The above is for information purposes only as our products are continually updated and changes may be made to the specifications at any time. If you require any specific feature, you must consult your authorised Opel Dealer who is regularly updated with any change in specification.

Specifications are subject to change without notice.

RRP does not include recommended delivery charge of €700. This price includes the recommended cost of PDI, number plates and delivery to an Opel Dealer. The recommended delivery charge does not include fuel supplied by the dealer, Motor insurance or any other goods or services supplied by agreement between the Dealer and the customer.

Prices effective 28.6.18. Prices subject to alteration or change without notice or obligation.

* = **Minimum Mass** ('Mass in running order' on Certificate of Conformity and 'Mass in Service' on V5C form) is defined according to European Type Approval and include all fluids, tools, 90% fuel load and driver (75kg). It is minimum mass for this variant and does not consider local specification/trim or deletable options. Weights are also subject to manufacturing tolerances (EU Legislation allows 5% tolerance). Payload figures do not allow for the weight of the driver, or any passenger's, which should therefore be deducted from the figures shown.

= Fuel consumption information is official government environmental data, tested in accordance with the relevant EU directive. Official EU-regulated test data is provided for comparison purposes and actual performance will depend on driving style, road conditions and other non-technical factors.

Stability:								
Electronic Stability Programme–plus (ESP–plus) with traction control: – Works in conjunction with the vehicle's electronic braking and engine systems to keep the vehicle stable in many different situations. ESP monitors a variety of inputs to determine when the vehicle starts to lose traction, it can then immediately respond by varying the brake pressure between up to three wheels and adjust the engine output to help correct the loss of traction and improve stability.		●	●	●	●			
Tyre pressure:					●	€215	€244	–
• Tyre pressure monitoring system	Option code: UJO	○	○	○				
Braking:								
Four-channel Anti-lock Braking System (ABS) – Prevents the vehicle's wheels from locking up under heavy braking by momentarily reducing brake pressure at the appropriate wheel, ensuring that you can maintain control of the steering.		●	●	●	●			
Emergency brake assist – When emergency braking is detected the vehicle automatically applies the maximum possible braking assistance.		●	●	●	●			
Electronic brakeforce distribution – Automatically apportions the optimum braking force to each wheel.		●	●	●	●			
Hill start assist – Briefly maintains rear brake pressure to stop the vehicle rolling back on an incline.		●	●	●	●			
Bulkhead:		●						
• Full-height steel bulkhead without window		●						
• Full-height ABS plastic bulkhead with window – <i>Doublecab only.</i>		●	●	●

VIVARO GLOSSARY OF TERMS

PLATED WEIGHT

The maximum weight to which a vehicle or an axle may be loaded, determined either by the design of the components or by legislation. All commercial vehicles must carry a manufacturer's 'plate' showing the vehicle and axle gross 'plated weights'. It is an offence to drive a vehicle in a condition where any of these weights are exceeded.

MINIMUM MASS

Minimum Mass ('Mass in running order' on Certificate of Conformity and 'Mass in Service' on V5C form) is defined according to European Type Approval and include all fluids, tools, 90% fuel load and driver (75kg). It is minimum mass for this variant and does not consider local specification/trim or deletable options (specific to Movano). Weights are also subject to manufacturing tolerances (EU Legislation allows 5% tolerance).

GROSS VEHICLE WEIGHT (GVW)

The total permissible weight of a vehicle including payload and passengers, as shown on the manufacturer's plate.

GROSS COMBINATION WEIGHT (GCW)

The maximum permissible weight of a vehicle, including payload and passengers, combined with the total weight of any trailer it is towing. The maximum GCW weight limit is quoted on the vehicle plate and must not be exceeded.

PAYLOADS

The total permissible weight that can be carried without exceeding the vehicle's plated weight. Payloads do not include driver but do take into consideration specification/trim level. Movano included are UK/Ireland specification (10kg) and deletable options such as Bulkhead (25kg); Sliding Doors (30kg each) and Spare Wheel (25kg). Weights are also subject to manufacturing tolerances (EU Legislation allows 5% tolerance). Payload does not consider any additional options that a customer may order.

ROOF LOADS

Movano roof load should not exceed 200kg including the weight of the roof rack/carrier. H3 are not permitted to carry roof loads

MAXIMUM TOWING WEIGHT

The maximum weight of any trailer and its load which may be towed within the limit of the vehicle's plated Gross Combination Weight (GCW). It is based on the ability of the vehicle – at full GCW – to restart on a 12% gradient, which is approximately 1 in 8.3, at sea level. At altitudes above 1500 metres, the engine output may drop with a corresponding reduction in towing capability. It is the operator's responsibility to ensure that the trailer noseweight does not cause the rear axle plated weight of the towing vehicle to be exceeded.

Always fit Opel towing attachments and accessories available from your Opel Commercial Vehicle Dealer. They are designed specifically for Opel models and carry a 12-month warranty.

LIGHT DUTY AND HEAVY DUTY CYCLES

For a Light Duty cycle (EC regulation 715/2007 with designation 'Euro 6') the emissions of the whole vehicle are evaluated whereas for Heavy Duty cycle (EC regulation 595/2009 with designation 'Euro VI') only the engine is bench tested. The requirement of which cycle is necessary is determined by the reference mass of the vehicle. In the case of Movano, reference mass calculations dictate that:

- N1 FWD and M1 FWD are approved as Light Duty
- N1 RWD, N2 RWD and M2 FWD are approved as Heavy Duty

When Euro 5 was previously introduced, there was an agreement between Member States and the Commission (Reference TEC 740/2011) that, assuming there was no alteration to the emissions system itself, a multi-stage build vehicle should be covered by the base vehicle emissions approval, irrespective of whether the reference mass had changed. The Department for Transport has confirmed that this interpretation will remain in place for Euro 6/VI.

COMMERCIAL VEHICLE CATEGORIES

Differences between M1/N1 and M2/N2 (Vehicles with GVW above 3500kg)

Category M: Passenger carriers

Category M1: Vehicles designed and constructed for the carriage of passengers and comprising no more than eight seats in addition to the driver's seat.

Category M2: Vehicles designed and constructed for the carriage of passengers, comprising more than eight seats in addition to the driver's seat, and having a maximum mass not exceeding 5 tonnes.

Category N: Goods vehicles

Category N1: Vehicles designed and constructed for the carriage of goods and having a maximum mass not exceeding 3.5 tonnes.

Category N2: Vehicles designed and constructed for the carriage of goods and having a maximum mass exceeding 3.5 tonnes but not exceeding 12 tonnes.

Specific differences, all M2/N2 require the following:

Speed limiter: All M2/N2 vehicles are legally required to be speed limited. M2 to 100km/h (62mph) and N2 to 90km/h (56mph).

Driver licence: Commercial vehicles with GVW greater than 3.5 tonnes have different license requirements. For any new drivers C1 category

To illustrate this better – a F3500 L3 H1 (130PS) Movano Chassis Cab is type approved as Light Duty (Euro 6). Regardless of any conversion to this vehicle and even if its reference mass transgresses above the 2840kg threshold, then it is still be covered by the original Light Duty cycle emissions. One situation where this may not apply is when a vehicle changes category from N1 (Commercial) to M1 (Passenger) during the process of conversion.

is necessary. Under some circumstances (social purposes for a non-commercial body) it is possible to drive a minibus without a D1 entitlement (Minibus) however eligibility for this exemption should be confirmed with Road Safety Authority (RSA).

Driver CPC: Driver Certificate of Professional Competence mandates 35 hours of periodic training every 5 years to maintain licence (from September 2014).

Tachograph: It is a legal requirement to administer the activities of drivers subject to the EU or AETR drivers' hours rules, and also record the vehicle's speed, distance and time. A Smart Card is required for digital tachograph and these are available from the RSA. The tachograph of a new vehicle must be calibrated within two weeks of first registration.

Operator's Licence: This may also be required to ensure that vehicles are kept safe and in good condition at all times. Specifically for M2, PSV (public service vehicle) operator's licence is required. Exemptions in some circumstances may be permitted but this should always be confirmed with RSA.

MOT Testing: M2/N2 must be tested each year, and vehicle presented with a completed Certificate of Conformity (CoC).
