Vehicle specific data

Please enter your vehicle's data on the previous page to keep it easily accessible. This information is available in the sections "Service and maintenance" and "Technical data" as well as on the identification plate.

Introduction

Your vehicle is a designed combination of advanced technology, safety, environmental friendliness and economy.

This Owner's Manual provides you with all the necessary information to enable you to drive your vehicle safely and efficiently.

Make sure your passengers are aware of the possible risk of accident and injury which may result from improper use of the vehicle.

You must always comply with the specific laws and regulations of the country that you are in. These laws may differ from the information in this Owner's Manual.

When this Owner's Manual refers to a workshop visit, we recommend your Opel Service Partner. For gas vehicles we recommend an Opel Repairer authorised for servicing gas vehicles.

All Opel Service Partners provide first-class service at reasonable prices. Experienced mechanics trained by Opel work according to specific Opel instructions.

The customer literature pack should always be kept ready to hand in the vehicle.

Using this manual

- This manual describes all options and features available for this model. Certain descriptions, including those for display and menu functions, may not apply to your vehicle due to model variant, country specifications, special equipment or accessories.
- The "In brief" section will give you an initial overview.
- The table of contents at the beginning of this manual and within each section shows where the information is located.
- The index will enable you to search for specific information.
- This Owner's Manual depicts left-hand drive vehicles. Operation is similar for right-hand drive vehicles.
- The Owner's Manual uses the factory engine designations. The corresponding sales designations can be found in the section "Technical data".
- Directional data, e.g. left or right, or front or back, always relate to the direction of travel.
- The vehicle display screens may not support your specific language.
- Display messages and interior labelling are written in bold letters.
Danger, Warnings and Cautions

⚠️ Danger
Text marked ⚠️ Danger provides information on risk of fatal injury. Disregarding this information may endanger life.

⚠️ Warning
Text marked ⚠️ Warning provides information on risk of accident or injury. Disregarding this information may lead to injury.

⚠️ Caution
Text marked Caution provides information on possible damage to the vehicle. Disregarding this information may lead to vehicle damage.

Symbols
Page references are indicated with ✴. ✴ means "see page".

We wish you many hours of pleasurable driving.

Adam Opel AG
Initial drive information

**Vehicle unlocking**

Press button \( \text{\textcircled{1}} \) to unlock the doors and load compartment. Open the doors by pulling the handles. To open the tailgate, push the touchpad switch below the handle.

Radio remote control \( \Diamond 21 \), Central locking system \( \Diamond 23 \), Load compartment \( \Diamond 26 \).

**Seat adjustment**

**Seat positioning**

Pull handle, slide seat, release handle.

Seat position \( \Diamond 39 \), Seat adjustment \( \Diamond 39 \).

**Danger**

Do not sit nearer than 25 cm from the steering wheel, to permit safe airbag deployment.
Seat backrests

Pull lever, adjust inclination and release lever. Allow the seat to engage auditorily.
Seat position ◇ 39, Seat adjustment ◇ 39.

Seat height

Lever pumping motion
up = seat higher
down = seat lower
Seat position ◇ 39, Seat adjustment ◇ 39.

Seat inclination

Lever pumping motion
up = front end higher
down = front end lower
Seat position ◇ 39, Seat adjustment ◇ 39.
Head restraint adjustment

Press release button, adjust height, engage.
Head restraints 37.

Seat belt

Pull out the seat belt and engage in belt buckle. The seat belt must not be twisted and must fit close against the body. The backrest must not be tilted back too far (maximum approx. 25 °). To release belt, press red button on belt buckle.
Seat position 39, Seat belts 49, Airbag system 53.

Mirror adjustment

Interior mirror

To reduce dazzle, adjust the lever on the underside of the mirror housing.
Interior mirror 31, Automatic anti-dazzle interior mirror 31.
Exterior mirrors

Select the relevant exterior mirror and adjust it.

Steering wheel adjustment

Unlock the lever, adjust the steering wheel, then engage the lever and ensure it is fully locked.
Do not adjust the steering wheel unless the vehicle is stationary and the steering wheel lock has been released.
Airbag system 53, Ignition positions 155.
Instrument panel overview
In brief

Rear fog light ...................... 141
Instrument illumination ....... 142
Exterior lighting

Turn light switch:
0 = lights off
≈ = sidelights
D = low beam

Automatic light control
AUTO = automatic light control: exterior lighting is switched on and off automatically
= activation or deactivation of the automatic light control
≈ = sidelights
D = low beam

Fog lights
Press light switch:
D = front fog lights
= rear fog light

Lighting 133.

Headlight flash, high beam and low beam

headlight flash = pull lever
high beam = push lever
low beam = push or pull lever

Automatic light control 134, High beam 134, High beam assist
134, Headlight flash 135,
Adaptive forward lighting 136.
Turn and lane-change signals

lever up = right turn signal
lever down = left turn signal

Turn and lane-change signals 140, Parking lights 141.

Hazard warning flashers

Operated with the button. Hazard warning flashers 140.

Horn

Press 🚫.
Washer and wiper systems

Windscreen wiper

Pull lever.
Windscreen and headlight washer system $\vartriangle$ 96, Washer fluid $\vartriangle$ 218.

For a single wipe when the windscreen wiper is off, press the lever down.
Windscreen wiper $\vartriangle$ 96, Wiper blade replacement $\vartriangle$ 221.

Press the rocker switch to activate the rear window wiper:
- upper switch = continuous operation
- lower switch = intermittent operation
- middle position = off

$2 = $ fast
$1 = $ slow
$\varpi = $ timed interval wiping or automatic wiping with rain sensor
$\bigcirc = $ off
## Rear window washer

Push lever.
Washer fluid is sprayed on the rear window and the wiper wipes a few times.
Rear window wiper/washer  98.

## Climate control

### Heated rear window, heated exterior mirrors

The heating is operated by pressing the button.
Heated rear window  34.

## Demisting and defrosting the windows

Press button .
Set the temperature control to the highest level.
Cooling  on.
Heated rear window  on.
Climate control system  145.
Transmission

Manual transmission

Reverse: with the vehicle stationary, wait 3 seconds after depressing clutch pedal and then press the release button on the selector lever and engage the gear.

If the gear does not engage, set the lever to neutral, release the clutch pedal and depress again; then repeat gear selection.

Manual transmission 164.

Automatic transmission

P = park
R = reverse
N = neutral
D = drive

Manual mode: move selector lever from D to the left.

+ = higher gear
− = lower gear

The selector lever can only be moved out of P when the ignition is on and the brake pedal is applied. To engage P or R, press the release button.

Automatic transmission 161.

Starting off

Check before starting off

- Tyre pressure and condition 237, 272.
- Engine oil level and fluid levels 216.
- All windows, mirrors, exterior lighting and number plates are free from dirt, snow and ice and are operational.
- Proper position of mirrors, seats, and seat belts 30, 39, 50.
- Brake function at low speed, particularly if the brakes are wet.

Starting off
Starting the engine

- Turn key to position 1
- move the steering wheel slightly to release the steering wheel lock
- operate clutch and brake
- automatic transmission in P or N
- do not operate accelerator pedal
- diesel engines: turn the key to position 2 for preheating and wait until control indicator ! extinguishes
- turn key to position 3 and release

Starting the engine ⇒ 155.

Stop-start system

If the vehicle is at a low speed or at a standstill and certain conditions are fulfilled, activate an Autostop as follows:

- Depress the clutch pedal
- shift the selector lever to N
- release the clutch pedal

An Autostop is indicated by the needle at the AUTOSTOP position in the tachometer.

To restart the engine, depress the clutch pedal again.

Stop-start system ⇒ 157.

Parking

- Always apply the parking brake. Activate the manual parking brake without pressing the release button. Apply as firmly as possible on a downhill slope or uphill slope. Depress foot brake at the same time to reduce operating force.

For vehicles with electrical parking brake, pull switch ⭐ for approx. one second.

- Switch off the engine. Turn the ignition key to position 0 and remove it. Turn the steering wheel until the steering wheel lock is felt to engage.

For vehicles with automatic transmission, the key can only be removed when the selector lever is in the P position.

- If the vehicle is on a level surface or uphill slope, engage first gear or set the selector lever to P before switching off the ignition. On an uphill slope, turn the front wheels away from the kerb.
If the vehicle is on a downhill slope, engage reverse gear or set the selector lever to P before switching off the ignition. Turn the front wheels towards the kerb.

- Lock the vehicle with button on the radio remote control.
  Activate the anti-theft alarm system 27.

- Do not park the vehicle on an easily ignitable surface. The high temperature of the exhaust system could ignite the surface.

- Close the windows.

- The engine cooling fans may run after the engine has been switched off 215.

- After running at high engine speeds or with high engine loads, operate the engine briefly at a low load or run in neutral for approx. 30 seconds before switching off, in order to protect the turbocharger.

Keys, locks 21, Laying the vehicle up for a long period of time 214.
Keys, doors and windows

Keys, locks

Keys

Replacement keys
The key number is specified in the Car Pass or on a detachable tag. The key number must be quoted when ordering replacement keys as it is a component of the immobiliser system.

Locks 254.

Key with foldaway key section

Press button to extend. To fold the key, first press the button.

Car Pass
The Car Pass contains security related vehicle data and should therefore be kept in a safe place. When the vehicle is taken to a workshop, this vehicle data is needed in order to perform certain operations.

Radio remote control

Replacement keys
The key number is specified in the Car Pass or on a detachable tag. The key number must be quoted when ordering replacement keys as it is a component of the immobiliser system.

Key with foldaway key section

Press button to extend. To fold the key, first press the button.

Radio remote control
Used to operate:
- Central locking system
- Anti-theft locking system
- Anti-theft alarm system
- Power windows

The radio remote control has an approximate range of up to 20 metres. It can be restricted by external influences. The hazard warning flashers confirm operation. Handle with care, protect from moisture and high temperatures and avoid unnecessary operation.

Fault
If the central locking system cannot be operated with the radio remote control, it may be due to the following:
- Range exceeded
- Battery voltage too low
- Frequent, repeated operation of the radio remote control while not in range, which will require re-synchronisation

- Overload of the central locking system by operating at frequent intervals, the power supply is interrupted for a short time
- Interference from higher-power radio waves from other sources

Unlocking

Basic settings
Some settings can be changed in the menu Settings in the Info-Display. Vehicle personalisation 

Radio remote control battery replacement
Replace the battery as soon as the range reduces.

Batteries do not belong in household waste. They must be disposed of at an appropriate recycling collection point.

Key with foldaway key section

Extend the key and open the unit. Replace the battery (battery type CR 2032), paying attention to the installation position. Close the unit and synchronise.

Radio remote control synchronisation
After replacing the battery, unlock the door with the key in the driver's door lock. The radio remote control will be synchronised when you switch on the ignition.
Memorised settings
Whenever the key is removed from the ignition switch, the following settings are automatically memorised by the key:
■ Lighting
■ Infotainment system
■ Central locking system
■ Sport mode settings
■ Comfort settings
The saved settings are automatically used the next time the memorised key is inserted into the ignition switch and turned to position 1 155.
A precondition is that Personalization by driver is activated in the personal settings of the Graphic-Info-Display. This must be set for each key used. On vehicles equipped with Colour-Info-Display, the personalisation is permanently activated.
Vehicle personalisation 127.

Central locking system
Unlocks and locks doors, load compartment and fuel filler flap.
A pull on an interior door handle unlocks the respective door. Pulling the handle once more opens the door.

Note
In the event of an accident in which airbags or belt pretensioners are deployed, the vehicle is automatically unlocked.

Note
A short time after unlocking with the remote control the doors are locked automatically if no door has been opened.

Unlocking
Press button 6.
Two settings are selectable:
■ To unlock only the driver's door, load compartment and fuel filler flap, press button 6 once. To unlock all doors, press button 6 twice or
■ press button 6 once to unlock all doors, load compartment and fuel filler flap
The setting can be changed in the menu Settings in the Info-Display. Vehicle personalisation 127.
The setting can be saved for the key being used. Memorised settings 23.

**Unlocking and opening the tailgate**

Press button when the ignition is off. The tailgate is released to be unlocked and opened by pushing the touchpad switch below the handle.

**Central locking buttons**

Locks or unlocks all doors, the load compartment and fuel filler flap from the passenger compartment.

Press button to lock.
Press the button to unlock.

Press button.
If the driver's door is not closed properly, the central locking system will not work.
Fault in radio remote control system

Unlocking
Manually unlock the driver's door by turning the key in the lock. Switch on the ignition and press the central locking button to unlock all doors, load compartment and fuel filler flap. By switching on the ignition, the anti-theft locking system is deactivated.

Locking
Manually lock the driver's door by turning the key in the lock.

Fault in central locking system

Unlocking
Manually unlock the driver's door by turning the key in the lock. The other doors can be opened by pulling the interior handle twice. The load compartment and fuel filler flap cannot be opened. To deactivate the anti-theft locking system, switch on the ignition.

Locking
Push inside locking knob of all doors except driver's door. Then close the driver's door and lock it from the outside with the key. The fuel filler flap and tailgate cannot be locked.

Automatic locking
This security feature can be configured to automatically lock all doors, load compartment and fuel filler flap as soon as a certain speed is exceeded.

Additionally it is configurable to unlock the driver's door or all doors after the ignition is switched off and the ignition key is removed (manual transmission) or the selector lever is moved to P position (automatic transmission).

Settings can be changed in the menu Settings in the Info-Display. Vehicle personalisation.

The settings can be saved for the key being used.

Child locks
## Warning

Use the child locks whenever children are occupying the rear seats.

Using a key or suitable screwdriver, turn the child lock in the rear door to the horizontal position. The door cannot be opened from the inside. For deactivation turn the child lock to the vertical position.

### Doors

**Load compartment**

**Tailgate**

**Opening**

After unlocking, push the touchpad switch under the tailgate moulding and open the tailgate.

Central locking system  23.

**Closing**

Use the interior handle.
Do not push the touchpad switch under the tailgate moulding whilst closing as this will unlock the tailgate again.

Central locking system  23.
General hints for operating tailgate

**⚠️ Warning**
Do not drive with the tailgate open or ajar, e.g. when transporting bulky objects, since toxic exhaust gases, which can not be seen or smelled, could enter the vehicle. This can cause unconsciousness and even death.

**Caution**
Before opening the tailgate check overhead obstructions, such as a garage door, to avoid damage to the tailgate. Always check the moving area above and behind the tailgate.

**Note**
The installation of certain heavy accessories onto the tailgate may affect its ability to remain open.

Vehicle security

**Anti-theft locking system**

**⚠️ Warning**
Do not use the system if there are people in the vehicle! The doors cannot be unlocked from the inside.

The system deadlocks all the doors. All doors must be closed otherwise the system cannot be activated.
If the ignition was on, the driver's door must be opened and closed once so that the vehicle can be secured.
Unlocking the vehicle disables the mechanical anti-theft locking system. This is not possible with the central locking button.

**Activating**
Press  2x  on the radio remote control twice within 15 seconds.

**Anti-theft alarm system**
The anti-theft alarm system is combined with the anti-theft locking system.
It monitors:
- Doors, tailgate, bonnet
- Passenger compartment including adjoining load compartment
- Vehicle inclination, e.g. if it is raised
- Ignition
**Activation**

- Self-activated 30 seconds after locking the vehicle (initialisation of the system)

- Directly by pressing ◀ on the radio remote control once more after locking

**Note**
Changes to the vehicle interior such as the use of seat covers, and open windows or sunroof, could impair the function of passenger compartment monitoring.

---

**Activation without monitoring of passenger compartment and vehicle inclination**

1. Close tailgate, bonnet and windows.
2. Press button ◐. LED in the button ◐ illuminates for a maximum of 10 minutes.
3. Close doors.
4. Activate the anti-theft alarm system.

Status message is displayed in the Driver Information Centre.

**Status LED**

Switch off the monitoring of passenger compartment and vehicle inclination when animals are being left in the vehicle, because of high volume ultrasonic signals or movements triggering the alarm. Also switch off when the vehicle is on a ferry or train.

Status LED is integrated in the sensor on top of the instrument panel.
Status during the first 30 seconds of anti-theft alarm system activation:
LED illuminates = test, arming delay.
LED flashes quickly = doors, tailgate or bonnet not completely closed, or system fault.

Status after system is armed:
LED flashes slowly = system is armed.

Seek the assistance of a workshop in the event of faults.

Deactivation
Unlocking the vehicle deactivates the anti-theft alarm system.

Alarm
When triggered, the alarm sounds via a separate battery-backed power sounder, and the hazard warning lights flash simultaneously. The number and duration of alarm signals are stipulated by legislation.

The alarm can be silenced by pressing any button on the radio remote control or by switching on the ignition.

The anti-theft alarm system can be deactivated only by pressing button 🚭 or by switching on the ignition.

A triggered alarm, which has not been interrupted by the driver, will be indicated by the hazard warning lights. They will flash quickly three times when the vehicle is unlocked next time with the radio remote control. Additionally a warning message or a warning code is displayed in the Driver Information Centre after switching on the ignition.

Vehicle messages 🚭 120.

Immobiliser
The system is part of the ignition switch and checks whether the vehicle is allowed to be started with the key being used.

The immobiliser is activated automatically after the key has been removed from the ignition switch.

If the control indicator 🚭 flashes when the ignition is on, there is a fault in the system; the engine cannot be started. Switch off the ignition and repeat the start attempt.

If the control indicator continues flashing, attempt to start the engine using the spare key and seek the assistance of a workshop.

Note
The immobiliser does not lock the doors. You should always lock the vehicle after leaving it and switch on the anti-theft alarm system 🚭 23, 🚭 27.

Control indicator 🚭 🚭 112.
Exterior mirrors

Convex shape
The convex exterior mirror contains an aspherical area and reduces blind spots. The shape of the mirror makes objects appear smaller, which will affect the ability to estimate distances.

Side blind spot alert 193.

Electric adjustment

Select the relevant exterior mirror by turning the control to left (L) or right (R). Then swivel the control to adjust the mirror.

In position 0 no mirror is selected.

Folding

For pedestrian safety, the exterior mirrors will swing out of their normal mounting position if they are struck with sufficient force. Reposition the mirror by applying slight pressure to the mirror housing.

Electric folding

Turn control to 0, then push the control down. Both exterior mirrors will fold.

Push the control down again - both exterior mirrors return to their original position.

If an electrically folded mirror is manually extended, pressing down the control will only electrically extend the other mirror.
Heated

Operated by pressing the button. Heating works with the engine running and is switched off automatically after a short time.

Interior mirrors

Manual anti-dazzle

To reduce dazzle, adjust the lever on the underside of the mirror housing.

Automatic anti-dazzle

Dazzle from following vehicles at night is automatically reduced.
Windows

Windscreen

Heat-reflecting windscreen
The heat-reflecting windscreen has a coating which reflects solar radiation. Also data signals, e.g. from toll stations, might be reflected.

The marked areas on the windscreen are not covered with the coating. Devices for electronic data recording and fee payment must be attached in these areas. Otherwise data recording malfunctions may occur.

Windscreen stickers
Do not attach stickers such as toll road stickers or similar on the windscreen in the area of the interior mirror. Otherwise the detection zone of the sensor and the view area of the camera in the mirror housing could be restricted.

Manual windows
The door windows can be opened or closed with the window winders.

Power windows

⚠️ Warning
Take care when operating the power windows. Risk of injury, particularly to children.
If there are children on the rear seats, switch on the child safety system for the power windows.

Keep a close watch on the windows when closing them. Ensure that nothing becomes trapped in them as they move.

Switch on ignition to operate power windows. Retained power off ☯ 155.

Operate the switch for the respective window by pushing to open or pulling to close.
Pushing or pulling gently to the first detent: window moves up or down as long as the switch is operated.
Pushing or pulling firmly to the second detent and then releasing: window moves up or down automatically with safety function enabled. To stop movement, operate the switch once more in the same direction.

**Safety function**
If the window glass encounters resistance above the middle of the window during automatic closing, it is immediately stopped and opened again.

**Override safety function**
In the event of closing difficulties due to frost or the like, switch on the ignition, then pull the switch to the first detent and hold. The window moves up without safety function enabled. To stop movement, release the switch.

**Child safety system for rear windows**
Press switch to deactivate rear door power windows, the LED illuminates. To activate, press again.

**Operating windows from outside**
The windows can be operated remotely from outside the vehicle.

Press and hold button to open windows.
Press and hold button to close windows.
Release button to stop window movement.
If the windows are fully opened or closed, the hazard warning lights will flash two times.

**Overload**
If the windows are repeatedly operated within short intervals, the window operation is disabled for some time.
Initialising the power windows
If the windows cannot be closed automatically (e.g. after disconnecting the vehicle battery), a warning message or a warning code is displayed in the Driver Information Centre.

Vehicle messages 120.

Activate the window electronics as follows:
1. Close doors.
2. Switch on ignition.
3. Pull switch until the window is closed and keep pulling for additional 2 seconds.
4. Repeat for each window.

Heated rear window
Operated by pressing the button. Heating works with the engine running and is switched off automatically after a short time. Depending on the engine type, the heated rear window comes on automatically when the diesel particle filter is being cleaned.

Sun visors
The sun visors can be folded down or swivelled to the side to prevent dazzling.

If the sun visors have integral mirrors, the mirror covers should be closed when driving.

A ticket holder is located on the backside of the sun visor.

Roller blinds
To reduce sunlight at the second row seats, pull the blind upwards using the grip and engage it at the top of the door frame.
Roof

Glass panel

Panorama roof

Pull the slider to open the cover of the panorama roof.

Push the slider to cover the panorama roof.

Sunblind

The sunblind above the rear seats is electrically operated.

Button

|= open

|= close

Press button |= or |= gently to the first detent: the sunblind is opened or closed as long as the switch is operated.

Press button |= or |= firmly to the second detent and then release: the sunblind is opened or closed automatically. To stop movement, operate the switch once more.

Safety function

If the sunblind encounters resistance during automatic closing, it is immediately stopped and opened again.

Function standby

In ignition switch position 1 the sunblind is operational ➔ 155.

Initialising after a power failure

After a power failure, it may only be possible to operate the sunblind to a limited extent. Initialise the system as follows:

1. Turn key in ignition switch to position 1.
2. Press button |= (open) twice gently to the first detent, the sunblind opens slightly.
3. Immediately press button |= (close) twice gently to the first detent, the sunblind closes slightly.

After step 3 the sunblind is in initialising mode without safety function.
4. Press button (open) gently to the first detent until the sunblind is completely opened.

5. Press button (close) gently to the first detent until the sunblind is completely closed.

After this procedure, the sunblind is initialised with safety function activated.

When or is pressed firmly to the second detent during initialising, the procedure is cancelled.
Seats, restraints

Head restraints ......................... 37
Front seats ............................ 39
Rear seats .............................. 43
Seat belts .............................. 49
Airbag system ......................... 53
Child restraints ....................... 57

Head restraints

Position

⚠️ Warning

Only drive with the head restraint set to the proper position.

The upper edge of the head restraint should be at upper head level. If this is not possible for extremely tall people, set to highest position, and set to lowest position for small people.

Adjustment

Head restraints on front seats

Height adjustment
Press release button, adjust height, engage.
Horizontal adjustment

To adjust horizontally, pull the head restraint forwards. It engages in several positions.
To return to its rearmost position, pull fully forwards and release.

Head restraints on rear seats

Height adjustment
Pull the head restraint upwards or press the catch to release and push the head restraint downwards.

Removal
Press both catches, pull the head restraint upwards and remove.

Active head restraints
In the event of a rear-end impact, the front parts of the active head restraints are moved slightly forwards. Thus the head is supported so that the risk of whiplash injury is reduced.

Note
Approved accessories may only be attached if the seat is not in use.
Front seats

Seat position

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Only drive with the seat correctly adjusted.</td>
</tr>
</tbody>
</table>

- Sit with buttocks as far back against the backrest as possible. Adjust the distance between the seat and the pedals so that legs are slightly angled when pressing the pedals. Slide the front passenger seat as far back as possible.

- Sit with shoulders as far back against the backrest as possible. Set the backrest rake so that it is possible to easily reach the steering wheel with arms slightly bent. Maintain contact between shoulders and the backrest when turning the steering wheel. Do not angle the backrest too far back. We recommend a maximum rake of approx. 25°.

- Adjust the steering wheel 🔄 94.

- Set seat height high enough to have a clear field of vision on all sides and of all display instruments. There should be at least one hand of clearance between head and the roof frame. Your thighs should rest lightly on the seat without pressing into it.

- Adjust the head restraint 🔄 37.

- Adjust the height of the seat belt 🔄 50.

- Adjust the thigh support so that there is a space approx. two fingers wide between the edge of the seat and the hollow of the knee.

- Adjust the lumbar support so that it supports the natural shape of the spine.

Seat adjustment

Drive only with engaged seats and backrests.

<table>
<thead>
<tr>
<th>Danger</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not sit nearer than 25 cm from the steering wheel, to permit safe airbag deployment.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Never adjust seats while driving as they could move uncontrollably.</td>
</tr>
</tbody>
</table>
Reminder
Never store any subjects under the seats.

Seat positioning

Pull handle, slide seat, release handle.

Seat backrests

Pull lever, adjust inclination and release lever. Allow the backrest to engage audibly.
Folding passenger seat backrest 76.

Seat height

Lever pumping motion
up = seat higher
down = seat lower
**Seat inclination**

Lever pumping motion
up = front end higher
down = front end lower

**Lumbar support**

Adjust lumbar support using the four-way switch to suit personal requirements.
Moving support up and down: push switch up or down.
Increasing and decreasing support: push switch forwards or backwards.

**Adjustable thigh support**

Pull the lever and slide the thigh support.
Armrest

Base armrest

The armrest can be slid forwards. Under the armrest there is a storage drawer.
Armrest storage $\Rightarrow$ 66.

FlexConsole armrest

The armrest can be moved in a centre console. Pull the handle to slide the armrest.
There are two storages, a storage drawer and a movable cupholder in the armrest console.
Armrest storage $\Rightarrow$ 66.

Removing the armrest

Flex console armrest can be removed.

Press fastenings inward and fold down locking mechanism at the rear end of the armrest.
Pull the handle in front of the armrest and slide armrest rearwards out of the console.
Installation in reverse order.

**Heating**

Adjust heating to the desired setting by pressing the ß button for the respective seat one or more times. The control indicator in the button indicates the setting. Prolonged use of the highest setting for people with sensitive skin is not recommended.

Seat heating is operational when engine is running and during an Autostop.
Stop-start system 157.

**Rear seats**

**Second row seats**

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>When seats or backrests of second and third seat row are being adjusted or folded, keep hands and feet away from the moving area.</td>
</tr>
<tr>
<td>Never store objects under the seats.</td>
</tr>
<tr>

</tr>
<tr>
<td>Drive only with engaged seats and backrests.</td>
</tr>
</tbody>
</table>

**Base seats**

**Seat positioning**
Each seat of the second seat row can be individually moved forward or backward.
Pull handle, slide seat, release handle and allow seat to engage. The seats can be engaged in intermediate positions.

**Seat backrests**
The backrest inclination of each seat can be individually adjusted in three positions.

Pull the strap, adjust inclination, release strap and allow backrest to engage.

**Warning**
Use vertical position of the backrest only for increased luggage volume and not as seating position.

Load compartment, folding down the backrests 76.

**Easy entry function**
To permit an easy entrance to the seats of the third row, the outer seats of the second row can be tilted. Pull release lever, fold backrest and move the seat to the front.

**Folding back easy entry**
First move seat to desired position and then raise backrest. Ensure that the seat is engaged in position.

**Lounge seats**
Two types of use are possible:
Normal seats, all three seats are usable and individually adjustable. Lounge seats, only outer seats are usable but with most comfortable adjustment.

**Seat positioning**

In normal position the three seats of the second seat row can be individually moved in longitudinal direction. Pull handle under the seat, slide seat, release handle and allow seat to engage.

In lounge position, the outer seats are additionally movable in transverse direction when the centre seat backrest is folded to an armrest. The seats can be engaged in intermediate positions.

**Change from normal seat position to lounge seat position**

- Push down head restraint of centre seat by pressing the catch 37.

- Fold down the centre backrest by pulling the strap.
■ Push the left and right buttons near the centre head restraint and fold in the outer backrest parts, to be used as an armrest. Engage backrest parts in armrest position.

■ Pull the handle under each outer seat and slide seats backwards. In the rear area the seats move in transverse direction. Allow seat to engage.

This is the most comfortable seating position for the outer seats.

## Caution

<table>
<thead>
<tr>
<th>With seats in lounge position:</th>
</tr>
</thead>
<tbody>
<tr>
<td>■ Do not use easy entry function ( \diamond ) 43.</td>
</tr>
<tr>
<td>■ Do not fold down backrests of the outer seats.</td>
</tr>
<tr>
<td>■ Do not fold up centre backrest.</td>
</tr>
<tr>
<td>■ Do not fold up or down the seats in the third row ( \diamond ) 47.</td>
</tr>
</tbody>
</table>

This would damage the seats.

### Warning

Move seats only to lounge position if seats in the third row are not occupied.

**Change from lounge seat position to normal seat position**

■ Pull the handle under each outer seat and slide seats to forward position.

## Caution

Before folding up the centre seat backrest make sure that the armrest parts are folded down.

Ensure that all positions are engaged correctly.
**Seat backrests**
The backrest inclination can be individually adjusted to three positions.

- **Warning**
  Use vertical position of the backrest only for increased luggage volume and not as seating position.

Pull the strap, adjust inclination, release strap and allow backrest to engage.

- **Load compartment, folding down the backrests**

**Easy entry function**
To permit an easy entrance to the seats of the third row, the outer seats of the second row can be tilted.

1. Pull release lever, fold backrest and move the seat to the front.

- **Caution**
  With seats in lounge position:
  - Do not use easy entry function.
  - Do not pull strap to adjust backrest inclination.
  
This would damage the seats.

**Folding back easy entry**
First move seat to desired position and then raise backrest.

Ensure that the seat is engaged in position.

- **Warning**
  When seats or backrests of second and third seat row are being adjusted or folded, keep hands and feet away from the moving area.
  
Never store objects under the seats.
Never adjust seats while driving as they could move uncontrollably.
Drive only with engaged seats and backrests.

Caution
Before setting up or folding down seats, all components must be removed from the side rails and from the lashing eyes.
Lashing eyes must be in stored position.

The seats in the third row can be folded down to the vehicle floor if they are not required, or for increasing the size of the load compartment.
The seats in the third row can only be used if the second seat row is not in the lounge position.

Setting up the seats
- Fold in interior protection mat 81 and remove load compartment cover 79.

- Pull up the seat by the upper strap, fold out and allow seat to engage in upright position.

Folding down the seats in the vehicle floor
- Push down head restraint by pressing the catch 37.
- Insert the latch plate of the seat belt on each side into the pocket that is mounted at the belt.

- Insert the latch plate of the seat belt on each side into the pocket that is mounted at the belt.
Seat belts

- Pull the lower strap, simultaneously swing the backrest forwards until the seat is lowered into the vehicle floor.
- Install the interior protection mat 81 and load compartment cover 79.

The seat belts are locked during heavy acceleration or deceleration of the vehicle holding the occupants in the sitting position. Therefore the risk of injury is considerably reduced.

⚠️ Warning

Fasten seat belt before each trip. In the event of an accident, people not wearing seat belts endanger their fellow occupants and themselves.

Seat belts are designed to be used by only one person at a time. Child restraint system 57.
Periodically check all parts of the belt system for damage, pollution and proper functionality.
Have damaged components replaced. After an accident, have the belts and triggered belt pretensioners replaced by a workshop.

Note
Make sure that the belts are not damaged by shoes or sharp-edged objects or trapped. Prevent dirt from getting into the belt retractors.

Seat belt reminder
Each seat is equipped with a seat belt reminder, indicated for front seats by control indicator X in the tachometer 107, or for rear seats by symbols X or > in the Driver Information Centre 114.

Belt force limiters
On the front seats, stress on the body is reduced by the gradual release of the belt during a collision.
Belt pretensioners
In the event of a head-on or rear-end collision of a certain severity, the front seat belts are tightened.

⚠️ Warning
Incorrect handling (e.g. removal or fitting of belts) can trigger the belt pretensioners.

Deployment of the belt pretensioners is indicated by continuous illumination of control indicator ⚠️ 108.
Triggered belt pretensioners must be replaced by a workshop. Belt pretensioners can only be triggered once.

Note
Do not affix or install accessories or other objects that may interfere with the operation of the belt pretensioners. Do not make any modifications to belt pretensioner components as this will invalidate the vehicle type approval.

Three-point seat belt

Fastening

Withdraw the belt from the retractor, guide it untwisted across the body and insert the latch plate into the buckle. Tighten the lap belt regularly whilst driving by pulling the shoulder belt.

⚠️ Warning
Loose or bulky clothing prevents the belt from fitting snugly. Do not place objects such as handbags or mobile phones between the belt and your body.

⚠️ Warning
The belt must not rest against hard or fragile objects in the pockets of your clothing.

Seat belt reminder ⭐️, ⚫ 107 and ⚫ 114
**Height adjustment**

1. Pull belt out slightly.
2. Press button.
3. Adjust height and engage.

Adjust the height so that the belt lies across the shoulder. It must not lie across the throat or upper arm. Do not adjust while driving.

**Removing**

To release belt, press red button on belt buckle.

**Centre seat belt of the second seat row**

The centre seat is equipped with a particular three-point seat belt. Pull latch plates with the belt out of belt holder in the roof.
Remove lower latch plate from retainer and click it into left-hand buckle (1) at the centre seat. Guide the upper latch plate with the belt over the lap area and the shoulder (do not twist) and click into right-hand buckle (2) at centre seat.

To remove the seat belt, first press the button on the right-hand buckle (2) and remove upper latch plate. Then press the button on the left-hand buckle (1) and remove lower latch plate. The seat belt retracts automatically.

Push the top latch plate into the retainer. Fold over locked together latch plates against the seat belt.

Insert in the seat belt holder in the roof with the lower latch plate pointing forward.

**Seat belts on the third seat row**
The seat belts on the third seat row are equipped with three point seat belts.

When seat belts are not used or when folding the seats, insert the latch plate of the seat belt on each side into the pocket that is mounted at the belt.

If the centre seat of the second seat row is occupied and the seat belt is fastened, only persons with a body
height up to max. 150 cm are allowed to use the left seat of the third seat row.

There is a warning label on the back side of the centre belt, when it is pulled out, to inform the passenger on the left seat of the third seat row.

**Using seat belts while pregnant**

Airbag system

The airbag system consists of a number of individual systems depending on the scope of equipment.

When triggered the airbags inflate within milliseconds. They also deflate so quickly that it is often unnoticeable during the collision.

**Warning**

If handled improperly the airbag systems can be triggered in an explosive manner.

**Note**

The airbag systems and belt pretensioner control electronics are located in the centre console area.

Do not put any magnetic objects in this area.

Do not stick anything on the airbag covers and do not cover them with other materials.

Each airbag is triggered only once. Have deployed airbags replaced by a workshop. Furthermore, it might be necessary to have the steering wheel, the instrument panel, parts of the panelling, the door seals, handles and the seats replaced.

Do not make any modifications to the airbag system as this will invalidate the vehicle type approval.

When the airbags inflate escaping hot gases may cause burns.

Control indicator for airbag systems

**Front airbag system**

The front airbag system consists of one airbag in the steering wheel and one in the instrument panel on the front passenger side. These can be identified by the word AIRBAG.
Additionally there is a warning label on the side of the instrument panel, visible when the front passenger door is open, or on the front passenger sun visor.

The front airbag system is triggered in the event of a front-end impact of a certain severity. The ignition must be switched on.

The inflated airbags cushion the impact, thereby reducing the risk of injury to the upper body and head of the front seat occupants considerably.

**Warning**

- Optimum protection is only provided when the seat is in the proper position 🔷 39.
- Keep the area in which the airbag inflates clear of obstructions.

Fit the seat belt correctly and engage securely. Only then the airbag is able to protect.

**Side airbag system**

The side airbag system consists of an airbag in each front seat backrest. This can be identified by the word **AIRBAG**.

The side airbag system is triggered in the event of a side impact of a certain severity. The ignition must be switched on.
The inflated airbags cushion the impact, thereby reducing the risk of injury to the upper body and pelvis in the event of a side-on collision considerably.

**Warning**

Keep the area in which the airbag inflates clear of obstructions.

**Note**

Only use protective seat covers that have been approved for the vehicle. Be careful not to cover the airbags.

---

**Curtain airbag system**

The curtain airbag system consists of an airbag in the roof frame on each side. This can be identified by the word **AIRBAG** on the roof pillars.

The curtain airbag system is triggered in the event of a side-on impact of a certain severity. The ignition must be switched on.

The inflated airbags cushion the impact, thereby reducing the risk of injury to the head in the event of a side-on impact considerably.

---

**Warning**

Keep the area in which the airbag inflates clear of obstructions.

The hooks on the handles in the roof frame are only suitable for hanging up light articles of clothing, without coat hangers. Do not keep any items in these clothes.

---

**Airbag deactivation**

The front passenger airbag system has to be deactivated if a child restraint system is to be fitted on this seat. The side airbag and curtain airbag systems, the belt pretensioners and all driver airbag systems will remain active.

The curtain airbag system does not protect passengers on the third seat row.
The front passenger airbag system can be deactivated via a key-operated switch on the right side of the instrument panel.

Use the ignition key to choose the position:
OFF = front passenger airbag is deactivated and will not inflate in the event of a collision. Control indicator OFF illuminates continuously in the centre console. A child restraint system can be installed in accordance with the chart Child restraint installation locations 59. No adult person is allowed to occupy the front passenger seat.

ON = front passenger airbag is active. A child restraint system must not be installed.

Risk of fatal injury for a child using a child restraint system on a seat with activated front passenger airbag.

Risk of fatal injury for an adult person on a seat with deactivated front passenger airbag.

If the control indicator ON illuminates for approx. 60 seconds after the ignition is switched on, the front passenger airbag system will inflate in the event of a collision.

If both control indicators are illuminated at the same time, there is a system failure. The status of the system is not discernible, therefore no person is allowed to occupy the front passenger seat. Contact a workshop immediately.
Change status only when the vehicle is stopped with the ignition off. Status remains until the next change.

Control indicator for airbag deactivation  § 108.

---

**Child restraints**

**Child restraint systems**

We recommend the Opel child restraint system which is tailored specifically to the vehicle.

When a child restraint system is being used, pay attention to the following usage and installation instructions and also those supplied with the child restraint system.

Always comply with local or national regulations. In some countries, the use of child restraint systems is forbidden on certain seats.

---

**Warning**

When using a child restraint system on the front passenger seat, the airbag systems for the front passenger seat must be deactivated; if not, the triggering of the airbags poses a risk of fatal injury to the child.

---

This is especially the case if rear-facing child restraint systems are used on the front passenger seat.

Airbag deactivation  § 55.

**Selecting the right system**

The rear seats are the most convenient location to fasten a child restraint system.

Children should travel facing rearwards in the vehicle as long as possible. This makes sure that the child's backbone, which is still very weak, is under less strain in the event of an accident.

Suitable are restraint systems that comply with ECE 44-03 or ECE 44-04. Check local laws and regulations for mandatory use of child restraint systems.

Ensure that the child restraint system to be installed is compatible with the vehicle type.

Ensure that the mounting location of the child restraint system within the vehicle is correct.
Allow children to enter and exit the vehicle only on the side facing away from the traffic.

When the child restraint system is not in use, secure the seat with a seat belt or remove it from the vehicle.

**Note**

Do not stick anything on the child restraint systems and do not cover them with any other materials.

A child restraint system which has been subjected to stress in an accident must be replaced.
## Child restraint installation locations

1  =  Only if front passenger seat airbag system is deactivated. If the child restraint system is being secured using a three-point seat belt, move seat height adjustment to uppermost position and ensure that vehicle safety belt runs forwards from the upper anchorage point. Adjust seat backrest inclination as far as necessary to a vertical position to ensure that the belt is tight on the buckle side.

2  =  Seat available with ISOFIX and Top-Tether mounting brackets 62.

U  =  Universal suitability in conjunction with three-point seat belt.

X  =  No child restraint system permitted in this weight class.

**IL** = Suitable for particular ISOFIX restraint systems of the 'specific-vehicle', 'restricted' or 'semi-universal' categories. The ISOFIX restraint system must be approved for the specific vehicle type.

**IUF** = Suitable for ISOFIX forward-facing child restraint systems of universal category approved for use in this weight class.

**X** = No ISOFIX child restraint system approved in this weight class.
**ISOFIX size class and seat device**

A – ISO/F3  =  Forward-facing child restraint system for children of maximum size in the weight class 9 to 18 kg.

B – ISO/F2  =  Forward-facing child restraint system for smaller children in the weight class 9 to 18 kg.

B1 – ISO/F2X = Forward-facing child restraint system for smaller children in the weight class 9 to 18 kg.

C – ISO/R3  =  Rear-facing child restraint system for children of maximum size in the weight class up to 13 kg.

D – ISO/R2  =  Rear-facing child restraint system for smaller children in the weight class up to 13 kg.

E – ISO/R1  =  Rear-facing child restraint system for young children in the weight class up to 13 kg.
ISOFIX child restraint systems

Fasten vehicle-approved ISOFIX child restraint systems to the ISOFIX mounting brackets. Specific vehicle ISOFIX child restraint system positions are marked in the table by IL.

ISOFIX mounting brackets are indicated by a label on the backrest. Before fastening a child seat adjust the head restraint to use position 37.

When using ISOFIX fastened child restraint systems on the second seat row, we recommend to adjust the accordant outer seat in third notch from rear end position, regarding to base seats. Lounge seat, if equipped, must be in normal position 43.

**Top-tether fastening eyes**

Top-Tether fastening eyes are marked with the symbol 🦸‍♂️ for a child seat.

Depending on country-specific equipment, the vehicle might have two or three fastening eyes.

In addition to the ISOFIX mounting, fasten the Top-Tether strap to the Top-Tether fastening eyes. The strap must run between the two guide rods of the head restraint.

ISOFIX child restraint systems of universal category positions are marked in the table by IUF.
Storage

Storage compartments ............... 63
Load compartment .................... 76
Roof rack system ..................... 91
Loading information .................. 92

Storage compartments

Instrument panel storage

In the instrument panel in front of the Info-Display is a storage compartment. Push to open the lid.

Glovebox

There are two gloveboxes on the passenger side.
To open the upper glovebox, press button on the left side in the open storage.
To open the lower glovebox, pull the handle.
The gloveboxes should be closed whilst driving.
Cupholders

Front cupholder

Cupholders are located in the centre console between the front seats.

Slidable cupholder in FlexConsole armrest
The cupholder can be moved in guide rails in the FlexConsole armrest or completely removed.

Push the handle in front of cupholder to slide.
Armrest $\diamondsuit$ 42.

Remove cupholder

Pull the handle in front of cupholder and remove it vertically out of the console.
Installation in reverse order.

Note
Install the cupholder in the direction as shown in the illustration.
Otherwise the cupholder may not engage properly.
Rear cupholder
Additional cupholder are located between the seats in the third row.

Bottleholder
The door pockets of front and rear doors are designed to carry bottles.

Front storage
A storage compartment is located next to the steering wheel.

Door panel storage
On front door trim there are small pockets for e.g. mobile phones.

Overhead console
Press button to open storage box. The box may be loaded with max. 0.2 kg.
Underseat storage

Storage box

There is a storage box under the passenger’s seat. Slide the rollo to open or close the box. Maximum load: 1.5 kg.

Underseat drawer

Press button in the recess and pull out drawer. Maximum load: 3 kg. To close, push in and engage.

Armrest storage

Storage in base armrest

The armrest console contains a storage compartment. To open slide armrest forward.
There is a storage drawer underneath the armrest. Pull out to open.

**Storage in FlexConsole armrest**

Press button to open storage in the armrest. Behind the armrest there is another storage. Slide the lid to open.

**Centre console storage**

**Centre console**

The storage container can be used to store small items. Slide cover backwards to open.

**Rear console**

At the rear side of the FlexConsole there is a storage drawer. Pull out to open.

**Caution**

Do not use for ashes or for other glowing items.
Rear carrier system

Rear carrier system for four bicycles

The rear carrier system (Flex-Fix system) allows two bicycles to be attached to a pull-out carrier integrated into the vehicle floor. It is possible to attach two further bicycles on an adapter. The transportation of other objects is not permitted.

The maximum load of the rear carrier system is 80 kg with attached adapter and 60 kg without attached adapter. The maximum load per bicycle on the pull-out carrier is 30 kg. This allows the attachment of electrically-powered bicycles to the pull-out carrier. The maximum load per bicycle on the adapter is 20 kg.

If not in use, the carrier system must be slid back into the vehicle floor. There must not be any objects on the bicycles that could become loose during transportation.

Caution

If the rear carrier system is extended and the vehicle is fully loaded, the chassis clearance will be reduced.

Drive carefully whenever the road has a steep inclination or when driving over a ramp, bump, etc.

Caution

Consult your bicycle dealer before attaching bicycles with carbon frames. The bicycles might get damaged.

Extending

Open the tailgate.

⚠️ Warning

No-one should be in the extension zone of the rear carrier system, risk of injury.

Pull release lever up. The system disengages and travels quickly out of the bumper.
Completely pull out the rear carrier system until you hear it engage. Ensure that it is not possible to push in the rear carrier system without pulling the release lever again.

**Warning**

It is only permissible to fit objects to the rear carrier system if the system has been correctly engaged. If the rear carrier system will not engage correctly, do not fit objects to the system and slide the system back. Seek the assistance of a workshop.

---

**Unfold number plate holder**

Lift the number plate holder and fold it backwards.

**Fold out tail lamps**

Fold out both tail lamps.

**Lock the rear carrier system**
Swivel both clamping levers sidewards as far as they will go. Otherwise safe functionality is not guaranteed.

**Fold out wheel recesses**

Fold out both wheel recesses.

---

**Assembling the bicycle rack**

Lift the rack at the rear (1) and pull it backwards. Fold up the rack (2).

Push down the rack (1) and swivel handle (2) backwards to engage.

**Attaching the first bicycle**
1. Rotate the pedals into position as shown in the illustration and put the bicycle on the foremost wheel recess.
   Make sure that the bicycle stands centrally on the wheel recesses.

2. Attach the short mounting bracket to the bicycle frame. Turn the knob clockwise to fasten.

3. Secure both bicycle wheels to the wheel recesses using the strap retainers.
4. Check the bicycle to make sure it is secure.

**Caution**

Ensure gap between bicycle and vehicle is at least 5 cm. If necessary, loosen handlebar and swivel sideways.

**Attaching the adapter**

When carrying more than two bicycles, the adapter must be fixed before the second bicycle is attached.

1. Apply the adapter to the rear carrier system as shown in the illustration.
2. Turn the lever (1) forwards and hold, then lower the adapter (2) at the rear.
3. Release lever and check if the adapter is engaged securely.
4. Guide the strap attached to the adapter underneath the lever for folding back the rear carrier system. Fasten the strap.

**Attaching further bicycles**
The attachment of further bicycles is similar to the attachment of the first bicycle. Additionally some steps must be considered:

1. Before putting on the bicycle, always unfold the wheel recesses for the next bicycle if necessary.
2. Always rotate the pedals into an appropriate position before putting on the bicycle.
3. Position the bicycles on the rear carrier system alternately aligned to the left and to the right.
4. Align the bicycles to the one attached before. The wheel hubs of the bicycles must not touch each other.
5. Attach the bicycles with mounting brackets and strap retainers as described for the first bicycle. The mounting brackets should be fixed in parallel.

Use the long mounting bracket to attach the second bicycle to the rack.
Use the longer accessory mounting bracket to attach the third bicycle to the rack.

Use the short accessory mounting bracket to attach the fourth bicycle. The bracket must be fixed between the frames of the third and fourth bicycle.

6. Additionally secure both bicycle wheels of the fourth bicycle to the wheel recesses using the tensioning straps.

It is recommended to attach a warning sign at the rearmost bicycle to increase visibility.

**Fold the rear carrier system backwards**

The rear carrier system can be folded backwards to get access to the load compartment.

**Without attached adapter:**

Push the lever (1) to disengage and hold.

Pull the rack (2) backwards to fold the rear carrier system.

**With attached adapter:**

**Warning**

Take care when disengaging the rear carrier system as it will tilt backwards. Risk of injury.
Hold frame (1) of rearmost bicycle with one hand and pull the loop (2) to disengage.

Hold rearmost bicycle with both hands and fold the rear carrier system backwards.

To increase visibility, the tail lights of the vehicle are activated when the rear carrier system is folded back.

**Warning**

When folding the rear carrier system forwards again, take care that the system is engaged securely.

**Removing bicycles**

Undo strap retainers on both bicycle tyres.

Turn knob anti-clockwise and remove mounting brackets.

**Detaching adapter**

Detach the adapter before removing the last bicycle left on the rear carrier system.

1. Fold in wheel recesses.

2. Unbutton the strap.

3. Turn the lever (1) forwards and hold.

4. Lift the adapter (2) at the rear and remove.
Disassembling the bicycle rack

Arrange mounting brackets as shown in the illustration.
Swivel handle (1) forwards to disengage and lift the rack (2).

Fold the rack backwards, then push forwards until it stops (1).
Press the rack down at the rear (2).

Fold in wheel recesses
Fold in both wheel recesses.

Stow the strap retainers accurately.

Unlock the rear carrier system
Swivel both clamping levers inwards as far as they will go.

**Fold in tail lamps**
Swivel in both tail lamps.

**Fold in number plate holder**
Lift the number plate holder and fold it forwards.

**Retracting the rear carrier system**

<table>

</thead>
<tbody>
<tr>
<td>When seats or backrests are being adjusted or folded, keep hands and feet away from the moving area.</td>
</tr>
<tr>
<td>Never store objects under the seats.</td>
</tr>
<tr>
<td>Drive only with engaged seats and backrests.</td>
</tr>
</tbody>
</table>
Caution
Before setting up or folding down seats, all components must be removed from the side rails and from the lashing eyes. Lashing eyes must be in stored position.

Folding down the seats of the third row
- Push down head restraint by pressing the catch 37.

- Insert the latch plate of the seat belt on each side into the pocket that is mounted at the belt.

- Pull the lower strap and swing simultaneously the backrest forwards until the seat is lowered into the vehicle floor.
- Install interior floor mat 81 and load compartment cover 79 if necessary.

Setting up the seats
Pull up the seat by the upper strap, fold out and allow seat to engage in upright position.

Folding the seat backrests of the second row
- Remove the load compartment cover if necessary 79.
- Push down head restraints by pressing the catch 37.
- Move front passenger seat in a position that avoids contact with the head restraints of the folded backrests.
Pull the strap and fold down the backrest onto the seat cushion.

### Caution

- Do not fold the outer seatbacks while the seats are in the lounge seat position 43.
- Do not pull release lever of the easy entry function when the backrest is folded down. The seats could be damaged.

Alternatively pull the strap and adjust backrest in vertical position as cargo position.

### Warning

Use vertical position of the backrest only for increased luggage volume and not as seating position.

**Folding up backrest**

Raise up backrest in vertical position. Adjust inclination by pulling the strap. Ensure that all positions are engaged correctly.

### Warning

Only drive the vehicle if the backrests are securely locked into position. Otherwise there is a risk of personal injury or damage to the load or vehicle in the event of heavy braking or a collision.

**Folding backrest of front passenger seat**

If the vehicle is equipped on the front passenger seat with a release mechanism, the seat backrest can be folded down to horizontal position, e.g. for very long objects.
Push down head restraint by pressing the catch 37.

Move passenger front seat in a position that avoids contact of the head restraint with the instrument panel.

Pull lever and fold down the backrest on the seat, then release lever. The backrest can be engaged in two positions before horizontal position. Allow the backrest to engage audibly.

■ Pull lever and fold up backrest in desired seat position, then release lever. Allow the backrest to engage audibly.

■ Adjust seat and head restraint.

Rear storage
On both sides of the load compartment there are storage shelves.

Folding up backrest

To open release cover in side trim panel and remove.

Floor storage

On version without third seat row, there are storage boxes under the floor cover. Lift up the cover to open.

Load compartment cover

Do not place any heavy or sharp-edged objects on the load compartment cover.
Before operating the load compartment cover, insert the latch plate of the seat belt on each side into the pocket that is mounted at the belt.

Closing
Pull the cover towards the rear using the handle and engage it in the retainers at the sides.

Opening
Remove load compartment cover from side brackets. Hold the cover and guide it until it is fully rolled up.
Removing

Open the load compartment cover. Pull the release lever up and hold. Lift cover on right side and remove from retainers.

Stowing in the load compartment
If the load compartment cover is not used, stow it in the storage in the vehicle floor. Open the cover of the storage in front of the tailgate.

Installing
Insert the left side of the load compartment cover in the recess, pull the release lever up and hold, insert the right side of the load compartment cover and engage.

Rear floor storage cover

Floor cover

Fasten the load compartment cover in the storage with the Velcro tape.
On versions without third seat row, there are storage boxes under the floor cover. To open lift up the cover and fold it upright behind rear seats.

**Interior protection mat**

Interior protection mat is a covering and protection feature for the load compartment to be used when all or single seats/backrests are folded down.

By folding and expanding the mat there are a lot of individual applications possible.

The interior protection mat is available in two versions:

- **Standard protection mat** covers the area between tailgate and second seat row, when third row is complete or one seat folded down.
- **Flex cover interior protection mat** is double size of standard protection mat, connected by a zipper. It covers the load compartment fully, when all or single seats of third and second row are folded down.

Protection mat is longitudinal foldable in 4 parts (standard) rsp. 8 parts (Flex cover) with a zipper central and transversely foldable in 4 parts.

Following only a few examples of using the mats are described.

Before folding and expanding the mat, all components must be removed from the side rails and from the lashing eyes. Lashing eyes must be in stored position.

Covering the load compartment between tailgate and second seat row possible with both **Standard protection mat** or **Flex cover interior protection mat** being folded at the zipper to half size (double layer).

Mat is located fourfold flapped behind the raised up seats of the third row.

- Fold down third row seats.
- Expand the parts of the folded mat so, that first part is raised up at second row backrest.
- When folding down second row backrests, the mat expands automatically and covers the space between both seat rows.
- To let one seat in the third row raised up, fold mat in half lengthways.

- Pull out the mat a little to protect load compartment sill when loading heavy objects. Raise up the overlaying part of the mat before closing the tailgate.

**Covering the load compartment up to the backrests of the front seats**

Only possible with Flex cover interior protection mat being folded at the zipper to half size (double layer).

Mat is expanded up to the second row seats, as described before.

- Fold down second row backrests.
- Expand the upper parts of the double layer mat, so that the load compartment is fully covered. The first part of the mat is now raised up at the backrests of front seats.
■ Fold the overlaying rear part under the mat before closing the tailgate.

Covering the load compartment partially
only possible with Flex cover interior protection mat being folded at the zipper to half size (double layer).

**e.g. left outer backrest is not folded down**
Mat is expanded up to the second row seats, as described in first section.

■ Fold down the backrests that shall be covered.

■ Open the zipper behind the raised up backrest.
■ Pull out the mat until the first part is flat on the load compartment floor.
■ Raise up lengthways the part, that is opened by the zipper, and fold it to the centre.

■ Expand the upper part of double layer mat over the folded backrests.
■ Fold the overlaying rear part under the mat before closing the tailgate.

Doing the same way when one outer and centre backrest are not folded down.

**e.g. only centre backrest is folded down**
Mat is expanded up to the second row seats, as described in first section.

■ Fold down centre backrest to be covered.
Open the zipper from both sides behind the left and right backrest.
Pull out the mat until the first part is flat on the load compartment floor.
Raise up lengthways both parts, that are opened by the zipper, and fold them to the centre.

Expand now the small upper part of double layer mat over the centre backrest.
Fold the overlaying rear part under the mat before closing the tailgate.
The following illustrations show some further examples.

Example for long small objects, e.g. skis.

Example for side cover protection.
Example for covering folded backrest on second row and one folded seat on third row.

**Load rails and hooks**

Install the hooks in the desired position in the rails: insert the hook in the upper groove on the rail and press in the lower groove.

**Lashing eyes**

The lashing eyes are designed to secure items against slippage, e.g. using lashing straps or luggage net.

**Cargo management system**

The FlexOrganizer is a flexible system for dividing up the load compartment.

The system consists of:
- adapters,
- mesh pockets,
Storage

- hooks,
- variable partition net.

The components are fitted in rails on both side panels using adapters and hooks.

**Installation of adapters in the rails**

Fold open the handle plate, insert the adapter into the upper and lower groove of the rail and move to the required position. Turn the handle plate upwards to lock the adapter. To remove, turn the handle plate down and move out of the rail.

**Variable partition net**

Insert adapters into the required position in the rails. Stick together the halves of the net rods.

To install, push rods together a little and insert into the relevant openings in the adapters.

To remove, press the net rods together and remove from the adapters.

**Net pocket**

Insert adapters into the required position in the rails. The net pocket can be suspended from the adapters.
Installation of hooks in the rails
Insert the hook in the desired position first in the upper groove of the rail and then press in the lower groove. To remove, first pull out of the upper groove.

Partitioning net in front of tailgate
Install directly in front of the tailgate. Before installation push in the four end pieces of the net rod by rotating each end piece anticlockwise.
To install, push the net rods together and insert into the openings of the tailgate frame. The longer rod must be inserted at the top.
To remove, push the net rods together and remove.

Safety net
The safety net can be installed behind the seats of the second row or the front seats.
Passengers must not be transported behind the safety net.

Installation behind second row seats
- There are installation openings on both sides in the roof frame above second row seats: suspend and engage rod of net at one side, compress rod and suspend and engage at the other side.
■ Attach hooks of safety net straps to front lashing eyes on both sides in the load compartment.

■ Tension both straps by pulling at the loose end.

**Installation behind front seats**

■ There are installation openings on both sides in the roof frame above the front seats: suspend and engage rod of net at one side, compress rod and suspend and engage at the other side.

■ Attach hooks of safety net straps to the lashing eyes on both sides in the floor in front of the seats.

■ Tension both straps by pulling at the loose end.
Push button on the tightener to release the strap on both sides. Detach hooks from the eyes. Unhook the safety net rods from the brackets in the roof frame. Roll up the net and secure with a strap.

**Stowing**
Open the cover of the storage in the load compartment floor in front of the tailgate.

Insert the safety net in the storage and close cover.

**Folding tray**
Located in the front seat backrests. Open by pulling upwards until it engages. Fold away by pressing down past the resistance point. Do not place any heavy objects on the folding tray.

Stow the warning triangle in the storage of the load compartment floor in front of the tailgate.

**First aid kit**
Stow the first aid kit and the high visibility vest under the driver’s seat.
On another version, first aid kit is located in a storage box under the driver’s seat. Slide the rollo to open or close the box.

Use the straps to fix.

**Roof rack system**

**Roof rack**

For safety reasons and to avoid damage to the roof, the vehicle approved roof rack system is recommended. For further information contact your workshop. Follow the installation instructions and remove the roof rack when not in use.

**Mounting roof rack**

**Vehicles with roof railing**
Fasten the roof rack in the area of the holes, indicated by the arrows in the illustration.

**Vehicles without roof railing**

To fasten a roof rack, open the caps in the roof strips. Insert the mounting provisions, as instructed, in the retainer indicated in the illustration.

**Loading information**

- Heavy objects in the load compartment should be placed against the seat backrests. Ensure the backrests are securely engaged. If objects can be stacked, the heavier objects should be placed at the bottom.
- Secure objects with lashing straps attached to lashing eyes ▶ 86.
- Secure loose objects in load compartment to prevent sliding.

- Do not allow the load to protrude above the upper edge of the backrests.
- Do not place any objects on the load compartment cover or the instrument panel.
- The load must not obstruct the operation of the pedals, parking brake and gear selector, or hinder the freedom of movement of the driver. Do not place any unsecured objects in the interior.
- Do not drive with an open load compartment.

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Always make sure that the load in the vehicle is securely stowed. Otherwise objects can be thrown around inside the vehicle and cause personal injury or damage to the load or car.</td>
</tr>
<tr>
<td>The payload is the difference between the permitted gross vehicle weight (see identification</td>
</tr>
</tbody>
</table>
plate (260) and the EC kerb weight.
To calculate the payload, enter the data for your vehicle in the Weights table at the front of this manual.
The EC kerb weight includes weights for the driver (68 kg), luggage (7 kg) and all fluids (tank 90% full).
Optional equipment and accessories increase the kerb weight.

- Driving with a roof load increases the sensitivity of the vehicle to cross-winds and has a detrimental effect on vehicle handling due to the vehicle’s higher centre of gravity. Distribute the load evenly and secure it properly with retaining straps. Adjust the tyre pressure and vehicle speed according to the load conditions. Check and retighten the straps frequently.

Do not drive faster than 120 km/h.
The permissible roof load is 75 kg for vehicles without roof railing and 100 kg for vehicles with roof railing.

The roof load is the combined weight of the roof rack and the load.

---

**Controls**

**Steering wheel adjustment**

Unlock lever, adjust steering wheel, then engage lever and ensure it is fully locked.

Do not adjust steering wheel unless vehicle is stationary and steering wheel lock has been released.

---

**Steering wheel controls**

The Infotainment system, some driver assistance systems and a connected mobile phone can be operated via the controls on the steering wheel.

Further information is available in the Infotainment system manual.

Driver assistance systems ◇ 171.
Heated steering wheel

Activate heating by pressing button. Activation is indicated by the LED in the button.

The recommended grip areas of the steering wheel are heated quicker and to a higher temperature than the other areas.

Heating is operational when the engine is running and during an Autostop.

Stop-start system 157.

Horn

Press .
Windscreen wiper/washer

Windscreen wiper

2 = fast
1 = slow
= interval wiping
= off

For a single wipe when the windscreen wiper is off, press the lever down.
Do not use if the windscreen is frozen.
Switch off in car washes.

Adjustable wiper interval

Wiper lever in position .
Turn the adjuster wheel to adjust the desired wipe interval:
short interval = turn adjuster wheel upwards
long interval = turn adjuster wheel downwards

Automatic wiping with rain sensor

= automatic wiping with rain sensor
The rain sensor detects the amount of water on the windscreen and automatically regulates the frequency of the windscreen wiper.
If the wiper frequency is above 20 seconds the wiper arm moves slightly down to park position.
Adjustable sensitivity of the rain sensor

Turn the adjuster wheel to adjust the sensitivity:

low sensitivity = turn adjuster wheel downwards
high sensitivity = turn adjuster wheel upwards

Keep the sensor free from dust, dirt and ice.

Windscreen and headlight washer

Pull lever. Washer fluid is sprayed onto the windscreen and the wiper wipes a few times.

If the headlights are on, washer fluid is also sprayed onto the headlights, provided that the lever is pulled sufficiently long. Afterwards the headlight washer system is inoperable for 5 wash cycles or until engine or headlights have been switched off and on again.
Rear window wiper/washer

Press the rocker switch to activate the rear window wiper:

- **upper position** = continuous operation
- **lower position** = intermittent operation
- **middle position** = off

Push lever. Washer fluid is sprayed onto the rear window and the wiper wipes a few times.

Do not use if the rear window is frozen.

Switch off in car washes.

The rear window wiper comes on automatically when the windscreen wiper is switched on and reverse gear is engaged.

Activation or deactivation of this function can be changed in the menu **Settings** in the Info-Display.

Vehicle personalisation 127.

The rear window washer system is deactivated when the fluid level is low.

Outside temperature

A drop in temperature is indicated immediately and a rise in temperature after a time delay.
If outside temperature drops to 3 °C, a warning message is displayed in the Driver Information Centre with Uplevel-Display or Uplevel-Combi-Display.

### Warning

The road surface may already be icy even though the display indicates a few degrees above 0 °C.

**Clock**

Date and time are shown in the Info-Display.

**Set date and time**

Press the CONFIG button. The menu Settings is displayed.

Select **Time & Date**.

![Set date and time interface](image)

Selectable setting options:

- **Set time**: Changes the time shown on the display.
- **Set date**: Changes the date shown on the display.
- **Set time format**: Changes indication of hours between 12 hours and 24 hours.
- **Set date format**: Changes indication of date between MM/DD/YYYY and DD.MM.YYYY.
- **Display digital clock**: Switches on/off indication of time on the display.
- **RDS clock synchronization**: The RDS signal of most VHF transmitters automatically sets the time. RDS time synchronisation can take a few minutes. Some transmitters do not send a correct time signal. In such cases, it is recommended to switch off automatic time synchronisation.

Vehicle personalisation 127.
Power outlets

A 12 Volt power outlet is located in the front console. Fold the cover downwards.

Further 12 Volt power outlets are located in the rear console and at the left sidewall in the load compartment.

Do not exceed the maximum power consumption of 120 watts. With ignition off, the power outlets are deactivated. Additionally the power outlets are deactivated in the event of low battery voltage.

Electrical accessories that are connected must comply with the electromagnetic compatibility requirements laid down in DIN VDE 40 839.

Do not connect any current-delivering accessories, e.g. electrical charging devices or batteries.

Do not damage the outlet by using unsuitable plugs.

Stop-start system ◊ 157.
Cigarette lighter

The cigarette lighter is located in the front console. Fold the cover downwards.
Press in cigarette lighter. It switches off automatically once the element is glowing. Pull out lighter.

Ashtrays

Warning lights, gauges and indicators

Instrument cluster

In some versions, the needles of the instruments briefly rotate to the end position when the ignition is switched on.

Speedometer

Indicates vehicle speed.
Odometer
The bottom line displays the recorded distance in km.

Trip odometer
The top line displays the recorded distance since the last reset.
To reset, press the SET/CLR button on the turn signal lever for a few seconds  114.

Some versions are equipped with a reset knob between speedometer and Driver Information Centre: to reset hold the knob depressed for a few seconds with the ignition on.
Trip odometer counts up to a distance of 2000 kilometres and restarts then with 0.

Tachometer
Displays the engine speed.
Drive in a low engine speed range for each gear as much as possible.

Caution
If the needle is in the red warning zone, the maximum permitted engine speed is exceeded. Engine at risk.

Fuel gauge
Displays the fuel level or gas pressure in the tank depending on the operation mode.
Control indicator ● illuminates if the level in the tank is low. Refuel immediately if it flashes.
During liquid gas operation, the system automatically switches over to petrol operation when gas tanks are empty 103.

Never run the tank dry.
Because of the fuel remaining in the tank, the top-up quantity may be less than the specified tank capacity.

**Fuel selector**

**Natural gas operation**

Press button :normal: to switch between petrol and natural gas operation. The LED  status shows the current operating mode.

- **off** = natural gas operation.
- **illuminates** = petrol operation.
- **flashes** = no switching is possible, one type of fuel is empty.

As soon as the natural gas tank is empty, petrol operation is automatically engaged until the ignition is switched off.

Fuel for natural gas operation 201.

**Liquid gas operation**

Press button **LPG** to switch between petrol and liquid gas operation. The LED  status shows the current operating mode.

- **off** = petrol operation
- **illuminates** = liquid gas operation
- **flashes** = no switching is possible, one type of fuel is empty

As soon as the liquid gas tank is empty, petrol operation is automatically engaged until the ignition is switched off.

Engine coolant temperature gauge

Displays the coolant temperature.

left area = engine operating temperature not yet reached
central area = normal operating temperature
right area = temperature too high

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>If engine coolant temperature is too high, stop vehicle, switch off engine. Danger to engine. Check coolant level.</td>
</tr>
</tbody>
</table>

Service display

The engine oil life system lets you know when to change the engine oil and filter. Based on driving conditions, the interval at which an engine oil and filter change will be indicated can vary considerably.

In the Up level-Display or Up level-Combi-Display, the remaining oil life duration is displayed in the Vehicle Information Menu.

In the Midlevel-Display, the remaining engine oil life duration is displayed by the control indicator, therefore the ignition must be switched on, with the engine not running.

The menu and function can be selected via the buttons on the turn signal lever.

To display the remaining engine oil life duration:
Instruments and controls

Press the **MENU** button to select the **Vehicle Information Menu**.
Turn the adjuster wheel to select **Remaining Oil Life**.
The system must be reset every time the engine oil is changed to allow proper functionality. Seek the assistance of a workshop.
Press the **SET/CLR** button to reset. Therefore the ignition must be switched on, with the engine not running.
When the system has calculated that engine oil life has been diminished, **Change Engine Oil Soon** or a warning code appears in the Driver Information Centre. Have engine oil and filter changed by a workshop within one week or 500 km (whichever occurs first).
Driver Information Centre 3 114.
Service information 3 257.

**Control indicators**
The control indicators described are not present in all vehicles. The description applies to all instrument versions. Depending on the equipment, the position of the control indicators may vary. When the ignition is switched on, most control indicators will illuminate briefly as a functionality test.
The control indicator colours mean:
red = danger, important reminder
yellow = warning, information, fault
green = confirmation of activation
blue = confirmation of activation
white = confirmation of activation
Control indicators in the instrument cluster
Control indicators in the centre console

**Turn signal**

- **Illuminates or flashes** green.

**Illuminates briefly**
The parking lights are switched on.

**Flashes**
A turn signal or the hazard warning flashers are activated.
Rapid flashing: failure of a turn signal light or associated fuse, failure of turn signal light on trailer.

Bulb replacement 222, Fuses 230.

**Turn signals**

**Seat belt reminder**

**Seat belt reminder on front seats**

- for driver’s seat or for front passenger seat illuminates or flashes red.

**Illuminates**
After the ignition has been switched on until the seat belt has been fastened.

**Flashes**
After having started the engine for a maximum of 100 seconds until the seat belt has been fastened.

Fastening the seat belt 50.

**Seat belt status on rear seats**

& or † in the Driver Information Centre flashes or illuminates.

**Illuminates**
After the ignition has been switched on for a minimum of 35 seconds until the seat belt has been fastened.

If an unfastened seat belt is fastened whilst driving.

**Flashes**
After starting off when the seat belt is unfastened.

Fastening the seat belt 50.
Airbag and belt tensioners

† illuminates red.

When the ignition is switched on, the control indicator illuminates for approx. 4 seconds. If it does not illuminate, does not go out after 4 seconds or illuminates whilst driving, there is a fault in the airbag system. Seek the assistance of a workshop. The airbags and belt pretensioners may fail to trigger in the event of an accident.

Deployment of the belt pretensioners or airbags is indicated by continuous illumination of †.

⚠ Warning

Have the cause of the fault remedied immediately by a workshop.

Belt pretensioners, airbag system † 49, † 53.

Airbag deactivation

ON † illuminates yellow.

Illuminates for approx. 60 seconds after the ignition is switched on. The front passenger airbag is activated.

OFF † illuminates yellow.

The front passenger airbag is deactivated † 55.

⚠ Danger

Risk of fatal injury for a child using a child restraint system together with activated front passenger airbag.

Risk of fatal injury for an adult person with deactivated front passenger airbag.

Charging system

‡ illuminates red.

Illuminates when the ignition is switched on and extinguishes shortly after the engine starts.

Illuminates when the engine is running

Stop, switch off engine. Battery is not charging. Engine cooling may be interrupted. The brake servo unit may cease to be effective. Seek the assistance of a workshop.

Malfunction indicator light

‡ illuminates or flashes yellow.

Illuminates when the ignition is switched on and extinguishes shortly after the engine starts.

Illuminates when the engine is running

Fault in the emission control system. The permitted emission limits may be exceeded. Seek the assistance of a workshop immediately.
Flashes when the engine is running
Fault that could lead to catalytic converter damage. Ease up on the accelerator until the flashing stops. Seek the assistance of a workshop immediately.

Service vehicle soon
⚠️ illuminates yellow.
Additionally a warning message or a warning code is displayed.
The vehicle needs a service.
Seek the assistance of a workshop.
Vehicle messages ⬇️ 120.

Brake and clutch system

Brake and clutch fluid level ⚠️ illuminates red.
The brake and clutch fluid level is too low ⬇️ 219.

<table>

</tr>
</tbody>
</table>

Illuminates
Electrical parking brake is applied ⬇️ 166.

Flashes
Electrical parking brake is not fully applied or released. Switch on ignition, depress brake pedal and attempt to reset the system by first releasing and then applying the electrical parking brake. If ⚠️ remains flashing, do not drive and seek the assistance of a workshop.

Electrical parking brake fault
⚠️ illuminates or flashes yellow.

Illuminates
Electrical parking brake is operating with degraded performance ⬇️ 166.

Flashes
Electrical parking brake is in service mode. Stop vehicle, apply and release the electrical parking brake to reset.
Warning

Have the cause of the fault remedied immediately by a workshop.

Antilock brake system (ABS)

qmlilluminates yellow.

Illuminates for a few seconds after the ignition is switched on. The system is ready for operation when the control indicator extinguishes.

If the control indicator does not extinguish after a few seconds, or if it illuminates while driving, there is a fault in the ABS. The brake system remains operational but without ABS regulation.

Antilock brake system 165.

Upshift

illuminates green as a control indicator, or is shown as a symbol in the Driver Information Centre with Uplevel-Display or Uplevel-Combi-

Display, when upshifting is recommended for fuel saving reasons.

On some versions gear shift indication is popped-up as a full page in the Driver Information Centre.

EcoFlex drive assistant 124.

Power steering

illuminates yellow.

Illuminates with power steering reduced

Power steering is reduced due to overheating of the system. Control indicator extinguishes when the system has cooled down.

Stop-start system 157.

Illuminates with power steering disabled

Failure in the power steering system. Consult a workshop.

Lane departure warning

illuminates green or flashes yellow.

Illuminates green

System is switched on and ready to operate.

Flashes yellow

System recognizes an unintended lane change.

Ultrasonic parking assist

illuminates yellow.

Fault in system or

Fault due to sensors that are dirty or covered by ice or snow or

Interference due to external sources of ultrasound. Once the source of interference is removed, the system will operate normally.

Have the cause of the fault in the system remedied by a workshop.

Ultrasonic parking assist 186.
Electronic Stability Control off

* illuminates yellow.
The system is deactivated.

Electronic Stability Control and Traction Control system

* illuminates or flashes yellow.

Illuminates
A fault in the system is present.
Continued driving is possible. Driving stability, however, may deteriorate depending on road surface conditions.

Have the cause of the fault remedied by a workshop.

Flashes
The system is actively engaged.
Engine output may be reduced and the vehicle may be braked automatically to a small degree.

Electronic Stability Control \( \Rightarrow \) 169, Traction Control system \( \Rightarrow \) 168.

Traction Control system off

* illuminates yellow.
The system is deactivated.

Preheating

* illuminates yellow.
Preheating is activated. Only activates when outside temperature is low.

Diesel particle filter

* illuminates or flashes yellow.
The diesel particle filter requires cleaning.
Continue driving until * extinguishes. If possible, do not allow engine speed to drop below 2000 rpm.

Illuminates
The diesel particle filter is full. Start cleaning process as soon as possible.

Flashes
The maximum filling level of the filter is reached. Start cleaning process immediately to avoid damage to the engine.

Diesel particle filter \( \Rightarrow \) 159, Stop-start system \( \Rightarrow \) 157.

Tyre pressure monitoring system

* illuminates or flashes yellow.

Illuminates
Tyre pressure loss. Stop immediately and check tyre pressure.

Flashes
Fault in system or tyre without pressure sensor mounted (e.g. spare wheel). After 60-90 seconds the control indicator illuminates continuously. Consult a workshop.
Engine oil pressure

✿ illuminates red.
Illuminates when the ignition is switched on and extinguishes shortly after the engine starts.

Illuminates when the engine is running

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Engine lubrication may be interrupted. This may result in damage to the engine and/or locking of the drive wheels.</td>
</tr>
</tbody>
</table>

1. Depress clutch.
2. Select neutral gear, set selector lever to N.
3. Move out of the flow of traffic as quickly as possible without impeding other vehicles.
4. Switch off ignition.

⚠️ Warning

When the engine is off, considerably more force is needed to brake and steer. During an Autostop the brake servo unit will still be operational.
Do not remove key until vehicle is stationary, otherwise the steering wheel lock could engage unexpectedly.

Check oil level before seeking the assistance of a workshop ◇ 216.

Low fuel

❖ illuminates or flashes yellow.

Illuminates
Level in fuel tank is too low.

Flashes
Fuel used up. Refuel immediately.
Never run the tank dry.
Catalytic converter ◇ 160.
Bleeding the diesel fuel system ◇ 221.

Immobiliser

❖ flashes yellow.
Fault in the immobiliser system. The engine cannot be started.

Reduced engine power

❖ illuminates yellow.
The engine power is limited. Consult a workshop.

Exterior light

❖❖ illuminates green.
The exterior lights are on ◇ 133.

High beam

❖❖ illuminates blue.
Illuminates when high beam is on, during headlight flash ◇ 134, or when high beam is on with high beam assist or intelligent light range ◇ 136.

High beam assist

❖❖ illuminates green.
The high beam assist or intelligent light range is activated 134, 136.

**Adaptive forward lighting**

 illumates or flashes yellow.

**Illuminates**
 Fault in system. Seek the assistance of a workshop.

**Flashes**
 System switched to symmetrical low beam. Control indicator flashes for approx. 4 seconds after the ignition is switched on as a reminder that the system has been activated 136. Automatic light control 134.

**Fog light**
 illumates green. The front fog lights are on 140.

**Rear fog light**
 illumates yellow. The rear fog light is on 141.

**Low washer fluid**
 illumates yellow. The washer fluid level is low. Washer fluid 218.

**Rain sensor**
 illumates green. Illuminated when automatic rain sensor is activated 96.

**Cruise control**
 illumates white or green. The system is on. Cruise control 171.

**Adaptive cruise control**
 illumates white or green. Adaptive cruise control is active. Adaptive cruise control 174.

**Illuminates white**
 The system is on.

**Illuminates green**
 Adaptive cruise control is active. Adaptive cruise control 174, Forward collision alert 181.

**Vehicle detected ahead**
 illumates green. A vehicle ahead is detected in the same lane. Adaptive cruise control 174, Forward collision alert 181.

**Door open**
 illumates red. A door or the tailgate is open.
Information displays

Driver Information Centre

The Driver Information Centre (DIC) is located in the instrument cluster between speedometer and tachometer. It is available as Midlevel-Display, Uplevel-Display or Uplevel-Combi-Display.

Midlevel-Display indicates:
- overall odometer
- trip odometer
- some control indicators

In the Midlevel-Display:
- trip/fuel information
- vehicle messages, displayed as code numbers 120.

In the Uplevel-Display the following main menus can be selected by pressing the MENU button:
- Vehicle Information Menu
- Trip/Fuel Information Menu

In the Uplevel-Combi-Display, menu pages can be selected by pushing the MENU button, Menu symbols are indicated in the top line of the display:
- Vehicle Information Menu
- Trip/Fuel Information Menu
- ECO Information Menu

Some of the displayed functions differ when the vehicle is being driven or at a standstill. Some functions are only available when the vehicle is being driven.

Selecting menus and functions
The menus and functions can be selected via the buttons on the turn signal lever.

Press the MENU button to switch between the menus or to return from a submenu to the next higher menu level.

Turn the adjuster wheel to highlight a menu option or to set a numeric value.

Press the SET/CLR button to select a function or to confirm a message.

Vehicle Information Menu
Press the MENU button to select the Vehicle Information Menu, or on Uplevel-Combi-Display select 🚗. Turn the adjuster wheel to select a submenu. Press the SET/CLR button to confirm.

Follow the instructions given in the submenus.

Possible submenus can be, depending on the version:
- **Unit**: displayed units can be changed
- **Tyre Pressure**: checks tyre pressure of all wheels during driving 🦅 238
Instruments and controls

- **Remaining Oil Life**: indicates when to change the engine oil and filter \( \Rightarrow 104 \)

- **Speed Warning**: if exceeding the preset speed, a warning chime will be activated

- **Traffic Sign Assistant**: displays detected traffic signs for the current route section \( \Rightarrow 196 \)

- **Following Distance Indication**: displays the distance to a preceding moving vehicle \( \Rightarrow 184 \)

Trip/Fuel Information Menu

Press the **MENU** button to select the **Trip/Fuel Information Menu**, or select / \ on Uplevel-Combi-Display.

Turn the adjuster wheel to select a submenu. Press the **SET/CLR** button to confirm.

- **Trip odometer 1**
- **Trip odometer 2**
- **Digital speed**

Trip odometer 2 and digital speed are only available on vehicles with Uplevel-Display or Uplevel-Combi-Display.
Reset trip odometer by pressing the **SET/CLR** button on the turn signal lever for a few seconds or by pressing the reset knob between speedometer and Driver Information Centre with the ignition on.

On vehicles with trip computer, more submenus are available.

Selection and indication can be different between Midlevel-, Uplevel-, and Uplevel-Combi-Display.

**Trip/Fuel Information Menu, Trip Computer** \(\Rightarrow 124.\)

**ECO Information Menu**

Press the **MENU** button to select **ECO** in the top line of the Uplevel-Combi-Display.

Turn the adjuster wheel to select a submenu. Press the **SET/CLR** button to confirm.

**Submenus are:**

- **Shift indication:** Current gear is indicated inside an arrow. The cypher above recommends upshifting for fuel saving reasons.

- **Eco index display:** The current fuel consumption is indicated on a segment display. For economical driving, adapt your driving style to keep the filled segments within the Eco area. The more segments are filled, the higher the fuel consumption. Simultaneously the current consumption value is indicated.

- **Top Consumers:** List of top comfort consumers currently switched on is displayed in descending order. Fuel saving potential is indicated. A switched-off consumer disappears from the list and the consumption value will be updated.
■ **Economy Trend**: Displays the average consumption development over a distance of 50 km. Filled segments display the consumption in 5 km steps and shows the effect of topography or driving behaviour on fuel consumption.

### Graphic-Info-Display, Colour-Info-Display

Depending on the vehicle configuration the vehicle has a Graphic- or Colour-Info-Display. The Info-Display is located in the instrument panel above the Infotainment system.

### Graphic-Info-Display

Depending on the Infotainment system, the Graphic-Info-Display is available in two versions.

Graphic-Info-Display indicates:

- **time** 99
- **outside temperature** 98
- **date** 99
- **Infotainment system, see description in the Infotainment system manual**
- **settings for vehicle personalisation** 127
The Colour-Information-Display indicates in colour:
- time ◊ 99
- outside temperature ◊ 98
- date ◊ 99
- Infotainment system, see description in the Infotainment system manual
- navigation, see description in the Infotainment system manual
- rear view camera
- system settings

- vehicle messages ◊ 120
- settings for vehicle personalisation ◊ 127

The type of information and how it is displayed depends on the equipment of the vehicle and the settings made.

**Selecting menus and settings**

Menus and settings are accessed via the display.

Select a function via the Infotainment system buttons. The menu of the selected function is displayed. The multifunction knob is used to select an item and to confirm.

**Multifunction knob**
The multifunction knob is the central control element for the menus:

**Turn**
- To mark a menu option
- To set a numeric value or to display a menu option

---

**Colour-Info-Display**

The Colour-Information-Display indicates in colour:

- time ◊ 99
- outside temperature ◊ 98
- date ◊ 99
- Infotainment system, see description in the Infotainment system manual
- navigation, see description in the Infotainment system manual
- rear view camera
- system settings

- vehicle messages ◊ 120
- settings for vehicle personalisation ◊ 127

The type of information and how it is displayed depends on the equipment of the vehicle and the settings made.

**Selecting menus and settings**

Menus and settings are accessed via the display.

Select a function via the Infotainment system buttons. The menu of the selected function is displayed. The multifunction knob is used to select an item and to confirm.

**Multifunction knob**
The multifunction knob is the central control element for the menus:

**Turn**
- To mark a menu option
- To set a numeric value or to display a menu option
Instruments and controls

Press (the outer ring)
- To select or activate the marked option
- To confirm a set value
- To switch a system function on/off

BACK button
Press button to:
- exit a menu without changing settings
- return from a submenu to a higher menu level
- delete the last character in a character sequence

Press and hold the button for a few seconds to delete the entire entry.

Vehicle personalisation  127.
Memorised settings  23.

Vehicle messages

Messages are indicated mainly in the Driver Information Centre (DIC), in some cases together with a warning and signal buzzer.

Vehicle messages on the Midlevel-Display

The vehicle messages are displayed as code numbers.

No.  
2  No radio remote control detected, depress clutch pedal for a restart
3  Engine coolant level low
4  Air conditioning off
5  Steering wheel is locked

Press the SET/CLR button, the MENU button or turn the adjuster wheel to confirm a message.

**Vehicle messages on the Uplevel-Display or Uplevel-Combi-Display**
■ Seat belts
■ Airbag systems
■ Engine and transmission
■ Tyre pressure
■ Diesel particle filter
■ Battery

Vehicle messages on the Colour-Info-Display
Some important messages appear additionally in the Colour-Info-Display. Press the multifunction knob to confirm a message. Some messages only pop-up for a few seconds.

Warning chimes

When starting the engine or whilst driving
Only one warning chime will sound at a time.

The warning chime regarding unfastened seat belts has priority over any other warning chime.

■ If seat belt is not fastened.
■ If a door or the tailgate is not fully closed when starting off.
■ If a certain speed is exceeded with parking brake applied.
■ If adaptive cruise control deactivates automatically.
■ If approaching a vehicle ahead too closely.
■ If a programmed speed or speed limit is exceeded.
■ If a warning message or a warning code appears in the Driver Information Centre.
■ If the parking assist detects an object.
■ If unintended lane change occurs.
■ If side blind spot alert recognises a vehicle.
■ If the reverse gear is engaged and the rear end carrier extended.
■ If the diesel particle filter has reached the maximum filling level.

When the vehicle is parked and/or the driver's door is opened
■ When the key is in the ignition switch.
■ With exterior lights on.

During an Autostop
■ If the driver's door is opened.

Battery voltage

When the battery voltage is running low, a warning message or warning code 174 will appear in the Driver Information Centre.

1. Switch off immediately electrical consumers which are not required for a safe ride, such as seat heating, heated rear window or other main consumers.

2. Charge the battery by driving continuously for a while or by using a charging device.

The warning message or warning code will disappear after the engine has been started two times consecutively without voltage drop.
If the battery cannot be recharged, have the cause of the fault remedied by a workshop.

**Trip computer**

The menus and functions can be selected via the buttons on the turn signal lever.

Press the **MENU** button to select the **Trip/Fuel Information Menu**, or select 
\[ / \] on the Uplevel-Combi-Display.

**Trip/Fuel Information Menu on Uplevel-Display**

Turn the adjuster wheel to select one of the submenus:
Trip odometer 1
Trip odometer 2
Range
Average consumption
Instantaneous consumption
Average speed
Digital speed
Traffic sign assistant
Route guidance

Trip computer 1 and 2
The information of two trip computers can be reset separately for odometer, average consumption and average speed by pressing the SET/CLR.
button, making it possible to display different trip information for different drivers.

**Trip odometer**
Trip odometer displays the recorded distance since a certain reset.
Trip odometer counts up to a distance of 2000 km then restarts at 0.
To reset, press the SET/CLR button for a few seconds.

**Range**
Range is calculated from current fuel tank content and current consumption. The display shows average values.
After refuelling, the range is updated automatically after a brief delay.
When the fuel level in the tank is low, a message appears on vehicles with Uplevel-Display or Uplevel-Combi-Display.
When the tank has to be refuelled immediately, a warning code or warning message is displayed on vehicles with Midlevel- and Uplevel-Display or Uplevel-Combi-Display.
Additionally the control indicator in the fuel gauge illuminates or flashes.

**Average consumption**
Display of average consumption. The measurement can be reset at any time and starts with a default value.
To reset, press the SET/CLR button for a few seconds.

**Instantaneous consumption**
Display of the instantaneous consumption.

**Average speed**
Display of average speed. The measurement can be reset at any time.
To reset, press the SET/CLR button for a few seconds.

**Digital speed**
Digital display of the instantaneous speed.

**Traffic sign assistant**
Indicates detected traffic signs for the current route section.

**Route guidance**
Additionally to the navigation information in the Color-Info-Display, route guidance is displayed in the Driver Information Centre.
Different indication on vehicles with natural gas engine:

**Range**
Range is indicated for petrol mode and natural gas mode.
Both modes can be indicated added together.

**Average consumption**
Average consumption is always indicated in the selected mode.
Fuel selector ◁ 103.

**Instantaneous consumption**
Instantaneous consumption is always indicated in the selected mode.
Fuel selector ◁ 103.

**Vehicle personalisation**
The vehicle's behaviour can be personalised by changing the settings in the Info-Display.
Some of the personal settings for different drivers can be memorised individually for each vehicle key.
Memorised settings ◁ 23.
Depending on vehicle equipment and country-specific regulations some of the functions described below may not be available.
Some functions are only displayed or active when the engine is running.

**Personal settings in the Graphic-Info-Display**
Press the CONFIG button. The menu Settings is displayed.
The following settings can be selected by turning and pressing the multifunction knob:

- **Sport mode settings**
- **Languages**
- **Time Date**
- **Radio settings**
- **Phone settings**
- **Vehicle settings**

In the corresponding submenus the following settings can be changed:

### Sport mode settings
The driver can select the functions which will be activated in Sport mode.

- **Sport suspension**: Damping becomes harder.
- **Sport powertrain performance**: Accelerator pedal and gear change characteristics become more responsive.
- **Sport steering**: Steering support is reduced.
- **Swap backlight colour main instr.**: Change of instrument illumination colour.

### Languages
Selection of the desired language.

### Time Date
See Clock.

### Radio settings
See description for Infotainment system in the Infotainment system manual.

### Phone settings
See description for Infotainment system in the Infotainment system manual.

### Vehicle settings

- **Climate and air quality**
  
  **Auto fan speed**: Modifies the fan regulation. Changed setting will be active after switching the ignition off and on again.

  **Climate control mode**: Activates or deactivates the cooling every time the ignition is switched on or uses the last chosen setting.
**Auto rear demist**: Activates automatically rear heated window.

**Comfort settings**
- **Chime volume**: Changes the volume of warning chimes.
- **Personalization by driver**: Activates or deactivates the personalisation function.
- **Rear auto wipe in reverse**: Activates or deactivates automatic switching on of the rear window wiper when reverse gear is engaged.

**Park assist / Collision detection**
- **Park assist**: Activates or deactivates the ultrasonic parking assist.
- **Auto collision preparation**: Changes or activates/deactivates settings for adaptive cruise control, forward collision alert and collision imminent braking system.
- **Side blind zone alert**: Changes the settings for the side blind spot alert system.

**Exterior ambient lighting**
- **Duration upon exit of vehicle**: Activates or deactivates and changes the duration of exit lighting.
- **Exterior lighting by unlocking**: Activates or deactivates the welcome lighting.

**Power door locks**
- **Auto door lock**: Activates or deactivates the automatic door unlocking function after switching off ignition. Activates or deactivates the automatic door locking function after driving-off.

**Stop door lock if door open**: Activates or deactivates the automatic door locking function while a door is open.

**Delayed door lock**: Activates or deactivates the delayed door locking function.

**Remote locking, unlocking, starting**
- **Remote unlock feedback**: Activates or deactivates the hazard warning flasher feedback whilst unlocking.
- **Remote door unlock**: Changes the configuration to unlock only the driver's door or the whole vehicle whilst unlocking.
- **Auto relock doors**: Activates or deactivates the automatic relock function after unlocking without opening the vehicle.

**Remote door unlock**
- **Remote unlock feedback**: Activates or deactivates the hazard warning flasher feedback whilst unlocking.

**Restore factory settings**
- **Restore factory settings**: Reset all settings to the default settings.
In the corresponding submenus the following settings can be changed:

**Sport mode settings**
The driver can select the functions which will be activated in Sport mode 169.

- **Sport suspension**: Damping becomes harder.
- **Sport powertrain performance**: Accelerator pedal and gear change characteristics become more responsive.
- **Sport steering**: Steering support is reduced.
- **Swap backlight colour main instr.**: Change of instrument illumination colour.

**Languages**
Selection of the desired language.

**Time & Date**
See Clock 99.

**Radio settings**
See description for Infotainment system in the Infotainment system manual.
Phone settings
See description for Infotainment system in the Infotainment system manual.

Navigation settings
See description for Infotainment system in the Infotainment system manual.

Vehicle settings

- Climate and air quality
  - Auto fan speed: Modifies the fan regulation. Changed setting will be active after switching the ignition off and on again.
  - Climate control mode: Activates or deactivates cooling when switching on the ignition or uses the last chosen setting.
  - Auto rear demist: Activates automatically the rear heated window.

- Comfort settings
  - Chime volume: Changes the volume of warning chimes.
  - Rear auto wipe in reverse: Activates or deactivates automatic switching on of the rear window wiper when reverse gear is engaged.

- Park assist / Collision detection
  - Park assist: Activates or deactivates the ultrasonic parking assist.
  - Auto collision preparation: Changes or activates/deactivates settings for adaptive cruise control, forward collision alert and collision imminent braking system.
  - Side blind zone alert: Changes the settings for the side blind spot alert system.

- Exterior ambient lighting
  - Duration upon exit of vehicle: Activates or deactivates and changes the duration of exit lighting.
  - Exterior lighting by unlocking: Activates or deactivates the welcome lighting.

- Power door locks
  - Auto door lock: Activates or deactivates the automatic door unlocking function after switching off ignition. Activates or deactivates the automatic door locking function after driving-off.
Prevent doorlock while door open: Activates or deactivates the automatic door locking function while a door is open.

- **Lock / Unlock / Start by remote**
  - **Remote unlock feedback:** Activates or deactivates the hazard warning flasher feedback whilst unlocking.
  - **Remote door unlock:** Changes the configuration to unlock only the driver's door or the whole vehicle whilst unlocking.
  - **Auto relock doors:** Activates or deactivates the automatic relock function after unlocking without opening the vehicle.

- **Restore factory settings**
  - **Restore factory settings:** Resets all settings to the default settings.

**Display settings**
Selectable display settings:

- **Day mode:** Optimisation for daylight conditions.
- **Night mode:** Optimisation for darkness.
- **Automatic mode:** The display changes mode when the vehicle lights are switched on/off.
- **Rear view camera:** Changes the settings for the rear view camera.
- **Picture frame:** See description for Infotainment system in the Infotainment system manual.
Exterior lighting

Light switch

Turn light switch:
0 = lights off
\( \Rightarrow \) = sidelights
\( \Rightarrow D \) = headlights

Control indicator \( \Rightarrow \circ \) 112.

Light switch with Automatic light control

Turn light switch:
AUTO = automatic light control: Headlights are switched on and off automatically depending on external lighting conditions.
\( \circ \) = activation or deactivation of the automatic light control. Switch turns back to AUTO.
\( \Rightarrow \) = sidelights
\( \Rightarrow D \) = headlights
In the Driver Information Centre with Uplevel-Display or Uplevel-Combi-Display, the current status of the automatic light control is displayed. When switching on the ignition, automatic light control is active. When headlights are on, lights up. Control indicator 112.

**Tail lights**
Tail lights are illuminated together with headlights and sidelights.

**Automatic light control**

When the automatic light control function is switched on and the engine is running, the system switches between daytime running light and headlights automatically depending on the lighting conditions and information given by the rain sensor system.

**Daytime running light**
Daytime running light increases visibility of the vehicle during daylight.

**Automatic headlight activation**
During poor lighting conditions the headlights are switched on. Furthermore the headlights are switched on if the windscreen wipers have been activated for several wipes.

**Tunnel detection**
When a tunnel is entered the headlights are switched on without any delay.

Adaptive forward lighting 136.

**High beam**
To switch from low to high beam, push lever. To switch to low beam, push lever again or pull.

**High beam assist**
This feature allows high beam as main driving light by night and when vehicle speed is faster than 40 km/h.
It switches to low beam when:

- a sensor detects the lights of oncoming or preceding vehicles
- the vehicle speed is slower than 20 km/h
- it is foggy or snowy
- driving in urban areas

If there are no restrictions detected, the system switches back to high beam.

**Activation**

The high beam assist is activated by pushing the indicator lever twice with a speed above 40 km/h.

The green control indicator _UNIX illustimates continuously when the assist is activated, the blue one _UNIX illuminates when high beam is on.

Control indicator _UNIX 112.

**Deactivation**

Push indicator lever once. It is also deactivated when front fog lights are switched on.

If a headlight flash is activated when the high beam is on, the high beam assist will be deactivated.

If a headlight flash is activated when the high beam is off, the high beam assist will stay activated.

The latest setting of the high beam assist will remain after the ignition is switched on again.

**Headlight flash**

To activate the headlight flash, pull lever.

---

**Headlight range adjustment**

**Manual headlight range adjustment**

To adapt headlight range to the vehicle load to prevent dazzling: turn thumb wheel _UNIX to required position.

0 = front seats occupied  
1 = all seats occupied  
2 = all seats occupied and load compartment laden  
3 = driver’s seat occupied and load compartment laden.
Dynamic automatic headlight levelling

Headlights when driving abroad

The asymmetrical headlight beam extends visibility at the edge of the road at the passenger side.
However, when driving in countries where traffic drives on the opposite side of the road, adjust the headlights to prevent dazzling of oncoming traffic.

Vehicles with halogen headlight system

The headlights do not have to be adjusted.

Vehicles with Xenon headlight system

1. Key in ignition switch.
2. Pull turn signal lever and hold (headlight flash).
3. Switch on ignition.
4. After approx. 5 seconds the control indicator $\mathcal{Z}$ starts flashing and an acoustic signal sounds.

Control indicator $\mathcal{Z}$ 113.
Every time the ignition is switched on, $\mathcal{Z}$ flashes as a reminder for approx. 4 seconds.

For deactivation operate the same procedure as described above. $\mathcal{Z}$ will not flash when function is deactivated.

Adaptive forward lighting

The Adaptive forward lighting functions are only available with Bi-Xenon headlights. Light range, light distribution and intensity of light are variably triggered depending on the light conditions, weather and road type.

With the light switch in position AUTO all lighting functions are available.

The following functions are available also with light switch in position $\mathcal{D}$:

- Dynamic curve lighting
- Corner lighting
- Reversing function
- Dynamic automatic headlight levelling
Playstreet lighting
Activated automatically at low speed up to approx. 30 km/h. The light beam is turned at an angle of 8° to the roadside.

Town lighting
Activated automatically at a speed range between approx. 40 and 55 km/h and when street lights are detected by the light sensor. The light range is reduced by an extended light distribution.

Country lighting
Activated automatically at a speed range between approx. 55 and 115 km/h. The beam of light and the brightness is different between the left and the right side.

Motorway lighting
Activated automatically at a speed above approx. 115 km/h and minimal steering movements. It switches on after a delay or directly when the vehicle is powerfully accelerated. The light beam is longer and brighter.

Adverse weather lighting
Activated automatically up to a speed of approx. 70 km/h, when the rain sensor recognises condensation or the wiper operates continuously. The range, distribution and light intensity is regulated variably depending on visibility.

Dynamic curve lighting
The light beam pivots based on steering wheel angle and speed, improving lighting in curves.
Control indicator 🚣 113.

Corner lighting
On tight bends or when turning off, depending on the steering angle or the turn signal light, an additional left or right reflector is switched on which illuminates the road at an angle to the direction of travel. It is activated up to a speed of 40 km/h.
Control indicator 🚣 113.

Reversing function
If the headlights are on and reverse gear is engaged, both corner lights are switched on. They remain illuminated for 20 seconds after disengaging reverse gear or until driving faster than 17 km/h in a forward gear.
**High beam assist**

This feature allows high beam as main driving light by night and when vehicle speed is faster than 40 km/h. It switches to low beam when:

- the camera in the windscreen detects the lights of oncoming or preceding vehicles
- the vehicle speed is slower than 20 km/h
- it is foggy or snowy
- driving in urban areas

If there are no restrictions detected, the system switches back to high beam.

### Activation

The high beam assist is activated by pushing the indicator lever twice with a speed above 40 km/h.

The green control indicator ✪ illuminates continuously when the assist is activated, the blue one ✪ illuminates when high beam is on.

Control indicator ✪ 112.

### Deactivation

Push indicator lever once. It is also deactivated when front fog lights are switched on.

If a headlight flash is activated when the high beam is on, the high beam assist will be deactivated.

If a headlight flash is activated when the high beam is off, the high beam assist will stay activated.

High beam assist is always active after the ignition is switched on.

**Intelligent light ranging with automatic high beam activation**

Intelligent light ranging uses the properties of Bi-Xenon headlights to extend the light range of the low beams by up to 400 metres and additionally activates automatic high beam without dazzling or disturbing oncoming or preceding traffic.

High beam is deactivated and the low beam light range will be reduced to avoid dazzling when the following restrictions are detected by the front camera in the windscreen:

- a preceding vehicle is recognised,
- an oncoming vehicle is recognised,
- urban areas are entered,
- it is foggy or snowy.
If there are no restrictions detected, the system switches back to high beam.

When the system is active, the front camera monitors the area ahead of the vehicle and ensures an optimum light distribution for maximum driver vision during almost all conditions. Intelligent light ranging with automatic high beam activation therefore reduces the difference between conventional low and high beam without drastic changes in light-range, distribution and intensity.

A special topographical evaluation function detects preceding vehicles on hills or slopes by recognising the rear light moving ahead. The system adjusts the height of the light range to ensure optimum illumination on the road ahead without dazzling.

**Activation**

Intelligent light ranging and automatic high beam activation are switched on together by pushing the indicator lever twice. They can be switched on with ignition on.

Automatic high beam activation operates at a speed above 40 km/h and deactivates below 20 km/h. Intelligent light ranging operates above 55 km/h.

The green control indicator \( \square \) illuminates continuously when the function is activated, the blue one \( \square \) illuminates when high beam switches on automatically.

**Deactivation**

Push indicator lever once. It is also deactivated when front fog lights are switched on.

**Dynamic automatic headlight levelling**

To prevent oncoming traffic from dazzle, headlight levelling is automatically adjusted based on inclination information measured by front and rear axle, acceleration or deceleration and vehicle speed.
**Fault in Adaptive forward lighting system**
When the system detects a failure in the Adaptive forward lighting system, the system moves to a preset position to avoid dazzling of oncoming traffic. If this is not possible, the affected headlight will be automatically switched off. In any case, one headlight will stay on. A warning is displayed in the Driver Information Centre.

**Hazard warning flashers**
Operated with the button.

In the event of an accident with airbag deployment the hazard warning flashers are activated automatically.

**Turn and lane-change signals**

lever up = right turn signal
lever down = left turn signal

If the lever is moved past the resistance point, the turn signal is switched on constantly. When the steering wheel moves back, the turn signal is automatically deactivated.

For three flashes, e.g. when changing lanes, press the lever until resistance is felt and then release.

When a trailer is connected, turn signal flashes six times when pressing the lever until resistance is felt and then releasing.

Move the lever to the resistance point and hold for longer indication.

Switch the turn signal off manually by moving the lever to its original position.

**Front fog lights**
Operated with the button.
Light switch in position **AUTO**: switching on front fog lights will switch headlights on automatically.

### Rear fog lights

Operated with the $\varnothing$ button. Light switch in position **AUTO**: switching on rear fog light will switch headlights on automatically. Light switch in position $\varnothing\varepsilon$: rear fog light can only be switched on with front fog lights. The vehicle rear fog light is deactivated when towing.

### Parking lights

When the vehicle is parked, the parking lights on one side can be activated:

1. Switch off ignition.
2. Move turn signal lever all the way up (right parking lights) or down (left parking lights).

Confirmed by a signal and the corresponding turn signal control indicator.

### Reversing lights

The reversing light comes on when the ignition is on and reverse gear is selected.

### Misted light covers

The inside of the light housing may mist up briefly in poor, wet and cold weather conditions, in heavy rain or after washing. The mist disappears quickly by itself; to help switch on the headlights.
**Interior lighting**

**Instrument panel illumination control**

Brightness of the following lights can be adjusted when the exterior lights are on:
- Instrument panel illumination
- Info-Display
- Illuminated switches and operation elements.

Turn thumb wheel  and hold until the desired brightness is obtained.

On vehicles with light sensor, the brightness can only be adjusted when the exterior lights are on and the light sensor detects night conditions.

**Interior lights**

During entry and exit of the vehicle, the front and rear courtesy lights automatically switch on and then off after a delay.

**Note**

In the event of an accident with airbag deployment the courtesy lights are turned on automatically.

**Front courtesy light**

Illuminate in conjunction with the front courtesy light depending on rocker switch position.

**Rear courtesy lights**

Operate rocker switch:

-  = automatic switching on and off.
- press  = on.
- press  = off.
Reading lights

Operated with ⬇️ and ➖ buttons in front and rear courtesy lights.

Sunvisor lights

Illuminates when the cover is opened.

Lighting features

Centre console lighting
Spotlight incorporated in the interior lighting comes on when headlights are switched on.

Entry lighting

Welcome lighting
Headlights, tail lights, reversing lights, number plate lights, instrument panel light, interior lights, light pipes in doors and FlexConsole and puddle lights are switched on for a short time by unlocking the vehicle with the radio remote control. This function works only in the dark and facilitates locating the vehicle.

The lighting switches off immediately when the ignition key is turned to position 1 ➓ 155.

Activation or deactivation of this function can be changed in the menu Settings in the Info-Display. Vehicle personalisation ➓ 127.

The settings can be saved for the key being used ➓ 23.

The following lights will additionally switch on when the driver's door is opened:

- All switches
- Driver Information Centre
- Door pocket lights
- Light pipes in doors and FlexConsole

Exit lighting

The following lights switch on if the key is removed from the ignition switch:

- Interior lights
- Instrument panel light (only when it is dark)
- Light pipes in doors and FlexConsole
- Puddle lights

They will switch off automatically after a delay and will be activated again if the driver's door is opened.
Headlights, tail lights, reversing lights and number plate lights illuminate the surrounding area for an adjustable time after leaving the vehicle.

**Switching on**

1. Switch off ignition.
2. Remove ignition key.
3. Open driver's door.
4. Pull turn signal lever.
5. Close driver's door.

If the driver's door is not closed the lights switch off after two minutes.

Exit lighting is switched off immediately if the turn signal lever is pulled while the driver's door is open.

Activation, deactivation and duration of this function can be changed in the menu **Settings** in the Info-Display. Vehicle personalisation  127.

The settings can be saved for the key being used  23.

**Battery discharge protection**

To prevent discharge of the battery when the ignition is switched off, some interior lights are switched off automatically after some time.
Climate control systems

Heating and ventilation system

Controls for:
- Temperature
- Air distribution
- Fan speed
- Demisting and defrosting

Heated rear window 🌋 34.

Temperature
red = warm
blue = cold

Heating will not be fully effective until the engine has reached normal operating temperature.

Air distribution
◉ = to windscreen and front door windows
◉ = to head area via adjustable air vents
◉ = to foot well

All combinations are possible.

Fan speed
Adjust the air flow by switching the fan to the desired speed.

Demisting and defrosting
- Press button 🌋: fan automatically switches to higher speed, the air distribution is directed towards the windscreen.
- Set temperature control to warmest level.
- Switch on heated rear window 🌋.
- Open side air vents as required and direct them towards the door windows.
In addition to the heating and ventilation system, the air conditioning system has controls for:

- Cooling
- Air recirculation

Heated seats ⬆️ 43, Heated steering wheel ⬆️ 95.

**Cooling**

Operated with the ⬆️ button and is functional only when the engine and fan are running.

The air conditioning system cools and dehumidifies (dries) as soon as the outside temperature is slightly above the freezing point. Therefore condensation may form and drip from under the vehicle.

If no cooling or drying is required, switch the cooling system off to save fuel. When the cooling system is switched off, no engine restart will be requested by the climate control system during an Autostop.

**Air recirculation system** 

Operated with the ⬇️ button.

⚠️ **Warning**

The exchange of fresh air is reduced in air recirculation mode. In operation without cooling the air humidity increases, so the windows may mist up from inside. The quality of the passenger compartment air deteriorates, which may cause the vehicle occupants to feel drowsy.

In warm and very humid ambient air conditions, the windscreen might mist up from outside, when cold air is directed to it. If windscreen mists up from outside, activate windscreen wiper and deactivate ⬆️.

**Maximum cooling**

Briefly open the windows so that hot air can disperse quickly.

- Cooling ⬆️ on.
- Air recirculation system ⬇️ on.
- Press air distribution switch ⬇️.
- Set temperature control to coldest level.
- Set fan speed to highest level.
- Open all vents.
Demisting and defrosting the windows

- Press button ⌀: fan automatically switches to higher speed, the air distribution is directed towards the windscreen.
- Switch cooling ⛅ on.
- Set temperature control to warmest level.
- Switch on heated rear window Ü.
- Open side air vents as required and direct them towards the door windows.

Note
If the ⌀ button is pressed while the engine is running, an Autostop will be inhibited until the ⌀ button is pressed again.
If the ⌀ button is pressed while the engine is in an Autostop, the engine will restart automatically.

Electronic climate control system
The dual zone climate control allows different climatisation temperatures for driver and front passenger side.

Controls for:
- Temperature on driver side
- Air distribution
- Fan speed
- Temperature on front passenger side

�� = cooling
AUTO = automatic mode
 Debbie = manual air recirculation
�� = demisting and defrosting

Heated rear window Ü 34, Heated seats ⌀ 43, Heated steering wheel ⌀ 95.

The preselected temperature is automatically regulated. In the automatic mode the fan speed and air distribution automatically regulate the air flow.
The system can be manually adapted via the use of air distribution and air flow controls.
Each change of settings is shown in the Info-Display for a few seconds. The electronic climate control system is only fully operational when the engine is running.

**Automatic mode AUTO**

Basic setting for maximum comfort:
- Press **AUTO** button, the air distribution and fan speed are regulated automatically.
- Open all air vents.
- Press 🌡️ to switch on optimal cooling and demisting.
- Set the preselected temperatures for driver and front passenger using the left and right rotary knobs to 22 °C.

The fan speed regulation in automatic mode can be changed in the menu **Settings**.

Vehicle personalisation ◇ 127.

All air vents are actuated automatically in automatic mode. The air vents should therefore always be open.

**Temperature preselection**

Temperatures can be set to a desired value between 16 °C and 28 °C.
If the minimum temperature is set, the climate control system runs at maximum cooling, if cooling is switched on.

If the maximum temperature is set, the climate control system runs at maximum heating.

**Note**
If the temperature will be reduced for climate comfort reasons, an Autostop can be inhibited or the engine will restart automatically, when cooling is switched on.

Stop-start system 157.

Demisting and defrosting the windows □
- Press button □.
- Press cooling button ▲.
- Temperature and air distribution are set automatically and the fan runs at high speed.
- Switch on heated rear window □.
- To return to previous mode: press button □, to return to automatic mode: press button AUTO.

Setting of automatic rear window heating can be changed in the menu Settings in the Info-Display. Vehicle personalisation 127.

**Note**
If the □ button is pressed while the engine is running, an Autostop will be inhibited until the □ button is pressed again.

If the □ button is pressed while the engine is in an Autostop, the engine will restart automatically.

**Manual settings**
Climate control system settings can be changed by activating the buttons and rotary knobs as follows. Changing a setting will deactivate the automatic mode.

**Fan speed ▲**
Press lower button to decrease or upper button to increase fan speed as shown in the illustration. The fan speed is indicated by the number of segments in the display.

Pressing the lower button longer: fan and cooling are switched off.

Pressing the upper button longer: the fan runs at maximum speed.

To return to automatic mode: Press AUTO button.
Air distribution 🌬️, 🌤️, 🌡️
Press appropriate button for desired adjustment. Activation is indicated by the LED in the button.

- 🌬️ = to windscreen and front door windows.
- 🌤️ = to head area via adjustable air vents.
- 🌡️ = to foot well.

All combinations are possible.
Return to automatic air distribution: Deactivate corresponding setting or press button AUTO.

Cooling 🌡️
Activate or deactivate with the 🌡️ button.
The air conditioning system cools and dehumidifies (dries) when outside temperature is above a specific level. Therefore condensation may form and drip from under the vehicle.

If no cooling or drying is required, switch the cooling system off to save fuel. When the cooling system is switched off, no engine restart will be requested by the climate control system during an Autostop.

Exception: defrost system is activated and outside temperature above 0° C requests a restart.
The display will indicate ACON when cooling is activated or ACOFF when the cooling is deactivated.

Activation or deactivation of cooling operation after engine start can be changed in the menu Settings in the Info-Display. Vehicle personalisation 127.

Air recirculation mode 🌡️

⚠️ Warning

The exchange of fresh air is reduced in air recirculation mode. In operation without cooling the air humidity increases, so the windows may mist up from inside. The quality of the passenger compartment air deteriorates, which may cause the vehicle occupants to feel drowsy.

Press button 🌡️ once to activate the manual air recirculation mode.
Activation is indicated by the LED in the button.

Basic settings
Some settings can be changed in the menu Settings in the Info-Display. Vehicle personalisation 127.
Auxiliary heater

Air heater
Quickheat is an electric auxiliary air heater which automatically warms up the passenger compartment more quickly.

Air vents

Adjustable air vents
At least one air vent must be open while the cooling is on.

To open the vent, turn the adjuster wheel to I. Adjust the air amount at the vent outlet by turning the adjuster wheel.

Direct the flow of air by tilting and swivelling the slats.
To close the vent, turn the adjuster wheel to **0**.

Air vents for rear passenger are left and right side behind the front seats.

**Warning**

Do not attach any objects to the slats of the air vents. Risk of damage and injury in case of an accident.

---

**Fixed air vents**

Additional air vents are located beneath the windscreen and door windows and in the foot wells.

---

**Maintenance**

**Air intake**

The air intake in front of the windscreen in the engine compartment must be kept clear to allow air intake. Remove any leaves, dirt or snow.

**Pollen filter**

The pollen filter cleans dust, soot, pollen and spores from the air entering the vehicle through the air intake.
Air conditioning regular operation
In order to ensure continuously efficient performance, cooling must be operated for a few minutes once a month, irrespective of the weather and time of year. Operation with cooling is not possible when the outside temperature is too low.

Service
For optimal cooling performance, it is recommended to annually check the climate control system, starting three years after initial vehicle registration, including:
- Functionality and pressure test
- Heating functionality
- Leakage check
- Check of drive belts
- Cleaning of condenser and evaporator drainage
- Performance check
Driving and operating

Driving hints

Control of the vehicle

Never coast with engine not running (except during Autostop)

Many systems will not function in this situation (e.g. brake servo unit, power steering). Driving in this manner is a danger to yourself and others. All systems function during an Autostop, but there will be a controlled reduction in power steering assist and vehicle speed is reduced.

Stop-start system ◇ 157.

Idle boost

If charging of the battery is required due to battery condition, the power output of the generator has to be increased. This will be achieved by an idle boost which may be audible.

On vehicles with Uplevel-Display or Uplevel-Combi-Display, a message appears in the Driver Information Centre.

Pedals

To ensure the pedal travel is uninhibited, there must be no mats in the area of the pedals.

Control of the vehicle

Never coast with engine not running (except during Autostop)

Many systems will not function in this situation (e.g. brake servo unit, power steering). Driving in this manner is a danger to yourself and others. All systems function during an Autostop, but there will be a controlled reduction in power steering assist and vehicle speed is reduced.

Stop-start system ◇ 157.

Idle boost

If charging of the battery is required due to battery condition, the power output of the generator has to be increased. This will be achieved by an idle boost which may be audible.

On vehicles with Uplevel-Display or Uplevel-Combi-Display, a message appears in the Driver Information Centre.

Pedals

To ensure the pedal travel is uninhibited, there must be no mats in the area of the pedals.
Driving and operating

New vehicle running-in
Do not brake unnecessarily hard for the first few journeys.
During the first drive, smoke may occur because of wax and oil evaporating off the exhaust system. Park the vehicle in the open for a while after the first drive and avoid inhaling the fumes.
During the running-in period, fuel and engine oil consumption may be higher and the cleaning process of the diesel particle filter may take place more often. Autostop may be inhibited to allow for charging of the battery.
Diesel particle filter \(\diamond\) 159.

Ignition switch positions

0 = Ignition off
1 = Steering wheel lock released, ignition off
2 = Ignition on, for diesel engine: preheating
3 = Starting

Retained power off
The following electronic systems can work until the driver's door is opened or at the latest for 10 minutes after the ignition is switched off:

- Power windows
- Power outlets

Power to the Infotainment system will continue to operate for 30 minutes or until the key is removed from the ignition switch, regardless of whether any door will be opened.

Starting the engine

Automatic transmission: operate brake and move the selector lever to P or N.
Do not operate the accelerator pedal.
Driving and operating

Diesel engine: turn the key to position 2 for preheating until control indicator extinguishes.

Turn the key briefly to position 3 and release: an automatic procedure operates the starter with a short delay as long as the engine is running, see Automatic Starter Control.

Before restarting or to switch off the engine, turn the key back to position 0.

During an Autostop, the engine can be started by depressing the clutch pedal.

Starting the vehicle at low temperatures
The start of the engine without additional heaters is possible down to -25 °C for diesel engines and -30 °C for petrol engines. Required is an engine oil with the correct viscosity, the correct fuel, performed services and a sufficiently charged battery. With temperatures below -30 °C the automatic transmission need a warming phase of approx. 5 minutes. The selector lever must be in position P.

Automatic Starter Control
This function controls the engine starting procedure. The driver does not have to hold the key in position 3. Once applied, the system will go on starting automatically until the engine is running. Because of the checking procedure, the engine starts running after a short delay.

Possible reasons for a non-starting engine:
- Clutch pedal not operated (manual transmission)
- Brake pedal not operated or selector lever not in P or N (automatic transmission)
- Timeout occurred

Turbo engine warm-up
Upon start-up, engine available torque may be limited for a short time, especially when the engine temperature is cold. The limitation is to allow the lubrication system to fully protect the engine.

Overrun cut-off
The fuel supply is automatically cut off during overrun, i.e. when the vehicle is driven with a gear engaged but accelerator is released.
Stop-start system
The stop-start system helps to save fuel and to reduce the exhaust emissions. When conditions allow, it switches off the engine as soon as the vehicle is at a low speed or at a standstill, e.g. at a traffic light or in a traffic jam. It starts the engine automatically as soon as the clutch is depressed. A battery sensor ensures that an Autostop is only performed if the battery is sufficiently charged for a restart.

Activation
The stop-start system is available as soon as the engine is started, the vehicle starts-off and the conditions as stated below in this section are fulfilled.

Deactivation
Deactivate the stop-start system manually by pressing the eco button. Deactivation is indicated by the LED in the button extinguishing.

Autostop
If the vehicle is at a low speed or at a standstill, activate an Autostop as follows:
- Depress the clutch pedal
- set the lever to neutral
- release the clutch pedal
The engine will be switched off while the ignition stays on.

An Autostop is indicated by the needle at the AUTOSTOP position in the tachometer.
During an Autostop, the heating and brake performance will be maintained.

Caution
The steering assist can be reduced during an Autostop.

Conditions for an Autostop
The stop-start system checks if each of the following conditions is fulfilled.
Driving and operating

- The stop-start system is not manually deactivated
- the bonnet is fully closed
- the driver's door is closed or the driver's seat belt is fastened
- the battery is sufficiently charged and in good condition
- the engine is warmed up
- the engine coolant temperature is not too high
- the engine exhaust temperature is not too high, e.g. after driving with high engine load
- the ambient temperature is above -5° C
- the climate control system allows an Autostop
- the brake vacuum is sufficient
- the self-cleaning function of the diesel particle filter is not active
- the vehicle was driven at least at walking speed since the last Autostop

Otherwise an Autostop will be inhibited.

Certain settings of the climate control system may inhibit an Autostop. See "Climate control" chapter for more details 147.

Immediately after motorway driving an Autostop may be inhibited.
New vehicle running-in 155.

Battery discharge protection
To ensure reliable engine restarts, several battery discharge protection features are implemented as part of the stop-start system.

Power saving measures
During an Autostop, several electrical features such as auxiliary electric heater or rear window heating are disabled or switched into a power-saving mode. The fan speed of the climate control system is reduced to save power.

Restart of the engine by the driver
Depress the clutch pedal to restart the engine.

The engine start is indicated by the needle at the idle speed position in the tachometer.
If the selector lever is shifted out of neutral before depressing the clutch first, control indicator 109 illuminates or is shown as a symbol in the Driver Information Centre.

Control indicator 109.

Restart of the engine by the stop-start system
The selector lever must be in neutral to enable an automatic restart.
If one of the following conditions occurs during an Autostop, the engine will be restarted automatically by the stop-start system.
- The stop-start system is manually deactivated
- the bonnet is opened
- the driver's seat belt is unfastened and the driver's door is opened
- the engine temperature is too low
- the charge level of the battery is below a defined level
Driving and operating

- the brake vacuum is not sufficient
- the vehicle is driven at least at walking speed
- the climate control system requests an engine start
- the air conditioning is manually switched on

If the bonnet is not fully closed, a warning message is displayed in the Driver Information Centre.
If an electrical accessory, e.g. a portable CD player, is connected to the power outlet, a brief power drop during restart might be noticeable.

Parking
- Do not park the vehicle on an easily ignitable surface. The high temperature of the exhaust system could ignite the surface.
- Always apply parking brake. Apply manual parking brake without pressing release button. Apply as firmly as possible on downhill or uphill slopes. Depress the foot brake at the same time to reduce operating force.

Apply electrical parking brake by pulling switch 🗝️ for approx. one second. Control indicator 🗝️ must light up.

- Switch off the engine and ignition. Turn the steering wheel until the steering wheel lock engages.
- If the vehicle is on a level surface or uphill slope, engage first gear or set the selector lever to P before switching off the ignition. On an uphill slope, turn the front wheels away from the kerb.
  If the vehicle is on a downhill slope, engage reverse gear or set the selector lever to P before switching off the ignition. Turn the front wheels towards the kerb.
- Lock the vehicle and activate the anti-theft alarm system.

Note
In the event of an accident with airbag deployment, the engine is turned off automatically if the vehicle comes to a standstill within a certain time.

Engine exhaust

⚠️ Danger

Engine exhaust gases contain poisonous carbon monoxide, which is colourless and odourless and could be fatal if inhaled.

If exhaust gases enter the interior of the vehicle, open the windows. Have the cause of the fault rectified by a workshop.
Avoid driving with an open load compartment, otherwise exhaust gases could enter the vehicle.

Diesel particle filter

The diesel particle filter system filters harmful soot particles out of the exhaust gases. The system includes a self-cleaning function that runs automatically during driving without any notification. The filter is cleaned by periodically burning off the soot particles at high temperature. This process takes place automatically under set driving conditions and may
take up to 25 minutes. Typically it needs between 7 and 12 minutes. Autostop is not available and fuel consumption may be higher during this period. The emission of smells and smoke during this process is normal.

Under certain driving conditions, e.g. short distances, the system cannot clean itself automatically. If the cleaning of the filter is required and if previous driving conditions did not enable automatic cleaning, it will be indicated by control indicator (%). Simultaneously \textit{Diesel partic. filter is full} continue driving or warning code 55 appears in the Driver Information Centre. % illuminates when diesel particle filter is full. Start cleaning process as soon as possible. % flashes when diesel particle filter has reached the maximum filling level. Start cleaning process immediately to avoid damage to the engine.

Cleaning process
To activate cleaning process, continue driving, keep engine speed above 2000 revolutions per minute. Shift down if necessary. Diesel particle filter cleaning is then started. If % illuminates additionally, cleaning is not possible, seek the assistance of a workshop.

Cleaning takes place quickest at high engine speeds and loads. The control indicator % extinguishes as soon as the self-cleaning operation is complete.

\textbf{Catalytic converter}

The catalytic converter reduces the amount of harmful substances in the exhaust gases.

\begin{table}[h]
\centering
\begin{tabular}{|l|}
\hline
\textbf{Caution} \\
\hline
Fuel grades other than those listed on pages 201, 265 could damage the catalytic converter or electronic components. Unburnt petrol will overheat and damage the catalytic converter. Therefore avoid excessive use of the starter, running the fuel tank dry and starting the engine by pushing or towing. \\
\hline
Caution \hspace{2cm} If the cleaning process is interrupted, there is a risk of provoking severe engine damage. \\
\hline
In the event of misfiring, uneven engine running, a reduction in engine performance or other unusual problems, have the cause of the fault... \\
\hline
\end{tabular}
\end{table}
rectified by a workshop as soon as possible. In an emergency, driving can be continued for a short period, keeping vehicle speed and engine speed low.

**Automatic transmission**

The automatic transmission permits automatic gearshifting (automatic mode) or manual gearshifting (manual mode).

**Transmission display**

The mode or selected gear is shown in the transmission display.

**Selector lever**

<table>
<thead>
<tr>
<th>P  =</th>
<th>park position, wheels are locked, engage only when the vehicle is stationary and the parking brake is applied</th>
</tr>
</thead>
<tbody>
<tr>
<td>R  =</td>
<td>reverse gear, engage only when the vehicle is stationary</td>
</tr>
<tr>
<td>N  =</td>
<td>neutral</td>
</tr>
<tr>
<td>D  =</td>
<td>automatic mode with all gears</td>
</tr>
</tbody>
</table>

The selector lever is locked in P and can only be moved when the ignition is on and the brake pedal is applied.
Driving and operating

Without brake pedal applied, the control indicator  
illuminates.

If the selector lever is not in P when the ignition is switched off, the control indicators  
and P flash.

To engage P or R, press the release button.

The engine can only be started with the lever in position P or N. When position N is selected, press the brake pedal or apply the parking brake before starting.

Do not accelerate while engaging a gear. Never depress the accelerator pedal and brake pedal at the same time.

When a gear is engaged, the vehicle slowly begins to creep when the brake is released.

**Engine braking**

To utilise the engine braking effect, select a lower gear in good time when driving downhill, see manual mode.

**Rocking the vehicle**

Rocking the vehicle is only permissible if the vehicle is stuck in sand, mud or snow. Move the selector lever between D and R in a repeat pattern. Do not race the engine and avoid sudden acceleration.

**Parking**

Apply the parking brake and engage P.

The ignition key can only be removed when the selector lever is in position P.

---

**Manual mode**

Move selector lever out of position D towards the left and then forwards or backwards.

+ = Shift to a higher gear.

− = Shift to a lower gear.

If a higher gear is selected when vehicle speed is too low, or a lower gear when vehicle speed is too high, the shift is not executed. This can cause a message in the Driver-Info-Display.
In manual mode no automatic shifting to a higher gear takes place at high engine revolutions.

Electronic driving programmes
- Following a cold start, the operating temperature programme increases engine speed to quickly bring the catalytic converter to the required temperature.
- The automatic neutral shift function automatically shifts gear to idling when the vehicle is stopped with a forward gear engaged and the brake pedal is pressed.
- When SPORT mode is engaged, the vehicle shifts at higher engine speeds (unless cruise control is on). SPORT mode 169.

Special programmes automatically adapt the gearshift points when driving up inclines or down hills.
- When starting-off in snowy or icy conditions or on other slippery surfaces, the electronic transmission control selects a higher gear automatically.

Kickdown
If the accelerator pedal is pressed down completely in automatic mode, the transmission shifts to a lower gear depending on engine speed.

Fault
In the event of a fault, illuminates. Additionally a code number or a vehicle message is displayed in the Driver Information Centre. Vehicle messages 120.

The transmission no longer shifts automatically. Continued travel is possible with manual shifting.

Only the highest gear is available. Depending on the fault, 2nd gear may also be available in manual mode. Shift only when vehicle is at a standstill.

Have the cause of the fault remedied by a workshop.

Interruption of power supply
In the event of an interruption of power supply, the selector lever cannot be moved out of the P position. The ignition key cannot be removed from the ignition switch.

If the battery is discharged, start the vehicle using jump leads 250.

If the battery is not the cause of the fault, release the selector lever.
1. Apply the parking brake.
2. Release the selector lever trim from the centre console at the front, fold it upwards and rotate it to the left.

3. Insert a screwdriver into the opening as far as it will go and move the selector lever out of P or N. If P or N is engaged again, the selector lever will be locked in position again. Have the cause of the power supply interruption remedied by a workshop.

4. Mount the selector lever trim onto the centre console and refit.

**Manual transmission**

To engage reverse, with the vehicle stationary wait 3 seconds after depressing the clutch pedal and then press the release button on the selector lever and engage the gear.

If the gear does not engage, set the lever to neutral, release the clutch pedal and depress again; then repeat gear selection.

Do not grind the clutch unnecessarily.

When operating, depress the clutch pedal completely. Do not use the pedal as a foot rest.
Caution

It is not advisable to drive with the hand resting on the selector lever.

Brakes

The brake system comprises two independent brake circuits. If a brake circuit fails, the vehicle can still be braked using the other brake circuit. However, braking effect is achieved only when the brake pedal is depressed firmly. Considerably more force is needed for this. The braking distance is extended. Seek the assistance of a workshop before continuing your journey.

When the engine is not running, the support of the brake servo unit disappears once the brake pedal has been depressed once or twice. Braking effect is not reduced, but braking requires significantly greater force. It is especially important to bear this in mind when being towed.

Control indicator \( \text{} \) 109.

Antilock brake system

Antilock brake system (ABS) prevents the wheels from locking.

ABS starts to regulate brake pressure as soon as a wheel shows a tendency to lock. The vehicle remains steerable, even during hard braking. ABS control is made apparent through a pulse in the brake pedal and the noise of the regulation process.

For optimum braking, keep the brake pedal fully depressed throughout the braking process, despite the fact that the pedal is pulsating. Do not reduce the pressure on the pedal.

After starting off the system performs a self-test which may be audible.

Control indicator \( \text{} \) 110.

Adaptive brake light

During full braking, all three brake lights flash for the duration of ABS control.
Fault

⚠️ Warning

If there is a fault in the ABS, the wheels may be liable to lock due to braking that is heavier than normal. The advantages of ABS are no longer available. During hard braking, the vehicle can no longer be steered and may swerve.

Have the cause of the fault remedied by a workshop.

Parking brake

Manual parking brake

Always apply parking brake firmly without operating the release button, and apply as firmly as possible on a downhill or uphill slope.

To release the parking brake, pull the lever up slightly, press the release button and fully lower the lever.

To reduce the operating forces of the parking brake, depress the foot brake at the same time.

Control indicator ⚠️ 109.

Electrical parking brake

Applying when vehicle is stationary

Pull switch ⚪ for approx. one second, the electrical parking brake is applied automatically with an adequate force. For maximum force, e.g. parking with trailer or on inclines, pull switch ⚪ twice.

The electrical parking brake is applied when control indicator ⚪ illuminates ⚫ 109.

The electrical parking brake can always be activated, even if the ignition is off.
Do not operate electrical parking brake system too often with engine not running, as this will discharge the battery.

Before leaving the vehicle, check the electrical parking brake status. Control indicator 109.

**Releasing**
Switch on ignition. Keep brake pedal depressed and then push switch 114.

**Drive away function**
Depressing clutch pedal (manual transmission) or engaging drive gear (automatic transmission) and then depressing the accelerator pedal releases the electrical parking brake automatically. This is not possible when the switch is pulled at the same time.

This function also helps driving away on inclines.

Aggressive drive-away may reduce lifetime of wear parts.

**Dynamic braking when vehicle is moving**
When the vehicle is moving and the switch 115 is kept pulled, the electrical parking brake system will decelerate the vehicle, but will not apply statically.

As soon as the switch 115 is released, dynamic braking will be stopped.

**Fault**
Failure mode of electrical parking brake is indicated by control indicator 116 and by a code number or a vehicle message which is displayed in the Driver Information Centre. Vehicle messages 120.

Apply electrical parking brake: pull and hold the switch 115 for more than 5 seconds. If control indicator 116 illuminates, electrical parking brake is applied.

Release electrical parking brake: push and hold the switch 115 for more than 2 seconds. If control indicator 116 extinguishes, electrical parking brake is released.

**Brake assist**
If the brake pedal is depressed quickly and forcefully, maximum brake force is automatically applied (full braking).

Maintain steady pressure on the brake pedal for as long as full braking is required. Maximum brake force is automatically reduced when the brake pedal is released.

**Hill start assist**
The system helps prevent unintended movement when driving away on inclines.

When releasing the foot brake after stopping on an incline, the brakes remain on for a further two seconds. The brakes release automatically as soon as the vehicle begins to accelerate.
The hill start assist is not active during an Autostop.

## Ride control systems

### Traction Control system

The Traction Control system (TC) is a component of the Electronic Stability Control.

TC improves driving stability when necessary, regardless of the type of road surface or tyre grip, by preventing the drive wheels from spinning.

As soon as the drive wheels starts to spin, engine output is reduced and the wheel spinning the most is braked individually. This considerably improves the driving stability of the vehicle on slippery road surfaces.

TC is operational as soon as the control indicator熄灭.

When TC is active熄灭 flashes.

### Warning

Do not let this special safety feature tempt you into taking risks when driving.

Adapt speed to the road conditions.

Control indicator熄灭 111.

### Deactivation

TC can be switched off when spinning of drive wheels is required: press button熄灭 briefly.

Control indicator熄灭 illuminates.
TC is reactivated by pressing the button again.
TC is also reactivated the next time the ignition is switched on.

Electronic Stability Control
Electronic Stability Control (ESC) improves driving stability when necessary, regardless of the type of road surface or tyre grip. It also prevents the drive wheels from spinning.

As soon as the vehicle starts to swerve (understeer/oversteer), engine output is reduced and the wheels are braked individually. This considerably improves the driving stability of the vehicle on slippery road surfaces.

ESC is operational as soon as the control indicator extinguishes.
When ESC is active flashes.

Warning
Do not let this special safety feature tempt you into taking risks when driving.
Adapt speed to the road conditions.

Control indicator ⚠️ 111.

Deactivation
For very high-performance driving ESC can be deactivated: hold button ⚠️ depressed for approx. 7 seconds.
Control indicator ⚠️ illuminates.

ESC is reactivated by pressing the button again. If the TC system was previously disabled, both TC and ESC are reactivated.
ESC is also reactivated the next time the ignition is switched on.

Interactive driving system

Flex Ride
Flex Ride driving system allows the driver to select between three driving modes:
- SPORT mode: press button SPORT, LED illuminates.
- TOUR mode: press button TOUR, LED illuminates.
- Normal mode: both buttons SPORT and TOUR are not pressed, no LED illuminates.

Deactivate SPORT mode and TOUR mode by pressing corresponding button once more.
In each driving mode Flex Ride networks the following electronic systems:
- Continuous Damping Control.
- Accelerator Pedal Control.
- Steering Control.
- Automatic transmission.

**SPORT mode**

The settings of the systems are adapted to a sportier driving style:
- Damping of shock absorbers reacts more stiffly to provide better contact with the road surface.
- The engine reacts more quickly to the accelerator pedal.
- Steering support is reduced.
- Shift points of automatic transmission occur later.
- With SPORT mode activated, the illumination of main instruments changes from white to red.

**TOUR mode**

The settings of the systems are adapted to a comfort driving style:
- Damping of shock absorbers reacts more softly.
- Accelerator pedal reacts with standard settings.
- Steering support is in standard mode.
- Shift points of automatic transmission occur in a comfort mode.
- Illumination of main instruments is white.

**Normal mode**
All settings of the systems are adapted to standard values.

**Drive mode control**
Within each manual selected driving mode SPORT, TOUR or Normal, the Drive Mode Control (DMC) detects and analyses continuously the real driving characteristic, responses by the driver, and the active dynamic state of the vehicle. If necessary, the control unit of DMC automatically
changes the settings within the selected driving mode or, when recognizing greater variations, the driving mode is changed for the length of variation.

If, for example, Normal mode is selected and DMC detects a sporty driving behaviour, DMC changes several settings of the Normal mode into sporty settings. The DMC changes to SPORT mode in case of very sporty driving behaviour.

If, for example, TOUR mode is selected and whilst driving on a winding road a sudden hard brake is necessary, DMC will detect the dynamic vehicle condition and changes the settings for suspension to SPORT mode to increase vehicle stability.

When the driving characteristic or the dynamic vehicle state returns to former state, DMC will change the settings to the preselected driving mode.

---

**Personalised settings in the Sport mode**

The driver can select the functions of the SPORT mode when **SPORT** button is pressed. These settings can be changed in the menu **Settings** in the Info-Display. Vehicle personalisation [127].

---

**Driver assistance systems**

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Driver assistance systems are developed to support the driver and not to replace his attention. The driver accepts full responsibility when driving the vehicle. When using driver assistance systems, always take care regarding the current traffic situation.</td>
</tr>
</tbody>
</table>

**Cruise control**

The cruise control can store and maintain speeds of approx. 30 to 200 km/h. Deviations from the stored speeds may occur when driving uphill or downhill.

For safety reasons, the cruise control cannot be activated until the foot brake has been operated once. Activation in first gear is not possible.
Do not use the cruise control if it is not advisable to maintain a constant speed.

With automatic transmission, only activate cruise control in automatic mode.

Control indicator odon 113.

**Switching on**

Press button odon, control indicator odon in instrument cluster illuminates white.

**Activation**

Accelerate to the desired speed and turn thumb wheel to SET/-, the current speed is stored and maintained. Control indicator odon in instrument cluster illuminates green. Accelerator pedal can be released. Vehicle speed can be increased by depressing the accelerator pedal. When the accelerator pedal is released, the previously stored speed is resumed.

Cruise control remains activated while gearshifting.

**Increase speed**

With cruise control active, hold thumb wheel turned to RES/+ or briefly turn to RES/+ repeatedly: speed increases continuously or in small increments.

Alternatively accelerate to the desired speed and store by turning to SET/-. 

**Reduce speed**

With cruise control active, hold thumb wheel turned to SET/- or briefly turn to SET/- repeatedly: speed decreases continuously or in small increments.

**Deactivation**

Press button odon, control indicator odon in instrument cluster illuminates white. Cruise control is deactivated. Last used set speed is stored in memory for later speed resume.

Automatic deactivation:

- vehicle speed below approx. 30 km/h,
- vehicle speed above approx. 200 km/h,
- the brake pedal is depressed,
- the clutch pedal is depressed for a few seconds,
- selector lever in N,
- engine speed in a very low range,
- the Traction Control system or Electronic Stability Control is operating.

**Resume stored speed**

Turn thumb wheel to RES/+ at a speed above 30 km/h. The stored speed will be obtained.
Switching off
Press button \( m \), control indicator \( m \) in instrument cluster extinguishes. The stored speed is deleted.
Pressing button \( L \) for activating speed limiter or switching off the ignition also switches off cruise control and deletes the stored speed.

Speed limiter
The speed limiter prevents the vehicle exceeding a preset maximum speed.
The maximum speed can be set at a speed above 25 km/h.
The driver can only accelerate up to the preset speed. Deviations from the limited speed may occur when driving downhill.
The preset speed limit is displayed in the top line of the Driver Information Centre when the system is active.

Activation
Press button \( m \). If cruise control or adaptive cruise control has been activated before, it is switched off when speed limiter is activated and the control indicator \( m \) extinguishes.

Set speed limit
With speed limiter active, hold thumb wheel turned to \( RES/+ \) or briefly turn to \( RES/+ \) repeatedly until the desired maximum speed is displayed in the Driver Information Centre.
Alternatively accelerate to the desired speed and briefly turn thumb wheel to \( SET/- \): the current speed is stored as maximum speed. Speed limit is displayed in the Driver Information Centre.

Change speed limit
With speed limiter active, turn thumb wheel to \( RES/+ \) to increase or \( SET/- \) to decrease the desired maximum speed.

Exceeding the speed limit
In the event of an emergency it is possible to exceed the speed limit by depressing the accelerator pedal firmly beyond the point of resistance.
The limited speed will flash in the Driver Information Centre and a chime sounds during this period.

Release the accelerator pedal and the speed limiter function is reactivated once a speed lower than the limit speed is obtained.

**Deactivation**
Press button \( \text{\textcopyright} \): speed limiter is deactivated and the vehicle can be driven without speed limit.

The limited speed is stored and a corresponding message appears in the Driver Information Centre.

**Resume limit speed**
Turn thumb wheel to RES/+. The stored speed limit will be obtained.

**Switching off**
Press button \( \text{\textcopyright} \), the speed limit indication in the Driver Information Centre extinguishes. The stored speed is deleted.

By pressing button \( \text{\textcopyright} \) to activate cruise control or adaptive cruise control or by switching off the ignition, speed limiter is also deactivated and the stored speed is deleted.

**Adaptive cruise control**
Adaptive cruise control is an enhancement to traditional cruise control with the additional feature of maintaining a certain distance behind the vehicle ahead.

Adaptive cruise control automatically decelerates the vehicle when approaching a slower moving vehicle. It then adjusts the vehicle speed to follow the vehicle ahead at the selected following distance. The vehicle speed increases or decreases to follow the vehicle in front, but will not exceed the set speed. It may apply limited braking with activated brake lights.

The adaptive cruise control can store and maintain speeds over approx. 50 km/h and brakes automatically to follow a slower vehicle driving ahead down to a minimum speed of 30 km/h.

Adaptive cruise control uses a radar sensor to detect the vehicles ahead. If no vehicle is detected in the driving path, the adaptive cruise control will behave like a traditional cruise control.

For safety reasons, the system cannot be activated before the brake pedal has been depressed once after switching on ignition. Activation in first gear is not possible.

Adaptive cruise control is mainly advised to be used on long straight roads like highways or country roads with steady traffic. Do not use the system if it is not advisable to maintain a constant speed.

Control indicator \( \text{\textcopyright} \) 113, \( \text{\textcopyright} \) 113.
**Warning**

The complete driver attention is always required while driving with adaptive cruise control. The driver stays fully in control of the vehicle because the brake pedal, the accelerator pedal and the cancel switch have priority over any adaptive cruise control operation.

**Switching on**

Press button 🔄 to switch on adaptive cruise control. The control indicator 🚦 illuminates white.

**Activation by setting the speed**

Adaptive cruise control can be activated between 50 km/h and 180 km/h.

Accelerate to the desired speed and turn thumb wheel to SET/-, the current speed is stored and maintained. Control indicator 🚦 illuminates green.

The adaptive cruise control symbol, the following distance setting and set speed are indicated in the top line of the Driver Information Centre.

The accelerator pedal can be released. Adaptive cruise control remains activated while gearshifting.

To display the adaptive cruise control page on the Driver Information Centre, press the MENU button on the turn signal lever and turn the adjuster wheel to choose adaptive cruise control page.

**Overriding set speed**

It is always possible to drive faster than the selected set speed by depressing the accelerator pedal. When the accelerator pedal is released, the vehicle returns to the
desired distance if a slower vehicle is ahead. Otherwise it returns to the stored speed.

Once the system is activated, adaptive cruise control decelerates or brakes if it detects a vehicle ahead which is slower or closer than the desired following distance.

### Warning

Accelerating by the driver deactivates braking by the system. This is indicated as a popup warning in the Driver Information centre.

### Increase speed

With adaptive cruise control active, hold thumb wheel turned to RES/+: speed increases continuously in large increments, or activate repeatedly RES/+: speed increases in small increments.

If the vehicle is driven with adaptive cruise control active much faster than the desired speed, e.g. after depressing the accelerator pedal, then the current speed can be stored and maintained by turning the thumb wheel to SET/-.

### Reduce speed

With adaptive cruise control active, hold thumb wheel turned to SET/-: speed decreases continuously in large increments, or activate repeatedly SET/-: speed decreases in small increments.

If the vehicle is driven with adaptive cruise control active much slower than the desired speed, e.g. because of a slower vehicle ahead, then the current speed can be stored and maintained by turning the thumb wheel to SET/-.

### Resume stored speed

If the system is switched on but inactive, then turn thumb wheel to RES/+ at a speed above 50 km/h to obtain the stored speed.

### Setting the following distance

When adaptive cruise control detects a slower moving vehicle in the driving path, it will adjust the vehicle speed to maintain the following distance selected by the driver.

The following distance can be set to near, medium or far.

Press button $\mathcal{E}$, the current setting is shown on the Driver Information Centre. Press button $\mathcal{E}$ again to change the following distance. The setting is also displayed in the top line of the Driver Information Centre.
The selected following distance is indicated by filled distance bars in the adaptive cruise control page. Note that the following distance setting is shared with the sensitivity setting of forward collision alert. Example: If setting 3 (far) is selected, then the driver is warned sooner before a possible collision, also if adaptive cruise control is inactive or switched off.

### Warning

The driver accepts fully responsibility for the valid following distance based on traffic-, weather- and visibility conditions.

### Detecting the vehicle ahead

The green illuminated “vehicle ahead” control indicator -datepicker displays in the speedometer when the system detects a vehicle in the driving path.

If this symbol does not display, or displays briefly, adaptive cruise control will not respond to vehicles ahead.

### Deactivation

Adaptive cruise control is deactivated by the driver when:
- button  is pressed,
- brake pedal is applied,
- clutch pedal is depressed for more than four seconds,
- gear selector lever of automatic transmission is moved to N.

The system is also automatically deactivated when:
- vehicle speed slows down below 45 km/h or accelerates above 190 km/h,
- Traction Control system is operating for more than 20 seconds,
- Electronic Stability Control is operating,
Driving and operating

- there is no traffic and nothing detected on the road sides for several minutes. In this case there are no radar echoes and the sensor may report that it is blocked,
- collision imminent braking system is applying the brakes,
- radar sensor is blocked by an ice or water film,
- fault is detected in the radar, engine or brake system.

When adaptive cruise control is deactivated automatically, the control indicator \( \text{熄} \) illuminates white and a warning symbol is displayed as a pop-up in the Driver Information Centre.

The stored speed is maintained.

⚠️ Warning

When adaptive cruise control is deactivated, the driver has to take over brake and engine control.

Switching off

Press button \( \text{熄} \) to switch off adaptive cruise control. The control indicator \( \text{熄} \) extinguishes. The stored speed is deleted.

Switching off the ignition also switches off adaptive cruise control and deletes the stored speed.

Driver's attention

- Use adaptive cruise control carefully on bends or mountain roads, as it can lose the vehicle ahead and require time to detect it again.
- Do not use the system on slippery roads as it can create fast changes in tyre traction (wheel spinning), so that you could lose control.
- Do not use adaptive cruise control during rain, snow or heavy dirt, as the radar sensor can be covered by a water film, dust, ice or snow. This reduces or suppresses completely the visibility. In case of sensor blockage, clean the sensor cover.

System limits

- The system's automatic brake force does not permit strong braking and the braking level may not be sufficient to avoid a collision.
- After a sudden lane change, the system needs a certain time to detect the next preceding vehicle.
So if a new vehicle is detected, the system may accelerate instead of braking.

- Adaptive cruise control does ignore the oncoming traffic.
- Adaptive cruise control does not brake for stopped vehicles, pedestrians or animals.

**Curves**

The adaptive cruise control calculates a predicted path based on the centrifugal force. This predicted path considers the current curve characteristic, but cannot consider a future curve change. The system may lose the current vehicle ahead or consider a vehicle which is not in the actual lane. This can happen when entering or exiting a curve or if the curve gets stronger or weaker. If it no longer detects any vehicle ahead, then control indicator 🚗 will extinguish.

If the centrifugal force is too high in a curve, the system slows down the vehicle slightly. This braking level is not designed to avoid spinning off the curve. The driver is responsible for reducing the selected speed before entering a curve and in general to adapt the speed to the road type and to existing speed limits.

**Motorways**

On motorways, adapt the set speed to the situation and the weather. Always consider that adaptive cruise control has a limited visibility range, a limited braking level and a certain reaction time to verify if a vehicle is in the driving path or not. Adaptive cruise control may not be able to brake the vehicle in time to avoid a collision with a much slower vehicle or after a lane change. This is particularly true if driving fast or if the visibility is reduced due to weather conditions.

While entering or exiting a motorway, adaptive cruise control may lose the vehicle ahead and accelerate up to the set speed. For this reason, decrease the set speed before the exit or before the entry.

**Vehicle path changes**

If another vehicle enters your driving path, adaptive cruise control will first consider the vehicle when it is completely in your path. Be ready to take action and press the brake pedal, if you need to brake quicker.
Hill and trailer considerations

System performance on hills and when towing a trailer depends on vehicle speed, vehicle load, traffic conditions and the road gradient. It may not detect a vehicle in your path while driving on hills. On steep hills, you may have to use the accelerator pedal to maintain your vehicle speed. When going downhill, especially when towing a trailer, you may have to brake to maintain or reduce your speed.

Note that applying the brake deactivates the system. It is not recommended to use adaptive cruise control on steep hills especially when towing a trailer.

Radar unit

The radar unit is mounted behind the radiator grille below the brand emblem.

⚠️ Warning

The radar unit was aligned carefully during manufacture. Therefore, after a frontal accident, do not use the system. The front bumper may appear to be intact, however the sensor behind can be out of position and react incorrectly. After an accident, consult a workshop to verify and correct the adaptive cruise control sensor position.

Settings

Settings can be changed in the Auto collision preparation menu in the vehicle personalisation 127.

Fault

If the adaptive cruise control does not work due to temporary conditions (e.g. blockage by ice) or if there is a permanent system error, then a message is displayed in the Driver Information Centre.
Vehicle messages  120.

Forward collision alert
The forward collision alert can help to avoid or reduce the harm caused by front-end crashes. If a vehicle directly ahead is approached too quickly, a warning chime and alert in the Driver Information Centre is provided.

The green illuminated vehicle ahead symbol  appears in the speedometer when the system has detected a vehicle in the driving path. Precondition is, that forward collision alert is activated in the vehicle personalisation menu  127 or that it is not deactivated by the button  (depending on the system, see following).

Depending on the vehicle's equipment, there are two variants of the forward collision alert available:

- **Forward collision alert based on radar system**
  - on vehicles equipped with adaptive cruise control  174.

- **Forward collision alert based on front camera system**
  - on vehicles with no or traditional cruise control  171.

Forward collision alert based on radar system
The system uses the radar sensor behind the radiator grille to detect a vehicle directly ahead, in your path, within a distance of max. 150 metres.

Activation
Forward collision alert operates automatically above walking speed, provided that **Auto collision preparation** setting is not deactivated in the vehicle personalisation menu  127.

Selecting the alert sensitivity
The alert sensitivity can be set to near, medium or far.

Press button  , the current setting is shown on the Driver Information Centre. Press button  again to change the alert sensitivity. The setting is also displayed in the top line of the Driver Information Centre.
Alerting the driver

When approaching another vehicle too rapidly, the collision alert warning page will be indicated in the Driver Information Centre. Simultaneously a warning chime sounds. Press the brake pedal, if it is requested by the situation.

Settings
Settings can be changed in the Auto collision preparation menu in the vehicle personalisation 127.

Forward collision alert based on front camera system
Forward collision alert uses the front camera system in the windscreen to detect a vehicle directly ahead, in your path, within a distance of approx. 60 metres.

Activation
Forward collision alert operates automatically above 40 km/h, if it is not deactivated by button V, see below.

Selecting the alert sensitivity
The alert sensitivity can be set to near, medium or far.

Note that the alert timing sensitivity setting is shared with the following distance setting of the adaptive cruise control. So changing the alert timing sensitivity changes the adaptive cruise control following distance setting.
Press button ⬅️, the current setting is shown on the Driver Information Centre. Press button ⬅️ again to change the alert sensitivity.

Alerting the driver

When approaching another vehicle too rapidly, the collision alert warning page will be indicated in the Driver Information Centre. Simultaneously a warning chime sounds. Press the brake pedal, if it is requested by the situation.

Deactivation
The system can be deactivated. Press button ⬅️ as often as the following message appears in the Driver Information Centre.

General information for both variants of forward collision alert

⚠️ Warning
Forward collision alert is just a warning system and does not apply the brakes. When
approaching a vehicle ahead too rapidly, it may not provide you enough time to avoid a collision. The driver accepts fully responsibility for the valid following distance based on traffic-, weather- and visibility conditions.

The complete attention of the driver is always required while driving. He shall always be ready to take action and apply the brakes.

System limitations
The system is designed to warn only for vehicles, but may react also on other metallic objects.

In the following cases, forward collision alert may not detect a vehicle ahead or sensor performance is limited:
- on winding roads,
- when weather limits visibility, such as fog, rain, or snow,
- when the sensor is blocked by snow, ice, slush, mud, dirt, or windscreen damage.

Following distance indication
The following distance indication displays the distance to a preceding moving vehicle. The system uses, depending on the vehicle equipment, either the radar behind the radiator grille or the front camera in the windscreen to detect the distance of a vehicle directly ahead in your path. It is active at speeds above 40 km/h. When a preceding vehicle is detected ahead, the distance is indicated in seconds, displayed on a page in the Driver Information Centre 114.

The minimum indicated distance is 0.5 s.
If there is no vehicle ahead or the vehicle ahead is out of range, two dashes will be displayed: -.- s.

Active Emergency Braking
Active emergency braking can help to reduce the damage from crashes with vehicles and obstacles directly ahead, when a collision can no longer
be avoided either by manual braking or by steering. Before the active emergency braking applies, the driver is warned by the forward collision alert 181.

The feature uses various inputs (e.g. radar sensor, brake pressure, vehicle speed) to calculate the probability of a frontal collision.

Active emergency braking operates automatically above walking speed, provided that Auto collision preparation setting is not deactivated in the vehicle personalisation menu 127.

The system includes:

- Brake preparation system
- Emergency automatic braking
- Forward looking brake assist

**Warning**

This system is not intended to replace the driver responsibility of driving the vehicle and looking ahead. Its function is limited to supplemental use only. The driver shall continue to apply the brake pedal as the driving situation dictates.

**Brake preparation system**

When approaching a vehicle ahead so quickly that a collision is likely, the brake preparation system slightly pressurises the brakes. This reduces the response time, when a manual or automatic braking is requested.

The brake system is prepared so that braking can occur more rapidly.

**Emergency automatic braking**

After the brake preparation and just before the imminent collision, this function automatically applies limited braking to reduce the impact speed of the collision.

**Forward looking brake assist**

In addition to brake preparation system and emergency automatic braking, the forward looking brake assist function makes the brake assist more sensitive. In this way, depressing the brake pedal slightly results immediately in a strong braking. This function helps the driver brake quicker and stronger before the imminent collision.

**Warning**

Active emergency braking is not designed to apply strong autonomous braking or to avoid automatically a collision. It is designed to reduce the vehicle speed before collision. It may not react on stopped vehicles, pedestrians or animals. After a sudden lane change, the system needs a certain time to detect the next preceding vehicle.

The complete attention of the driver is always required while driving. The driver shall always be ready to take action and apply the brakes and steer to avoid collisions. The system is designed to work with all occupants wearing their seat belts.
System limitations
The active emergency braking has limited or no function during rain, snow or heavy dirt, as the radar sensor can be covered by a water film, dust, ice or snow. In case of sensor blockage, clean the sensor cover.

In some seldom cases the active emergency braking system may provide a short automatic braking in situations that seem to be unnecessary, for instance due to traffic signs in a curve or due to vehicles in another lane. This is acceptable operation, the vehicle does not need service. Firmly apply the accelerator pedal to override the automatic braking.

Settings
Settings can be changed in the Auto collision preparation menu in the vehicle personalisation, 127.

Fault
In the event of a system service requirement, a message is displayed in the Driver Information Centre.

If the system does not work as it should, vehicle messages are displayed in the Driver Information Centre.

Vehicle messages 120.

Parking assist
The parking assist makes parking easier by measuring the distance between the vehicle and obstacles, and giving acoustic signals. It is the driver, however, who bears full responsibility for the parking manoeuvre.

The system consists of four ultrasonic parking sensors in each of the front and rear bumpers.

The system uses two different frequencies for the front and rear sensors, respectively, each with a different sound.
Control indicator $P_{△}$/A $\triangleright$ 110.

**Button** $P_{△}$/A

Parking assist is activated and deactivated by pressing the parking assist button $P_{△}$/A. If the vehicle is equipped with parking assist and advanced parking assist $\triangleright$ 189 both use the same button to operate the systems.

For activating or deactivating parking assist, press button $P_{△}$/A once briefly. For activating or deactivating advanced parking assist, press button $P_{△}$/A for approx. one second.

If one system is active, it is possible to switch between both systems by pressing the button shorter or longer.

### Activation

When reverse gear is engaged, the system is activated automatically.

The front parking assist can also be activated at a low speed by pressing the parking assist button $P_{△}$/A briefly.

An illuminated LED in the parking assist button indicates that the system is ready to operate.

### Indication

The system warns the driver with acoustic signals against handicaps in front of or behind the vehicle. Depending on which of the sensors are closer to an obstacle, you will hear a buzzing sound of the respective sensors. The interval between the sounds becomes shorter as the vehicle gets closer to the obstacle. When the distance is less than 30 cm, the buzzing is continuous.

Additionally, the distance to obstacles can be shown in the Driver Information Centre $\triangleright$ 114.

On version with Uplevel-Display, the distance to a front obstacle is indicated by changing segments.
On version with Uplevel-Combi-Display, the distance to a front and rear obstacle is indicated by changing distance lines around the vehicle. The distance indication in the display can be inhibited and overwritten by vehicle messages with a higher priority. Once the distance indication is overwritten by a vehicle message, distance is no longer indicated until parking assist is activated again.

Deactivation
Deactivate the system by pressing the parking assist button briefly.

The LED in the button extinguishes and Park Assist Off will be displayed in the Driver Information Centre. The system is deactivated automatically when exceeding a certain speed.

If the \( \text{Parking Assist} \) button is pressed once within an ignition cycle, the front parking assist is always reactivated when the vehicle speed goes below a certain value.

Fault
In the event of a fault in the system, \( \text{Park Assist} \) illuminates or a message is displayed in the Driver Information Centre.

If the system does not work due to temporary conditions like snow covered sensors, \( \text{Park Assist} \) illuminates or a message is displayed in the Driver Information Centre.

Vehicle messages \( \text{120} \).

⚠️ Warning
Under certain circumstances, various reflective surfaces on objects or clothing as well as external noise sources may cause the system to fail to detect obstacles.

Special attention has to be paid to low obstacles which can damage the lower part of the bumper.

Caution
Performance of the sensor can be reduced when sensors are covered, e.g. by ice or snow.

Performance of the parking assist system can be reduced due to heavy loading.

Special conditions apply if there are taller vehicles involved (e.g. off-road vehicles, mini vans, vans). Object identification in the upper part of these vehicles cannot be guaranteed.
Objects with a very small reflection cross section, like objects of narrow size or soft materials, may not be detected by the system. Parking assist will not detect objects out of the detection range.

Note
The parking assist system automatically detects factory-fitted towing equipment. It is deactivated when the connector is plugged in. The sensor may detect a non-existing object (echo disturbance) caused by external acoustical or mechanic disturbances.

Advanced parking assist

The advanced parking assist system manoeuvres the driver into a parking slot by giving instructions on the Driver Information Centre and acoustic signals. It is the driver, however, who bears full responsibility for accepting the parking slot suggested by the system and the parking manoeuvre.

The system uses the sensors of the parking assist system in combination with two additional sensors on both sides of the front bumper and the rear bumper.

Button

Advanced parking assist and parking assist 186 both use the same button to operate the systems. For activating or deactivating parking assist push button once briefly. For activating or deactivating advanced parking assist push button for approx. one second.

If one system is active, it can be switched between both systems by pushing the button shorter or longer.

Activation
When looking for a parking slot, the system has to be activated by pushing the button D for approx. one second.

The system can only be activated at a speed up to 30 km/h and the system searches for a parking slot at a speed up to 30 km/h.

The maximum allowed parallel distance between the vehicle and a row of parking cars is 1.8 m.

**Note**

Before using the advanced parking assist the first time, the vehicle has to be driven at least for 40 km to calibrate the system automatically.

**Functionality**

When the vehicle passes a row of cars and the system is activated, the advanced parking assist system begins looking for a suitable parking slot. When a suitable slot is detected, a visual feedback on the Driver Information Centre and an acoustic signal are given.

The parking slot suggestion of the system is accepted when the vehicle is stopped by the driver within 10 metres after the Stop message is given. The system calculates the optimal route into the parking slot. Then it manoeuvres the driver into the slot by giving detailed instructions.
The instructions show:
- a hint when driving faster than 30 km/h,
- the demand to stop the vehicle, when a parking slot is detected,
- the direction of driving during the parking manoeuvre,
- the steering wheel position during parking,
- for some of the instructions a progress bar is shown.

A successful parking manoeuvre is indicated by the End position symbol.

If the driver does not stop the vehicle within 10 metres after a parking slot is proposed, the system starts to search for another suitable parking slot.

Changing the parking side
The system is configured to detect parking slots on the passenger side. To detect parking slots on the driver side, switch turn indicator to the driver side.

Display priorities
After activating the advanced parking assist, a message appears on the Driver Information Centre. Indication of messages with higher priority like vehicle messages 120 will be displayed. After approving the message by pressing the SET/CLR button, parking assist messages appear again and parking can be continued.

Deactivation
The system is deactivated by:
- pushing button D for approx. one second
- parking manoeuvre successfully ended
- driving faster than 30 km/h
- switching off the ignition

Deactivation by the driver or by the system during manoeuvring will be indicated by Parking Deactivated in the Driver Information Centre.
Fault
A message appears in the Driver Information Centre when:

- there is a fault in the system
- the driver did not successfully complete the parking manoeuvre
- the system is not operational

If an object is detected during parking instructions, **Stop** is indicated in the Driver Information Centre. Removing the object will resume the parking manoeuvre. If the object is not removed, the system will be deactivated. Push button \( \text{D} \) for approx. one second to activate the system and search for a new parking slot.

Important hints for using the parking assist systems

### Warning
Under certain circumstances, various reflective surfaces on objects or clothing as well as external noise sources may cause the system to fail to detect obstacles.

Special attention has to be paid to low obstacles which can damage the lower part of the bumper.

### Caution
Performance of the sensor can be reduced when sensors are covered, e.g. by ice or snow.

Performance of the parking assist system can be reduced due to heavy loading.

Special conditions apply if there are taller vehicles involved (e.g. off-road vehicles, mini vans,
Driving and operating

Driving and operating
driving

Object identification in the upper part of these vehicles cannot be guaranteed.

Objects with a very small reflection cross section, like objects of narrow size or soft materials, may not be detected by the system.

Parking assist will not detect objects out of the detection range.

**Note**

The parking assist system automatically detects factory-fitted towing equipment. It is deactivated when the connector is plugged in.

It is possible that the sensor detects a non-existing object (echo disturbance) caused by external acoustical or mechanic disturbances.

Advanced parking assist system may not respond to changes in the parking space after initiating a parallel parking manoeuvre.

**Side blind spot alert**

The Side blind spot alert system detects and reports objects on either side of the vehicle, within a specified "blind spot" zone. The system alerts visually in each side rear view mirror, when detecting objects that may not be visible in the inside and outside rear view mirrors.

The system’s sensors are located in the bumper on the left and right side of the vehicle.

**Warning**

Side blind spot alert does not replace driver vision.

The system does not detect:

- Vehicles outside the side blind zones which may be rapidly approaching.
- Pedestrians, cyclists or animals.

Before changing a lane, always check all mirrors, look over the shoulder and use the turn signal.

When the system detects a vehicle in the side blind zone while driving forward, either while passing a vehicle or being passed, an amber warning symbol \(\text{amber symbol}\) will light up in the relevant outside mirror. If the driver then activates the turn signal, the warning symbol \(\text{amber symbol}\) starts flashing amber and a chime sounds as a warning not to change lanes.

Side blind spot alert is active from speeds of 10 km/h up to 140 km/h. Driving faster than 140 km/h deactivates the system, indicated by low lighting warning symbols \(\text{amber symbol}\) in both outside mirrors. Reducing the
speed again will extinguish the warning symbols. If a vehicle is then detected in the blind zone, the warning symbols \( \Rightarrow \) will illuminate as normal on the relevant side. When the vehicle is started, both outside mirror displays will briefly come on to indicate that the system is operating.

The system can be activated or deactivated in the menu Settings in the Info-Display, vehicle personalisation \( \Rightarrow \) 127. Deactivation is indicated by a message in the Driver Information Centre.

Detection zones
The system sensor covers a zone of approx. 3 metres on both sides of the vehicle. This zone starts at each side mirror and extends rearwards by approx. 3 metres. The height of the zone is approx. between 0.5 metres and 2 metres off the ground.

The detection zones will not change if the vehicle is towing a trailer.

Side blind spot alert is designed to ignore stationary objects such as guardrails, posts, curbs, walls and beams. Parked vehicles or oncoming vehicles are not detected.

Fault
Occasional missed alerts can occur under normal circumstances and will increase in wet conditions.

Side blind spot alert does not operate when the left or right corners of the rear bumper are covered with mud, dirt, snow, ice, slush, or in heavy rainstorms. Cleaning instructions \( \Rightarrow \) 254.

In the event of a fault in the system or if the system does not work due to temporary conditions, a message is displayed in the Driver Information Centre. Seek the assistance of a workshop.

Rear view camera
The rear view camera assists the driver when reversing by displaying a view of the area behind the vehicle.

The view of the camera is displayed in the Colour-Info-Display.

⚠️ Warning
The rear view camera does not replace driver vision. Note that objects that are outside the camera’s field of view and the advanced parking assist sensors, e.g. below the bumper or underneath the vehicle, are not displayed.

Do not reverse the vehicle by only looking at the Info-Display and check the surrounding behind and around the vehicle before reversing.

Activation
Rear view camera is automatically activated when reverse gear is engaged.
Functionality

The camera is mounted in the tailgate handle and has a viewing angle of 130°.

Due to the high position of the camera the rear bumper can be seen on the display as a guide to position.

The area displayed by the camera is limited. The distance of the image that appears on the display differs from the actual distance.

**Guiding lines**
Dynamic guiding lines are horizontal lines in 1 metre intervals projected on the picture to define the distance to shown objects.

Trajectory lane of the vehicle is shown in accordance with the steering angle.

The function can be deactivated in the menu **Settings** in the Info-Display. Vehicle personalisation 127.

**Warning symbols**
Warning symbols are indicated as triangles on the picture which show obstacles detected by the rear sensors of the advanced parking assist.
Display settings

Brightness can be set with the up/down buttons of the multifunction knob.

Contrast can be set with left/right buttons of the multifunction knob.

Deactivation

The camera is deactivated when a certain forward speed is exceeded or if reverse gear is not engaged for approx. 10 seconds.

Traffic sign assistant

Functionality

The traffic sign assistant system detects designated traffic signs via a front camera and displays them in the Driver Information Centre.

Traffic signs, which will be detected, are

Limit- and no passing signs
- speed limit
- no passing
- end of speed limit
- end of no passing

Fault

Fault messages are displayed with a △ on the top line of the Info-Display.

The rear view camera may not operate properly when:
- the surrounding is dark,
- the sun or the beam of headlights is shining directly into the camera lens,
- ice, snow, mud, or anything else covers the camera lens. Clean the lens, rinse it with water, and wipe it with a soft cloth,
- the tailgate is not closed correctly,
- the vehicle had a rear end accident,
- there are extreme temperature changes.
Road signs
beginning and end of:
■ motorways
■ A-roads
■ play streets
Add on signs
■ additional hints to traffic signs
■ restriction of trailer towing
■ wet warning
■ ice warning
■ direction arrows
Speed limit signs are displayed in the Driver Information Centre until the next speed limit sign or end of speed limit is detected or up to a defined sign timeout.

An exclamation mark in a frame indicates that there is an add on sign detected which cannot be recognised by the system.
The system is active up to a speed of 200 km/h depending on the lighting conditions. At night the system is active up to a speed of 160 km/h.
As soon as the speed becomes slower than 55 km/h the display will be reset and the content of the traffic sign page will be cleared. The next recognized speed indication will be displayed.

Display indication
Traffic signs are displayed on the page Traffic sign detection on the Driver Information Centre, chosen via the adjuster wheel on the turn signal lever 114.

When another function on the Driver Information Centre menu was selected and then Traffic sign detection page is chosen again, the last recognised traffic sign will be displayed.

If the system is deactivated by itself, the content of the traffic sign page is cleared (not if equipped with a navigation system), indicated by the following symbol:

The content of the traffic sign page is also cleared during driving by pressing the SET/CLR button on the turn signal lever for longer.

Pop-up function
Speed limits and no passing signs are displayed as pop-ups on each page of the Driver Information Centre.

The pop-up function can be deactivated on the traffic sign page by pressing the SET/CLR button on the turn signal lever.
Once setting page is displayed, select **Off** to deactivate pop-up function. Reactivated by selecting **On**. When switching on the ignition, pop-up function is deactivated. Pop-up indication is displayed for approx. 8 seconds in the Driver Information Centre.

**Traffic sign detection in conjunction with navigation system**

If the vehicle is equipped with a navigation system, the following features can be available:

- constant indication of actual speed limits
- in heavy weather conditions, the navigation data for speed limits are displayed

**Fault**
The traffic sign assistant system may not operate correctly when:

- the area of the windscreen, where the front camera is located, is not clean
- traffic signs are completely or partially covered or difficult to discern
- there are adverse environmental conditions, e.g. heavy rain, snow, direct sunlight or shadows. In this case **No Traffic Sign Detection due to Weather** is indicated on the display
- traffic signs are incorrectly mounted or damaged
- traffic signs do not comply with the Vienna Convention on traffic signs (Wiener Übereinkommen über Straßenverkehrszeichen)

**Caution**
The system is intended to help the driver within a defined speed range to discern certain traffic signs. Do not ignore traffic signs which are not displayed by the system.
The system does not discern any other than the conventional traffic signs that might give or end a speed limit.
Do not let this special feature tempt you into taking risks when driving.
Always adapt speed to the road conditions.
The driver assistance systems do not relieve the driver from full responsibility for vehicle operation.

**Lane departure warning**
The lane departure warning system observes the lane markings between which the vehicle is driving via a front camera. The system detects lane changes and warns the driver in the event of an unintended lane change via visual and acoustic signals.
Criteria for the detection of an unintended lane change are:
- no operation of turn signals
- no brake pedal operation
- no active accelerator operation or speeding-up
- no active steering
If the driver is active, no warning will be issued.

**Activation**

The lane departure warning system is activated by pressing the button. The illuminated LED in the button indicates that the system is switched on. When the control indicator in the instrument cluster illuminates green, the system is ready to operate. The system is only operable at vehicle speeds above 56 km/h and if lane markings are available. When the system recognises an unintended lane change, the control indicator changes to yellow and flashes. Simultaneously a chime sound is activated.

**Deactivation**

The system is deactivated by pressing button, the LED in the button extinguishes.

At speeds below 56 km/h the system is inoperable.

**Fault**

The lane departure warning system may not operate properly when:
- the windscreen is not clean
- there are adverse environmental conditions like heavy rain, snow, direct sunlight or shadows

The system can not operate when no lane marking is detected.
Fuel

Fuel for petrol engines

Only use unleaded fuel that complies with European standard EN 228 or E DIN 51626-1 or equivalent.

Your engine is capable of running with E10 fuel that fulfills these standards. E10 fuel contains up to 10 % bioethanol.

Use fuel with the recommended octane rating $\geq 265$. Use of fuel with too low an octane rating can reduce engine power and torque and slightly increases fuel consumption.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use of fuel that does not comply to EN 228 or E DIN 51626-1 or equivalent can lead to deposits or engine damage and may affect your warranty.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use of fuel with too low an octane rating could lead to uncontrolled combustion and engine damage.</td>
</tr>
</tbody>
</table>

Fuel for diesel engines

Only use diesel fuel that complies with EN 590.

In countries outside the European Union use Euro-Diesel fuel with a sulphur concentration below 50 ppm.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Use of fuel that does not comply to EN 590 or similar can lead to engine power loss, increased wear or engine damage and may affect your warranty.</td>
</tr>
</tbody>
</table>

Do not use marine diesel oils, heating oils, Aquazole and similar diesel-water emulsions. Diesel fuels must not be diluted with fuels for petrol engines.

Fuel for natural gas operation

Use natural gas with a methane content of approx. 78 - 99 %. L-gas (low) has approx. 78 - 87 % and H-gas (high) has approx. 87 - 99 %. Biogas with the same methane content can also be used if it has been chemically prepared and desulphurised.

Only use natural gas or biogas that complies with DIN 51624.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not use fuel or fuel additives that contain metallic compounds such as manganese-based additives. This may cause engine damage.</td>
</tr>
</tbody>
</table>

Liquid gas or LPG must not be used.
Fuel selector

Pressing button \( \text{\textbullet} \) switches between petrol and natural gas operation. Switching is not possible at high loads (e.g. strong acceleration, running at full throttle). The LED status shows the current operating mode.

- **\( \text{\textbullet} \) off** = natural gas operation.
- **\( \text{\textbullet} \) illuminates** = petrol operation.
- **\( \text{\textbullet} \) flashes** = no switching is possible, one type of fuel is empty.

As soon as the natural gas tank is empty, petrol operation is automatically engaged until the ignition is switched off.

If the natural gas tank is not refuelled, the system must be manually switched to petrol operation before the engine is started-up again. This will prevent damage to the catalytic converter (overheating caused by irregular fuel supply).

If the selector switch is operated several times within a short time, a switchover block is activated. The engine remains in the current operating mode. The block remains active until the ignition is switched off.

A slight loss of power and torque can be expected during petrol operation. You must therefore adapt your driving style (e.g. during overtaking manoeuvres) and vehicle loads (e.g. towing loads) accordingly.

Every six months run the petrol tank down until control indicator \( \text{\textbullet} \) illuminates, then refuel. This is necessary to maintain fuel quality as well as system function necessary for petrol operation.

Fill the tank completely at regular intervals to prevent corrosion in the tank.

Fuel for liquid gas operation

Liquid gas is known as LPG (Liquefied Petroleum Gas) or under its French name GPL (Gaz de Pétrole Liquéfié). LPG is also known as Autogas.

LPG consists mainly of propane and butane. The octane rating is between 105 and 115, depending on the butane proportion. LPG is stored liquid at around 5 - 10 bar pressure.

The boiling point depends on the pressure and mixing ratio. At ambient pressure, it is between -42 °C (pure propane) and -0.5 °C (pure butane).
Driving and operating

Caution

The system works at an ambient temperature of approx. -8 °C to 100 °C.

Full function of the LPG system can only be guaranteed with liquid gas which complies with the minimum requirements of DIN EN 589.

Fuel selector

Pressing the LPG button switches between petrol and liquid gas operation as soon as the required parameters (coolant temperature, gas temperature and minimum engine speed) have been reached. The requirements are usually fulfilled after around 60 seconds (depending on exterior temperature) and the first firm press on the accelerator. The LED status shows the current operating mode:

- off = petrol operation
- illuminates = liquid gas operation
- flashes = no switching is possible, one type of fuel is empty

As soon as the liquid gas tank is empty, petrol operation is automatically engaged until the ignition is switched off.

Every six months, run the petrol tank down until control indicator illuminates, then refuel. This helps maintain fuel quality and system function for petrol operation.

Fill the tank completely at regular intervals to prevent corrosion in the tank.

Faults and remedies

If gas mode is not possible, check the following:

- Is there enough liquid gas present?
- Is there enough petrol present for starting?

Due to extreme temperatures in combination with the gas composition, it may take slightly longer before the system switches from petrol to gas mode.

In extreme situations, the system may also switch back to petrol mode if the minimum requirements are not fulfilled.

Seek the assistance of a workshop in the event of all other faults.

Caution

Repairs and adjustments may only be made by trained specialists in order to maintain the safety and warranty on the LPG system.

Liquid gas is given a particular odour (odorised) so that any leaks can be detected easily.
### Warning

If you smell gas in the vehicle or in the immediate vicinity, switch to petrol mode immediately. No smoking. No naked flames or ignition sources.

If the gas odour persists, do not start the engine. Have the cause of the fault remedied by a workshop.

When using underground car parks, follow the instructions of the operator and local laws.

**Note**

In the event of an accident, switch off the ignition and lights.

### Refuelling

**Danger**

Before refuelling, switch off engine and any external heaters with combustion chambers. Switch off any mobile phones.

Follow the operating and safety instructions of the filling station when refuelling.

### Danger

Fuel is flammable and explosive. No smoking. No naked flames or sparks.

If you can smell fuel in your vehicle, have the cause of this remedied immediately by an authorized dealer.

### Caution

In case of misfuelling, do not switch on ignition.

Fuel filler flap is located at right rear side of the vehicle.
The fuel filler flap can only be opened if the vehicle is unlocked. Pull flap at the recess and open.

**Petrol and Diesel refuelling**
To open, turn the cap slowly to the left.

The fuel filler cap can be retained in the bracket on the fuel filler flap. For refuelling, fully insert the pump nozzle and switch it on. After automatic cut-off, it can be topped up with max. two doses of fuel.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Wipe off any overflowing fuel immediately.</td>
</tr>
</tbody>
</table>

To close, turn the fuel filler cap to the right until it clicks. Close the flap and let engage.

**Natural gas refuelling**

The fuel filler flap can only be opened if the vehicle is unlocked. Release the fuel filler flap by pushing the flap.

**Warning**
Refuel only with a maximum output pressure of 250 bar. Use only temperature compensated filling stations.

The refuelling procedure must be completed, i.e. the filler neck must be vented.
Driving and operating

The capacity of the natural gas tank depends on outside temperature, filling pressure and type of refuelling system. Capacities 271.

Close the flap and allow it to engage.

Terms for "natural gas vehicles" abroad:

- German: Erdgasfahrzeuge
- English: NGVs = Natural Gas Vehicles
- French: Véhicules au gaz naturel – or – Véhicules GNV
- Italian: Metano auto

Terms for "natural gas" abroad:

- German: Erdgas
- English: CNG = Compressed Natural Gas
- French: GNV = Gaz Naturel (pour) Véhicules - or - CGN = carburant gaz naturel
- Italian: Metano (per auto)

Liquid gas refuelling

Follow the operating and safety instructions of the filling station when refuelling.

The filling valve for the liquid gas is behind the fuel filler cap.

Fit the required adapter.

Unscrew protective cap from the filler neck.

ACME Adapter: Screw the nut of the filling nozzle onto the adapter. Press locking lever on filler nozzle down.
**DISH (Italy) filler neck:** Place the filler nozzle into the adapter. Press locking lever on filler nozzle down.

**Bayonet filler neck:** Place filler nozzle on the adapter and turn to the left or right through one quarter turn. Pull locking lever of filler nozzle fully.

**EURO filler neck:** Press the filler nozzle onto the adapter until it engages.

Press the button of the liquid gas supply point. The filling system stops or begins to run slowly when 80% of the tank volume is reached (maximum fill level).

Release button on filling system and the filling process stops. Release the locking lever and remove the filler nozzle. A small quantity of liquid gas can escape.

Remove adapter and stow in vehicle.

Fit protective cap to prevent the penetration of foreign bodies into the filler opening and the system.

---

<table>
<thead>
<tr>
<th><strong>Warning</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Due to the system design, an escape of liquid gas after releasing the locking lever is unavoidable. Avoid inhaling.</td>
</tr>
</tbody>
</table>

---

<table>
<thead>
<tr>
<th><strong>Warning</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>The liquid gas tank may only be filled to 80% for safety reasons.</td>
</tr>
</tbody>
</table>

---

The multivalve on the liquid gas tank automatically limits the fill quantity. If a larger quantity is added, we recommend not exposing the vehicle to the sun until the excess amount has been used up.

**Filling adapter**

As filling systems are not standardised, different adapters are required which are available from Opel Distributors and from Opel Authorised Repairers.

---

**ACME adapter:** Belgium, Germany, Ireland, Luxembourg, Switzerland

**Bayonet adapter:** Netherlands, Norway, Spain, United Kingdom
Croatia, Latvia, Lithuania, Macedonia, Austria, Poland, Portugal, Romania, Sweden, Switzerland, Serbia, Slovakia, Slovenia, Czech Republic, Turkey, Ukraine, Hungary

**Fuel filler cap**
Only use genuine fuel filler caps. Diesel-engined vehicles have special fuel filler caps.

**Fuel consumption - CO$_2$ - Emissions**

**Petrol and Diesel engines**
The fuel consumption (combined) of the model Opel Zafira is within a range of 4.5 to 7.2 l/100 km.
The CO$_2$ emission (combined) is within a range of 119 to 169 g/km.
For the values specific for your vehicle, refer to the EEC Certificate of Conformity provided with your vehicle or other national registration documents.

**Natural gas engines**
The gas consumption (combined) of the model Opel Zafira is 4.7 kg/100 km.
The CO$_2$ emission (combined) is within a range of 106 to 167 g/km.
For the values specific for your vehicle, refer to the EEC Certificate of Conformity provided with your vehicle or other national registration documents.

**General information**
The official fuel consumption and specific CO$_2$ emission figures quoted relate to the EU base model with standard equipment.
Fuel consumption data and CO$_2$ emission data are determined according to regulation R (EC) No. 715/2007 (in the version respectively applicable), taking into consideration the vehicle weight in running order, as specified by the regulation.
The figures are provided only for the purpose of comparison between different vehicle variants and must
not be taken as a guarantee for the actual fuel consumption of a particular vehicle. Additional equipment may result in slightly higher results than the stated consumption and CO₂ figures. Furthermore, fuel consumption is dependent on personal driving style as well as road and traffic conditions.

Natural gas
The fuel consumption information was obtained using reference fuel G20 (methane proportion 99 - 100 mol%) under prescribed driving conditions. When using natural gas with a lower proportion of methane, the fuel consumption can differ from the specified values.

Towing

**General information**

Only use towing equipment that has been approved for your vehicle. Vehicles with natural gas engine require a special towing equipment. Entrust retrofitting of towing equipment to a workshop. It may be necessary to make changes that affect the cooling system, heat shields or other equipment.

The bulb outage detection function for trailer brake light can not detect partial bulb outage. E. g. in case of 4x5 Watts it only detects lamp outage when only a 5 watts lamp remains or none.

Fitting of towing equipment could cover the opening of the towing eye. If this is the case use the coupling ball bar for towing. Always keep the coupling ball bar in the vehicle.

Installation dimensions of factory-fitted towing equipment ▷ 275.

**Driving characteristics and towing tips**

Before attaching a trailer, lubricate the coupling ball. However, do not do so if a stabiliser, which acts on the coupling ball, is being used to reduce snaking movements.

For trailers with low driving stability and caravan trailers with a permitted gross vehicle weight of more than 1300 kg the use of a stabiliser is strongly recommended when driving above 80 km/h.

If the trailer starts snaking, drive more slowly, do not attempt to correct the steering and brake sharply if necessary.

When driving downhill, drive in the same gear as if driving uphill and drive at a similar speed.

Adjust tyre pressure to the value specified for full load ▷ 272.
Driving and operating

Trailer towing

Trailer loads
The permissible trailer loads are vehicle and engine-dependent maximum values which must not be exceeded. The actual trailer load is the difference between the actual gross weight of the trailer and the actual coupling socket load with the trailer coupled.

The permissible trailer loads are specified in the vehicle documents. In general, they are valid for gradients up to max. 12 %.

The permitted trailer load applies up to the specified incline and up to an altitude of 1000 metres above sea level. Since engine power decreases as altitude increases due to the air becoming thinner, therefore reducing climbing ability, the permissible gross train weight also decreases by 10 % for every 1000 metres of additional altitude. The gross train weight does not have to be reduced when driving on roads with slight inclines (less than 8 %, e.g. motorways).

The permissible gross train weight must not be exceeded. This weight is specified on the identification plate 260.

Vertical coupling load
The vertical coupling load is the load exerted by the trailer on the coupling ball. It can be varied by changing the weight distribution when loading the trailer.

The maximum permissible vertical coupling load (75 kg) is specified on the towing equipment identification plate and in the vehicle documents. Always aim for the maximum load, especially in the case of heavy trailers. The vertical coupling load should never fall below 25 kg.

Rear axle load
When the trailer is coupled and the towing vehicle fully loaded, the permissible rear axle load (see identification plate or vehicle documents) may be exceeded by 60 kg, the gross vehicle weight rating may be exceeded by 60 kg. If the permissible rear axle load is exceeded, a maximum speed of 100 km/h applies.

Towing equipment

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>When operating without a trailer, remove the coupling ball bar.</td>
</tr>
</tbody>
</table>
Stowage of coupling ball bar

The bag with the coupling ball bar is stowed in the load compartment. Place the strap through the right rear lashing eye, wrap around twice and tighten the strap to secure the bag.

Fitting the coupling ball bar

Disengage and fold down the socket. Remove the sealing plug from the opening for the coupling ball bar and stow it.

Checking the tensioning of the coupling ball bar

- Red marking on rotary knob must point towards green marking on coupling ball bar.
- The gap between the rotary knob and the coupling ball bar must be approx. 6 mm.
- The key must be in position  ❖ . Otherwise, the coupling ball bar must be tensioned before being inserted:
  - Unlock coupling ball bar by turning key to position  ❖ .
Pull out rotary knob and turn clockwise as far as it will go.

**Inserting the coupling ball bar**

Insert the tensioned coupling ball bar in the opening and push firmly upwards until it audibly engages. The rotary handle snaps back into its original position resting against the coupling ball bar without a gap.

<table>
<thead>
<tr>
<th><strong>Warning</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Do not touch rotary handle during insertion.</td>
</tr>
</tbody>
</table>

Lock the coupling ball bar by turning the key to position ②. Remove the key and close the protective flap.

**Eye for break-away stopping cable**

Attach breakaway stopping cable to eye.

**Check that the coupling ball bar is correctly installed**

- Green marking on rotary knob must point towards green marking on coupling ball bar.
- There must be no gap between the rotary handle and the coupling ball bar.
Driving and operating

The coupling ball bar must be firmly engaged in the opening.
The coupling ball bar must be locked and the key removed.

**Warning**

Towing a trailer is permitted only when a coupling ball bar is fitted correctly. If the coupling ball bar does not engage correctly, seek the assistance of a workshop.

Dismounting the coupling ball bar

Open the protective flap and turn the key to position 3 to unlock the coupling ball bar.
Pull out rotary handle and turn clockwise as far as it will go. Pull out coupling ball bar downwards.
Insert sealing plug in opening. Fold away socket.

**Trailer stability assist**

If the system detects snaking movements, engine power is reduced and the vehicle/trailer combination is selectively braked until the snaking ceases. While system is working keep steering wheel as still as possible.

Trailer stability assist (TSA) is a function of the Electronic Stability Control 169.
### General Information

#### Accessories and vehicle modifications

We recommend the use of genuine parts and accessories and factory approved parts specific for your vehicle type. We cannot assess or guarantee reliability of other products - even if they have a regulatory or otherwise granted approval.

Do not make any modifications to the electrical system, e.g. changes of electronic control units (chip tuning).

**Caution**

When transporting the vehicle on a train or on a recovery vehicle, the mud flaps might be damaged.

---

### Vehicle storage

**Storage for a long period of time**

If the vehicle is to be stored for several months:

- Wash and wax the vehicle.
- Have the wax in the engine compartment and underbody checked.
- Clean and preserve the rubber seals.
- Fill up fuel tank completely.
- Change the engine oil.
- Drain the washer fluid reservoir.
- Check the coolant antifreeze and corrosion protection.
- Adjust tyre pressure to the value specified for full load.
- Park the vehicle in a dry, well ventilated place. Engage first or reverse gear or set selector lever to P. Prevent the vehicle from rolling.
- Do not apply the parking brake.
Open the bonnet, close all doors and lock the vehicle.

Disconnect the clamp from the negative terminal of the vehicle battery. Beware that all systems are not functional, e.g. anti-theft alarm system.

**Putting back into operation**
When the vehicle is to be put back into operation:
- Connect the clamp to the negative terminal of the vehicle battery. Activate the electronics of the power windows.
- Check tyre pressure.
- Fill up the washer fluid reservoir.
- Check the engine oil level.
- Check the coolant level.
- Fit the number plate if necessary.

**End-of-life vehicle recovery**
Information on end-of-life vehicle recovery centres and the recycling of end-of-life vehicles is available on our website, where legally required. Only entrust this work to an authorised recycling centre. Gas vehicles must be recycled by a service centre authorised for gas vehicles.

**Vehicle checks**

**Performing work**

> **Warning**
> Only perform engine compartment checks when the ignition is off. The cooling fan may start operating even if the ignition is off.
### Danger

The ignition system and Xenon headlights use extremely high voltage. Do not touch.

### Bonnet

#### Opening

Pull the release lever and return it to its original position.

Push the safety catch to the right and open the bonnet.

The bonnet is held open automatically by a lifter.

If the bonnet is opened during an Autostop, the engine will be restarted automatically for safety reasons.

#### Closing

Lower the bonnet and allow it to drop into the catch. Check that the bonnet is engaged.

### Engine oil

Check the engine oil level manually on a regular basis to prevent damage to the engine. Ensure that the correct specification of oil is used. Recommended fluids and lubricants ☞ 258.

Check with the vehicle on a level surface. The engine must be at operating temperature and switched off for at least 5 minutes.

Pull out the dipstick, wipe it clean, insert it to the stop on the handle, pull out and read the engine oil level.

Insert dipstick to the stop on the handle and make half a turn.
When the engine oil level has dropped to the **MIN** mark, top up engine oil.

We recommend the use of the same grade of engine oil that was used at last change.

The engine oil level must not exceed the **MAX** mark on the dipstick.

On some engines a chute is needed to top up engine oil.

A chute is located on the right side storage in the load compartment.

Use the chute to fill in the engine oil into the engine oil opening.

After topping up, put the chute into the plastic bag and stow it in the storage.

<table>
<thead>
<tr>
<th><strong>Caution</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Overfilled engine oil must be drained or suctioned out.</td>
</tr>
</tbody>
</table>

Capacities 271.

Fit the cap on straight and tighten it.
Vehicle care

Engine coolant

The coolant provides freeze protection down to approx. -28 °C. In northern countries with very low temperatures the factory filled coolant provides frost protection down to approx. -37°C.

Caution

Only use approved antifreeze.

Coolant level

Caution

Too low a coolant level can cause engine damage.

Caution

If the cooling system is cold, the coolant level should be above the filling line mark. Top up if the level is low.

Warning

Allow the engine to cool before opening the cap. Carefully open the cap, relieving the pressure slowly.

To top up use a 1:1 mixture of released coolant concentrate mixed with clean tap water. If no coolant concentrate is available, use clean tap water. Install the cap tightly. Have the coolant concentration checked and have the cause of the coolant loss remedied by a workshop.

Washer fluid

Fill with clean water mixed with a suitable quantity of windscreen washer fluid which contains antifreeze. For the correct mixing ratio refer to the washer fluid container.
**Caution**

Only washer fluid with a sufficient antifreeze concentration provides protection at low temperatures or a sudden drop in temperature.

---

**Brakes**

In the event of minimum thickness of the brake lining, a squealing noise sounds during braking.

Continued driving is possible but have the brake lining replaced as soon as possible.

Once new brake linings are installed, do not brake unnecessarily hard for the first few journeys.

**Brake fluid**

<table>
<thead>
<tr>
<th>Warning</th>
</tr>
</thead>
<tbody>
<tr>
<td>Brake fluid is poisonous and corrosive. Avoid contact with eyes, skin, fabrics and painted surfaces.</td>
</tr>
</tbody>
</table>

The brake fluid level must be between the **MIN** and **MAX** marks.

When topping up, ensure maximum cleanliness as contamination of the brake fluid can lead to brake system malfunctions. Have the cause of the loss of brake fluid remedied by a workshop.

Only use high-performance brake fluid approved for the vehicle. Brake and clutch fluid ➤ 258.

---

**Battery**

The vehicle battery is maintenance-free provided that the driving profile allows sufficient charging of the battery. Short-distance driving and frequent engine starts can discharge the battery. Avoid the use of unnecessary electrical consumers.

Batteries do not belong in household waste. They must be disposed of at an appropriate recycling collection point.

Laying up the vehicle for more than 4 weeks can lead to battery discharge. Disconnect the clamp from the negative terminal of the vehicle battery.

Ensure the ignition is switched off before connecting or disconnecting the vehicle battery.

Battery discharge protection ➤ 144.
Replacing the battery

**Note**
Any deviation from the instructions given in this paragraph may lead to a temporary deactivation of the stop-start system.

When the battery is being replaced, please ensure that there are no open ventilation holes in the vicinity of the positive terminal. If a ventilation hole is open in this area, it must be closed off with a dummy cap, and the ventilation in the vicinity of the negative terminal must be opened.

Only use batteries that allow the fuse box to be mounted above the battery.

In vehicles with stop-start system, ensure to have the AGM (Absorptive Glass Mat) battery replaced with an AGM battery again.

An AGM battery can be identified by the label on the battery. We recommend the use of an original Opel battery.

**Note**
Using an AGM battery different from the original Opel battery might result in a lower performance of the stop-start system.

We recommend that you have the battery replaced by a workshop.

Stop-start system 157.

Charging the battery

<table>
<thead>
<tr>
<th><strong>Warning</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>On vehicles with stop-start system, ensure that the charging potential does not exceed 14.6 volts when using a battery charger. Otherwise the battery might be damaged.</td>
</tr>
</tbody>
</table>

Jump starting 250.

Warning label
Meaning of symbols:
- No sparks, naked flames or smoking.
- Always shield eyes. Explosive gases can cause blindness or injury.
- Keep the battery out of reach of children.
- The battery contains sulphuric acid which could cause blindness or serious burn injuries.
- See the Owner’s Manual for further information.
- Explosive gas may be present in the vicinity of the battery.

Diesel fuel system bleeding
If the tank has been run dry, the diesel fuel system must be bled. Switch on the ignition three times for 15 seconds at a time. Then crank the engine for a maximum of 40 seconds. Repeat this process after no less than 5 seconds. If the engine fails to start, seek the assistance of a workshop.

Wiper blade replacement
Lift the wiper arm until it stays in the raised position, press button to disengage the wiper blade and remove.
Attach the wiper blade slightly angled to the wiper arm and push until it engages.
Lower wiper arm carefully.

Wiper blade on the rear window
Lift wiper arm. Disengage wiper blade as shown in illustration and remove.
Attach the wiper blade slightly angled to the wiper arm and push until it engages.
Bulb replacement

Switch off the ignition and switch off the relevant switch or close the doors. Only hold a new bulb at the base! Do not touch the bulb glass with bare hands. Use only the same bulb type for replacement. Replace headlight bulbs from within the engine compartment.

Halogen headlights

1. Rotate the cap (1) anticlockwise and remove it.
2. Rotate the bulb holder anticlockwise to disengage. Withdraw the bulb holder from the reflector.

Bi-Halogen Headlight (1) with one bulb for low and high beam.
Front turn signal (2).
Sidelight/Daytime running light (3).

Low/High beam (1)

1. Rotate the cap (1) anticlockwise and remove it.
2. Rotate the bulb holder anticlockwise to disengage. Withdraw the bulb holder from the reflector.
3. Disengage the bulb holder from the plug connector by pressing the retaining lug.

4. Replace the bulb and connect bulb holder with the plug connector.

5. Insert the bulb holder, engaging the two lugs into the reflector and rotate clockwise to secure.

6. Fit the cap and rotate clockwise.

Front turn signal (2)

1. Rotate bulb socket (2) anticlockwise to disengage. Withdraw the bulb socket from the reflector.

2. Remove the bulb from the socket by turning anticlockwise.

3. Replace and insert new bulb into socket by turning clockwise.

4. Insert the bulb socket into the reflector and turn clockwise.
Sidelight/Daytime running light (3)

1. Rotate bulb socket (3) anticlockwise to disengage. Withdraw the bulb socket from the reflector.

2. Remove the bulb from the socket by pulling.

3. Replace and insert new bulb into socket.

4. Insert the bulb socket into the reflector and turn clockwise.

Adaptive forward lighting

Danger

Adaptive forward lighting system uses Xenon headlights. Xenon headlights work under extremely high electrical voltage. Do not touch. Have bulbs replaced by a workshop.

Bulbs for front turn signal and corner lighting can be changed.

Corner lighting (1).
Front turn signal (2).
Sidelight/Daytime running light are designed as Light Emitting Diodes (LEDs) and cannot be changed.

**Corner lighting (1)**

1. Rotate the cap (1) anticlockwise and remove it.

2. Rotate the bulb holder anticlockwise to disengage. Withdraw the bulb holder from the reflector.

3. Disengage the bulb from the plug connector by pulling.

4. Replace the bulb and connect bulb holder with the plug connector.

5. Insert the bulb holder, engaging the two lugs into the reflector and rotate clockwise to secure.

6. Fit the cap and rotate clockwise.

**Front turn signal (2)**

1. Rotate bulb socket (2) anticlockwise to disengage. Withdraw the bulb socket from the reflector.
2. Remove the bulb from the socket by turning anticlockwise.
3. Replace and insert new bulb into socket by turning clockwise.
4. Insert the bulb socket into the reflector and turn clockwise.

Fog lights
The bulbs are accessible from beneath the vehicle.

2. Hinge away the cover.
   Turn the bulb socket anticlockwise and remove it from the reflector.
3. Disengage the bulb socket from the plug connector by pressing the retaining lug.
4. Remove and replace the bulb socket with bulb and attach the plug connector.
5. Insert the bulb socket into the reflector, turn clockwise and engage.
6. Mount the cover with the screws.
Tail lights

1. Hinge out the screw cover.

2. Remove the screws, marked by the arrows.

3. Carefully withdraw the light assembly from retaining pins and remove.

4. Detach the plug connector from the light assembly.

5. Remove and replace the bulb by turning the bulb socket.
   
   Turn signal light (1)
   Tail lights (2)
   Brake light (3)
Tail lights with Light Emitting Diode (LED) for tail and brake light

Only turn signal light (1) can be changed.

Remove and replace the bulb by turning the bulb socket.

6. Connect the plug connector with the light assembly.
7. Fit light assembly onto retaining pins and mount light assembly with the screws.
8. Plug in screw cover.

Reverse lights (4) in the tailgate

2. Turn the bulb holder anti-clockwise and remove it from the reflector.

3. Remove the bulb from the socket by pulling.
4. Replace and insert new bulb into socket.
5. Insert the bulb socket into the reflector and turn clockwise.
6. Install the cover.

Rear fog light

The bulbs are accessible from beneath the vehicle.
1. Turn the bulb socket anticlockwise and remove it from the reflector.

2. Remove the bulb from the socket by turning anticlockwise.

3. Replace and insert new bulb into the socket by turning clockwise.

4. Insert the bulb socket into the reflector, turn clockwise and engage.

Bulb check
Switch on the ignition, operate and check all lights.

Side turn signal lights
Have bulbs replaced by a workshop.

Number plate light
1. Insert screwdriver in recess of the cover, press to the side and release spring. Remove cover.
2. Remove the bulb from the socket by pulling.
3. Replace the bulb and insert it into the socket.
4. Push the cover into the housing.

**Interior lights**

**Courtesy lights, reading lights**
Have bulbs replaced by a workshop.

**Load compartment light**
Have bulbs replaced by a workshop.

---

**Instrument panel illumination**
Have bulbs replaced by a workshop.

**Electrical system**

**Fuses**
Data on the replacement fuse must match the data on the defective fuse.
There are three fuse boxes in the vehicle:
- in the front left of the engine compartment,
- in left-hand drive vehicles, in the interior behind the storage compartment, or, in right-hand drive vehicles, behind the glovebox,
- behind a cover on the left side of the load compartment.

Before replacing a fuse, turn off the respective switch and the ignition.
A blown fuse can be recognised by its melted wire. Do not replace the fuse until the cause of the fault has been remedied.
Some functions are protected by several fuses.
Fuses may also be inserted without existence of a function.
Fuse extractor
A fuse extractor may be located in the fuse box in the engine compartment.

Place the fuse extractor on the various types of fuse from the top or side, and withdraw fuse.
Engine compartment fuse box

The fuse box is in the front left of the engine compartment.
Disengage the cover and fold it upwards until it stops. Remove the cover vertically upwards.

After having changed defective fuses close the fuse box cover and press until it engages. If the fuse box cover is not closed correctly, malfunction may occur.
In left-hand drive vehicles, the fuse box is behind the storage compartment in the instrument panel. Open the compartment and push it to the left to unlock. Fold the compartment down and remove it.

In right-hand drive vehicles, the fuse box is located behind a cover in the glovebox. Open the glovebox, then open the cover and fold it down.

Vehicle tools

Some tools, the towing eye and (only on vehicles with spare wheel) the vehicle jacking equipment are placed in the rear storage in the load compartment floor.

Open the cover in front of the tailgate.

Wheels and tyres

Tyre condition, wheel condition

Drive over edges slowly and at right angles if possible. Driving over sharp edges can cause tyre and wheel damage. Do not trap tyres on the kerb when parking.

Regularly check the wheels for damage. Seek the assistance of a workshop in the event of damage or unusual wear.

Winter tyres

Winter tyres improve driving safety at temperatures below 7 °C and should therefore be fitted on all wheels.

In accordance with country-specific regulations, affix the speed sticker in the driver's field of view.

Tyre designations

E.g. 215/60 R 16 95 H

- 215 = Tyre width, mm
- 60 = Cross-section ratio (tyre height to tyre width), %
- R = Belt type: Radial
- RF = Type: RunFlat
- 16 = Wheel diameter, inches
- 95 = Load index e.g. 95 is equivalent to 690 kg
- H = Speed code letter

Speed code letter:

- Q = up to 160 km/h
- S = up to 180 km/h
- T = up to 190 km/h
- H = up to 210 km/h
- V = up to 240 km/h
- W = up to 270 km/h

Tyre pressure

Check the pressure of cold tyres at least every 14 days and before any long journey. Do not forget the spare wheel. This also applies to vehicles with tyre pressure monitoring system.

Unscrew the valve cap.
Tyre pressure 272 and on the label on the front left or right door frame. The tyre pressure data refers to cold tyres. It applies to summer and winter tyres.

Always inflate the spare tyre to the pressure specified for full load. The ECO tyre pressure serves to achieve the smallest amount of fuel consumption possible.

Incorrect tyre pressures will impair safety, vehicle handling, comfort and fuel economy and will increase tyre wear.

### Warning

If the pressure is too low, this can result in considerable tyre warm-up and internal damage, leading to tread separation and even to tyre blow-out at high speeds.

If the tyre pressure must be reduced or increased on a vehicle with tyre pressure monitoring system, switch off ignition.

**Tyre pressure monitoring system**

The tyre pressure monitoring system checks the pressure of all four wheels once a minute when vehicle speed exceeds a certain limit.

All wheels must be equipped with pressure sensors and the tyres must have the prescribed pressure.

The current tyre pressures can be shown in the Vehicle Information Menu in the Driver Information Centre.

The menu can be selected by the buttons on the turn signal lever.

Press the MENU button to select the Vehicle Information Menu.
Turn the adjuster wheel to select the tyre pressure monitoring system. System status and small pressure differences are displayed by a warning message with the corresponding tyre flashing in the Driver Information Centre. Furthermore considerable pressure differences between the tyres on one axle are displayed by a warning message in the Driver Information Centre. Major pressure differences are indicated additionally by the control indicator (1).

Control indicator (1) 111. Vehicle messages 120. If the tyre pressure shall be reduced or increased, switch off ignition. If a complete set of wheels without sensors is mounted (e.g. four winter tyres), a message is displayed in the Driver Information Centre. The tyre pressure monitoring system is not operational. Retrofitting of sensors is possible. A spare wheel or temporary spare wheel is not equipped with pressure sensors. The tyre pressure monitoring system is not operational for these wheels. Control indicator (1) illuminates. For the further three wheels the system remains operational. The use of commercially available liquid tyre repair kits can impair the function of the system. Factory approved repair kits can be used. External high-power radio equipment could disrupt the tyre pressure monitoring system.

The tyre pressure monitoring system valve cores and sealing rings must be replaced each time the tyres are changed.

**Adaptive threshold function**
The tyre pressure monitoring system automatically detects if the vehicle is driven with a tyre pressure appropriate for a load of up to 3 people or for a full load. If the tyre pressure shall be reduced, switch off ignition before reducing.

**Auto learn function**
After changing wheels the vehicle has to be stationary for approx. 20 minutes, before the system recalculates. The following relearn process takes up to 10 minutes of driving with a minimum speed of 20 km/h. In this case -- can be displayed or pressure values can swap in the Driver Information Centre. If problems occur during the relearn process a warning message is displayed in the Driver Information Centre.
Temperature compensation
Cold tyres decrease the tyre pressure, warm tyres increase the tyre pressure. The tyre pressure monitoring system considers this effect for the warning messages. The tyre pressure value displayed in the Driver Information Centre shows the actual tyre pressure. Therefore it is important to check tyre pressure with cold tyres.

Tread depth
Check tread depth at regular intervals.

Tyres should be replaced for safety reasons at a tread depth of 2-3 mm (4 mm for winter tyres).

For safety reasons, it is recommended that the tread depth of the tyres on one axle should not vary by more than 2 mm.

The legally permissible minimum tread depth (1.6 mm) has been reached when the tread has worn down as far as one of the tread wear indicators (TWI). Their position is indicated by markings on the sidewall.

If there is more wear at the front than the rear, swap round front wheels and rear wheels periodically. Ensure that the direction of rotation of the wheels remains the same.

Tyres age, even if they are not used. We recommend tyre replacement every 6 years.

Changing tyre and wheel size
If tyres of a different size than those fitted at the factory are used, it may be necessary to reprogramme the speedometer as well as the nominal tyre pressure and make other vehicle modifications.

After converting to a different tyre size, have the label with tyre pressures replaced.

⚠️ Warning

Use of unsuitable tyres or wheels may lead to accidents and will invalidate the vehicle type approval.

Wheel covers
Wheel covers and tyres that are factory approved for the respective vehicle and comply with all of the relevant wheel and tyre combination requirements must be used.
If the wheel covers and tyres used are not factory approved, the tyres must not have a rim protection ridge. Wheel covers must not impair brake cooling.

⚠️ Warning

Use of unsuitable tyres or wheel covers could lead to sudden pressure loss and thereby accidents.

**Tyre chains**

Tyre chains are only permitted on the front wheels. Always use fine mesh chains that add no more than 10 mm to the tyre tread and the inboard sides (including chain lock).

⚠️ Warning

Damage may lead to tyre blowout.

Tyre chains are only permitted on tyres of size 215/60 R 16 and 225/50 R 17.
Tyre chains are not permitted on tyres of size 225/45 R 18, 235/45 R 18 and 235/40 R 19.
The use of tyre chains is not permitted on the temporary spare wheel.

**Tyre repair kit**

Minor damage to the tyre tread can be repaired with the tyre repair kit. Do not remove foreign bodies from the tyres.

⚠️ Warning

Do not drive faster than 80 km/h. Do not use for a lengthy period. Steering and handling may be affected.

If you have a flat tyre:
Apply the parking brake and engage first gear, reverse gear or P.

Tyre damage exceeding 4 mm or that is at tyre's sidewall cannot be repaired with the tyre repair kit.
The tyre repair kit is on the left side in the load compartment behind a cover.

1. Take the tyre repair kit from the compartment.
2. Remove the compressor.

3. Remove the electrical connection cable and air hose from the stowage compartments on the underside of the compressor.

4. Screw the compressor air hose to the connection on the sealant bottle.
5. Fit the sealant bottle into the retainer on the compressor. Set the compressor near the tyre in such a way that the sealant bottle is upright.
6. Unscrew valve cap from defective tyre.
7. Screw the filler hose to the tyre valve.
8. The switch on the compressor must be set to J.
9. Connect the compressor plug to the power outlet or cigarette lighter socket. To avoid discharging the battery, we recommend running the engine.
10. Set the rocker switch on the compressor to I. The tyre is filled with sealant.

11. The compressor pressure gauge briefly indicates up to 6 bar whilst the sealant bottle is emptying (approx. 30 seconds). Then the pressure starts to drop.

12. All of the sealant is pumped into the tyre. Then the tyre is inflated.

13. The prescribed tyre pressure should be obtained within 10 minutes. Tyre pressure 272. When the correct pressure is obtained, switch off the compressor.

14. Detach the tyre repair kit. Push catch on bracket to remove sealant bottle from bracket. Screw the tyre inflation hose to the free connection of the sealant bottle. This prevents sealant from escaping. Stow tyre repair kit in load compartment.

15. Remove any excess sealant using a cloth.

16. Take the label indicating maximum permitted speed from the sealant bottle and affix in the driver's field of view.

17. Continue driving immediately so that sealant is evenly distributed in the tyre. After driving approx. 10 km (but no more than 10 minutes), stop and check tyre pressure. Screw compressor air hose directly onto tyre valve and compressor when doing this.
If tyre pressure is more than 1.3 bar, set it to the correct value. Repeat the procedure until there is no more loss of pressure. If the tyre pressure has fallen below 1.3 bar, the vehicle must not be used. Seek the assistance of a workshop.

18. Stow away tyre repair kit in load compartment.

Note
The driving characteristics of the repaired tyre are severely affected, therefore have this tyre replaced.

If unusual noise is heard or the compressor becomes hot, turn compressor off for at least 30 minutes.

The built-in safety valve opens at a pressure of 7 bar.

Note the expiry date of the kit. After this date its sealing capability is no longer guaranteed. Pay attention to storage information on sealant bottle.

Replace the used sealant bottle. Dispose of the bottle as prescribed by applicable laws.

The compressor and sealant can be used from approx. -30 °C.

The adapters supplied can be used to pump up other items e.g. footballs, air mattresses, inflatable dinghies etc. They are located on the underside of the compressor. To remove, screw on compressor air hose and withdraw adapter.

**Wheel changing**

Some vehicles are equipped with a tyre repair kit instead of a spare wheel \(\text{\ding{241}}\) 241.

Make the following preparations and observe the following information:

- Park the vehicle on a level, firm and non-skid surface. The front wheels must be in the straight-ahead position.

- Apply the parking brake and engage first gear, reverse gear or P.

- Remove the spare wheel \(\text{\ding{247}}\).

- Never change more than one wheel at once.

- Use the jack only to change wheels in case of puncture, not for seasonal winter or summer tyre change.

- If the ground on which the vehicle is standing is soft, a solid board (max. 1 cm thick) should be placed under the jack.

- No people or animals may be in the vehicle when it is jacked-up.

- Never crawl under a jacked-up vehicle.
- Do not start the vehicle when it is raised on the jack.
- Clean wheel nuts and thread with a clean cloth before mounting the wheel.

**Warning**

Do not grease wheel bolt, wheel nut and wheel nut cone.

1. Disengage wheel nut caps with a screwdriver and remove. Pull off the wheel cover with the hook. Vehicle tools 237.

2. Fold out the wheel wrench and install ensuring that it locates securely and loosen each wheel nut by half a turn.

3. Some versions may have covered the vehicle jacking point. Pull out the cover sideways.

Alloy wheels: Disengage wheel nut caps with a screwdriver and remove. To protect the wheel, place a soft cloth between the screwdriver and the alloy wheel.
4. Ensure the jack is correctly positioned under the relevant vehicle jacking point.

5. Set the jack to the necessary height. Position it directly below the jacking point in a manner that prevents it from slipping.

6. Unscrew the wheel nuts.

7. Change the wheel. Spare wheel 247

8. Screw on the wheel nuts.

9. Lower vehicle.

10. Install the wheel wrench ensuring that it locates securely and tighten each nut in a crosswise sequence. Tightening torque is 140 Nm.

11. Align the valve hole in the wheel cover with the tyre valve before installing.

12. Install vehicle jacking point cover.

13. Stow the replaced wheel 247 and the vehicle tools 237.

14. Check the tyre pressure of the installed tyre and the wheel nut torque as soon as possible.

Have the defective tyre renewed or repaired as soon as possible.

**Jacking position for lifting platform**
Rear arm position of the lifting platform centrically under the recess of the sill.

Front arm position of the lifting platform at the underbody.

Spare wheel
Some vehicles are equipped with a tyre repair kit instead of a spare wheel.

The spare wheel can be classified as a temporary spare wheel depending on the size compared to the other mounted wheels and country regulations.

The spare wheel has a steel rim.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The use of a spare wheel that is smaller than the other wheels or in combination with winter tyres could affect driveability. Have the defective tyre replaced as soon as possible.</td>
</tr>
</tbody>
</table>

The spare wheel is located in a holder beneath the vehicle floor.

1. Open the stowage in the load compartment 3237.
2. Remove both caps above the hexagon bolts.
3. Fit the wheel wrench on one hexagon bolt and turn it anti-clockwise until a resistance is noticeable.
4. Proceed with the other hexagon bolt in the same way.
5. Lift the spare wheel holder and unhook both catches.
6. Lower the spare wheel holder.

7. Detach the safety cable.

8. Lower holder all the way and remove spare wheel.
9. Change the wheel.
   The damaged wheel has to be secured in the load compartment, see below.
10. Lift the empty spare wheel holder and insert the safety cable.
11. Lift the spare wheel holder farther and engage in both catches. The open sides of the catches must point in the direction of travel.
12. Close the empty spare wheel holder by turning both hexagon bolts clockwise successively using the wheel wrench.
13. Fit the caps above both hexagon bolts.
14. Stow wheel wrench and the jack in the stowage in front of the tailgate.
15. Close the stowage compartment cover.

When stowing again the spare wheel in the spare wheel holder, note that the wheel is positioned with the tyre valve above the recess of the wheel holder.

**Stowing a damaged wheel in the load compartment**
The spare wheel holder is not designed for other tyre sizes than spare wheel.

A damaged wheel wider than the spare wheel has to be stowed in the load compartment and secured with a strap. Vehicle tools 237.
The seats of the third row must be folded in \( 76 \).

1. Position the wheel close to the left sidewall of the load compartment.

2. Place the loop end of the strap through the front lashing eye on the left side.

3. Place the hook end of the strap through the loop and pull it until the strap is fastened securely to the lashing eye.

4. Insert the strap through the spokes of the wheel as shown in the illustration.

5. Mount the hook to the rear left lashing eye.

6. Tighten the strap and secure it using the buckle.

### Warning

Storing a jack, a wheel or other equipment in the load compartment could cause injury if they are not fixed properly. During a sudden stop or a collision, loose equipment could strike someone.

Store jack and tools always in the respective storage compartments and secure them by fixing.

Damaged wheel placed in the load compartment must always be secured by the strap.

### Temporary spare wheel

The use of the temporary spare wheel could affect driveability. Have the defective tyre renewed or repaired as soon as possible.

Only mount one temporary spare wheel. Do not drive faster than 80 km/h. Take curves slowly. Do not use for a long period of time.

### Danger

Always drive with folded up and engaged rear seat backrests when stowing a damaged full size wheel in the load compartment.
If your vehicle gets a flat tyre on the rear while towing another vehicle, mount the temporary spare wheel in the front and the full tyre in the rear. Tyre chains \(\diamond 241\).

**Directional tyres**

Fit directional tyres such that they roll in the direction of travel. The rolling direction is indicated by a symbol (e.g. an arrow) on the sidewall.

The following applies to tyres fitted opposing the rolling direction:
- Driveability may be affected. Have the defective tyre renewed or repaired as soon as possible.
- Drive particularly carefully on wet and snow-covered road surfaces.

---

**Jump starting**

Do not start with quick charger.

A vehicle with a discharged battery can be started using jump leads and the battery of another vehicle.

**\(\Delta\) Warning**

Be extremely careful when starting with jump leads. Any deviation from the following instructions can lead to injuries or damage caused by battery explosion or damage to the electrical systems of both vehicles.

**\(\Delta\) Warning**

Avoid contact of the battery with eyes, skin, fabrics and painted surfaces. The fluid contains sulphuric acid which can cause injuries and damage in the event of direct contact.

- Never expose the battery to naked flames or sparks.
- A discharged battery can already freeze at a temperature of 0 °C. Defrost the frozen battery before connecting jump leads.
- Wear eye protection and protective clothing when handling a battery.
- Use a booster battery with the same voltage (12 Volts). Its capacity (Ah) must not be much less than that of the discharged battery.
- Use jump leads with insulated terminals and a cross section of at least 16 mm\(^2\) (25 mm\(^2\) for diesel engines).
- Do not disconnect the discharged battery from the vehicle.
- Switch off all unnecessary electrical consumers.
- Do not lean over the battery during jump starting.
- Do not allow the terminals of one lead to touch those of the other lead.
The vehicles must not come into contact with each other during the jump starting process.

Apply the parking brake, transmission in neutral, automatic transmission in P.

---

Lead connection order:

1. Connect the red lead to the positive terminal of the booster battery.
2. Connect the other end of the red lead to the positive terminal of the discharged battery.
3. Connect the black lead to the negative terminal of the booster battery.
4. Connect the other end of the black lead to a vehicle grounding point, such as the engine block or an engine mounting bolt. Connect as far away from the discharged battery as possible, however at least 60 cm.

Route the leads so that they cannot catch on rotating parts in the engine compartment.

To start the engine:

1. Start the engine of the vehicle providing the jump.
2. After 5 minutes, start the other engine. Start attempts should be made for no longer than 15 seconds at an interval of 1 minute.
3. Allow both engines to idle for approx. 3 minutes with the leads connected.
4. Switch on electrical consumers (e.g. headlights, heated rear window) of the vehicle receiving the jump start.
5. Reverse above sequence exactly when removing leads.
Towing

Towing the vehicle

Insert a screwdriver in the slot at the short edge of the cap. Release the cap by carefully moving the screwdriver sideward. To prevent damage it is recommended to place a cloth between the screwdriver and the frame.

The towing eye is stowed with the vehicle tools 237.

Screw in the towing eye as far as it will go until it stops in a horizontal position.

Attach a tow rope – or better still a tow rod – to the towing eye.

The towing eye must only be used for towing and not for recovering the vehicle.

Switch on ignition to release steering wheel lock and to permit operation of brake lights, horn and windscreen wiper.

Transmission in neutral.

Caution

Drive slowly. Do not drive jerkily. Excessive tractive force can damage the vehicle.

When the engine is not running, considerably more force is needed to brake and steer.

To prevent the entry of exhaust gases from the towing vehicle, switch on the air recirculation and close the windows.

Vehicles with automatic transmission: The vehicle must be towed facing forwards, not faster than 80 km/h nor further than 100 km. In all other cases and when the transmission is defective, the front axle must be raised off the ground.

Seek the assistance of a workshop.

After towing, unscrew the towing eye. Insert cap at the bottom and close.
Towing another vehicle

Insert a screwdriver in the slot at the lower edge of the cap. Release the cap by carefully moving the screwdriver downwards. To prevent damage it is recommended to place a cloth between the screwdriver and the frame.

The towing eye is stowed with the vehicle tools 237.

Screw in the towing eye as far as it will go until it stops in a horizontal position.

The lashing eye at the rear underneath the vehicle must never be used as a towing eye.

Attach a tow rope – or even better a tow bar – to the towing eye.

The towing eye must only be used for towing and not for recovering a vehicle.

Caution

Drive slowly. Do not drive jerkily. Excessive tractive force can damage the vehicle.

After towing, unscrew the towing eye. Insert cap at the bottom and engage.
Appearance care

Exterior care

Locks
The locks are lubricated at the factory using a high quality lock cylinder grease. Use de-icing agent only when absolutely necessary, as this has a degreasing effect and impairs lock function. After using de-icing agent, have the locks regreased by a workshop.

Washing
The paintwork of your vehicle is exposed to environmental influences. Wash and wax your vehicle regularly. When using automatic vehicle washes, select a programme that includes waxing.

Bird droppings, dead insects, resin, pollen and the like should be cleaned off immediately, as they contain aggressive constituents which can cause paint damage.

If using a vehicle wash, comply with the vehicle wash manufacturer's instructions. The windscreen wiper and rear window wiper must be switched off. Remove antenna and external accessories such as roof racks etc.

If you wash your vehicle by hand, make sure that the insides of the wheel housings are also thoroughly rinsed out.

Clean edges and folds on opened doors and the bonnet as well as the areas they cover.

Caution

Always use a cleaning agent with a pH value of 4 to 9.

Do not use cleaning agents on hot surfaces.

Have the door hinges of all doors greased by a workshop.

Do not clean the engine compartment with a steam-jet or high-pressure jet cleaner.

Thoroughly rinse and leather-off the vehicle. Rinse leather frequently. Use separate leathers for painted and glass surfaces: remnants of wax on the windows will impair vision.

Do not use hard objects to remove spots of tar. Use tar removal spray on painted surfaces.

Exterior lights
Headlight and other light covers are made of plastic. Do not use any abrasive or caustic agents, do not use an ice scraper, and do not clean them dry.

Polishing and waxing
Wax the vehicle regularly (at the latest when water no longer beads). Otherwise, the paintwork will dry out.

Polishing is necessary only if the paint has become dull or if solid deposits have become attached to it.

Paintwork polish with silicone forms a protective film, making waxing unnecessary.

Plastic body parts must not be treated with wax or polishing agents.
Windows and windscreen wiper blades
Use a soft lint-free cloth or chamois leather together with window cleaner and insect remover.
When cleaning the rear window, make sure the heating element inside is not damaged.
For mechanical removal of ice, use a sharp-edged ice scraper. Press the scraper firmly against the glass so that no dirt can get under it and scratch the glass.
Clean smearing wiper blades with a soft cloth and window cleaner.

Glass panel
Never clean with solvents or abrasive agents, fuels, aggressive media (e.g. paint cleaner, acetone-containing solutions etc.), acidic or highly alkaline media or abrasive pads. Do not apply wax or polishing agents to the glass panel.

Wheels and tyres
Do not use high-pressure jet cleaners.
Clean rims with a pH-neutral wheel cleaner.
Rims are painted and can be treated with the same agents as the body.

Paintwork damage
Rectify minor paintwork damage with a touch-up pen before rust forms.
Have more extensive damage or rust areas repaired by a workshop.

Underbody
Some areas of the vehicle underbody have a PVC undercoating while other critical areas have a durable protective wax coating.
After the underbody is washed, check the underbody and have it waxed if necessary.
Bitumen/rubber materials could damage the PVC coating. Have underbody work carried out by a workshop.
Before and after winter, wash the underbody and have the protective wax coating checked.

Liquid gas system

<table>
<thead>
<tr>
<th>Danger</th>
</tr>
</thead>
<tbody>
<tr>
<td>Liquid gas is heavier than air and can collect in sink points.</td>
</tr>
<tr>
<td>Take care when performing work at the underbody in a pit.</td>
</tr>
</tbody>
</table>
For painting work and when using a drying booth at a temperature above 60 °C, the liquid gas tank must be removed.
Do not make any modifications to the liquid gas system.

Towing equipment
Do not clean the coupling ball bar with a steam-jet or high-pressure jet cleaner.

Rear carrier system
Clean the rear carrier system with a steam-jet or high-pressure jet cleaner at least once a year.
Operate the rear carrier system periodically if not in regular use, in particular during winter.
**Air shutter**
Clean the shutter system in the front bumper to maintain correct functionality.

**Interior care**

**Interior and upholstery**
Only clean the vehicle interior, including the instrument panel fascia and panelling, with a dry cloth or interior cleaner.

Clean the leather upholstery with clear water and a soft cloth. In case of heavy soiling, use leather care.

The instrument panel should only be cleaned using a soft damp cloth.

Clean fabric upholstery with a vacuum cleaner and brush. Remove stains with an upholstery cleaner.

Clothing fabrics may not be colourfast. This could cause visible discoulourations, especially on light-coloured upholstery. Removable stains and discoulourations should be cleaned as soon as possible.

Clean seat belts with lukewarm water or interior cleaner.

<table>
<thead>
<tr>
<th>Caution</th>
</tr>
</thead>
<tbody>
<tr>
<td>Close Velcro fasteners as open Velcro fasteners on clothing could damage seat upholstery. The same applies to clothing with sharp-edged objects, like zips or belts or studded jeans.</td>
</tr>
</tbody>
</table>

**Plastic and rubber parts**
Plastic and rubber parts can be cleaned with the same cleaner as used to clean the body. Use interior cleaner if necessary. Do not use any other agent. Avoid solvents and petrol in particular. Do not use high-pressure jet cleaners.
Service and maintenance

General information ................... 257
Recommended fluids, lubricants and parts .................................... 258

General information

Service information
In order to ensure economical and safe vehicle operation and to maintain the value of your vehicle, it is of vital importance that all maintenance work is carried out at the proper intervals as specified.

The detailed, up-to-date service schedule for your vehicle is available at the workshop.

Service display .DAL. 104.

European service intervals
Maintenance of your vehicle is required every 30000 km or after 1 year, whichever occurs first, unless otherwise indicated in the service display.

The European service intervals are valid for the following countries:
Andorra, Austria, Belgium, Bosnia-Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Greenland, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Macedonia, Malta, Montenegro, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, United Kingdom.

Service display .DAL. 104.

International service intervals
Maintenance of your vehicle is required every 15000 km or after 1 year, whichever occurs first, unless otherwise indicated in the service display.

The international service intervals are valid for the countries which are not listed in the European service intervals.

Service display .DAL. 104.

Confirmations
Confirmation of service is recorded in the Service and Warranty Booklet. The date and mileage is completed with the stamp and signature of the servicing workshop.
Make sure that the Service and Warranty Booklet is completed correctly as continuous proof of service is essential if any warranty or goodwill claims are to be met, and is also a benefit when selling the vehicle.

**Service interval with remaining engine oil life duration**
The service interval is based on several parameters depending on usage.

The service display lets you know when to change the engine oil.

Service display ◇ 104.

---

**Recommended fluids, lubricants and parts**

**Recommended fluids and lubricants**

Only use products that meet the recommended specifications. Damage resulting from the use of products not in line with these specifications will not be covered by the warranty.

⚠️ **Warning**

Operating materials are hazardous and could be poisonous. Handle with care. Pay attention to information given on the containers.

**Engine oil**

Engine oil is identified by its quality and its viscosity. Quality is more important than viscosity when selecting which engine oil to use. The oil quality ensures e.g. engine cleanliness, wear protection and oil ageing control, whereas viscosity grade gives information on the oil's thickness over a temperature range.

Dexos is the newest engine oil quality that provides optimum protection for gasoline and diesel engines. If it is unavailable, engine oils of other listed qualities have to be used.

Recommendations for gasoline engines are also valid for Compressed Natural Gas (CNG), Liquified Petroleum Gas (LPG) and Ethanol (E85) fuelled engines.

Select the appropriate engine oil based on its quality and on the minimum ambient temperature ◇ 262.

**Topping up engine oil**

Engine oils of different manufacturers and brands can be mixed as long as they comply with the required engine oil quality and viscosity.

Use of engine oil with only ACEA A1/B1 or only A5/B5 quality is prohibited, since it can cause long-term engine damage under certain operating conditions.
Select the appropriate engine oil based on its quality and on the minimum ambient temperature.

**Additional engine oil additives**
The use of additional engine oil additives could cause damage and invalidate the warranty.

**Engine oil viscosity grades**
The SAE viscosity grade gives information of the thickness of the oil. Multigrade oil is indicated by two figures, e.g. SAE 5W-30. The first figure, followed by a W, indicates the low temperature viscosity and the second figure the high temperature viscosity.

Select the appropriate viscosity grade depending on the minimum ambient temperature.

All of the recommended viscosity grades are suitable for high ambient temperatures.

**Coolant and antifreeze**
Use only silicate-free long life coolant (LLC) antifreeze.

The system is factory filled with coolant designed for excellent corrosion protection and frost protection down to approx. -28 °C. In northern countries with very low temperatures the factory filled coolant provides frost protection down to approx. -37°C. This concentration should be maintained all year round. The use of additional coolant additives that intend to give additional corrosion protection or seal against minor leaks can cause function problems. Liability for consequences resulting from the use of additional coolant additives will be rejected.

**Brake and clutch fluid**
Only use high-performance brake fluid approved for the vehicle, consult a workshop.

Over time, brake fluid absorbs moisture which will reduce braking effectiveness. The brake fluid should therefore be replaced at the specified interval.

Brake fluid should be stored in a sealed container to avoid water absorption.

Ensure brake fluid does not become contaminated.
The Vehicle Identification Number is visible through the windscreen and in the floor on the front passenger side behind a cover.

Identification plate
The identification plate is located on the front left door frame.

Information on identification label:

1 = Manufacturer
2 = Type approval number
3 = Vehicle Identification Number
4 = Permissible gross vehicle weight rating in kg
5 = Permissible gross train weight in kg
6 = Maximum permissible front axle load in kg
7 = Maximum permissible rear axle load in kg
8 = Vehicle-specific or country-specific data

The combined total of front and rear axle loads must not exceed the permissible gross vehicle weight. For example, if the front axle is bearing its maximum permissible load, the rear axle can only bear a load that is equal to the gross vehicle weight minus the front axle load.

The technical data is determined in accordance with European Community standards. We reserve the right to make modifications. Specifications in the vehicle documents always have priority over those given in this manual.

Vehicle data recording and privacy

Event data recorders

Data storage modules in the vehicle

A large number of electronic components of your vehicle contain data storage modules temporarily or permanently storing technical data about the condition of the vehicle, events and errors. In general, this technical information documents the condition of parts, modules, systems or the environment:

- Operating conditions of system components (e.g. filling levels)
- Status messages of the vehicle and its single components (e.g. number of wheel revolutions / rotational speed, deceleration, lateral acceleration)
- Dysfunctions and defects in important system components

- Vehicle reactions in particular driving situations (e.g. inflation of an airbag, activation of the stability regulation system)
- Environmental conditions (e.g. temperature)

These data are exclusively technical and help identifying and correcting errors as well as optimizing vehicle functions.

Motion profiles indicating travelled routes cannot be created with these data.

If services are used (e.g. repair works, service processes, warranty cases, quality assurance), employees of the service network (manufacturer included) are able to read out this technical information from the event and error data storage modules applying special diagnostic devices. If required, you will receive further information at these workshops. After an error has been corrected, the data are deleted from the error storage module or they are constantly overwritten.
When using the vehicle, situations may occur in which these technical data related to other information (accident report, damages on the vehicle, witness statements etc.) may be associated with a specific person - possibly, with the assistance of an expert.

Additional functions contractually agreed upon with the client (e.g. vehicle location in emergency cases) allow the transmission of particular vehicle data from the vehicle.

Radio Frequency Identification (RFID)

RFID technology is used in some vehicles for functions such as tyre pressure monitoring and ignition system security. It is also used in connection with conveniences such as radio remote controls for door locking/unlocking and starting, and in-vehicle transmitters for garage door openers. RFID technology in Opel vehicles does not use or record personal information or link with any other Opel system containing personal information.
