At speeds above 30km/h it brakes automatically to reduce speed by a maximum of 50km/h – to reduce speed even further the driver must brake him/herself. The operational speed range of the system depends on the detected obstacle (mobile target: from 5 to 140km/h; fixed target: from 5 to 80km/h; pedestrian: from 5 to 60km/h). SPECIFICATIONS

Transmission

- Front-wheel drive
- Five-speed manual gearbox
 - 1.6 (75/100PS) Turbo D models
- Six-speed manual gearbox – 1.5 (130PS) Turbo D/1.2 (110PS) Turbo* models
- Eight-speed automatic transmission – available on 1.5 (130PS) Turbo D/1.2 (130PS) Turbo* models

Replacing the traditional lever, the automatic transmission selection-mode dial/drive wheel is an innovative solution that is both elegant and intuitive. By simply twisting the dial, the following modes can be selected:

- Park, for when the vehicle is stationary and the wheels are locked
- Drive, for automatic forward motion
- Neutral, for when the vehicle is stationary, wheels are free
- Reverse, for automatic backward motion

For an extra experience of dynamism, the shift paddles for automatic transmissions are located behind the steering wheel, offering drivers an extra level of control that is highly ergonomic and intuitive. The shift paddles function in the following way:

- To go up a gear, the driver must pull the right lever towards themselves
- To go down a gear, the driver must pull the left lever towards themselves**

Steering

- Speed-sensitive electric power-assisted system
- Turning circle (kerb-to-kerb) –
 - 11.0m (36 ft) L1 models, 11.8m (38.7 ft) L2 models
