KARL FEATURES / OPTIONS

SAFETY

Driver/passenger airbags

- Driver's airbag • Front passenger's airbag • Two front seat side-impact airbags
- Full-size curtain airbags for driver and front and outer rear seat passengers

Seating

- Height-adjustable front and rear seat head restraints • Anti-submarining ramps in all seats – Prevents occupants sliding underneath the lap belt during a collision.

Seatbelts

- Front inertia-reel lap and diagonal seatbelts • Three inertia-reel lap and diagonal rear seatbelts
- Front and rear seatbelt pretensioner system – Pretensioners tighten the seatbelt in the event of an accident limiting forward movement. • Front and rear 'seatbelt unfastened' audible warning and warning light

Child safety

- Deactivation switch for front passenger seat's front airbag – Permits the safe use of a child seat in the front passenger seat. • ISOFIX child seat mountings incorporating top tether anchor points located on outer rear seats (does not include child seat) – Allows ISOFIX child safety seats to be securely fixed into the car. The ISOFIX mounting system reduces forward movement in an accident and makes the child seat easier to install. • Child-proof locks on rear doors

Pedestrian safety

- Bonnet/headlight/wiper structure – Designed to reduce pedestrian head and upper body injuries.
- Upper and lower bumper design – Reduces upper and lower leg injuries.

Stability

- Electronic Stability Programme (ESP) – Works in conjunction with the vehicle's electronic braking and engine systems to keep the car stable in many different situations. ESP monitors many different inputs to determine when the car starts to lose traction, it can then immediately respond by varying the brake pressure between up to three wheels and adjust the engine output to help correct the loss of traction and improve stability. ESP functions include: • Cornering brake control • Straight line stability control • Rollover mitigation • Drag torque control – Maintain stability on slippery roads when lifting off the accelerator or changing gear.

Braking

- Anti-lock Braking System (ABS) – Prevents the vehicle's wheels from locking up under heavy braking by momentarily reducing brake pressure at the appropriate wheel, ensuring that you can maintain control of the steering. The same electronic systems used in the ABS and ESP also deliver exceptional braking performance. • Emergency brake assist – When emergency braking is detected the vehicle automatically applies the maximum possible braking assistance. • Fading brake support – Compensates for the effects of brake fade. • Electronic brakeforce distribution – Automatically apportions the optimum braking force to each wheel. • Adaptive brake lights – Automatically warns other road users of heavy braking. • Hill start assist – Briefly maintains rear brake pressure to stop the vehicle rolling back on an incline.

Tyre pressure

- Tyre pressure monitoring system
