bulb glass with bare hands.
Use only the same bulb type for replacement.

Bulb check

After a bulb replacement, switch on the ignition, operate and check the lights.

Headlights

Low beam and high beam

Replace headlight bulbs from within the engine compartment.

Wiper blades on the rear window

Lift wiper arm, press retaining lugs together to disengage the wiper blade and raise to remove.
Lower wiper arm carefully.
When attaching new wiper blade, ensure it is engaged securely.
Vehicle care

Sidelights/Daytime running lights

1. Remove protective cover by rotating it anticlockwise.
2. Remove harness connector.
3. Release retaining clip (see illustration) and remove bulb.
4. Renew bulb and install retaining clip ensuring that bulb is in correct orientation.
5. Install harness connector and protective cover.

Fog lights

Access the front fog light bulb from beneath the vehicle.

1. On left vehicle side, release retaining clip and open the access cover.
   On right vehicle side, remove screws and retaining clips to remove the access cover.
2. Remove harness connector.
3. Rotate bulb holder anticlockwise and remove bulb.
4. Renew bulb and install bulb holder.
5. Install harness connector and access cover.
Front turn signal lights

1. Remove bulb holder from reflector housing by rotating anticlockwise.
2. Renew bulb.
3. Install bulb holder in reflector housing.

Tail lights

Rear brake, turn signal and tail lights

4. Rotate bulb holder anticlockwise to separate from lamp assembly.
5. Renew bulb.
6. Push to install the bulb holder into the lamp assembly, then rotate clockwise to secure.
7. Reattach wiring connector to lamp assembly and check that the wiring harness is located correctly.
8. Replace lamp assembly into original position, ensuring that it is seated correctly.
9. Fit lamp assembly onto retaining pins and replace the three screws.

1. Remove the three screws (using the tool supplied).
2. Carefully pull lamp assembly from retaining pins on the outer side and remove.
3. Detach wiring connector from lamp assembly.
1. Release lamp assembly from fender by depressing clips using a suitable tool and lift out lamp assembly from aperture.
2. Remove bulb holder from lamp assembly by rotating anticlockwise and renew bulb.
3. Install bulb holder in lamp assembly and install lamp assembly into aperture.

**Centre high-mounted brake light**
1. Open the rear doors/tailgate.

2. Remove the two bolts from inside the rear doors

3. From outside the vehicle, remove the bulb holder by releasing the clips with a flat blade screwdriver.
4. Renew bulb.
5. Install bulb holder and replace the two bolts.
Reversing light

1. Remove the two screws (using the tool supplied) and remove lamp assembly.
2. Detach wiring connector from lamp assembly.
3. Rotate bulb housing anticlockwise to separate from lamp assembly.
4. Renew lower bulb.
5. Push to install the bulb holder into the lamp assembly, then rotate clockwise to secure.
6. Reattach wiring connector to lamp assembly.
7. Install lamp assembly with the two screws.

Number plate light

H1 roof height

1. Prise out lamp using a flat blade screwdriver.
2. Remove harness connector.
3. Prise off lens to release the clips.
4. Renew bulb.
5. Install lens and replace lamp in housing.

H2 roof height

1. Remove the two screws (using the tool supplied) to release lens.
2. Renew bulb.
3. Install lens in housing and replace the two screws.
**Vehicle care**

**Fog tail light**

1. Remove the two screws (using the tool supplied) and remove lamp assembly.
2. Detach wiring connector from lamp assembly.
3. Rotate bulb housing anticlockwise to separate from lamp assembly.
4. Renew upper bulb.
5. Push to install the bulb holder into the lamp assembly, then rotate clockwise to secure.
6. Reattach wiring connector to lamp assembly.
7. Install lamp assembly with the two screws.

**Interior lights**

**Front and rear courtesy lights**

1. Release lens assembly from the clips and the locator using a flat blade screwdriver.
2. Renew bulb.
3. Install lens assembly.

**Load compartment light**

1. Release lens assembly from the clips using a flat blade screwdriver.
2. Remove rear cover on lamp assembly.
3. Renew bulb.
4. Install rear cover and lamp assembly.
**Glovebox light**

1. Remove lens assembly using a flat blade screwdriver.
2. Renew bulb.
3. Install lens assembly.

**Instrument panel illumination**

Have bulbs replaced by a workshop.

---

**Electrical system**

**Fuses**

Data on the replacement fuse must match the data on the defective fuse. There are two fuse boxes in the vehicle:

- on the left-hand side of the instrument panel, behind the trim panel
- in the engine compartment located next to the battery

**Note**

The engine compartment fuse box should only be accessed by a workshop.

Before replacing a fuse, turn off the respective switch and the ignition.

There are different types of fuses in the vehicle.

Depending on the type of fuse, a blown fuse can be recognised by its melted wire. Do not replace the fuse until the cause of the fault has been remedied.
It is advisable to carry a full set of fuses. Provision is made in the fuse box for the storing of spare fuses. Some functions are protected by several fuses. Fuses may also be inserted without existence of a function.

**Note**
Not all fuse box descriptions in this Owner's Manual may apply to your vehicle. Refer to the fuse box label, where fitted.

**Fuse extractor**

A fuse extractor may be located on the instrument panel fuse box cover. Place the fuse extractor on the various types of fuse from the top or side, and withdraw fuse.

**Instrument panel fuse box**

The fuse box is located on the left-hand side of the instrument panel, behind a trim panel. Pull upper part of trim panel and remove to access the fuse box. Do not store any objects behind this panel. Some circuits may be protected by several fuses.

After having changed defective fuses, replace the trim panel.

**Vehicle tools**

**Tools**

The jack, wheel wrench, wheel bolt sleeve, torx key, adapters, wheel cover hook, towing eye are contained in a unit, stowed under the driver's seat.

Slide seat forwards and fold the backrest forwards 47 to access the tool box. The tool box may be secured in position with a wing nut. Rotate wing nut anticlockwise to release.

Wheel changing 185, Spare wheel 187.

Vehicles with tyre repair kit: The wheel cover hook and torx key are stored within the tyre repair kit case, stowed under the driver's seat.

Tyre repair kit 183.
Vehicle care

Wheels and tyres

Tyre condition, wheel condition
Drive over edges slowly and at right angles if possible. Driving over sharp edges can cause tyre and wheel damage. Do not trap tyres on the kerb when parking.
Regularly check the wheels for damage. Seek the assistance of a workshop in the event of damage or unusual wear.
We recommend not swapping the front wheels with the rear wheels and vice versa, as this can affect vehicle stability. Always use less worn tyres on the rear axle.

Tyres
Factory-fitted tyres are matched to the chassis and offer optimum driving comfort and safety.

Winter tyres
Winter tyres improve driving safety at temperatures below 7 °C and should therefore be fitted on all wheels.
In accordance with country-specific regulations, a notice indicating the maximum permissible speed for the tyres must be affixed within the driver's field of vision.

Tyre designations
E.g. 195/65 R 16 C 88 Q
195 : Tyre width, mm
65 : Cross-section ratio (tyre height to tyre width), %
R : Belt type: Radial
RF : Type: RunFlat
16 : Wheel diameter, inches
C : Cargo or commercial use
88 : Load index e.g. 88 is equivalent to 567 kg
Q : Speed code letter

Speed code letter:
Q : up to 160 km/h
S : up to 180 km/h
T : up to 190 km/h
H : up to 210 km/h
V : up to 240 km/h
W : up to 270 km/h

Choose a tyre appropriate for the maximum speed of your vehicle.
The maximum speed is achievable at kerb weight with driver (75 kg) plus 125 kg payload. Optional equipment could reduce the maximum speed of the vehicle.

Directional tyres
Fit directional tyres such that they roll in the direction of travel. The rolling direction is indicated by a symbol (e.g. an arrow) on the sidewall.

Tyre pressure
Check the pressure of cold tyres at least every 14 days and before any long journey. Do not forget the spare wheel. This also applies to vehicles with tyre pressure monitoring system.
The tyre pressure information label on the driver's door frame indicates the original equipment tyres and the correspondent tyre pressures. Always inflate tyres to the pressures shown on the label.

Tyre pressures \( \Rightarrow 212 \).

The tyre pressure data refers to cold tyres. It applies to summer and winter tyres.

Always inflate the spare tyre to the pressure specified for full load.

Incorrect tyre pressures will impair safety, vehicle handling, comfort and fuel economy and will increase tyre wear.

Tyre pressures differ depending on various options. For the correct tyre pressure value, follow the procedure below:

1. Identify the engine identifier code.
   Engine data \( \Rightarrow 202 \).

2. Identify the respective tyre.

The tyre pressure tables show all possible tyre combinations \( \Rightarrow 212 \).

For the tyres approved for your vehicle, refer to the EEC Certificate of Conformity provided with your vehicle or other national registration documents.

The driver is responsible for correct adjustment of tyre pressure.

\[ \text{\textbf{Warning}} \]

If the pressure is too low, this can result in considerable tyre warm-up and internal damage, leading to tread separation and even to tyre blow-out at high speeds.

\[ \text{\textbf{Warning}} \]

For specific tyres the recommended tyre pressure as shown in the tyre pressure table may exceed the maximum tyre pressure as indicated on the tyre. Never exceed the maximum tyre pressure as indicated on the tyre.

\[ \text{\textbf{Temperature dependency}} \]

Tyre pressure depends on the temperature of the tyre. During driving, tyre temperature and pressure increase.

Tyre pressure values provided on the tyre information label and tyre pressure chart are valid for cold tyres, which means at 20 °C. The pressure increases by nearly 10 kPa (0.1 bar) for a 10 °C temperature increase. This must be considered when warm tyres are checked.
Tyre pressure monitoring system

The tyre pressure monitoring system uses radio and sensor technology to check tyre pressure levels.

**Caution**

Tyre pressure monitoring system warns only about low tyre pressure condition and does not replace regular tyre maintenance by the driver.

All wheels must be equipped with pressure sensors and the tyres must have the prescribed pressure.

**Note**

In countries where the tyre pressure monitoring system is legally required, the use of wheels without pressure sensors will invalidate the vehicle type approval.

The tyre pressure monitoring system sensors monitor the air pressure in the tyres and transmit tyre pressure readings to a receiver located in the vehicle.

---

A detected low tyre pressure condition is indicated by illumination of control indicator \( \□ \) 95 and a corresponding message appears in the Driver Information Centre.

If \( \□ \) illuminates, stop as soon as possible and inflate the tyres as recommended \( \□ \) 212.

After inflating, some driving may be required to update the tyre pressure values in the system. During this time \( \□ \) may illuminate.

If \( \□ \) illuminates at lower temperatures and extinguishes after some driving, this could be an indicator for approaching a low tyre pressure condition. Check tyre pressure of all four tyres.

If the tyre pressure must be reduced or increased, switch off ignition.

Only mount wheels with pressure sensors, otherwise \( \□ \) flashes for several seconds then illuminates continuously together with control indicator \( \□ \) 93 and a corresponding message appears in the Driver Information Centre.

A spare wheel or temporary spare wheel is not equipped with pressure sensors. The tyre pressure monitoring system is not operational for these wheels. For the further three wheels, the tyre pressure monitoring system remains operational.

Control indicator \( \□ \) and the corresponding message appears at each ignition cycle until the tyres are inflated to the correct tyre pressure.

Driver Information Centre \( \□ \) 97.

Vehicle messages \( \□ \) 98.
Puncture

A puncture or severely under-inflated tyre is indicated by illumination of control indicator together with and a corresponding message appears in the Driver Information Centre. Stop vehicle and switch off engine.
Tyre pressure 212.
Tyre repair kit 183.
Spare wheel 187.
Wheel changing 185.

Relearn function

After a puncture has been repaired and the driver has inflated the tyres to the correct tyre pressure, the tyre pressure monitoring system needs to recalculate.
Tyre pressure 212.
Tyre repair kit 183.

During driving, select the tyre pressure menu in the Driver Information Centre by pressing button on end of wiper lever. Press and hold button for approx. five seconds to initialise recalculation. A corresponding message appears in the Driver Information Centre.
Several minutes of driving at a speed above 40 km/h may be required to complete the relearn process. The system can only provide limited information during this time.
If problems occur during the relearn process, control indicator remains illuminated and a warning message is displayed in the Driver Information Centre.
Driver Information Centre 97.
Vehicle messages 98.

General information

The use of tyre chains or commercially available liquid tyre repair kits can impair the function of the system. Factory-approved tyre repair kits can be used.
Tyre repair kit 183, Tyre chains 182.

External high-power radio equipment could disrupt the tyre pressure monitoring system.
Each time the tyres are replaced, the tyre pressure monitoring system sensors must be dismounted and serviced by a workshop.

Tread depth

Check tread depth at regular intervals.
Tyres should be replaced for safety reasons at a tread depth of two to three mm (four mm for winter tyres).
For safety reasons it is recommended that the tread depth of the tyres on one axle should not vary by more than two mm.
Vehicle care

The legally permissible minimum tread depth (1.6 mm) has been reached when the tread has worn down as far as one of the tread wear indicators (TWI). Their position is indicated by markings on the sidewall.

Tyres age, even if they are not used. We recommend tyre replacement every six years.

Changing tyre and wheel size

If tyres of a different size than those fitted at the factory are used, it may be necessary to reprogramme the speedometer as well as the nominal tyre pressure and make other vehicle modifications.

After converting to a different tyre size, have the label with tyre pressures replaced.

⚠️ Warning

Use of unsuitable tyres or wheels may lead to accidents and will invalidate the vehicle type approval.

Wheel covers

Wheel covers and tyres that are factory approved for the respective vehicle and comply with all of the relevant wheel and tyre combination requirements must be used.

If the wheel covers and tyres used are not factory approved, the tyres must not have a rim protection ridge.

Wheel covers must not impair brake cooling.

⚠️ Warning

Use of unsuitable tyres or wheel covers could lead to sudden pressure loss and thereby accidents.

Tyre chains

Tyre chains are only permitted on the front wheels.

Always use fine mesh chains that add no more than 15 mm to the tyre tread and the inboard sides (including chain lock).
For tyre size 215/60 R17, consult a workshop.

**Warning**

Damage may lead to tyre blowout.

Wheel covers on steel wheels may come into contact with parts of the chains. In such cases, remove the wheel covers.

Tyre chains may only be used at speeds up to 50 km/h and, when travelling on roads that are free of snow, they may only be used for brief periods since they are subject to rapid wear on a hard road and may snap.

The use of tyre chains is not permitted on the temporary spare wheel.

**Tyre repair kit**

Minor damage to the tyre tread or sidewall can be repaired with the tyre repair kit.

Do not remove foreign bodies from the tyres.

Tyre damage exceeding four mm or that is at tyre sidewall near the rim cannot be repaired with the tyre repair kit.

**Warning**

Do not drive faster than 80 km/h. Do not use for a lengthy period. Steering and handling may be affected.

If the vehicle has a flat tyre:

Apply the parking brake and engage first gear or reverse gear.

The tyre repair kit is located under the driver's seat. Vehicle tools 177.

1. Remove the compressor and sealant bottle from the tyre repair kit case.
2. Remove the electrical connection cable and air hose from the compartments on the underside of the compressor.
3. Screw the air hose to the connection on the sealant bottle.
4. Fit the sealant bottle into the retainer on the compressor. Set the compressor near the tyre in such a way that the sealant bottle is upright.
5. Unscrew valve cap from defective tyre.
Vehicle care

6. Screw the filler hose to the tyre valve.

7. The switch on the compressor must be set to O.

8. Connect the electrical connection cable to the power outlet or cigarette lighter socket. To avoid discharging the vehicle battery, we recommend running the engine.

9. Set the rocker switch on the compressor to I. The tyre is filled with sealant.

10. The compressor pressure gauge briefly indicates up to six bar (600 kPa/87 psi). Then the pressure starts to drop.

11. All of the sealant is pumped into the tyre. Then the tyre is inflated.

12. The prescribed tyre pressure should be obtained within 15 minutes. Tyre pressure 212. When the correct pressure is obtained, switch off the compressor.

If the prescribed tyre pressure is not obtained within 15 minutes, remove the tyre repair kit. Move the vehicle one tyre rotation (approx. two metres). Reattach the tyre repair kit and continue the filling procedure for 15 minutes. If the prescribed tyre pressure is still not obtained, the tyre is too badly damaged. Seek the assistance of a workshop.
Drain excess tyre pressure with the button beside the pressure indicator.
Do not run the compressor for longer than 15 minutes.

13. Detach the tyre repair kit.
14. Remove any excess sealant using a cloth.
15. Take the label indicating maximum permitted speed from the tyre repair kit and affix in the driver's field of view.
16. Store the sealant bottle in the plastic bag. Return tyre repair kit to case and stow under the driver's seat.

17. Continue driving immediately so that the sealant is evenly distributed throughout the tyre. After driving approx. ten km, but no more than ten minutes, stop and check tyre pressure using the compressor. Screw air hose from compressor directly onto tyre valve when doing this.
18. If the tyre pressure is more than 2.2 bar (220 kPa/31 psi), set it to the correct value. Repeat the procedure until there is no more loss of pressure.
If the tyre pressure has fallen below 2.2 bar (220 kPa/31 psi), the vehicle must not be driven. Seek the assistance of a workshop.
19. Detach the tyre repair kit, return to case and stow under the driver's seat.

⚠️ Warning
Do not allow the sealant to contact skin, eyes or clothing. If swallowed seek medical assistance immediately.

Note
The driving characteristics of the repaired tyre is severely affected, therefore have this tyre replaced.
If unusual noise is heard or the compressor becomes hot, turn compressor off for at least 30 minutes.
Pay attention to storage information and expiry date on sealant bottle. Its sealing capability is not guaranteed after this time.
Replace the used sealant bottle. Dispose of the sealant bottle as prescribed by applicable laws.

Wheel changing
Some vehicles are equipped with a tyre repair kit instead of a spare wheel ⚫ 183.
Make the following preparations and observe the following information:
- Park the vehicle on a level, firm and non-slippery surface. The front wheels must be in the straight-ahead position.
- Apply the parking brake and engage first gear or reverse gear.
Vehicle care

- Remove the spare wheel 187.
- Never change more than one wheel at a time.
- Use the jack only to change wheels in case of puncture, not for a seasonal winter or summer tyre change.
- The jack is maintenance-free.
- If the ground on which the vehicle is standing is soft, a solid board (max. 1 cm thick) should be placed under the jack.
- Remove heavy objects out of the vehicle before jacking up.
- No people or animals may be in the vehicle when it is jacked-up.
- Never crawl under a jacked-up vehicle.
- Do not start the engine when the vehicle is raised on the jack.
- Clean wheel bolts/nuts and thread with a clean cloth before mounting the wheel.

### Warning

Do not grease wheel bolt, wheel nut and wheel nut cone.

1. Remove the wheel cover (using the hook supplied). Vehicle tools 177.

2. Loosen each of the wheel bolts by half a turn using the wheel wrench. Ensure the wrench locates securely. The wrench should turn anticlockwise to loosen the bolts. Invert the wrench if necessary.

3. Place lifting pad spigot of the jack under the jacking hole located nearest the wheel concerned. Ensure the jack is positioned correctly. The jack base must be on the ground directly below the jacking hole in a manner that prevents it from slipping.

4. Install wrench onto the jack and raise the vehicle by turning the wrench until the wheel is clear of the ground.

5. Unscrew wheel bolts completely by turning anticlockwise and wipe clean with a cloth.
Put wheel bolts somewhere where the threads will not be soiled.

7. Screw in the wheel bolts.

8. Lower the vehicle and remove jack.

9. Tighten each of the wheel bolts in a crosswise sequence using the wheel wrench. Ensure the wrench locates securely. The wrench should turn clockwise to tighten the bolts. Invert the wrench if necessary.

   Tightening torque is 160 Nm.

10. Replace the wheel cover, ensuring that the valve hole in the wheel cover is aligned with the tyre valve before installing.

**Note**

If applicable, fit anti-theft bolts nearest the tyre valve (otherwise it may not be possible to refit the wheel cover).

11. Stow the replaced wheel 187 and the vehicle tools 177.

12. Have the new wheel balanced on the vehicle.

   Check the tyre pressure of the installed tyre 212.

   Check the wheel bolt torque.

   Have the defective tyre renewed or repaired as soon as possible.

### Spare wheel

Some vehicles are equipped with a tyre repair kit instead of a spare wheel 183.

If mounting a spare wheel which is different from the other wheels, this wheel might be classified as a temporary spare wheel and the corresponding speed limits apply, even though no label indicates this. Seek the assistance of a workshop to check the applicable speed limit.

**Caution**

The use of a spare wheel that is smaller than the other wheels or in combination with winter tyres could affect driveability. Have the defective tyre replaced as soon as possible.

It may be necessary to jack the vehicle up to gain access to the spare wheel on a fully loaded vehicle with a flat rear tyre.

Wheel changing 185.
The spare wheel is mounted under the rear underbody and may be secured using a security bolt that can only be removed using the wheel bolt sleeve supplied. Vehicle tools ⇒ 177.

⚠️ Warning

Due to the weight of the tyre assembly, exercise caution when releasing the spare wheel carrier. Do not fully remove bolt 1.

Support the spare wheel with a suitable object to prevent the wheel falling suddenly when loosening the carrier bolts - risk of injury!

To release the spare wheel carrier, loosen bolt 1, ensuring it is not fully removed. Fully remove bolt 2, then pull the carrier to the left, until it clears bolt 1, and lower the carrier assembly.

When installing the wheel ensure that the spare wheel carrier is correctly positioned before tightening the bolts.

Summer and winter tyres

If you use winter tyres, the spare wheel may still be fitted with a summer tyre.

If you use the spare wheel when it is fitted with a summer tyre the vehicle’s driveability may be affected, especially on slippery road surfaces.

**Directional tyres**

Fit directional tyres such that they roll in the direction of travel. The rolling direction is indicated by a symbol (e.g. an arrow) on the sidewall.

The following applies to tyres fitted opposing the rolling direction:

- Driveability may be affected. Have the defective tyre renewed or repaired as soon as possible and fit it instead of the spare wheel.
- Do not drive faster than 80 km/h.
- Drive particularly carefully on wet and snow-covered road surfaces.

Jump starting

Do not start with a quick charger.

A vehicle with a discharged battery can be started using jump leads and the vehicle battery of another vehicle.

⚠️ Warning

Be extremely careful when starting with jump leads. Any deviation from the following instructions can lead to injuries or damage caused by battery explosion or damage to the electrical systems of both vehicles.

Avoid contact of the battery with eyes, skin, fabrics and painted surfaces. The fluid contains sulphuric acid which can cause injuries and damage in the event of direct contact.

- Never expose the battery to naked flames or sparks.
• A discharged vehicle battery can already freeze at a temperature of 0 °C. Defrost the frozen battery before connecting jump leads.
• Wear eye protection and protective clothing when handling a battery.
• Use a booster battery with the same voltage (12 volts). Its capacity (Ah) must not be much less than that of the discharged battery.
• Use jump leads with insulated terminals and a cross section of at least 16 mm$^2$ (25 mm$^2$ for diesel engines).
• Do not disconnect the discharged vehicle battery from the vehicle.
• Switch off all unnecessary electrical consumers.
• Do not lean over the battery during jump starting.
• Do not allow the terminals of one lead to touch those of the other lead.
• The vehicles must not come into contact with each other during the jump starting process.

• Apply the parking brake, transmission in neutral.
• Open the positive terminal protection caps of both batteries. The battery is located in the engine compartment.

Remove cover to access the battery.

Leads connection order:
1. Connect the red lead to the positive terminal (1) of the booster battery.
2. Connect the other end of the red lead to the positive terminal (2) of the discharged battery.
3. Connect the black lead to the negative terminal (3) of the booster battery.
4. Connect the other end of the black lead to a vehicle grounding point (4), such as the engine block or an engine mounting bolt. Connect as
Vehicle care

far away from the discharged vehicle battery as possible, however at least 60 cm. Route the leads so that they cannot catch on rotating parts in the engine compartment.

To start the engine:
1. Start the engine of the vehicle providing the jump start.
2. After five minutes, start the other engine. Start attempts should be made for no longer than 15 seconds at an interval of one minute.
3. Allow both engines to idle for approx. three minutes with the leads connected.
4. Switch on electrical consumers (e.g. headlights, heated rear window) of the vehicle receiving the jump start.
5. Reverse above sequence exactly when removing leads.

Towing

**Towing the vehicle**
The towing eye is stowed with the vehicle tools 177.

Release cap using a suitable tool. Screw the towing eye clockwise into the front towing point and tighten fully using the wheel wrench. Attach a tow rope - or better still a tow rod - to the towing eye, never to the bumper or front suspension units.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not tow the vehicle from the rear. The front towing eye must only be used for towing and not recovering a vehicle.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Activate the child locks in the rear doors if the rear seats are occupied. Child locks 31.</td>
</tr>
</tbody>
</table>

Switch on ignition to permit operation of brake lights, horn and windscreen wipers, and move the steering wheel slightly to release the steering wheel lock.

**Note**
Depending on version, it may be necessary to switch on the engine to permit operation of brake lights.

Transmission in neutral.
**Caution**

Drive slowly. Do not drive jerkily. Excessive tractive force can damage the vehicle.

When the engine is not running, considerably more force is needed to brake and steer. Switch on hazard warning flashers 3 106.

To prevent the entry of exhaust fumes from the towing vehicle, switch on the air recirculation system 3 112 and close the windows. Seek the assistance of a workshop. After towing, unscrew the towing eye and replace cap.

---

**Towing another vehicle**

The fixed towing eye is located under the rear bumper, on the left vehicle side. Attach a tow rope - or better still a tow rod - to the rear towing eye, never to the rear axle and suspension units. The rear towing eye must only be used for towing and not recovering a vehicle.

---

**Caution**

Drive slowly. Do not drive jerkily. Excessive tractive force can damage the vehicle.

Trailer hitch 3 155.
Appearance care

Exterior care

Locks
The locks are lubricated at the factory using a high quality lock cylinder grease. Use de-icing agent only when absolutely necessary, as this has a degreasing effect and impairs lock function. After using a de-icing agent, have the locks regreased by a workshop.

Washing
The paintwork of your vehicle is exposed to environmental influences, therefore wash your vehicle regularly. When using automatic vehicle washes, we recommend one with textile brushes and a programme without wax additives. Restrictions for filmed or matt painted body parts or decor tapes, see "Polishing and waxing".

Never use a steam-jet or high-pressure jet cleaner for the engine compartment.

Wax painted parts of the vehicle regularly.

Bird droppings, dead insects, resin, pollen and the like should be cleaned off immediately, as they contain aggressive constituents which can cause paint damage.

If using a vehicle wash, comply with the vehicle wash manufacturer's instructions. The windscreen wipers and rear window wiper must be switched off and the exterior mirrors must be folded in. Remove antenna and external accessories such as roof racks etc.

If you wash your vehicle by hand, make sure that the insides of the wheel housings are also thoroughly rinsed out.

Clean edges and folds on opened doors and the bonnet as well as the areas they cover.

Clean bright metal mouldings with a cleaning solution approved for aluminium, to avoid damage.

Caution

Always use a cleaning agent with a pH value of four to nine.

Do not use cleaning agents on hot surfaces.

Thoroughly rinse and leather-off the vehicle. Rinse leather frequently. Use separate leathers for painted and glass surfaces: remnants of wax on the windows will impair vision.

Have the door hinges of all doors greased by a workshop.

Do not use hard objects to remove spots of tar. Use tar removal spray on painted surfaces.

Exterior lights
Headlight and other light covers are made of plastic. Do not use any abrasive or caustic agents, do not use an ice scraper, and do not clean them dry.
Polishing and waxing

Wax the vehicle regularly (at the latest when water no longer beads). Otherwise, the paintwork will dry out. Polishing is necessary only if the paint has become dull or if solid deposits have become attached to it. Paintwork polish with silicone forms a protective film, making waxing unnecessary. Unpainted plastic body parts must not be treated with wax or polishing agents. Matt filmed body parts or decor tapes must not be polished, to avoid gleaming. Do not use hot wax programmes in automatic car washes if the vehicle is equipped with these parts. Matt painted decor parts, e.g. mirror housing cover, must not be polished. Otherwise these parts would become agleam or the colour would be dissolved.

Windows and windscreen wiper blades

Use a soft lint-free cloth or chamois leather together with window cleaner and insect remover. When cleaning the rear window from inside, always wipe in parallel to the heating element to prevent damage. For mechanical removal of ice, use a sharp-edged ice scraper. Press the scraper firmly against the glass so that no dirt can get under it and scratch the glass. Remove dirt residues from smearing wiper blades by using a soft cloth and window cleaner. Also make sure to remove any residues such as wax, insect residues and similar from the window. Ice residues, pollution and continuous wiping on dry windows will damage or even destroy the wiper blades.

Wheels and tyres

Do not use high-pressure jet cleaners.

Clean rims with a pH-neutral wheel cleaner. Rims are painted and can be treated with the same agents as the body.

Paintwork damage

Rectify minor paintwork damage with a touch-up pen before rust forms. Have more extensive damage or rust areas repaired by a workshop.

Underbody

Some areas of the vehicle underbody have a PVC undercoating while other critical areas have a durable protective wax coating. After the underbody is washed, check the underbody and have it waxed if necessary. Bitumen/rubber materials could damage the PVC coating. Have underbody work carried out by a workshop. Before and after winter, wash the underbody and have the protective wax coating checked.
Vehicle care

Towing equipment
Do not clean the coupling ball bar with a steam-jet or high-pressure jet cleaner.

Interior care

Interior and upholstery
Only clean the vehicle interior, including the instrument panel fascia and panelling, with a dry cloth or interior cleaner.

Clean any leather upholstery with clear water and a soft cloth. In case of heavy soiling, use leather care.

The instrument cluster and the displays should only be cleaned using a soft damp cloth. If necessary use a weak soap solution.

Clean fabric upholstery with a vacuum cleaner and brush. Remove stains with an upholstery cleaner.

Clothing fabrics may not be colourfast. This could cause visible discolourations, especially on light-coloured upholstery. Removable stains and discolourations should be cleaned as soon as possible.

Clean seat belts with lukewarm water or interior cleaner.

Caution
Close Velcro fasteners as open Velcro fasteners on clothing could damage seat upholstery.
The same applies to clothing with sharp-edged objects, like zips or belts or studded jeans.

Plastic and rubber parts
Plastic and rubber parts can be cleaned with the same cleaner as used to clean the body. Use interior cleaner if necessary. Do not use any other agent. Avoid solvents and petrol in particular. Do not use high-pressure jet cleaners.
General information

Service information
In order to ensure economical and safe vehicle operation and to maintain the value of your vehicle, it is of vital importance that all maintenance work is carried out at the proper intervals as specified.

The detailed, up-to-date service schedule for the vehicle is available at the workshop.

Service display 89.

Engine identification 200.

European service intervals
Maintenance of your vehicle is required every 40,000 km or after two years, whichever occurs first, unless otherwise indicated by the service display.

A shorter service interval can be valid for severe driving behaviour, e.g. for taxis and police vehicles.

The European service intervals are valid for the following countries:

- Andorra
- Austria
- Belgium
- Croatia
- Czech Republic
- Denmark
- Estonia
- Finland
- France
- Germany
- Greece
- Hungary
- Iceland
- Ireland
- Italy
- Latvia
- Liechtenstein
- Lithuania
- Luxembourg
- Netherlands
- Norway
- Poland
- Portugal
- Slovakia
- Slovenia
- Spain
- Sweden
- Switzerland
- United Kingdom

International service intervals

Israel:
Maintenance of your vehicle is required every 40,000 km or after one year, whichever occurs first, unless otherwise indicated by the service display.

Albania, Bosnia-Herzegovina, Kosovo, Macedonia, Montenegro, Serbia:
Maintenance of your vehicle is required every 30,000 km or after two years, whichever occurs first, unless otherwise indicated by the service display.
### Service and maintenance

</tbody>
</table>

### Severe operating conditions

Severe operating conditions exist if one or more of the following circumstances occur frequently: Cold starting, stop and go operation, trailer operation, mountain driving, driving on poor and sandy road surfaces, increased air pollution, presence of airborne sand and high dust content, driving at high altitude and large variations of temperature. Under these severe operating conditions,
certain service work may be required more frequently than the regular service interval.

Service display ◊ 89.

**Confirmations**

Confirmation of service is recorded in the Service and warranty booklet. The date and mileage is completed with the stamp and signature of the servicing workshop.

Make sure that the Service and warranty booklet is completed correctly as continuous proof of service is essential if any warranty or goodwill claims are to be met, and is also a benefit when selling the vehicle.

**Service display**

The service interval is based on several parameters depending on usage.

The service display, located in the Driver Information Centre, indicates when the next service is due. Seek the assistance of a workshop.

Service display ◊ 89.

---

**Recommended fluids, lubricants and parts**

**Recommended fluids and lubricants**

Only use products that meet the recommended specifications.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Operating materials are hazardous and could be poisonous. Handle with care. Pay attention to information given on the containers.</td>
</tr>
</tbody>
</table>

**Engine oil**

Engine oil is identified by its quality and its viscosity. Quality is more important than viscosity when selecting which engine oil to use. The oil quality ensures e.g. engine cleanliness, wear protection and oil aging control, whereas viscosity grade gives information on the oil’s thickness over a temperature range.

Dexos is the newest engine oil quality that provides optimum protection for diesel engines. If it is unavailable, engine oils of other listed qualities must be used.

Select the appropriate engine oil based on its quality and on the minimum ambient temperature ◊ 201.

**Topping up engine oil**

Engine oils of different manufacturers and brands can be mixed as long as they comply with the required engine oil quality and viscosity.

Use of engine oil with only ACEA A1/B1 or only A5/B5 quality is prohibited, since it can cause long-term engine damage under certain operating conditions.

Select the appropriate engine oil based on its quality and on the minimum ambient temperature ◊ 201.

**Additional engine oil additives**

The use of additional engine oil additives could cause damage and invalidate the warranty.
Engine oil viscosity grades
The SAE viscosity grade gives information of the thickness of the oil. Multigrade oil is indicated by two figures, e.g. SAE 5W-30. The first figure, followed by a W, indicates the low temperature viscosity and the second figure the high temperature viscosity.
Select the appropriate viscosity grade depending on the minimum ambient temperature \( \diamond 201 \).
All of the recommended viscosity grades are suitable for high ambient temperatures.

Coolant and antifreeze
Use only silicate-free long life coolant (LLC) antifreeze approved for the vehicle. Consult a workshop.
The system is factory filled with coolant designed for excellent corrosion protection and frost protection down to approx. -28 °C. This concentration should be maintained all year round. The use of additional coolant additives that intend to give additional corrosion protection or seal against minor leaks can cause function problems. Liability for consequences resulting from the use of additional coolant additives will be rejected.

Washer fluid
Use only washer fluid approved for the vehicle to prevent damage of wiper blades, paintwork, plastic and rubber parts. Consult a workshop.

Brake fluid
Over time, brake fluid absorbs moisture which will reduce braking effectiveness. The brake fluid should therefore be replaced at the specified interval.

AdBlue
Only use AdBlue to reduce the nitrogen oxides in the exhaust emission \( \diamond 134 \).
### Technical data

**Vehicle identification** ............... 199  
  Vehicle Identification Number .......... 199  
  Identification plate .................. 200  
  Engine identification ................ 200

  Vehicle dimensions ................... 206  
  Capacities ............................ 211  
  Tyre pressures ....................... 212  

### Vehicle identification

**Vehicle Identification Number**

The Vehicle Identification Number is visible through the windscreen.

The VIN is also displayed behind a removable plastic cover on the right-hand side door step.
Identification plate

The identification plate is located on the right-hand door pillar.

- Information on identification plate:
  1: Manufacturer
  2: Type approval number
  3: Vehicle Identification Number
  4: Permissible gross vehicle weight rating in kg
  5: Permissible gross combination weight in kg
  6: Maximum permissible front axle load in kg
  7: Maximum permissible rear axle load in kg
  8: Engine coding
  9: Vehicle-specific or country specific data

**Note**
The identification plate on your vehicle may differ from the illustration shown.

The combined total of front and rear axle loads must not exceed the permissible gross vehicle weight. For example, if the front axle is bearing its maximum permissible load, the rear axle can only bear a load that is equal to the gross vehicle weight minus the front axle load.

The technical data is determined in accordance with European Community standards. We reserve the right to make modifications. Specifications in the vehicle documents always have priority over those given in this manual.

**Engine identification**
The technical data tables show the engine identifier code. Engine data 3202.

To identify the respective engine, refer to the engine power in the EEC Certificate of Conformity provided with your vehicle or other national registration documents.

It is also possible, using the Vehicle Identification Number (VIN), to determine the engine type that is installed in your vehicle. For further information consult a workshop.

[^9]: The spare wheel should be set to the highest applicable pressure shown in the table.
[^10]: Combi: 320/3.2 (46) for non-motorway driving below 160 km/h.
[^11]: Combi: 350/3.5 (51) for non-motorway driving below 160 km/h.

### Warning

The tyre pressure information label on the driver's door frame indicates the original equipment tyres and the correspondent tyre pressures. Always inflate tyres to the pressures shown on the label.

Tyre pressure information label ◊ 178.
Customer information

Declaration of conformity

Radio transmission systems

This vehicle has systems that transmit and/or receive radio waves subject to Directive 1999/5/EC or 2014/53/EU. These systems are in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC or 2014/53/EU. Copies of the original Declarations of Conformity can be obtained on our website.

Radar systems

Country-specific Declarations of Conformity for radar systems are shown on the following page:
Customer information

European Union
EC Directive: 1999/5/EC
Manufacturer: Delphi Electronics & Safety
Model / Type Designation: L2C0038TR
Description / Intended Use: Electronically Scanned Radar (ESR), a 76.5GHz adaptive cruise control system radar fitted to motor vehicles at vehicle manufacture
Applied Standards:
47 CFR Part 15
CEPT ERC Recommendation 70-03
EN 60950
EN 301 091
European Commission Directive 2006/28/EC
I declare that the product referenced above is in compliance with the essential requirements and other relevant provisions of Directive 1999/5/EC, on the approximation of the laws of the member states relating to Directive 1999/5/EC.

Model / FCC ID: L2C0038TR IC: 3432A-0038TR
This device complies with Part 15 of the FCC Rules and with Industry Canada license-exempt RSS standard(s). Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes: (1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

Note: Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment. The term “IC” before the radio certification number only signifies that Industry Canada technical specifications were met.

Note: This equipment complies with radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance of 20 cm between the radiator and your body.

Brazil
Este equipamento opera em caráter secundário, isto é, não tem direito a proteção contra interferência prejudicial, mesmo de estações do mesmo tipo, e não pode causar interferência a sistemas operando em caráter primário.

Collision damage repair

Paint thickness

Due to production techniques, the thickness of the paint can vary between 50 and 400 µm. Therefore, different paint thickness is no indicator for a collision damage repair.

Vehicle data recording and privacy

Event data recorders

Data storage modules in the vehicle

A large number of electronic components of your vehicle contain data storage modules temporarily or permanently storing technical data about the condition of the vehicle, events and errors. In general, this technical information documents the condition of parts, modules, systems or the environment:

- operating conditions of system components (e.g. filling levels)
- status messages of the vehicle and its single components (e.g. number of wheel revolutions / rotational speed, deceleration, lateral acceleration)
- dysfunctions and defects in important system components
Customer information

- vehicle reactions in particular driving situations (e.g. inflation of an airbag, activation of the stability regulation system)
- environmental conditions (e.g. temperature)

These data are exclusively technical and help identifying and correcting errors as well as optimising vehicle functions.

Motion profiles indicating travelled routes cannot be created with these data.

If services are used (e.g. repair works, service processes, warranty cases, quality assurance), employees of the service network (manufacturer included) are able to read out this technical information from the event and error data storage modules applying special diagnostic devices. If required, you will receive further information at these workshops. After an error has been corrected, the data are deleted from the error storage module or they are constantly overwritten.

When using the vehicle, situations may occur in which these technical data related to other information (accident report, damages on the vehicle, witness statements etc.) may be associated with a specific person - possibly, with the assistance of an expert.

Additional functions contractually agreed upon with the client (e.g. vehicle location in emergency cases) allow the transmission of particular vehicle data from the vehicle.

Radio Frequency Identification (RFID)

RFID technology is used in some vehicles for functions such as tyre pressure monitoring and ignition system security. It is also used in connection with conveniences such as radio remote controls for door locking/unlocking and starting, and in-vehicle transmitters for garage door openers. RFID technology in Opel vehicles does not use or record personal information or link with any other Opel system containing personal information.
